Manufactures and Trade are confined within very narrow limits. Except in the principal towns, where the houses are large and square, with a central court and flat roof similar to those of Algiers, the people live almost universally in huts or moveable tents; comparatively destitute of furniture and accommodation. Every woman understands the art of spinning wool or cotton, and the men weave it into cloth. Domestic labour, in short, which is almost wholly performed by women, supplies the principal wants of the inhabitants. Tanning appears to be almost the only exception: leather is made in great quantities all over the empire, but especially in the large towns, that of Fez being red, while that of Tafflet and Morocco is respectively green and yellow. About 250,000 dozens of goat-skins are annually exported. The red caps, silk fabrics and girdles of Fez are highly esteemed; carpets, chip-baskets, and earthenware are manufactured in different provinces, and in the principal towns may be found skilful saddlers, carpenters, locksmiths, and farriers.

The *Commissaries* of Morocco is carried on, 1, with Europe; 2, with the Levant; and 3, with the interior of Africa. The exports of Europe comprise about 2500 cwt. of wax (chiefly to Marseilles, Leghorn, Cadiz, and Lisbon), 1500 cwt. cow-hides, 100,000 dozens goat-skins, 2500 cwt. olive-oil, and 4300 cwt. gums, with smaller quantities of wool, dates, honey, indigo, shawls, carpets, &c., to the amount of about 1,000,000 piastres a year; while the imports, chiefly of manufactured and colonial goods, amount only to 750,000 piastres a year. The tariff is regulated by the whim of the sultan, and prohibitions and duties vary at every port. European vessels pay six piastres for harbour dues, and a tax of 10 per cent. is levied on all imported articles. In 1831, the imports were valued at £158,400, the exports at £121,300; and in the same year 64 European ships, of 3870 tons, arrived at, and 98 ships, of 5890 tons, departed from, the different ports of the empire. (*Gräberg von Humeß*, p. 157.)

The trade with the Levant is carried on partly by podlars, accompanying the pilgrim-caravan to Mecca, and partly, also, by feluccas coasting the shores of Africa as far as Alexandria. The communication with the interior of Africa is effected by caravans proceeding from Tafflet, and crossing the Sahara desert to Timbuctoo, in the manner described in the art. AFRICA (i. 35), where the traders exchange salt, tobacco, cloth caps, girdles, Turkish daggers, &c., for gold-dust, ivory, rhinoceros horns, assafetida, ostrich feathers, and slaves. Their profits would seem to be immense; since, for 1,000,000 piastres, the value of goods exported, the returns amount at least to 10,000,000 piastres (*G. von H.*, p. 146); but a great part of this excess is swallowed up by the expense of the conveyance of the goods across the desert and back again. Interest on money is forbidden by law; but, notwithstanding, the Jews and others exact sums varying from 7 to 12 per cent. a month, on the security of merchandise. Paper money and bills of exchange are wholly unknown; nor is there any communication by post, for the purpose of facilitating commercial intercourse.

Government, Revenue, &c.—The government of Morocco is a pure despotism, the sultan being the head both of church and state, and the arbiter over the property and lives of his subjects; his chief title is *Emir-al-Mumenin*, "absolute ruler of the true believers." There are not here, as in Turkey, an ulema, the depositary of the national religion, or a mufti, the head of the law, who possesses privileges independent of the sovereign, and may interfere to check his determinations. There is not even a council or divan which he is expected to consult. He has no regular ministers: all

MOROCCO.

is done by his single command, and no subject is supposed to have either life or property but at his disposal. The sultans would appear to consider an adherence to their engagements as an unconstitutional check on their power. "Takest thou me for an infidel," said one of them to a foreigner, "that I must be the slave of my word? Is it not in my power to say and unsay whenever I shall please?" (*Cher's Morocco*, i., 208, Eng. trans.) But, after all, there are here, as in all countries, certain rights which the monarchs dare not touch, and certain duties they must discharge. The sultan cannot safely invade the domestic privacy of his subjects, nor shock any of those customs to which long establishment has given the force of law. He is expected also to give public audience four times a week, when he administers justice to all, even the poorest. Yet prudent persons usually think it more eligible to acquiesce in the sentence of the *cadi*, than to afford the sultan any insight into their private affairs, of which he might afterward make a not very agreeable use. On these occasions the sovereign appears on horseback, with an umbrella held over his head.

The crown is hereditary, descending to males only, but without the right of primogeniture; and hence it is not unusual for strife and civil war to arise among the children of a deceased sultan. The government has frequently, also, been overthrown by private or public treason. And hence, probably, has arisen the jealous and ferocious character by which the rulers of Morocco have been especially distinguished. Muly Ismael, who ascended the throne in 1673, a bloodthirsty monster, though not without ability, introduced the system, since kept up, of employing a guard of negro mercenaries, on whose fidelity more reliance may be placed than on that of the Moors.

The most important state officers are the *Mule-etti*, or treasurer, usually the sultan's favourite, and the *Mule-esteward*, or steward of the sultan's household. The sultan sits in public, as already stated, four times a week, to administer justice. The *Koran* is here, as elsewhere in the Mohammedan world, the text-book of justice, and decrees are usually executed immediately after they have been pronounced. For the purposes of civil and military government, Morocco is divided into 39 prefectures, some of which extend over large tracts of country, though others are confined to a single town. The chief provincial officers are the *kaid*s or prefects, who, although removable by the sultan, are despotic governors and commanders of the military forces within their districts. The agricultural tribes have also their respective sheikhs; but these are commonly subject to the Moorish governors. The revenue of Morocco in 1822 amounted to 2,600,000 piastres; of which, nearly a half is derived from duties on land, houses, shops, mills, &c., and about a fifth from imported goods. The expenditure of the same year, chiefly for the maintenance of the army and the sultan's household, was only 980,000 piastres; and the yearly surplus goes to enrich the sultan's treasury at Mequinez, which is supposed to contain at least 50,000,000 piastres. (*G. van H.*, p. 288.) The regular army does not exceed 16,000 men; of whom, as already stated, fully a half are negroes. The sultan's body-guard comprises about 3000 infantry, and 2000 cavalry. The Moors are good horsemen, and endure hunger, thirst, fatigue, and every inconvenience. They might therefore make excellent soldiers if they were properly manoeuvred and exercised; but they are ignorant of every part of discipline except submission to their superiors. Their standard is the commentary upon the *Koran*, by Sidi Becari, the favourite imperial saint, whose book is deposited under a tent in the centre of the army, and is the signal by which they rally. Morocco has 24 fortified and garrisoned towns, the principal of which are Salra, Tangier, Azamer, Salee, and Mazagan. The navy of the empire is quite inconsiderable, comprising only three brigs, mounting 40 cannons, and three shallops.

Population.—The inhabitants may be divided into the classes of Moors, Arabs, Berbers or Berebers, Shellocks, Jews, and Negroes. The Moors are a mixed race, the descendants of the ancient Mauritians, intermixed with their Arab conquerors, and with the remains of the Vandals, who once ruled over the country; and, with the Moors, expelled from Spain, in the 15th century; but these varieties have been long since obliterated, and the Moors are now moulded into a distinct, peculiar people. They principally inhabit the villages and cities. Their language, called the Occidental Arabic, contains, as might be expected, many words borrowed from the language of the Berbers and Shellocks, and imported from Spain. The Arabs, as distinguished from the Moors, principally inhabit the plains, where, like their ancestors, they mostly lead a wandering life, and follow pastoral pursuits. They occupy *durwars* or movable villages, composed of tents; and whenever the pastures in the vicinity are exhausted, or the increase of *boas* and vermin render the tents uninhabitable, they are struck; and placing them, their effects, and children, on panniers on the backs of camels, they set out in search of

some other quarter in which to settle. Their women are not confined; but being subjected to hard labour, tanned by the sun, and sometimes even yoked in the plough with domestic animals, these habits of hardihood, with the loss of all traces of beauty, prove more effectual securities against intrigues than the bolts and bars used in the cities. The mountainous portions of the country is occupied by the Berbers and Shellocks, probably the aboriginal inhabitants of the country. The Berbers, who principally inhabit the country of the lesser Atlas, adjoining the Mediterranean, are nearly white, well formed, of middle size, and athletic; they live mostly in huts of stone and mud, but sometimes, like the Arabs, in tents, and sometimes in caves; they are principally engaged in hunting and pastoral occupations. The Shellocks, who inhabit both sides of the greater Atlas, are less robust than the Berbers, but they are more advanced in civilization, being principally agriculturists and artisans, and enjoying comparatively good houses. A great discrepancy of opinion has been entertained as to whether the languages of those people be radically different, or merely different dialects of the same language; the latter opinion, though accompanied by several difficulties, seems to be, on the whole, the most probable.

The Berbers and Shellocks are sometimes called *em-zeghis*, or freemen, a designation to which they have a not ill-founded claim. They have never, in fact, been fully subjected to the Moorish government; they often break out into rebellion; and have carried their arms to the gates of Morocco. Their internal government has even somewhat of a republican form, and they are well trained in the use of arms. The Jews, who are numerous, particularly in the cities, carry on all the mercantile and money transactions; they also act as interpreters, and perform, in the cities, the functions of servants, porters, scavengers, &c. Every species of oppression and contempt, however, is heaped upon them. They are not allowed to mount on horseback, nor to sit before a Moor with their legs crossed. The meanest Moors may insult or maltreat them in the streets, or enter their synagogues for the purpose. They must not read or write Arabic, which being the language of the *Koran*, is too holy for them! A worse evil is that when the emperor, or men in power, happen to be in want of money, they hesitate not to relieve themselves by stripping the Jews of large portions of their wealth, however carefully it may be concealed.

The negroes, who are not very numerous, are imported from Sudan. Sometimes, however, they obtain their liberty; and, as already stated, the emperor has thought fit to select them for his body guard. (The learned and excellent observations of Shaw, as to the different classes of people in Algiers, may be applied, with little modification, to Morocco. See his *Travels*, passim.)

Religion and Education.—The prevailing religion is Mohammedanism, and nowhere are its tenets and observances more rigidly enforced. The Jews are universally despised, nor are Christians allowed to reside anywhere except in Tangiers, Mogadore, El-Araich, and Tetuan. There is a Franciscan convent in Tangiers, being the only Christian establishment throughout Morocco.

The education of the Moors is, at present, greatly inferior to that of their forefathers in the middle ages, and is almost exclusively confined to learning the *Koran* by rote, reading, and writing. At the high school of Fez, however, more aspiring students may receive a sort of instruction in grammar, geometry, and the mixed sciences, logic, rhetoric, medicine, and theology. The art of printing is unknown, so that great numbers of persons are employed, in all parts of the empire, copying the *Koran*, &c. Arts and sciences are in the most barbarous states; the literature, and history of foreign countries are wholly unknown; and their only musical instruments are a rude pipe, and more barbarous drum.

Manners and Customs.—The Moors are generally a free looking race of men, of middle stature, and somewhat inclining to corpulence, owing, probably, to their inactive life. The women are pretty when young, blacken their eye-lashes and eye-brows, and stain the tips of their fingers with *kenna*. The dress of the country is picturesque and graceful, comprising a shirt with large sleeves, ample drawers of white linen, a *kafan*, or waistcoat, of yellow or blue cloth, a silk sash, *azek*, or mantle, and slippers, or boots, of yellow leather. Women, however, wear red shoes. The Jews are not allowed to wear colours, and a black cap, with slippers of the same colour, marks their degradation. The usual food throughout the country is a dish, called *kus-kus*, composed of mutton or fowls, stewed with vegetables, and served up in large earthenware pans, accompanied with a savoury kind of sauce. Coffee is not used; but tea is a general beverage, always presented to visitors, and highly esteemed by all classes. The Moors do not smoke tobacco, but take large quantities of snuff, and occasionally smoke the hemp-plant, which seems to partake of the

MOROCCO.

intoxicating qualities of opium: a confection is also made from the hemp-seed, possessed of the same qualities, and to the use of this the natives are much addicted. The distinguishing features of the Moorish character are, a love of idleness, apathy, pride, ignorance, bigotry, and the grossest sensuality. The cities present the same gloomy aspect as in other Moorish states—that of strict seclusion, particularly of the female sex, while habits of gravity and silence prevail among the men, who meet only in the public coffee-houses. Unluckily, their high national pride, and contempt for all other people, is not combined with any sentiments of individual honour. They are not, however, wholly destitute of good qualities, among which may be mentioned their hospitality, and fortitude under misfortune: *Allah-ira*, "God willed it," is their consolation in trouble. They are, also, healthy and long-lived, which could hardly have been expected, considering their habits. The climate is unquestionably good; but leprosy, ophthalmia, hydrocele, and syphilis, originating, most probably, in filthy habits, are not uncommon. Their medicines consist only of a few herbs, and their surgery is such as might be expected among a people without science or arts. The plague visits them about once in 50 years, and carries off thousands of the population. (*Geog. Jour.*, i., 146.)

History.—Morocco, anciently called Mauritania, was inhabited, under the Romans, by a hardy nomadic race, who were never thoroughly subdued by that nation. Early in the seventh century, the country yielded to the Saracens, whose different dynasties disputed for its possession nearly 300 years. At length, in the eleventh century, a chief of Leptima, having acquired so high a reputation for sanctity as to cause all the neighbouring tribes to flock to his standard, overthrew the existing government, and extended his dominion all over N. Africa. His son, Joseph Ben-Toussin, extended the empire by the addition of Fez and the E. provinces of Spain. In 1148, however, another revolution took place, and the Morabites were succeeded by the Almohades, who, in their turn, yielded the empire to more successful adventurers. In this state of anarchy the country remained till the middle of the sixteenth century, when Mohammed Ben-Achmet, a schiærit and descendant of the Prophet, extended the throne, which his posterity has ever since continued to occupy. (*Jackson's Travels in Africa; Beaulieu's Journey to Morocco; Sir A. C. Brak's Spain and Morocco*, i.; *Comte Gräberg von Hamo, Storia di Morocco*; *Geog. Jour.*, i.)

Morocco (Arab. *Morak'ah*), a large city of N.W. Africa, and the cap. of the above empire, 195 m. E. by N. Mogador, lat. 31° 37' 30" N. long. 7° 38' W. Pop., according to Captain Washington, about 80,000, of whom 4000 are Shoolchoa, and 5000 Jews. We doubt, however, whether the population really exceeds 50,000, or at most 60,000*. It is beautifully situated about 4 m. S. from the river Tensift, on a plain elevated 1450 ft. above the sea, and is surrounded by a strong wall of lime and mud 30 ft. high and 6 m. in circuit, with square towers at intervals of 50 paces; but the enclosed area, as in many African and Asiatic cities, comprises, besides houses and streets, many large gardens and open spaces from 10 to 30 acres in extent. The whole town, with slight exceptions, is in bad repair, many parts are in ruins, and it is everywhere filthy in the extreme. It is entered by 11 strong double gates; but the only one worth notice is the *Bab-el-Ram*, a Moorish horse-shoe arch, richly sculptured with arabesque work. Extensive underground aqueducts, 10 or 12 ft. deep, surround the walls, and reach across the plain to the foot of Atlas; at present, however, they are mostly in ruins. The houses in the habitable part of the town, a few of which are of stone, but the greater number of mud and lime, are, generally speaking, small, and only one story high, with central courts and flat roofs, the sides fronting the streets being plain and whitewashed, with here and there a narrow opening, unplastered, and scarcely deserving the name of a window. Their interior disposition greatly resembles that of Spanish houses—the doors are of carved cypress-wood, the rooms long and narrow, with scarcely any furniture except a few mats, carpets, and cushions. Most of them, however, being old and in decay, swarm with vermin, especially bugs, scorpions, and snakes. The streets, which are unpaved, are frequently so narrow and crooked, that a horse can with difficulty pass through them; and they are in parts so heaved up with accumulations of filth, that the floors of the houses are some feet below the pathway. (*Beaulieu's Morocco*, p. 140.) These inconveniences are further increased by numerous low cross arches and gateways that connect the opposite houses. The city contains several public squares; but, like the streets, they are unpaved, and consequently very dirty when it rains, and covered with dust in dry weather. The sultan's palace

stands on the S. side of the city, outside the main wall, but is itself enclosed within walls of equal strength. Its precincts consist of a large oblong space about 1500 yds. in length and 600 in width, divided into squares and laid out in gardens, round which are several detached pavilions about 40 ft. square, forming the imperial residence. These have pyramidal roofs covered with glazed tiles, and lighted from four lofty and spacious doors, which are opened according to the position of the sun, the floors being tessellated with variously coloured tiles, and the interior painted in the arabesque style, and ornamented with square compartments, containing passages from the Koran, written in a sort of Arabic short-hand. The luxury and convenience of tables, chairs, and curtains, are unknown, and even the rooms occupied by the sultan are furnished only with a few mats, carpets, cushions, some china and tea equipage, a clock, and arms hung round the walls. The grand pavilion in the middle of the gardens is appropriated to the women: it is a spacious building fitted up in the same simple style as the rest. Near the palace, on the E. side of the enclosure, is the *mesbar*, or place of audience, an extensive quadrangle, walled in, but open to the sky, in which the sultan gives audience to his subjects, hears their complaints, and administers justice. Attached to the palace, also, are three gardens, each about 15 acres in extent. In two of these, the foreign merchants are allowed to pitch their tents when they visit the sultan, and the third, called *Jenah el-Afah*, "the garden of prosperity," is destined for the use of the sultanas. The city has many sanctuaries and mosques; one of these, called El Kontabî, is conspicuous above all by a square tower, 231 ft. high, divided into seven stories, and surmounted by a small lantern. The mosque, Bent-Yussef, next in height and age, has an attached college and a saint's tomb, with a cupola delicately wrought in Saracenic tracery. El Moassin, also, said to be the most ancient mosque in the city, is of great size, comprising several courts opening into each other, and intersected in various directions by highly sculptured horse-shoe arches. Its gates are said to be those of Seville, brought thence by the triumphant Al-Mansour. The mosque of Bel Abbas, the patron saint of Morocco, is built in the shape of a pavilion, surmounted by a cupola covered with green varnished tiles. Attached to it is an immense hospital, said to have accommodation for 1500 patients. Near the S. wall of the city is the *Madrasa el Emakia*, a college and mosque, in which are the sepulchres of the sultans of the Mouk Saïdia dynasty, once adorned with statues and busts, now defaced.

Morocco, like most other Moorish towns, comprises numerous fountains, several of which have traces of delicate sculpture; and one close to the mosque El-Moassin has a cornice of white marble, still exhibiting the remains of former beauty. Outside the walls are several large cemeteries, one of which, on the E. side is upwards of 100 acres in extent: war, plague, and famine, to which the town owes its present decay, have caused them to be thickly tenanted. In the N. part of the town is the *kaisseria*, or bazaar, a long range of shops, or rather stalls, covered in from the weather, divided into compartments, and serving as a general lounge for all classes of the inhabitants. Here are exposed for sale silk scarfs, shawls, and handkerchiefs, from Fez; carpets and various articles of dress from Duquella; cloth, linen, hardware, tea, and sugar, from Sues; almonds and raisins, henna and pure spirit, from Sues; corn, beans, &c., from Shragra; dates from Taflet; and an abundance of boots, slippers, saddles, earthenware, mats and cord, with gold and silver embroidery, in making which the inhabitants particularly excel. A large market is held every Thursday, near the N. gate of the city, and is well supplied with home manufactures: outside the gate, also, is the market for camels, horses, mules, horned-cattle, sheep, &c.; but the display is very indifferent. The tanning of leather is the most important branch of industry in Morocco; and Captain Washington visited one tan-yard, which alone employed 1500 persons. The establishment was extremely defective in order and arrangement; but, in spite of dirt and slovenliness, a bright yellow colour is produced, that has not been successfully imitated in Europe. (*Geog. Jour.*, i., 139.)

The *Millah*, or Jews' quarter, is a walled inclosure about 1½ m. in circuit, at the S.E. angle of the city, very densely peopled, and dirtier even than the parts inhabited by the Moors. The Jews pay a capitation tax to the sultan, and are treated with the utmost contempt; but they are a serviceable body, and are the only goldsmiths, tinsmen, and tailors, in Morocco. Shoemaking, carpentry, masonry, smith's work, and the weaving of haiks, are exclusively the occupations of the Moors. Provisions are cheaper even than at Tangiers; but there is very little trade, that which exists being, with the exception of the commerce in leather and salt, confined to the supply of the town. The air about Morocco is generally calm: the neighbouring mountains defend it from the scorching winds that blow from Taflet

* All they estimated the population at only 20,000, while Jackson, by an absurd exaggeration, carried it up to 870,000!

MORON.

and Sahara, while the snow with which the chain is covered nearly all the year, imparts an agreeable coolness to the surrounding atmosphere. In summer, however, the heat during the day is intense, though the nights are cool, and in winter the cold is pretty severe. On the whole, however, the climate is extremely healthy.

Morocco, which is supposed to be situated on or near the spot occupied by the ancient *Bocanum Hemorum*, was founded in 1032 by Abu Tassid, the first Moorish sultan of the Marabou dynasty, and in the following century, during the reign of Ali Ben Yusef, it is said, but no doubt the statement is grossly exaggerated, to have contained 1,000,000 of inhabitants. In later times, its population has greatly fallen off; and, owing to the devastations of successive conquerors, it retains little of its ancient magnificence. At present, it is in many parts little else than a desert; the ruins of houses heaped one upon another serve to harbour thieves and desperadoes of all sorts. Nothing but the wretched government of Morocco could have made so great a city so miserable and so deserted. (*Geog. Journ.*, vol. i.; *Beauleier's Journey to Morocco*; *Chamier's Hist. of Morocco*, i. 50-63; *Jackson's Morocco*, p. 121-124.)

MORON, a town of Spain, in Andalusia, prov. Seville, on a plain near the foot of a lofty hill, 33 m. S.E. Seville, and 60 m. W.S.W. Cordova. Pop., according to Mifano, 7694. It has some well-built houses, a parish church, and two hospitals. Its inhabitants are almost wholly agricultural, and nearly all the oil used in Seville is raised in the neighbourhood. The existence of Roman inscriptions and other antiquities, has induced some authors to identify Moron with the ancient *Arauci*.

MORPETH, a mun. and parl. bor., market town and par. of England, co. Northumberland, ward of its own name, on the N. bank of the Wansbeck, crossed here by two bridges, 144 m. N. by W. Newcastle. Pop. of parl. bor. (which includes the parish of Morpeth, except one detached township, together with the parish of Bedlington, in 1831, 6678.

The town, which is pretty well built, though badly paved, and not lighted, consists principally of two streets, at the junction of which is the market place, with a high square clock tower, containing a chime of bells. A town-house, a stone structure fronted by a colonnade, and decorated with turrets at the angles, was erected in 1714, at the expense of Lord Carlisle, for the manorial courts, quarter sessions, local business, &c. The county jail, and house of correction, is an extensive and commodious pile erected in 1839, on the S. side of the river. The parish church, a plain brick building, is on Kirkahill, $\frac{1}{2}$ m. S. the town; the living being a rectory in the gift of Earl Carlisle. There is also a chapel of ease. The Roman Catholics, Presbyterians, and Wesleyan Methodists, have their respective places of worship, to which, and the church, are attached Sunday-schools. A slenderly endowed grammar-school was founded here by Edward VI. An English free-school, and infant schools, are supported by the corporation, and there are two subscription schools for boys and girls. The other establishments of the town comprise a provident club, dispensary, mechanics' institute, subscription library, and some minor charities. Morpeth has undergone little change in its condition during the last 50 years: no buildings are in course of erection, and in 1836, there were 115 uninhabited houses. A small woollen manufactory, iron-foundry, and two or three steam corn-mills, are established here, but its chief dependence is on its cattle market, which is one of the largest in the N. of England. Freestone is quarried, and there are four collieries within the parish: but the railway connecting them with the town has been an unprofitable undertaking.

Morpeth is a borough by prescription, and recognized as such by the charter of 15 Charles II.; its municipal officers, since the Municipal Reform Act, being a mayor, three other aldermen, and twelve councillors. Corporation revenue in 1839, 216*l.*, leaving a debt of 903*l.* It has sent two members to the House of Commons since the reign of Mary; the right of election, down to the reform act, having been nominally vested in the bailiff and free burgesses, but substantially in Earl Carlisle, lord of the manor. This act deprived it of one of its members, and the limits of the borough were then also enlarged as stated above. Reg. electors, in 1839-40, 263. Petty sessions are held weekly, and quarter sessions alternately, with three other townships. Markets on Wednesday. Large cattle fairs the Wednesday, Thursday, and Friday, but one before Whit-Sunday. Races are held N. of the town on Cottingham Common, early in September. (*Man. and Board. Rep.*, &c.)

It appears from Camden that Morpeth was "burned down" by its inhabitants in 1215, out of hatred to King John, that is, with the view of distressing him when on his march to punish the revolt of his barons; and it suffered again from fire in 1699. Its castle, built in 1358, and Cistercian monastery, both mere ruins, and several churches and

MOSCOW.

baronial residences in the immediate vicinity, are well worth the notice of the antiquary.

MORRIS, county, N. J. Situated toward the N. part of the state, and contains 500 sq. m. Bounded S.E. and E. by Passaic river, N.E. by Poquanock river. Drained by Rockaway and Whippany rivers, tributaries of Passaic river. It abounds with iron ore, which is chiefly magnetic. The Morris canal passes through the county. It contained in 1840, 18,627 neat cattle, 19,147 sheep, 12,719 swine; and produced 27,103 bushels of wheat, 72,551 of rye, 226,248 of Indian corn, 86,175 of buckwheat, 292,385 of oats, 219,996 of potatoes. It had 96 stores, three furnaces, 43 forges, seven filling-mills, six woollen factories, four cotton factories with 2906 spindles, 37 grist-mills, 57 saw-mills, four paper-mills, 19 tanneries, 50 distilleries, one pottery, three printing-offices, two blinderies, two weekly newspapers; 10 academies, 456 students, 103 schools; 4343 scholars. Pop. 28,844. Capital, Morristown.

MORRIS, L., Morris co., N. J. 38 m. W. New-York. Bounded W. and S. by Passaic river, N. by Whippany river. It contains 23 stores, five grist-mills, six saw-mills, two paper-mills, three distilleries; three academies, 116 students, 19 schools, 341 scholars. Pop. 4013.

MORRIS, T., Greene co., Pa. It contains four grist-mills, six saw-mills; three schools, 85 scholars. Pop. 1162.

MORRIS, T., Huntingdon co., Pa. It has one commission house in foreign trade, four stores, one forge, two furnaces, three grist-mills, seven saw-mills. Pop. 1516.

MORRIS, T., Washington co., Pa. It has five grist-mills, one saw-mill; 11 schools, 330 scholars. Pop. 1663.

MORRIS, L., Knox co., O. Watered by three branches of Vernon river, which here unite. It has five schools, 190 scholars. Pop. 1072.

MORRISTOWN, p. t., Lamolille co., Vt., 38 m. N. by W. Montpelier, 544 W. Watered by Lamolille river, which affords water-power. Chartered in 1780, first settled in 1790. It contains three churches, a Congregational, Methodist, and Universalist, a town-house for public meetings, four stores, two filling-mills, two grist-mills, nine saw-mills, one oil-mill; 12 schools, 423 scholars. Pop. 1592.

MORRISTOWN, p. t., St. Lawrence co., N. Y., 130 m. N.N.W. Albany, 468 W. Bounded N.W. by St. Lawrence river. Black lake, which is 30 m. long, and from 1 to 24 m. wide, extends through the town. There is a good landing-place on St. Lawrence river. It contains an inexhaustible mine of plumbago or black lead, which yields 80 per cent. of the metal; and has two churches, an Episcopal and a Presbyterian, three stores, one filling-mill, six saw-mills; 15 schools, 478 scholars. Pop. 2809.

MORRISTOWN, p. v., Morris L., capital of Morris co., N. J., 33 m. N. by E. Trenton, 224 W. Situated on the S. side of Musconetcong river, on an elevated plain, which slopes on two sides to the river, commanding a fine view of the surrounding country. It is regularly laid out with streets crossing each other at right angles, with a public square in the centre, ornamented with trees. It contains a neat courthouse of brick, with a jail in the basement, a bank, an academy, four churches, a Presbyterian, Episcopal, Methodist, and Baptist, 30 stores, one iron-works, one grist-mill, one oil-mill, two paper-mills, five wagon factories, two printing-offices, two weekly newspapers, and about 2200 inhabitants. The place is supplied with pure spring water by an aqueduct a mile and a half long. The houses are generally well-built and neatly painted, with fine gardens attached. The Morris and Essex railroad has cars which pass four times daily between this place and Newark, where it connects with the railroad from New-York to Philadelphia. It is noted as a station of the American army, during the revolutionary war, and the ruins of an old fort, overgrown with stately trees, on a hill commanding the town, still mark the spot.

MORRISTOWN, p. v., capital of Henry co., Ill., 141 m. N.W. Springfield, 870 W. Situated 4 m. S. of Green river, and contains a courthouse, and several stores and dwellings.

MORRISVILLE, p. v., Eaton t., capital of Madison co., N. Y., 103 m. W. by N. Albany, 359 W. Incorporated in 1819. It contains a courthouse and clerk's office of stone, a jail of wood, three churches, a Baptist, Methodist, and Presbyterian, an academy, a printing-office, issuing a weekly newspaper, five stores, one furnace, one woollen factory, one grist-mill, one saw-mill, one comb factory, 123 dwellings, and about 750 inhabitants. It was founded in 1808.

MORRISVILLE, p. v., Bucks co., Pa., 30 m. N.E. Philadelphia, 125 m. E. Harrisburg, 165 W. Situated on the W. side of Delaware river, opposite to Trenton. Good water-power is obtained from the river. It contains three stores, one grist-mill, one saw-mill, one paper-mill, one button factory; one school, 65 scholars. Pop. 405. Here is a beautiful bridge across the Delaware, suspended from five arches, supported on piers, which is 1100 feet long and 36 ft. wide. MOSCOW (Russ. *Москвa*), a large city of European

MOSCOW.

Kremla, long the residence of the sovereigns, and still one of the capitals of the empire, on the navigable river Moskva, 400 m. S.E. Petersburg, lat. 55° 45' 13" N., long. 37° 33' E. Pop., in 1838, 364,562.

The total pop. of the city, in 1830, amounting to 305,631, was, according to M. Androsoff, classified as follows:*

	Males.	Females.	Total.
Clergy	1,679	3,367	4,946
Nobles and superior officers	10,420	11,304	22,224
Bazochiers	10,167	8,779	19,546
Retail merchants	8,728	7,488	16,316
Dr. lower traders	31,651	33,636	47,987
Artisans and workmen	8,036	4,426	12,461
Foreigners	1,466	1,255	2,691
Peasants, &c.—			
1. Of the crown	30,564	4,034	36,619
2. <i>Zur openages</i>	2,088	749	2,847
3. Of private individuals	37,794	6,788	45,583
4. Domestic servants	42,398	28,714	70,332
Infantry grades of the army—			
1. On active service	12,300	1,468	13,768
2. On leave of absence	8,365	10,329	18,714
Students, inmates of convents, &c.	4,411	4,949	8,561
Total	164,900	180,638	305,631

This city, which was founded in 1147, is one of the most singular in the world. It is of a circular form, and covers a large extent of ground. The central part, on an eminence on the N. side of the river, is occupied by the kremlin, or citadel, containing the palace of the czars, with cathedrals, monasteries, squares, &c., built at different epochs, and in the most incongruous styles of architecture. The other quarters of the city lie round this central nucleus, increasing in magnitude according as they diverge from it. On the outside of all are the *slabodes*, or suburbs. The Moskva, which has a very tortuous course through the city, is crossed by various bridges, some of stone, but the greater number of wood.

Previously to the conflagration of 1812, which destroyed two thirds of the city, Moscow presented the most extraordinary contrasts—palaces alternating with huts, Asiatic with European buildings, and open fields and gardens with crowded streets. "If I was struck with the irregularity of Smolensk," says Mr. Cox, "I was all astonishment at the immensity and variety of Moscow; a city so irregular, so uncommon, so extraordinary, and so contrasted, never before claimed my attention. The streets are in general exceedingly long and broad: some are paved; others, particularly those in the suburbs, formed with trunks of trees, or boarded with planks like the floor of a room; wretched hovels are blended with large palaces; cottages of one story stand next to the most stately mansions. Many brick structures are covered with wooden tops; some of the timber houses are painted, others have iron doors and roofs. Numerous churches present themselves in every quarter, built in the oriental style of architecture; some with domes of copper, others of tin, gilt or painted green, and many roofed with wood. In a word, some parts of this vast city have the appearance of a sequestered desert, other quarters of a populous town; some of a contemptible village, others of a great capital." (*Travels in the North*, i., 263.; see also *Clarke*, i., 80, Euro. *Ed.*)

There is no longer any question that the conflagration of 1812 was the act of the Russian government, in the view of rendering it impossible for the French to winter in the city. With the exception of the Kremlin, and the quarter (*Bielogorod*) immediately surrounding it, on the N., the rest of the city was mostly destroyed; and in some quarters the destruction was so complete that the lines of streets could with difficulty be recognised. The Kremlin, too, though it escaped the conflagration, suffered severely from the mines sprung under its walls, by order of Napoleon, on its evacuation by the French. But this wide-spread desolation was repaired in a very few years. Like a phoenix, Moscow has risen from her ashes larger and more beautiful than ever. The streets have been widened, and the buildings are less singular and discordant: still, however, the old and distinctive character of the city is preserved, being at once "beautiful and rich, grotesque and absurd, magnificent and mean." According to M. Androsoff, there were in all 9482 houses in the city in 1831; of which 3127 were of brick and stone, and the residue timber. The erection of a wooden house is an easy matter. A market, held in a large open space in one of the suburbs, exhibits a variety of materials for house building, consisting of trunks of trees cut, shaped, and morticed into each other. The purchaser who wants a dwelling repairs to the spot, explains the number of rooms he requires, examines the different timbers, which are regularly numbered, and bargains for what suits him. The whole is either paid for on the spot, and taken away by the purchaser, or the seller may agree to transport and erect it at the place where it is wanted. A dwelling may thus be bought, transported, raised, and inhabited, within a week!

* *Schneider La Russie*, p. 20.

The Kremlin, which has been completely repaired since 1812, comprises the imperial palace, the archbishop's palace, the cathedral of the Assumption, in which the Russian sovereigns are crowned, with the cathedrals of St. Michael, the Annunciation, &c. It also contains the belfry of Ivan Veliki, a tower 2664 ft. in height, having within it, at different stories, 32 bells, some of them of an immense size: on festivals they are tolled without interruption, the Russians being passionately fond of bell-ringing. The great bell of Moscow, weighing 10,080 pounds, or 360,000 lbs. (1000 tons Eng.), is now lying on the ground, at a short distance from the tower of Ivan Veliki. It is said to have been once suspended in a wooden building; but this taking fire, the water thrown upon it, to extinguish the flames, occasioned the large rent now seen in the bell. But the fact of its ever having been suspended is doubtful, and the rent was probably occasioned by some defect in the casting. On festivals, the peasants resort to this bell as they would to a sanctuary. Among the other public buildings, may be mentioned the palace of Arms, in the Kremlin; the founding hospital; the bezaar, an immense building, containing a great number of shops; the imperial theatre; the hall, for exercising the troops in bad weather, built by the emperor Alexander (of vast dimensions, being 500 ft. in length, 180 in breadth, and 50 in height, the roof not being supported on pillars); the arsenal; the palace of the senate; the university; the postoffice; the Pachkov palace; the great military hospital. The number of churches, though lessened by the fire, is still immense. In 1831 they amounted, in all to 288, of which seven were for Catholics.

The university founded in 1755, is the most ancient in Russia. It had, in 1835, 190 professors and sub-professors, and 419 pupils. Among the other educational establishments, may be mentioned the gymnasium, dependent on the university; the theological academy, one of the principal in the empire; the medico-chirurgical academy; the military school, or *corps de cadets*, with 600 pupils; the commercial school, founded in 1804; the establishments of St. Catherine and Alexander, for the education of young ladies; the veterinary school; the institute of Lazzarus, so called from its founder, with 80 pupils, and a library particularly rich in Armenian literature, &c. There is, however, a great want of elementary schools for the lower classes; Moscow being, in this respect, far below Petersburg, defective as is the latter.

There are a number of literary societies, libraries, &c. The best library belongs to Count Tolstol. The university library was partly destroyed in 1812; but it has since been enriched by fresh purchases and donations, and contained, in 1835, about 45,000 volumes. Several nobles have extensive collections of books, pictures, medals, &c.

The founding hospital is a vast establishment, and is managed in the best possible manner. During the ten years ending with 1831, the admissions were 52,540, and the deaths 24,713. In point of fact, however, a large proportion of the children brought to this, and to all similar establishments, are all but dead before they arrive; and the real objection to such institutions consists not so much in their great mortality, as in the encouragement they hold out to licentiousness, and the desertion of children. The great military hospital has above 1500 beds; and an undoubted judge, Baron Larrey, has declared that its organisation is excellent. There is also the hospital of St. Catherine, the hospital of Galitzen, &c. The population of the hospitals attached to the city in 1830 amounted to 22,337 individuals.

Moscow is the favourite residence of many of the Russian nobles, who pass the winter in the greatest splendour; not being overhauled, as at Petersburg, by the court. According to M. Lecoq de Laureau (*Guide du Voyageur à Moscou*), there were reckoned in the city, in 1830, 3306 shops, 476 inns and hotels, 244 restaurants, 131 kabuks, or places for the sale of spirits, 58 kabuks for the sale of beer, 125 cellars for the sale of wine, 115 bakehouses, and 25 apothecaries' shops.

Manufactures are prosecuted here on a much larger scale than in Petersburg; but a large proportion of the works on account of the manufacturers and capitalists of Moscow are not in the city, but in the adjoining towns and villages, sometimes at a considerable distance from the capital. The principal establishments are those for the manufacture of cotton, woollen, and silk fabrics, many of which are upon a very large scale, and are fitted up with steam-engines and other improved machinery. Hats, also, are extensively produced; and there are numerous tanneries, breweries, distilleries, &c.

Moscow is the grand entrepôt of the internal commerce of the empire. It has a water communication with Petersburg and Riga, on the Baltic, Astrakhan, on the Caspian, and Odessa, on the Black sea. In spring, or after the breaking up of the ice, the Moskva is navigable for boats, but during the rest of the season it is navigable for rafts only. A great deal of the commercial intercourse between the

MOSELLE.

city and the adjacent and distant provinces is carried on in winter by the sledge-roads.

The same causes which occasion a very great preponderance of males over females at Petersburg (which see), exist in Moscow, though to a less extent, and have a similar result.

MOSELLE, a frontier dep. of France, reg. N. E., formerly a part of Lorraine, chiefly between lat. 49° and 49° 30' N., and long. 5° 30' and 7° 40' E., having N. and E. Luxemburg, Rhenish Prussia, and Rhenish Bavaria; S. the depts. Bas-Rhin and Meurthe, and W. that of the Moselle. Area, 533,796 hectares. Pop., in 1836, 417,003. The E. part of the dep. is covered with ramifications of the Vosges, and the W. with those of the Ardennes mountains; but neither rise to any considerable height. The general slope of the dep. is toward the N., which is the direction followed by its principal rivers, the Moselle in the W., the Sarre in the E., and their affluents, the Orne and Nied. Some portions of the surface are very marshy. Near the Vosges, where primary formations prevail, the soil is stony; elsewhere it is chalky or clayey, and, in general, of indifferent quality, only about 10,000 hectares being said to be rich land. In 1834, the arable lands were estimated to comprise 303,913 hectares; pastures, 45,597; woods, 92,938; and orchards, gardens, &c., 11,990 hectares. According to Hugo and the *Dict. Géog.*, agriculture has of late made considerable progress in this dep.; and certainly it would seem, from the statements of Mr. Jacob, by whom it was visited in 1819, that, both in this respect and in the condition of the population, there was ample room for improvement. "Through the whole distance," says he, "of 50 m. from the Prussian frontier to Metz, there is not a single good house to be seen, except the convent, and the house of the iron master at Forbach. There is nothing in any of the villages, large and populous as they are, nor within sight of the road, though it is an open country, that looks like a decent farmer's or clergyman's house. All seemed of the same standard; each filthy, dilapidated, and small, with barn and stables adjoining, of corresponding appearance. The horses and wagons look miserable; the cows, few and poor; and I did not see more than fifty sheep, which were of a bad race, and nearly half of them black. The inhabitants were ill clothed, and at every stoppage we were assailed by numerous beggars. The cultivators (near Metz) are all proprietors. They or their parents generally bought the land, at the revolution, for paper money; before which they were bound to their lords in certain feudal services and payments, and were supplied by them with the capital requisite for cultivation. In the worst parts of Germany, where the soil is poorest, and where the feudal power is still in force, the peasantry are better clothed, have more furniture in their houses, and display more new and repaired houses, than are seen in the district from Metz to Verdun. Between those cities, the towns and villages are miserable receptacles of filth and poverty." (*Jacob's View of Agriculture in Germany*, &c., p. 435, 436.)

Besides wheat, oats, and barley, the other principal articles of culture are turnips, fax, hemp, and oleaginous plants.

Moselle furnishes about 180,000 hectolitres a year of second-rate wine, the best of which is the red wine produced in the arrond. of Metz. The white wines are mostly light, and *de peu de durée*. (*Jullien*, 42.) Though the pastures are good, all kinds of live stock, except hogs, are said to be inferior. Quills and honey are important articles of rural produce; cantharides are collected in summer near Metz. In 1834, of 153,968 properties subject to the *contribution foncière*, 84,651 were assessed at less than five francs, and 22,518 at between five and ten francs; only 95 were assessed at 1000 fr. or upward. Iron, which is everywhere abundant, and usually of good quality, is extensively produced and wrought, especially in the arrond. of Thionville. There are many potteries and some glass factories in the dep. Lorraine is famous for its linens; but the value of those produced in this dep. does not exceed 1,800,000 fr. a year. Woollen cloths, lace, paper, glue, and leather are the other principal products. Manufacturing industry may, in fact, be said to have originated and grown up in this dep. since the revolution; but in the interval since that event, has made considerable progress. Moselle is divided into four arrond.: chief towns Metz, the cap., Briey, Thionville, and Sarreguemines. It sends six members to the chamber of deputies. Number of electors, in 1838-39, 1791. Total public revenue (1831), 13,577,481 fr. (*Hugo*, art. *Moselle*; *French Official Tables*.)

MOSELLE (an. *Mosella*), a river of W. Europe, flowing through the E. part of France, and the S. part of Rhenish Prussia; its basin being situated between that of the Nahe to the E., and the Meuse to the W. It rises in the Vosges dep. and mountains about lat. 46° N., long. 7° E., and runs generally in a N. N. E. direction, with a very tortuous course, to Coblenz, in lat. 50° 28', and long. 7° 33', where it joins the Rhine. Before entering the Prussian dominions, it

MOULINS.

traverses the French depts. Vosges, Meurthe, and Moselle, and separates Dutch Luxemburg from Rhenish Prussia. Its entire course is estimated at nearly 300 m., for about half of which it is navigable. Its average breadth is about 170 yards; its mean depth 6 ft., and its ordinary rate of current about 1½ m. an hour. Its principal affluents are the Madon, Meurthe, Sella, Sarre, and Sura; Epinal, Toul, Metz, Thionville, Treves, Traubach, and Coblentz, are on its banks. The surrounding country is subject to its inundations, which do much damage; but it is of immense utility as a channel of internal communication, large quantities of timber, slate, coal, charcoal, brandy, ash, pitch, oak bark, glass, and earthenware, and wine being sent by it to the Rhine. (*Dict. Géog.*; *Schreiber's Guide du Rhin*, &c.)

MOSTAR, a town of European Turkey, pach. Bosnia, and sandjak Herzegovina, of which it is the cap., on the Narenta, crossed here by a Roman bridge, 48 m. S. W. Buzi Serni; lat. 43° 30' N., long. 17° 58' E. Pop. probably under 10,000. It is surrounded by crenellated walls, and its principal streets are on the right bank of the river, about one third of the town being on the other side. It has a celebrated manufacture of swords and fire-arms, besides a extensive traffic in cattle, corn, and wine, brought thither from a great distance. (*Stein*, *Dict. Géog.*)

MOSUL, a city of Asiatic Turkey, pach. of Bagdad, chiefly interesting as being near the site of Nineveh, the celebrated capital of the first Assyrian empire. It stands on the W. bank of the Tigris (here very rapid, 300 ft. broad, and crossed by a bridge of boats, as well as an older one of stone), 193 m. N. N. W. Bagdad, lat. 36° 31' N., long. 40° 11' E. Pop., according to Kinneir, 35,000; of whom, about 9000 are Christians, 1500 Jews, and the rest Arabs, Turks, and Kurds. The city is so near the level of the river, that its streets are often flooded, and, like almost every other town in Turkey and Persia, it is in a declining state, its walls being broken down, and its best buildings crumbling into ruins. It has seven gates, and the castle, now in ruins, occupies a small artificial island in the Tigris. Streets narrow and irregular. Houses built partly of stone, partly of plastered brick, with vaulted roofs and ceilings, surrounded by flat terraces. The mosques, of which there are several that possess considerable beauty, the coffee houses, khans, hammams, and bazars, are handsomer than in most Turkish towns, and the market is well supplied with provisions from Kurdistan. The Greek Christians have nine churches, and there is a Dominican convent. The principal monument of the city are, a college, the tomb of Sheikh Abd-ul-Casim, and the remains of a fine mosque, the minaret of which was built by Nouredin, sultan of Damascus. West of the Tigris, the environs are wholly uncultivated; and this circumstance, combined with the great extent of the cemetery close under the walls, gives it a gloomy and melancholy aspect.

Mosul is under the separate jurisdiction of a pach of two tails: it formerly had a large caravan trade with all parts of Asia, but has lost much of its commercial importance; it still, however, carries on a trifling trade with Bagdad and Asia Minor; to the former of which it sends, on rafts down the Tigris, gall-nuts and copper, from Kurdistan and Armenia, receiving in return Indian commodities, afterwards forwarded to Diarbekr, Orfa, Tokat, Aleppo, &c. Its only manufacture is that of coarse blue cotton cloths, used by the lower orders of the population.

The climate is proverbially healthy, the average temperature of summer not exceeding 66° Fahrenheit; but in spring, during the floods of the Tigris, epidemics are common, though not often fatal. Several sulphur springs are found within a short distance of the town, and are much resorted to for cutaneous diseases. The geological formation of its immediate vicinity consists, according to Alshworth, of solid beds of massive, compact, and granular calcareous gypsum, arranged in horizontal strata, not fossiliferous, of a bluish white colour, and extensively quarried as marble. Superimposed on the gypsum is a thin formation of a friable limestone, abounding in shells, and forming the common building stone of Mosul, as it probably also formed that of the ancient Nineveh. (*Kinneir*; see also *NINEVEH*.)

MOULINS, a town of France, cap. dep. Allier, on the river of that name, which is here crossed by a handsome stone bridge of 13 arches, in a fertile plain, 150 m. S. S. E. Paris; lat. 46° 34' 4" N., long. 3° 20' 14" E. Pop., in 1838, 14,382. Streets narrow and irregular, but clean and well-paved; houses chiefly of brick, but a few also of stone, especially in the principal avenue, the *rue de Paris*. It has three public squares, that of the Allier being by far the largest and best built. It is well supplied with water from numerous fountains. The chief public edifices are the church of Notre Dame and the Visitation, the royal college, established in the suppressed convent of the latter, the town-hall, hotel of St. Cyr, and a recently erected hall of justice. It has also two large hospitals, barracks, a public library

MOULTONBOROUGH.

with 30,000 volumes, a museum of natural history, and a small theatre. Several fine walks run in different directions out of the town; and in the neighbourhood are extensive vineyards, and mulberry plantations for breeding silkworms. Coal and limestone are wrought a short distance from the town, and are articles of considerable trade. Moulins is the seat of a tribunal of primary jurisdiction and commerce, a chamber of manufactures, and a society of agriculture, sciences, and arts: it has a large manufacture of cutlery, especially scissars, which are highly esteemed, and smaller establishments for making coarse cotton and woollen fabrics, haberdashery, and bays, with steam corn-mills, glass-houses, and tan-yards. It has a considerable trade in corn, wine, silk, timber, coal, and cattle, chiefly with Orleans, by the Loire navigation; but also with Bourges, Macon, &c.

Moulins, which existed as a town so early as the 11th century, became the residence of the Dukes of Bourbon in 1368. A famous assembly convoked here in 1565, by Catherine de Medici, was followed by the long and sanguinary war of the league. (*Hugos, art. Allier, &c.*)

MOULTONBOROUGH, p. t., Carroll co., N.H., 46 m. N. Concord, 587 W. Chartered in 1763, first settled in 1764. Bounded S. by Winnipissee lake, into which a considerable neck of land extends. Between this town and Holderness lies Squam lake, 6 m. long, and in its widest part 3 m. wide, containing several islands, the largest of which is a mile long and one third of a mile wide. It is a beautiful sheet of water. It has its outlet into Pemigewasset river. In the N. part of this township are Great Ossipee and Red mountains, over which the wind often blows with great violence. A mineral spring at the base of the Ossipee mountain contains iron and sulphur. There is also a spring 16 ft. in diameter, which discharges water sufficient for a mill stream. Interesting aboriginal remains are found. It contains two churches, a Congregational and Christian, three stores, three grist-mills, three saw-mills; one academy, 11 students; 18 schools, 714 scholars. Pop. 1752.

MOUNT CARMEL, p. v., capital of Wabash co., Ill., 106 m. S.E. Springfield, 714 W. Situated on elevated ground on the W. side of Wabash river. It contains a courthouse and jail, of brick, two churches, a Methodist, and a German Reformed, with which the Evangelical Lutherans are associated; 12 stores, three saw-mills, and one ox tread-mill, one iron foundry and machine shop, and about 1200 inhabitants. Steamboats frequently arrive and depart.

MOUNT DESERT, p. t., Hancock co., Me., 146 m. E. Augusta, 688 W. It is southern of two townships into which mount Desert is divided. This island lies between Frenchman's and Blue Hill bays, and is 45 m. long and 12 broad. The town has excellent harbours, and considerable navigation employed in the coasting trade and the fisheries. It contains six stores, two fulling-mills, two woollen factories, two grist-mills, nine saw-mills; 32 schools, 887 scholars. Pop. 1867.

MOUNT HOLLY, p. t., Rutland co., Vt., 79 m. S. Montpelier, 468 W. Incorporated in 1792. Watered by Mill river, a branch of Otter creek. It has two stores, two grist-mills, four saw-mills; 11 schools, 300 scholars. Pop. 1856.

MOUNT HOLLY, p. v., Northampton t., capital of Burlington co., N.J., 18 m. S. Trenton, 156 W. Situated at the head of tide-water and of navigation on Rancocas creek. It is regularly laid out on seven streets, and contains a brick courthouse, 40 by 60 feet, two stories high, with a cupola, a jail of stone, five churches, an Episcopal, Methodist, Baptist, and two Friends; two female academies, a bank, eight stores, one fulling-mill, one woollen factory, one grist-mill, one saw-mill, one plaster-mill, a large paper-mill, 240 dwellings many of them of brick and neat, and about 1400 inhabitants. A library company was established here as early as 1705; and, at the period of the revolution, the town had 200 dwellings.

MOUNT HOLYOKE, mt., Hampshire co., Mass., 3 m. S.E. of Northampton. It is 830 feet above the level of Connecticut river, and its top presents the beautiful windings of the river, and altogether one of the finest views in New-England.

MOUNT HOPE, p. t., Orange co., N.Y., 11 m. W. Goshen, 112 m. S.W. Albany, 276 W. Watered by Shawangunk creek. It contains a Presbyterian church, nine stores, one fulling-mill, one woollen factory, five grist-mills, three saw-mills, three tanneries, two distilleries, one printing-office, one periodical; one academy, 100 students; four schools, 318 scholars. Pop. 1565.

MOUNT JOY, t., Adams co., Pa., 6 m. S. Gettysburg. Watered by Rock and Willows creeks. It has two flouring-mills, two grist-mills, three saw-mills. Pop. 1031.

MOUNT JOY, p. t., Lancaster co., Pa., 25 m. S.E. Harrisburg, 123 W. It has Little Chiques creek on its E. border, and Conewango creek on the N.W. It contains eight

MOUNT VERNON.

stores, four flouring-mills, three grist-mills; three schools, 93 scholars. Pop. 2375.

MOUNT MARCY, Keene t., Essex co., N.Y., is the highest peak of the Adirondack mountains, 5476 feet above tide water in Hudson river. There are several other peaks in the vicinity, nearly as high, and little inferior in elevation to the celebrated White mountains in New-Hampshire.

MOUNT MORRIS, p. t., Livingston co., N.Y., 16 m. S. Geneseo, 242 m. W. Albany, 353 W. Watered by Genesee river, across which is a dam with a raceway, affording good water-power. It contains 24 stores, one furnace, two fulling-mills, two grist-mills, four saw-mills, one tannery, one pottery, one printing-office, two weekly newspapers; one academy, 60 students; 12 schools, 430 scholars. Pop. 4576.

MOUNT PLEASANT, t., Westchester co., N.Y., 6 m. N. White Plains, 125 m. S. Albany. It has an abundance of marble of a good quality. It contains the village of Singing, where is a state prison. See Singing. The township has four academies, 195 students. Pop. 7367.

MOUNT PLEASANT, t., Adams co., Pa., 17 m. N.E. Gettysburg. Watered by branches of Conewago creek. It contains three stores, three flouring-mills, three grist-mills, three saw-mills, one distillery, one pottery; nine schools, 300 scholars. Pop. 1588.

MOUNT PLEASANT, p. t., Westmoreland co., Pa., 170 m. W. Harrisburg, 196 W. Drained by Big Sewickly and Jacob's creeks. It contains two churches, a Methodist and Baptist; 10 stores, one flouring-mill, four tanneries, 13 distilleries; five schools, 120 scholars. Pop. 2123.

MOUNT PLEASANT, t., Wayne co., Pa. Drained by head branches of Lackawaxen, Dyberry, and Equinunk creeks. It has 11 schools, 190 scholars. Pop. 1359.

MOUNT PLEASANT, t., Washington co., Pa. It has four stores, one flouring-mill, one grist-mill, two saw-mills; one academy, 11 students; nine schools, 300 scholars. Pop. 1203.

MOUNT PLEASANT, p. t., Jefferson co., O., 131 m. E. by N. Columbus, 377 W. Bounded N. by Short creek. It contains 10 stores, one woollen factory, three flouring-mills, three saw-mills, two tineries; one academy, 140 students; three schools, 250 scholars. Pop. 1876. The village contains three churches, a Methodist, Associate Reformed, and Friends, all of brick; a bank, a market-house, several stores, a printing-office, 190 dwellings, and about 700 inhabitants.

MOUNT PLEASANT, p. v., capital of Harlan co., Ky., 165 m. S.E. Frankfort, 473 W. Situated on the N. side of Clover fork of Cumberland river. It contains a courthouse, jail, clerk's office, and several stores and dwellings.

MOUNT PLEASANT, p. v., capital of Martin co., Ia., 106 m. S.S.W. Indianopolis, 653 W. Situated on the W. side of the E. fork of White river. It contains a courthouse, jail, two churches, four stores, 40 dwellings, and about 250 inhabitants.

MOUNT PLEASANT, p. v., capital of Henry co., Iowa, situated on the N. side of Big creek, and contains a brick courthouse in the centre of a public square, 100 dwellings, and about 500 inhabitants.

MOUNT SOBREL (properly, *mount Socor-Aitz*), a market-town of England, in E. Goscoote hund., co. Leicester, parish of Bothley and Barrow-upon-Soar. Pop. of township, in 1841, 1536. It derives its name from being situated close to a steep craggy hill of red granite, which rises immediately from the Soar. On its highest point there formerly stood a fortress, which, being taken by Henry III., was soon after entirely demolished. The town, built along the great road between London and Nottingham, consists chiefly of houses constructed of granite: the principal buildings are, the town-hall (in which the petty sessions for the hundred are held), a church, subordinate to that of Barrow, and three places of worship for dissenters.

Mount Sobrel has some share in the hosiery trade of Leicester; and it has derived much benefit from its position on the Great North road; but this advantage it is likely to lose, from the recent opening of the Midland Counties railway. Markets on Monday.

MOUNT STERLING, p. v., capital of Montgomery co., Ky., 59 m. E. Frankfort, 514 W. Situated on a branch of the S. fork of Licking river. It contains a courthouse, jail, 10 stores, and 585 inhabitants.

MOUNT STERLING, p. v., capital of Brown co., Ill., 77 m. W. by N. Springfield, 854 W. It contains a courthouse, and several stores and dwellings.

MOUNT VERNON, p. t., Kennebec co., Me., 15 m. N.W. Augusta, 609 W. Incorporated in 1792. It contains six stores, two fulling-mills, two grist-mills, four saw-mills; 608 scholars in schools. Pop. 1475.

MOUNT VERNON, Fairfax co., Va., 9 m. below Alexandria, on the W. bank of Potomac river. It contains the former mansion-house of, and at present, the tomb of Washington, which is often visited, not only by American citizens, but by foreigners, who take a peculiar interest in the

MOURZOUK.

memorials of this great man, "first in war, first in peace, and first in the hearts of his countrymen."

MOUNT VERNON, p. v., capital of Knox co., O., 51 m. N.E. Columbus, 376 W. Situated on Vernon river, and contains a fine courthouse, a jail, four churches, two Presbyterian, a Protestant Methodist, and an Episcopal; 90 stores, three flouring-mills, two saw-mills, one oil-mill, two printing-offices, 250 dwellings, and 3362 inhabitants.

MOUNT VERNON, p. v., capital of Freney co., Ia., 188 m. S.W. by S. Indianapolis, 749 W. Situated on a high bank, on a N. bend of Ohio river, of which it commands a view for 16 m. It contains a courthouse, jail, 15 or 20 stores, a steam flouring-mill and saw-mill, and about 900 inhabitants.

MOUNT VERNON, p. v., capital of Jefferson co., Ill., 139 m. S.S.E. Springfield, 794 W. It contains a courthouse, jail, three churches, an Episcopal, Methodist, and Baptist; nine stores, and about 300 inhabitants.

MOURZOUK. See FIZKAN I. 908.

MOYAMENSING, L. Philadelphia co., Pa. It lies S. of the city of Philadelphia, of which it is a suburb, if not a part; though it is under a distinct incorporation, governed by nine commissioners elected for three years, three of whom are elected annually. Incorporated in 1819. Adjoining the city it is compactly built, and contains 197 stores, one cotton factory, one brewery; two academies, 745 students; 14 schools, 2156 scholars. Pop. 14,573.

MOZAMBIQUE, a city and seaport of E. Africa, capital of a colony belonging to the Portuguese, lat. 14° 40' S. long. 40° 45' E. Pop. 3000. It stands on a crescent-shaped island of coral, very low and narrow, and scarcely 1½ m. in length, near the entrance of a deep inlet of the sea, which forms its harbor. The fort, which has six bastions and 80 cannon, is in bad repair: the city comprises a large square, and several narrow, dirty streets, lined with lofty houses fast falling to decay. The governor's palace is an extensive stone building, with a flat lead roof, and a square court in its centre. Three churches, an old town-hall, and hospital, are the only other public edifices. Black town, at its S. extremity, is wholly inhabited by negroes, and consists of bamboo and oster huts.

The administration of the colony is vested in the governor, aided by a council comprising the bishop, the commander of the troops, and the chief civil minister; but it is extremely corrupt, and nearly all the functionaries, both civil and military, are criminals exiled from Portugal. Exclusive of about 500 Portuguese and Creoles, the population consists of free blacks and slaves, with about 800 Arabs and Banyans, chiefly engaged in petty trade and handicraft. The irregular life led by the Europeans, and the general insalubrity of the climate, prevent any increase in the white population; and, at an average, of 100 soldiers, seven only survive a residence of five years. The rural population is in the most degraded state; and, although the soil is naturally rich and productive, the culture of cotton, indigo, sugar, and other articles of commerce is wholly neglected. Rice, millet, and manioc, are raised almost without labour; furnishing, with cocoa nuts, almost the entire food of the slaves. The commerce of Mozambique has greatly decreased, in consequence of our exertions to suppress the traffic in slaves; but, though much diminished, the trade is still carried on to a considerable extent both with Brazil and Arabia. These slaves, who are chiefly of the tribe of Monjores, and brought from the centre of the continent, a distance of 40 or 45 days from the colony, are procured from the native merchants in exchange for salt, shells, tobacco, coarse cloths, &c.; goods costing about two dollars will bring in, as the case may be, either a slave, or an elephant's tusk, weighing from 60 to 80 lbs. of ivory; hippopotamus' tusks, gold dust, columbo-root, gums, and amber, are the other chief exports; the imports comprise tea, sugar, coffee, cotton and woollen cloths, with other articles from India, Demaua, and Goa. A duty of 16½ crusadoes is levied on every slave exported: all other imports and exports are free of duty.

Mozambique was first visited by Vasco de Gama in 1498; and in 1506 Albuquerque made it the centre of the Portuguese possessions in this part of the world, and the seat of the viceroy of the African colonies. When the Portuguese lost their Indian possessions at the commencement of the 17th century, Mozambique began to decline, and has ever since been in a languishing state. The territory, however, still extends from cape Delgado northward to Delagoa bay southward, having a length of coast exceeding 1400 m., and comprising, besides the capital, the several settlements of Ibo, Pemba, Conducia, Mokamba, and Quilmanse. The channel between the E. coast of Africa and Madagascar is called the Mozambique channel. (Ritter's Africa, i., 202-204, &c.)

MUDDY CREEK, t., Butler co., Pa. It has five stores, one grist-mill, seven saw-mills, two tanneries; 13 schools, 504 scholars. Pop. 1998.

MULLENBURG, county, Ky., situated centrally to

MULLINGAR.

wards the W. part of the state, and contains 49 sq. a. Bounded N.E. by Green river, by branches of which it is watered. It contained in 1840, 8326 neat cattle, 7661 sheep, 28,950 swine; and produced 34,960 bushels of wheat, 20,88 of Indian corn, 37,751 of oats, 1326 of potatoes, 28,747 pounds of tobacco. It had 15 stores, one furnace, seven grist-mills, four saw-mills, one oil-mill, five tanneries, ten distilleries, four schools, 98 scholars. Pop.: whites, 835; slaves, 1196; free coloured, 13; total, 6864. Capital, Greenville.

MULLICA, t., Atlantic co., N.J. It contains 23 stores, one furnace, three grist-mills, seven saw-mills; five schools, 296 scholars. Pop. 1056.

MULHAUSEN, a town of the Prussian dom., prov. Saxony, reg. Erfurt, cap. circ., on the Unstrut, 20 m. N.W. Erfurt. Pop. with its suburbs, in 1838, 12,858. (Bergheim.) It is surrounded by a high wall, flanked with towers and encircled by a ditch; has an antiquated apse, several general Lutheran churches, a gymnasium, three hospitals, not an orphan asylum; and is the seat of a judicial officer for the town and circuit. It has manufactures of woollen and linen cloths, carpets, &c.; with dyeing-houses, tanning, oil mills, distilleries, breweries, and tanneries, and an active trade in corn and dyeing drugs. (Von Zedler's Berghaus.)

MULHAUSEN, or MULHOUSE, a town of France, dep. Haut-Rhin, cap. cant., on the Ill, 92 m. S. Colmar, and 6 m. N.W. Basle. Pop., in 1838, ex com., 12,789; ex vic com., 16,932; exclusive of about 7000 individuals, who come daily out of the neighbouring communes to work in the various factories. It is divided into the old and the new town. The former, entirely surrounded by the Ill (here crossed by several bridges), though irregularly laid out, has tolerably broad, well-paved, and clean streets, and some good houses. The Protestant and the Roman Catholic parish churches, the synagogue, town-hall, college, arsenal, and hospital, are its principal public edifices. One of its squares is a column erected to the astronomer Leonhart, born here in 1728. The new town, which extends on the S.E. as far as the canal uniting the Rhine and Rhodan, is handsomely laid out, and has numerous handsome residences, with the hall of the Society of Industry, the exchange, the chamber of commerce, &c.; it has also a capacious basin on the canal.

Until about the middle of last century, Mulhausen had only a manufacture of woollen cloths; but in 1745 cotton printing was introduced, and it is now one of the principal seats of the cotton manufacture in France. The cotton prints and mullins of Mulhausen and its neighbourhood are second only, as respects the perfection and variety of its patterns, to the silk goods of Lyons. (Bewering's Rep. on Switzerland, p. 34.) The manufacturers have, in many instances, branch establishments in other parts of Haut-Rhin and in the neighbouring departments; but Dr. Bewering states that many of their mills and factories are managed by the inhabitants of Basle; and, in fact, Switzerland furnishes considerable capital to the manufacturers of Alsace. (See art. REIN-HAUT in this work.) Hugo says that about one fifth part of its cotton goods are sent out of France. The work-people are badly clothed, dirty, and lodge generally in cellars, or other comfortable dwellings; but of late efforts have been made, by some of the more wealthy manufacturers, to improve the lodgings of the work-people in their employ. Wages are good: cotton printers of the first class get from 24 fr. to 3 fr. 30 c. a day; inferior workmen, from 1 fr. to 1½ fr.; women, an average of 1 fr. 20 c. and children, from 25 to 33 c. a day. Weavers (men and women) and male cotton spinners get from 1½ fr. to 3 fr. a day; females engaged in cotton spinning, from 75 c. to 1 fr. 10 c.

Intemperance is not so prevalent here as among the cotton weavers of the department du Nord; and, according to Villermé, the proportion of illegitimate children is but little above the general average of France.

The spinning-mills at Mulhausen are not in a flourishing condition, owing, in part, to their being obliged to use cotton imported by way of Havre or Marseilles. In point of fact, however, they are totally unable to withstand the competition of the English; and since Manchester and Glasgow-cotton twist has been admitted at a slight duty, as low as No. 170, they have ceased to spin any high numbers. Woollen cloths, hosiery, straw hats, morocco leather, and beer, are the other principal goods made at Mulhausen, which has also a brisk trade in iron, hardware, and agricultural produce. Before the revolution, this town was the capital of a small republic allied to Switzerland. It was annexed to France in 1798, and has rapidly increased since 1820. (Hugo, art. Haut-Rhin; Villermé, Tableau des Censiers, i., 14-30; Bewering's and Sydenham's Reports, &c.)

MULL. See HERRINGS.

MULLINGAR, an inland town of Ireland, prov. Leinster, co. Westmeath, of which it is the cap., on the Boyne, 44 m. W. by N. Dublin. Pop., in 1821, 3684; in 1831, 6565. It consists of one principal street, running E. and W., and

MUNCY.

several diverging streets and lanes. It has a parish church, a very large Roman Catholic chapel, a convent, a Presbyterian and a Methodist meeting-house, a large barrack, and the prison, courthouse, and infirmary for the county. Though not as incorporated borough, it sent two members to the Irish House of Commons till the union, when it was disfranchised. It has two schools, partly supported by the Educational board, one attended by about 250 boys, and the other by above 400 girls. Courts leet and baron, for small debts, are held every Thursday; and a court of record, with jurisdiction to the amount of £100. The assizes for the county are also held here; with general sessions in January, April, and July, and October; and petty sessions on Saturdays. It is a comestibulary and revenue police station. The county prison, built on the radiating plan, contains 100 cells and 15 other rooms for prisoners. It is a large market-town for corn, butter, cattle, and other agricultural produce, having an easy communication by the royal canal, which nearly encircles it, with Dublin on the one hand, and the Shannon on the other. It has two tanneries and a brewery. Markets on Thursdays; fairs, inferior only to those of Ballisloege, for the sale of cattle, on April 6, July 4, August 28, and November 11, the last chiefly for horses. Post-office revenue, in 1830, £273; in 1836, £1034.

MUNCY, p. b., 85 m. N. Harrisburg, 195 W. Situated 1 m. E. of Susquehanna river, and contains four churches, a Presbyterian, Episcopal, Methodist, and Baptist; nine stores, one furnace, one tannery, two distilleries, one printing-office, one weekly newspaper; two schools, 90 scholars. Pop. 662.

MUNCY CREEK, t., Lycoming co., Pa., 13 m. E. by N. Williamsport. Drained by Big and Little Muncy creek, which flows into the W. branch of Susquehanna river. It contains Muncy borough, exclusive of which it has two mills, two woolen factories, three grist-mills, three saw-mills, one tannery, one distillery; seven schools, 210 scholars. Pop. 1166.

MUNCY TOWN, p. v., capital of Delaware co., Ia., 58 m. N.E. Indianapolis, 529 W. It is on the S. bank of White river, elevated 36 feet above the water of the river. It is laid out in the form of an oblong, having its four principal streets, 66 feet wide, crossed at right angles by other streets, 45 feet wide. It contains a courthouse, jail, three stores, a saw-mill, with a fall in the river of 11 feet, and about 400 inhabitants.

MUNICH (Germ. *München*), a city of S. Germany, the cap. of Bavaria, highly interesting on account of its collections of the fine arts, on the Isar, crossed here by three bridges, about 280 m. W. Vienna, and 118 m. E.S.E. Stuttgart; lat. 49° 57' 30" N., long. 11° 34' 30" E. Pop. in 1840, 108,537, including military. The city stands in the midst of a plain, which is neither fertile nor picturesque, but is one of the most elevated in Europe, being nearly 1600 feet above the sea. In the last century it was only a second-rate fortified town, with castellated gates, and quaint, ancient-looking houses; but since the beginning of the present century, new quarters and suburbs have so far extended themselves beyond the walls, that the buildings now occupy nearly double the extent of the old town. "Munich," says the author of Germany and the Germans, "has kept pace even with Vienna in the march of modern improvement. This is everywhere visible; for we see new and splendid streets extending in all directions, fine palaces and public edifices, many of them magnificent, surrounded by extensive pleasure-grounds with fine walks and drives: in short, every object shows that it is flourishing beneath the sunshine of peace. Indeed, next to Berlin, Munich is the third city in the Germanic empire; for though Dresden, from its beautiful localities, is more captivating, yet this is the more striking; add to which, the one is dull and stationary, while the other is lively, attractive, and continually advancing in prosperity" (II., 319). It has, however, an unfinished appearance, in consequence of the open spaces that intervene here and there between the numerous edifices, many of which are still incomplete. The old town comprises numerous streets, diverging from a common central square, named the *Haupt-platz*, and running towards the walls, which form about it a species of irregular circle. A large and broad street runs from N.W. to S.E., called in different parts, the *Neubauer Strasse*, *Kaufinger Strasse*, and the *Theat.* The *Sendingen Strasse* is another leading avenue, and two narrow lanes, one of which passes through *Max-Joseph's-platz*, one of the finest squares in Europe, lead to a fine suburban line of streets. The *Ludwig's Strasse*, *Karl's-platz*, and *Maximilian's-platz* skirt the town on its W. and N. sides. The different public edifices that form the principal glory of Munich are chiefly on its N. side. Here, also, is the *Caroline-platz*, in the centre of which is an obelisk, 100 ft. high, formed partly out of cannon taken by the Bavarians in the late war. An equestrian statue of the elector, Max. I., by Thorwaldsen, decorates the *Wittelsbacher-platz*. The cathedral, a large brick edifice, erected at the close of the 15th century, has two tow-

MUNICH.

ers, 333 ft. high, and a fine monument of the emperor Louis of Bavaria. The church of the Theatines (so called from Caraffa, bishop of Theuse, the founder of the order) is a large structure in the Italian style, with a central dome flanked by two towers. The Jesuit's church, built at the end of the 16th century, is remarkable for its wide roof unsupported by pillars, as well as for two fine portions of marble, which form its grand entrance: it is 280 feet in length, and 14 feet wide; has 11 altars and a noble organ, with several monuments, one of which, by Thorwaldsen, to the memory of Prince Eugene Beauharnois, son-in-law of Napoleon, is one of the finest works of its kind. The church of St. Louis, in the Ludwig's-strasse, a brick building faced with marble, in the Byzantine Gothic style, has two towers, 250 ft. above the basement, and the nave is 250 ft. in length. The church of All Saints, recently finished, has some fine carvings and fresco paintings; but is much smaller, and with fewer pretensions to architectural beauty than those before mentioned. There are several other churches, and two have very lately been opened in the suburbs, both on a large scale, and tastefully ornamented with pictures and painted glass windows. A Protestant church, recently built, has a lofty open tower, and is celebrated for a remarkably fine-toned organ. The public cemetery lies outside the S. gate, and is of vast extent; open alike to Protestants and Catholics. Not far from it is the general hospital, a large building having accommodation for nearly 800 patients. The royal palace, or *Königs-resident*, consists of an older part, built in the 16th century, and comprising four irregular courtyards, as well as a more modern part, called *Neubau*, planned on the model of the Pitti palace at Florence, and fitted up in the most sumptuous style, though not yet completed. The apartments already finished are in the style of those seen in Pompeii, and comprise numerous fresco and encaustic paintings, base-reliefs, richly carved cornices, &c. At the back of the palace is the *Hofgarten*, a large, square, planted space, surrounded by arcades, with cafés, shops, &c., not unlike those of the Palais royal in Paris; the E. side being occupied by barracks. Connected with the *Hofgarten* eastward, is a kind of park, called the English garden. The new buildings of the palace face Max-Joseph's square, on another side of which is the opera-house, opened about 14 years ago, one of the largest and most elegant theatres in Germany; it is fitted to hold about 2500 spectators, and is equalled, as respects its performances, only by those of London, Naples, and Milan. Opposite the palace, in the same square, is the new post-office, copied from that of Rome, and in the centre is a statue of the late king, Max-Joseph I., by Rauch of Berlin.

The great glory of Munich, however, consists in its fine galleries of paintings and sculpture, called respectively the *Pinaetheca* (from *pinax*, a picture, and *θηκη*, a repository), and the *Glyptotheca* (from *γλυπτός*, a carving, and *θηκη*, a repository). The first of these, in the Baier Strasse, is in the Palladian style, with two wings, and has a front 500 ft. in length: the public entrance is at the E. end, the corridor is adorned with allegorical frescoes in compartments; and the collection, which for specimens of the Flemish and Dutch schools, is one of the finest in the world, occupies seven splendid halls and 23 adjoining cabinets on the first floor, the basement story being devoted to the reception of drawings, enameled, mosaics, &c. The collection of drawings comprises about 9000, including five by Raphael, 30 by Fra Bartolomeo, and several by Rembrandt, Albert Durer, and other Dutch and German artists. The paintings are limited to 1500, and consist of the *choix d'œuvre* from the king's collections, including the galleries of Dosseldorf, Mannheim, Deux-ponts, Schleissheim, and other galleries. Two of the apartments are devoted to the German school, and include the *Musee de la Boissière* gallery, purchased in 1837 for 375,000 flins, comprising specimens by Albert Durer, J. von Eyck, Schöner, Hans Hemling, &c. Three of the rooms contain pictures of the Flemish and Dutch masters, the principal of which are the "Murder of the Innocents," "Fall of the Damned," and other splendid works of Rubens; the "Village Fête" of Tonders; the "Musical Party," by Netcher; the "Girl with the Pitcher" and "The Mountebank," by Gerard Dow; "The Wise and Foolish Virgins," by Schalken, besides numerous highly-coloured works of Wanderwerf and Rembrandt, with various portraits of Vandyck. The specimens of the Italian school, comprised in two apartments, bear no comparison with the invaluable pictures just mentioned; but there are a few fine works by Raphael, Guido, Titian, Domenichino, Annibal Carracci, and Carlo Maratti. Belonging to the Spanish school, also, may be noticed "The Beggars" of Murillo, several works of Espagnoletto, and some portraits by Velasquez. There are also a few paintings of the English school, and among them is the well-known "Reading of the Will," by Sir D. Wilkie. The Glyptotheca in the Königs-platz is a chaste and elegant structure, in the Ionic style, erected like the last by the

MUNICH.

Barn Von Klenze, and has a noble central portion, the sides being adorned with statues in niches. The collection is distributed in 19 rooms, each of which is devoted to a distinct epoch in the art, and decorated in accordance with its contents. The walls are of scagliola-work, the floors of marble, and the ceilings richly adorned in fresco and stucco work. The marbles from the temple of Jupiter Panhellenius, in Egina, purchased by the present king for 10,000 sequins, occupy an entire room, and are particularly valuable, from their being the only extant specimens of the Eginetan school of statuary. The Ilioneus, however, is said to be "the gem of the collection," and one of the finest existing specimens of ancient art. The Roman hall far surpasses the rest in the splendour of its decorations; but the works that it contains are said to belong rather to the declining stage of the arts. The hall of modern sculpture has, among other works, the Paris and Venus of Canova, copied from that at Florence; the Adonis of Thorwaldsen, and a bust of the king by the same artist.

The Leuchtenberg gallery, formed by the late Prince Eugene Beauharnois, comprises a choice, though not very extensive collection, including, among other *chefs d'œuvre*, Murillo's famous Virgin and Child, with several cabinet pictures, by Raphael, Vandyck, Rembrandt, and Velasquez, with numerous works of modern French artists, and a few sculptures by Canova. The present king of Bavaria is certainly a liberal, and perhaps, also, a judicious patron of art; and nowhere is the modern German school of painting to be seen to greater advantage than at Munich. Several artists are kept in the king's employ, and an Academy of Arts has a triennial exhibition, supported by government, with salaried professors and pensioned students. This exhibition is encouraged and, in part, supported by a society which devotes annually about 8000 florins to the purchase of modern pictures. Munich was the birthplace of Senefelder, the inventor of lithography; and it has many eminent professors of that art, who have transferred to stone some of the most celebrated works of the Pinacotheca and Glyptotheca.

The university of Munich, originally founded at Ingolstadt in 1473, and removed thither in 1826, is the principal school of learning in Bavaria. It comprises 30 professors of four different faculties, with 1300 students, almost exclusively Bavarians, besides a library of about 160,000 volumes. Philological and theological seminaries, as well as two gymnasiums, are attached to the university; and the town has polytechnic, central, and subscription schools. But however high the celebrity of Munich, as respects music and the fine arts, the censorship of the press is fatal to the progress of literature, and to all the higher branches of philosophy. The royal library, lately removed to a noble building of great length, and three stories in height, is equalled only by that of Paris, the best authorities estimating its contents at 540,000 printed books, and 16,000 MSS. The reading-room is open for five hours during three days of the week; but the books may not be withdrawn from the building. The collection of engravings amounts to 300,000; and there are about 10,000 Greek and Roman coins. The museum of natural history is small and poor, containing but few specimens of foreign plants or animals; and the Brazilian collection, made by Spix and Martius during their travels in South America, though originally good and well selected, has been so much neglected as to be unworthy of notice. Munich has no very important manufactures, but comprises establishments for bronze-casting, iron-works, sugar-refineries, silk-throwing mills, and tobacco manufactories. Its telescopes are highly celebrated, and its porcelain is exported, like that of Dresden, to different parts of Europe. The last branch of industry is under royal patronage, and is carried on in a large establishment at Nymphenberg, about 3 m. distant, where also is a handsome palace of the king, with parks, menageries, &c., completed at the end of the 17th century.

Munich owes its present distinguished position, as the Athens of S. Germany, principally to the patronage and encouragement of the reigning monarch. It is very doubtful, however, whether he deserves any considerable portion of the praise that has been lavished upon him on this account. On the contrary, those who are best acquainted with Bavaria, affirm that the embellishment of the capital has been effected at the expense and injury of the rest of the kingdom; and that the vast sums lavished on buildings and pictures would have been far better expended on the improvement of roads, and such like public works.

The immediate environs of Munich abound in taverns and gardens, which are the favourite resort of the middle classes. Beer is the favourite beverage, and waltzes are danced for six or eight hours, without intermission. The beer-houses are exceedingly numerous, and beer is drunk in immense quantities. Some of the breweries are upon a very large scale. (See BAVARIA, I., 307.)

The inhabitants are likewise fond of good cheer in other

MURCIA.

respects, eating and drinking constituting with them the chief business of life. The morals of the inhabitants are alleged to be at a very low ebb; and, according to the government returns of 1834, there were in that year 1391 natural, and only 1330 legitimate children. These returns, however, are probably but little to be depended on, and the probability is that Murcia is nearly, in this respect, on a level with the other capitals of Germany, where large garisons are kept. Seven newspapers and magazines are published in Murcia, some daily, one or two weekly, and the rest at longer intervals; besides which, several literary clubs and reading-rooms are established in the city. It has also a yearly festival (*Folk-fest*) in the early part of October, established by the present king for the purpose of encouraging agriculture, frequented by the farmers and peasants, who bring with them the finest specimens of cattle in competition for prizes offered by government. Horse races and shooting matches take place at this fair; and a high sloping bank, running along the meadow in which it is held, is cut into steps, like a Roman amphitheatre, commanding an excellent view of the whole scene.

Murcia was founded by Henry, Duke of Saxony and Bavaria, in 903, on a site belonging to the monks of Schafflar, from whom it takes its name. Otto IV. encircled it with walls in 1157, and in 1632 it surrendered to the Swedes and German Protestants, under Gustavus Adolphus. In the war of 1784, between the Austrians and Bavarians, it fell into the hands of the former, after the battle of Blenheim; and it shared also the vicissitudes of the war of 1794, when the elector made his unsuccessful attempt to attain the imperial crown. In 1796 the French army, under Moreau, approached Murcia, and obliged the elector to make a separate treaty. The French again occupied Bavaria in 1800, and from the battle of Hohenlinden till 1813 the country remained in alliance with France. (*Murray's Handbook for South Germany*, p. 37-49; *Strang's Germany*, II., 328-329; *Germany and the Germans*, II., 315-336; *Bergius's Schicksal, Wegweiser durch München*.)

MUNNEEPOOR, an indep. state of India beyond the Brahmaputra. (See CASIMYR.) The small town of the same name, cap. Casmy, is in a fertile valley, about 400 m. N.E. Calcutta: lat. 24° 20' N. long. 94° 30' E.

MUNSON, p. 1, Geauga co., O., 106 m. N.E. Columbus. 340 W. It contains five grist-mills, seven saw-mills; seven schools, 301 scholars. Pop. 1963.

MUNSTER, a city of the Prussian states, cap. prov. Westphalia, and of a reg. and circ. of the same name, on the Aa, a tributary of the Ems. Pop., 1836, 19,763. It is pretty well built, is the seat of a R. C. archbishop of the government, and of the tribunal of appeal for the province. It has a seminary or college for the instruction of Catholics in theology, a gymnasium, a veterinary school, a botanic garden, and a public library. Principal public buildings, the cathedral, the church of St. Lambert, and the episcopal palace, now occupied by the governor. Münster has manufactures of woollen stuffs and starch, with tanneries and breweries; and a considerable commerce in the products of these, and linen fabrics, hams, and other Westphalian produce. It is united by canals with the Ems, and also with the Vechte, flowing into the Zuider Zee. The town of Westphalia was signed in the town-house, in 1648. The famous fanatic Bocoel, surnamed John of Leyden, the leader of the Anabaptists, made himself master of this place in 1534; but the town being subsequently taken by the bishop John of Leyden and two of his accomplices were put to death, after being confined for a while in iron cages, all preserved in the church of St. Lambert. (*Bergius*, &c.)

MUNSTER, one of the four great provinces into which Ireland is divided, comprising the S.W. portion of the island, and counties of Clare, Kerry, Limerick, Cork, Tipperary, and Waterford. (See IRELAND.)

MURCIA, a prov. and formerly a kingdom in the S.E. of Spain, between lat. 37° 30' and 39° 25' N., and long. 0° 10' and 3° 3' W., bounded N. and N.W. by Castile, E. by Valencia, S. by the Mediterranean, and W. by Andalusia. Greatest length, 140 m.; do. breadth, 120 m. Area, about 8000 sq. m. Pop., in 1833, 474,315. It is intersected by numerous ranges of mountains separated by extensive valleys formed by the Segura and its tributaries. The Sierra Segura and Pinoco skirt the country westward, and a chain of mountains runs northward from Carthage, the highest point in the province being the Sierra España, which rises 5800 ft. above the sea. The mountains are chiefly of limestone, interspersed here and there with other formations. Lead and copper abound; but no mines are wrought. The climate on the sea-coast, and among the mountains, is temperate and delightful, but oppressively hot in the plains. The heat in summer occasionally rises above 100° Fahr. in the shade; and the winters are so mild, that frost is almost unknown. Rain seldom falls, and the sky is usually so clear and blue as to have caused Murcia to be called *ciudad serenisima*. The soil, except on the banks of the Segura,

MURCIA.

is sandy, dry, and unproductive; above two thirds of the surface is incapable of cultivation, and only about one half is fit even for pasture: indeed Murcia is one of the most barren districts in Spain. The *Aurora*, however, which lies close to the Segura, is extremely fertile, producing rich crops of wheat, barley, rye, rice, maize, vegetables, and fruit, particularly oranges, lemons, pomegranates, and melons: mulberry and olive trees are found in great quantities, and evergreen oaks, as well as pines, clothe the sides of the mountains. Silk and oil are extensively produced, with smaller quantities of mignon and wine. The *capotes* rush grows luxuriantly in the neighbourhood of Carthagena, and with *barilla*, forms a considerable article of trade. The cattle of Murcia are not numerous, consisting principally of sheep and goats, with only a few horned cattle: the pigs, owing to the abundance of oaks, are almost equal to those of Valencia. Game is abundant, and the coast swarms with a variety of fishes. Wolves, foxes, and wild boar, inhabit the mountains. The manufactures are unimportant, being principally limited to the production of coarse linens, silks, and earthenware, and soap. Carthagena, its only port, has a considerable export trade in cutlery, hemp, ribbons, wine, soda, barilla, and saffron; but the roads of the interior are so bad as almost to prevent intercourse. Three large fairs are held in September, at Murcia, Lorea, and Albacete. The inhabitants are proverbial, even in Spain, for pride, apathy, and indolence. Except at Carthagena, the principal inhabitants of which are of French, English, or Italian descent, all classes lead a dull monotonous life, spending their time either in eating and smoking, or else in total inactivity. Agriculture is pursued only from necessity, commerce languishes, and education and science are at the lowest ebb.

Murcia was the part of Spain first conquered by the Carthaginians, who founded *Nova Carthago*, anno 209 B.C. The country passed, with the rest of the peninsula, into the hands successively of the Romans, Goths, and Moors, the last of whom invaded it in the beginning of the 8th century. It formed a part of the caliphate of Cordova till 1144, when it was annexed to the kingdom of Granada, to which it belonged down to 1308, when it was taken by Alonso X. of Castile, and has since formed one of the provinces of Christian Spain. (*Mifano; Mod. Trav.*; *Ingles*, ii., 208-211.)

MURCIA, a city of Spain, cap. of the above prov., on the N. bank of the Segura (crossed here by a "magnificent" stone bridge of two arches). 31 m. N.N.W. Carthagena, and 250 m. S.E. Madrid, lat. 36° N. and long. 1° 14' W.; pop., according to Mifano, 35,300. It is situated in a vale, which, for beauty and fertility, equals any part of Spain. It was formerly fortified, but is now open on every side, and has narrow, though clean streets, lined with mean houses, sometimes ornamented with grotesque carved-work. Gardens often skirt the streets, as in Seville, and the walls in many parts are overtopped by the heavily laden orange trees and branching palms. There are four considerable squares, the largest of which is used for a bull-ring; the principal public buildings are the cathedral, 11 parish churches, the bishop's palace, five colleges, a town-hall, custom-house, and hospital. The cathedral is of mixed architecture, with a Corinthian portico and Gothic dome. It formerly possessed great riches in plate and jewelry; but these were abstracted during the late war, and it has now only a few pictures. The chief object of attraction at present is its tower, 200 ft. high, which, like that of Seville, may be ascended by a spiral walk or inclined plane, accessible even to horsemen. In the *Plaza real* is a fine marble column, formerly surrounded by a statue of Ferdinand V.; and there are four public walks, one of which is formed by a mole or quay skirting the river. The botanic garden is small and ill-arranged. The silk manufacture of Murcia, which once employed some thousand hands, now requires only 400. The silk is prepared by hand labour, and cannot therefore come into competition with that of Valencia, which is for the most part produced by machinery. Considerable quantities of coarse cloth are made for the supply of the poor; and there is a manufactory of saltpetre farmed by government to a company, which makes about 1200 arrobas yearly—only one tenth of the quantity produced at the close of the last century. About 3 m. from the city is a gunpowder-mill, bound to furnish government with 60,000 arrobas a year; but the quantity produced seldom exceeds 32,000 arrobas a year. Most of the inhabitants are supported by agriculture: the land in the vale of Murcia produces two crops a year—wheat and lentils, wheat and maize, or wheat and beans—and may be estimated to return about five per cent. to a purchaser. (*Ingles*, ii., 214.) Provisions, owing to a heavy market-duty, are somewhat dearer than at Malaga and Seville. The price of labour is from four to five reals a day: female servants receive a dollar per month, and men from one and a half to two dol-

MURVIEDRO.

lers. Mifano mentions sixteen *peonadas* or inns; but they are little better than wretched pot-houses, kept by *pitancas* or gypsies, a race very thickly scattered over all the S. provinces of Spain, and following the trade of a butcher, tinker, or low Innkeeper. The inhabitants of the capital are equally sluggish, gloomy, and reserved, with those in the rest of the province. The African character is more strongly marked in them than in other Spaniards; and the cast of countenance is, in general, very different from that of the Andalusian Moors. (*Townsend*, iii., 152-159; *Cook's Sketches in Spain*, i., 35.)

Murcia was little known before the invasion of the Moors, when it was besieged and taken, A.D. 714. It was subject to the caliphate of Cordova from 756 to 1144, when it was annexed to the new Moorish kingdom of Granada. In 1221 it again became subject to Cordova; and, on the dismemberment of that caliphate, was made the capital of a separate kingdom by Hubel, from whom it was taken in 1266 by Alonso X. of Castile; since which time it has remained in the hands of the Christians.

MURVIEDRO, p. v., capital of Rutherford co., Tenn., situated on the E. side of the W. branch of Stone's r., on elevated ground, surrounded by a rich farming country. It contains a courthouse, jail, three churches, one of them an elegant brick, Presbyterian, an academy, 12 stores, two cotton factories, two cotton gins, one grist-mill, one carding machine, two tanneries, various mechanic shops, 200 dwellings, many of brick and neat, and 1500 inhabitants. It was founded in 1811, incorporated and made the capital of the state in 1817, and continued such until 1836, when the seat of the state government was removed to Nashville.

MURRAY, county, Ga., situated in the N.W. part of the state, and contains 650 sq. m. Drained by branches of Oostanaula r. It contained, in 1840, 5538 neat cattle, 1156 sheep, 19,899 swine; and produced 10,568 bushels of wheat, 174,790 of Indian corn, 10,654 of oats, 5450 of potatoes, 1187 pounds of tobacco, 2675 of cotton. It had nine stores, eight grist-mills, eight saw-mills, three tanneries, five distilleries; 18 schools, 318 scholars. Pop.: whites, 3896; slaves, 798; free coloured, 1; total, 4695. Capital, Spring Place.

MURRAY, pt. Orleans co., N.Y., 243 W. by N. Albany, 392 W. Bounded N. by Lake Ontario. Drained by Sandy cr. It contains 12 stores, two fulling-mills, one woollen factory, one furnace, three grist-mills, eight saw-mills; two academies, 70 students; 16 schools, 898 scholars. Pop. 2675.

MURVIEDRO (*Muri velera*, but more an. *Saguntum*), a town of Spain, highly interesting on account of its Roman antiquities, prov. Valencia, on the Canetas, about 34 m. from the Mediterranean, and 15 m. N.N.E. Valencia. Pop., according to Mifano, 9273. It stands at the foot of a mountain of black marble, and at the N.E. extremity of a large and well irrigated plain; has long, tortuous, narrow streets, and is surrounded by walls flanked with small round towers. The houses in the interior have a mean and gloomy appearance; but the suburbs are more airy and agreeable, and perfectly level. Two churches, three old convents, and a governor's palace, are its only public buildings. Murviedro formerly exported considerable quantities of brandy; but its chief dependence, at present, is on the export of the oil, wine, wheat, barley, carobs, and fruit, grown in the adjacent district, sent coastwise to Valencia and other ports of the Mediterranean.

"Murviedro," says Mr. Swinburne, "seems to occupy the same ground as the ancient Roman city; but, in all probability, the Saguntum of Hannibal was built on the summit of the hill. That the Romans, also, had a fortress on the top is clear, from the large stones and regular masonry on which the Saracens afterwards erected their castle. Half way up the rock are the ruins of the theatre, forming an exact semicircle, about 92 yards in diameter, from outside to outside: the length of the orchestra, or inner diameter, is 24 feet. The seats for the audience, the staircases, and passages of communication, the vomitoria, and the arched porticos, are still easily traced. The back part rests against the hill, and some of the galleries are cut out of the rock. Two walls, going off at an angle, serve to turn off the rain water that washes down from the cliff behind. As the spectators faced the N. and E., and were sheltered from the W. and S., nothing could be more agreeable in this climate than such a place of entertainment, open to every pleasant and salubrious breeze, and defended from all winds that might bring them heat or noxious vapours. It is computed that 9000 persons might be present, without inconvenience, at the exhibitions in this theatre."

An attempt was made, at the close of the last century, to repair this noble structure; and, in 1796, a Spanish comedy was represented within its walls; but the plan was never carried into execution. The remains of a circus, also, are still discoverable in the orchards outside the town. It extended to a small river, the bed of which only remains, and which was the chord of the segment formed by the circus. When the Saguntines exhibited their mock sea-fights, call-

Murcia is very ill provided with accommodation for trav-

MUSCAT.

ed *neumachia*, this bed was undoubtedly filled from the neighbouring canals which still exist. A mosaic pavement, 24 ft. in length and 14 ft. wide, in a very perfect state of preservation, was discovered in 1755, at the entrance of the town; and Ferdinand VI. ordered it to be enclosed, but his orders were not carried into effect, and it was, consequently, soon despoiled. Its fragments may still be seen in several houses of Murviedro. "Indeed," says M. Bourgoing, "the city is full of the remains of its antiquity: the walls of the houses, the city gates, and the doors of the churches and inns, are covered with Roman inscriptions."

The ground occupied by the convent of the Trinitarians was formerly the site of a temple dedicated to Diana. A part of the materials served to build the church, and the rest were sold to build *San Miguel de los Reyes*, near Valencia. The castle on the top of the hill presents some interesting remains of Moorish architecture; the fortifications divide the hill into several courts, with double and triple walls, erected on huge masses of rock, laid in regular courses by the Romans. (*Swinsburne*; *Fischer's Valencia*, p. 144; *Mod. Trav.* i., 988.)

The prevalent opinion seems to be, that Saguntum was originally founded by colonists from Zacynthus, who were afterwards joined by Euthim from Ardea. (*Strabo*, lib. iii.; *Silius Italicus*, l. 603.) It appears to have early attained to great wealth and distinction; and being zealously attached to the Romans, it became an object of hostility to the Carthaginians. It was besieged by Hannibal previously to his invasion of Italy; but the strength of the city, and the determined bravery of the inhabitants, baffled for nearly eight months all the efforts of this great general to effect its subjugation. At length, however, it fell into his hands, *anno* 219 B.C., the inhabitants being in part put to the sword and in part sold as slaves. They had previously thrown a great part of their wealth into the flames; but the booty was still ample enough to enable Hannibal to reward the valour and devotion of his soldiers, and to facilitate his designs against Italy. (*Polih.* lib. iii.; *Livy*, lib. xxi., cap. 9.) Having been rebuilt by the Romans, it was afterwards famed for its porcelain, mentioned by Martial (xiv. *epig.* 106).

"Some Saguntino porceli sets luto."

MUSCAT, a city and seaport on the E. side of Arabia, prov. Oman, of which it is the cap., about 96 m. N.W. Cape Ras-el-had, lat. 33° 38' N., long. 50° 37' 30" E. Pop. estimated by Fraser at from 10,000 to 19,000, of whom 1000 are Hindoos, from Sind, &c., and the rest a mixed race, the descendants of Arabs, Persians, Kurds, Afghans, Belooches, settled here for the purposes of commerce. The town is situated at the S. extremity of a small cove, shaped like a horse-shoe; and on either side hills, lined with forts, rise almost perpendicularly 300 ft. from the sea. It is built on a slope, rising gradually from the water, which nearly washes the bases of the houses. On this side it has no defence; but the other sides are protected by a wall 14 ft. high, with a dry ditch. Its mosques, minarets, and white terraced houses give it an imposing aspect when seen from a distance; but, on entering, narrow crowded streets, and filthy bazaars, wretched huts, poltry houses, and other tenements more than half fallen to decay, meet the eye in every direction. It has, however, some substantial and even handsome houses; the palace of the Imam, those belonging to his mother, the governor's, and several others being of the latter description: their form differs considerably from what is usually seen in the towns of Yemen and the Hedjaz, partaking more of the Persian than Arabian style of architecture. Muscat is supplied with water by means of a deep and strongly guarded well, from which a newly constructed aqueduct conveys it to tanks in the different quarters. During July and August it is excessively hot; and the fevers then prevalent are especially fatal to Europeans. The country in its immediate vicinity is extremely barren; but it improves as it recedes inland. Dates and wheat are the principal articles of produce; the former being held in high estimation, and largely exported, chiefly to India. A date tree is valued at from seven to ten dollars, and its annual produce from one to one and a half dollars. The value of estates is measured by the number of date trees comprised within the property.

Muscat is a place of considerable importance, being at once the key to, and commanding the trade of, the Persian gulf. The dominions of the Imam are very extensive, and his government is more liberal and intelligent than any other in Arabia or Persia. He has some large ships of war; and his subjects have some of the finest trading vessels to be met with in the Indian seas. The part of Arabia near Muscat is so poor to have any very considerable direct trade; but, owing to its favourable position, and the superiority of its ships and seamen, it has become an important entrepôt, and has an extensive transit and carrying trade. Most European ships bound for Bussorah and Basra touch here; and more than half the trade of the Per-

MUSKINGUM.

sian gulf is carried on in ships belonging to its merchants. But exclusive of the ports on the gulf and the coast of Arabia, ships under the Imam's flag trade to all the ports of British India, to Singapore, Java, the Mauritius, E. Africa, &c. The pearl trade of the Persian gulf is now, also, wholly centered at Muscat. All merchandise passing to the gulf on Arab bottoms pays a duty of 4 per cent. to the Imam. He also rents the Islands of Ormuz and Kishmoo, the port of Gombroon, and some sulphur mines from the Persian government.

In the magazines of Muscat may be found every species of produce imported into, or exported from, the Persian gulf. Various articles are also imported for the use of the surrounding country, and for the internal consumption of Arabia. Among these, the principal are rice, sugar, coffee from Mocha, cotton and cotton cloth, cocoa nuts, wood for building, slaves from Zanguebar, dates from Bashire and Bussorah, &c. Payment for these is chiefly made in specie and pearls; but they also export drugs of various descriptions, ivory, gums, hides, ostrich feathers, horses, a sort of earthen jar, called *martuban*, to Tranquebar, dried fish, an esteemed sweetmeat called *kulach*, and a few other articles.

The markets of Muscat are abundantly supplied with all sorts of provision. Beef, mutton, and vegetables of good quality may be had at all times, and reasonably cheap. The bay literally swarms with the greatest variety of most excellent fish. Water is excellent, and is conveyed to the beach in such a manner that the casks of a vessel may be filled in her boats while afloat. Firewood is also abundant, and is cheaper than at Bombay.

Mohammedans pay a duty of 24 per cent. on imports and exports; and all other nations pay five per cent.

Niebuhr thinks, that Muscat occupies the site of the Mosca of Arrian and other Greek writers (*Péage en Arabie*, li. 71. ed. Amst. 1780); a conjecture which seems to be confirmed, not merely by the resemblance of the name, but also by the terms applied by Arrian to Mosca being sufficiently descriptive of Muscat; and as the port is bounded on all sides by rocks, it must now present almost the same appearance as in antiquity. Dr. Vincent, however, though he speaks doubtfully on the subject, is inclined to place Mosca to the west of Cape Ras-el-had. (*Commerce and Navigation of the Ancients*, li. 344-347. For further particulars, besides the authorities above referred to, see *Hamilton's New Account of the East Indies*, i. 63; *Fraser's Journey to Khorasan*, pp. 5-19; *Milburn's Orient. Com.* &c. The longitude given above is that of *Arrowsmith's Chart of the Persian Gulf*.)

MUSCATINE, county, Iowa. Situated S.E. of the centre of the ter. and contains 440 sq. m. Bounded S.E. by Mississippi river. Watered by Red Cedar river and its tributaries, and Pine creek which affords water-power, and a good harbour for steamboats at its mouth. The Muscatine-blue, a bayou of the Mississippi, about 80 yards wide and four feet deep, with a gentle current, which leaves, and again enters Mississippi river forms a beautiful and fertile island. The county contained in 1840, 1547 neat cattle, 422 sheep, 4890 swine; and produced 5630 bushels of wheat, 4435 of Indian corn, 8890 of oats, 8647 of potatoes. It had 15 stores, three grist-mills, four saw-mills; one pottery; four schools, 69 scholars. Pop. 1942. Capital, Bloomington.

MUSCOGEE, county, Ga. Situated in the W. part of the state, and contains 410 sq. m. Bounded W. by Chattahoochee river, and drained by Upetoy creek and other branches of it. It contained in 1840, 9946 neat cattle, 1897 sheep, 19,292 swine; and produced 13,346 bushels of wheat, 251,490 of Indian corn, 6005 of oats, 7981 of potatoes, 1,186,980 pounds of cotton. It had six commission houses in foreign trade, 106 retail stores, one woollen factory, one cotton factory with 1600 spindles, 18 grist-mills, 18 saw-mills, three printing-offices, one bindery, three weekly newspapers, and one periodical; three academies, 60 students, 12 schools, 304 scholars. Pop.: whites, 6039; slaves, 4701; free coloured, 59; total, 11,699. Capital, Columbus.

MUSKINGUM r., O., is one of the largest rivers that run wholly in the state, and is formed by the union at Coshocton, of Tuscarawas river, and Walhonding, or White Woman's river. The former rises in Medina county, near the Cuyahoga river, between which and Tuscarawas river was formerly a portage, which gave name to Portage township and county, and was early used to connect lake Erie with Ohio river, but a better communication is now formed by the Ohio canal. The Muskingum is navigable for large batteaux 100 m. to Coshocton. It is obstructed by falls at Zanesville, overcome by a dam and locks, which afford great water-power. Above Zanesville, a slack water navigation is completed to Dresden, where a side cut, 2 m. long, connects the river with the Ohio canal. The Muskingum flows with a limpid current, over a pebbly bottom, variegated with thousands of red and white shells. Below Zanesville it has on its borders inexhaustible beds of bitu-

MUSSELBURGH.

minous coal, and rich deposits of salt. It enters the Ohio at Marietta, by a mouth 225 yards wide.

MUSKINGUM, county, O. Situated toward the S. E. part of the state, and contains 935 sq. m. Drained by Muskingum river and its tributaries. There are about 30 salt works in the county. The brine is obtained by boring in a whitish sandstone, from 350 to 700 feet. Coal is found in every town, but particularly near Muskingum river. Pipe clay and burr-stone, or cellular quartz, suitable for mill stones, are found. There are numerous ancient mounds. It contained in 1840, 30,994 neat cattle, 37,173 sheep, 51,839 swine; and produced 336,929 bushels of wheat, 3599 of rye, 683,577 of Indian corn, 34,979 of buckwheat, 3096 of barley, 196,408 of oats, 113,146 of potatoes, 28,589 pounds of tobacco, 21,294 of sugar. It had 50 commission houses in foreign trade, 66 retail stores, three fulling-mills, two woolen factories, 32 flouring-mills, 37 grist-mills, 73 saw-mills, one paper-mill, eight tanneries, nine distilleries, five breweries, six printing-offices, one bindery, two weekly newspapers; one college, 40 students; four academies, 216 students; 146 schools, 5925 scholars. Pop. 38,749. Capital, Zanesville.

MUSKINGUM, p. t., Muskingum co., O., 61 m. E. Columbus, 346 W. It has three churches, a salt factory; seven schools, 338 scholars. Pop. 1959.

MUSSELBURGH, a pari. bor. and market and seaport town of Scotland, county Mid Lothian, on level ground, at the mouth of the Eke, in the fifth of Forth, 5 m. E. Edinburgh. Population in 1831, including Fisher-row, and other environs, 6941. It is well built: the main street runs nearly E. and W., with a slight curvature, parallel to the bay; and it has a great many subsidiary streets. It has numerous villas; which is accounted for by its vicinity to Edinburgh, and its salubrity. Fisher-row, which contains many modern buildings, and new streets, is separated from Musselburgh, properly so called, by the Eke, the communication between them being kept up by means of one wooden and two stone bridges, one of the latter being old and little used. The other stone bridge is a modern and handsome structure, after a design by Keanie. The only public buildings are a jail, an ancient edifice surmounted by a spire, and the parish church of Inveresk (in which parish the town is situated). The latter, on an abrupt eminence $\frac{1}{2}$ m. from the town, is a conspicuous object in every direction. On the shore immediately adjoining the town on the E., are extensive downs or links, used since 1817 for the Edinburgh races, and for the game of golf, which is much practiced here.

Musselburgh has two fax-mills, which employ about 190 hands; and about 300 weavers of sail-cloth and other fabrics. The manufacture of hats is, also, carried on to a limited extent; and there are brick-works, a pottery, extensive breweries and distilleries, tanneries, and flour-mills. Fisher-row, along with Newhaven, in the parish of North Leith, virtually monopolizes the supply of Edinburgh with haddocks and other white fish. A branch of the Edinburgh and Dalkeith railroad has its depot at Fisher-row. The country all round the borough abounds with coal, which, by means of the railroad, is conveyed to Edinburgh, and by another branch of the same railway is taken to Leith, for consumption and export. There are two banks in the town. The harbour dries at low water. The exports are coal, spirits, ale, and farm produce.

The schools are numerous and efficient. Gilbert Stuart, author of a history of Scotland and other works, resided at Musselburgh; and New Hallie, the residence of Lord Hallie, the assailler and antiquary, is within $\frac{1}{2}$ m. of the town. Poor rates have been introduced: average annual assessment, £1190. In addition to the parish church, it has a *quoad sacra* church, and chapels belonging to the Episcopalians, Associate Synod, Relief, and Independents.

The chapel of Loretto, to the E. of the town, was, before the reformation, a place of great importance; pilgrimages were often made to it; and, in 1539, James V. performed a pilgrimage thither on foot. About $\frac{1}{2}$ m. S. of Pinkie-house was fought on the 10th Sept. 1547, the battle of Pinkie, in which the English, under the duke of Somerset, totally defeated the Scotch. The battle of Preston Pans, on 21st Sept., 1745, between the forces of Charles Edward and the royal army, took place in this neighbourhood, when the latter were completely defeated.

Musselburgh had no pari. rep. till the passing of the Reform Act. It now unites with Leith and Portobello in sending one member to the House of Commons. Registered voters in 1840-41, 967. Municipal income, £3992. Number of councillors, 12. (*Boundaries of Scotland, & Edinburghshire; Boundary Reports; Chalmers's Caled.; Private Information, &c.*)

MYSORE (*Mahabharava*), a province of S. Hindostan, forming a state subsidiary to the British, between lat. 11° 30' and 15° N., and long. 74° 45' and 76° 40' E., almost entirely surrounded by the territory of the Madras presidency. Its shape is nearly rhomboidal; greatest length, N.

MYTILENE.

to S., 340 m. by an extreme breadth of about the same. Area, estimated at 29,750 sq. m.; and population at about 2,500,000. The whole country consists of a table land enclosed on the E., W., and S. by the Ghauts; and varying from 1900 to 4600 feet in elevation above the sea, with a gentle slope towards the N. The Zoongabuddra, Pennar, Colair, Coleroon, &c., all rise within this province, which has, however, no river of much size. The climate is one of the most salubrious within the tropics; the air is temperate and bracing, and the deluging rains, which prevail on either side beneath the Ghauts, are here unknown. The soil, which is mostly of the red and black varieties common in the Deccan, is continually watered by refreshing showers; and produces not only most of the grains and vegetables of other parts of India, but also many of the fruits of Europe. Extensive tracts are overrun with jungle, especially of the date palm, and from the remains of hedges, &c., the province appears at a remote period to have been in a much higher state of cultivation than at present, though it has recovered to a great extent, from its previous devastations, since the period of peace, commencing with the present century. Rice, sesamum, sugar, coffee, betel leaf, castor oil, and cocoa nuts, are the principal articles of produce. Though an inland country, the cocoa palm is almost everywhere abundant, great quantities of salt and soda efflorescing on the soil. About Colair, the poppy is raised, both for making opium and for its seed. Potatoes are grown, and exported to Madras and elsewhere. Tobacco is of inferior quality, and is not much cultivated. From the great imperfection of agricultural implements, and the inferiority of the cattle, the fields are very imperfectly ploughed; but the soil is, in many parts, extremely productive, with the aid of little labour. The cottages of the peasantry are, on the whole, neater and more commodious than in most parts of India. They are almost universally constructed of the red soil of the country, and roofed with tiles; nor are the best habitations of different materials, or otherwise distinguished from the rest than by their size, and from being whitewashed. The inhabitants are nearly all Hindus.

The Mysore dominions are subdivided into three great districts: chief towns, Mysore, the capital, Bednore, and Chittiedroog. The government is nominally in the hands of a native prince, but actually vested in the British resident at Mysore, appointed under the Madras presidency. The subsidiary armed force furnished by Mysore to the British government is undefined, but may be estimated at 4000 men. The present dynasty of the Mysore sovereigns are supposed to have originally emigrated to this province from Gujrat; but no authentic records of them exist previously to the 16th century. From 1760 to 1798, Mysore was governed by Hyder Ali and Tippos Sult. After a protracted contest with the English, Tippos lost his crown and life at the taking of Seringapatam. (*Parl. Reports; Hamilton, &c.*)

MYSOON, a town of S. Hindostan, the capital of the above state, on a lofty hill, 9 m. S. by W. Seringapatam, lat. 15° 19' N., long. 76° 42' E. It was suffered to fall into decay by Hyder Ali and Tippos, but, under the present dynasty, it has been rebuilt, and restored to its ancient importance. It is enclosed by an earthen wall, and consists of the town (pettah) and fort. The latter, which is an extensive work in imitation of a European fortress, is separated from the pettah by an esplanade, and comprises, besides the rajah's palace, the dwellings of the principal merchants and bankers. The architecture of the town is similar to that of Seringapatam, but the houses are larger and better; they are ranged in regular streets, whitened, and intermingled with trees and temples. S. of the fort is a large and good suburb; and on rising ground, near the town, is a British residency. Mysore is well supplied with provisions, and is considered much more healthy than Seringapatam. (*Hamilton; E. J. Gasterley.*)

MYTILENE, the ancient Lesbos (*insula nobilis et amena*, Tacit. Hist. lib. vi., cap. 3), an island of Turkey in Asia, in the *Ægean* sea, opposite the coast of Asia Minor, to the north of the entrance to the gulf of Smyrna. It is about 33 m. in length from E. to W., by about 96 in breadth. The strait by which it is separated from the main land varies in breadth from seven to 10 m. Though in part hilly and mountainous, it has notwithstanding a considerable extent of level and very fertile land; and, except in a few places infested with malaria, it is extremely salubrious. The principal products are oil, corn, wine, figs, and other fruits; cotton, timber and pitch, silk, honey, &c. The wines of Lesbos were among the most celebrated of the ancient world. They are said by Athenæus (l. 93) to have deserved the name of ambrosia, rather than of wine, and to have been like nectar when old!

"*Elic innoxia potius Lesbii
Ducos sub umbra.*"—*Hor.* Od. l. 17.

The wine of the island still continues to preserve some,
2 C° 409

NAAS.

though but a slender, portion of its ancient reputation; very little, however, is exported. The figs are excellent, and large quantities of oil of medium quality are annually shipped for Constantinople and other places. The produce of corn is insufficient for the supply of the island. The timber and pitch are derived from the pine forests, with which the mountains are covered. The town of Castro, on the site of the ancient *Mytilene*, stands on the E. coast of the island, on the strait separating it from Anatolia. It contains many fragments of pillars, capitals, friezes, &c., but no considerable ancient ruin: it may have from 5000 to 6000 inhabitants; and has two harbours, but neither is good. The island can, however, boast of two of the finest harbours in the world, Port Jero, or Olivier, and Port Caloni. The former, in its S.E. angle, has a narrow entrance, but the water is deep, and within it expands into a noble basin, capable of containing the largest fleets. Port Caloni, on the S. side of the island, is a basin, similar to the last mentioned, but of more ample dimensions, nearly, in fact, intersecting the island. It has deep water throughout; but the entrance to it being very narrow, it is but little frequented.

Olivier estimated the entire population of the island at about 40,000, half Greeks and half Turks, with a few Jews; but later estimates considerably reduce the number of Turks. There can be no doubt that under an enlightened government Mytilene would speedily recover some portion of her ancient prosperity. Olivier mentions that the singular usage obtains in this island of the eldest daughter succeeding to the paternal property, to the exclusion of her brothers and younger sisters! (*Voyage dans l'Empire Ottoman*, ii., 99.) Most probably the custom has descended from a remote era; but some modifications have, however, been introduced in modern times in favour of the younger sisters.

Lesbos was one of the most celebrated of the Greek islands. It had several cities, of which Methymna and Mytilene were the most celebrated. The latter was distinguished alike by the magnificence of its buildings, the amenity of its climate, its proficiency in the *belles lettres* and philosophy, the number of its great men, and the luxury and refinement of the inhabitants. Epicurus is said to have read lectures in Mytilene; and Aristotle resided in it for two years to profit by the society and conversation of its learned men. At a later period it became, like Rhodes, a favourite resort of those Romans who preferred quiet enjoyment to the turmoil and bustle of Rome.

Landabant alii clarum Rhodes aut Mytilenem. Nov. Od. l. 17.

Among the illustrious persons who were natives of the city of Mytilene, or of other parts of the island, may be specified. Pittacus, one of the seven sages of Greece; Theophrastus, the scholar and successor of Aristotle; Alceus, so famous for his odes; Sappho, celebrated alike for her beauty, her poetical talents, her loves and her death; Trepander, who added a seventh string to the lyre; Diophanes, a famous rhetorician, tutor to Tiberius Gracchus, &c. At the same time, however, it must be admitted that the morals of the bulk of the inhabitants were exceedingly corrupt, so much so, that it was common in antiquity to say of a debauchee, that he lived like a Lesbian. (*Callistis Orbis Antiqui*, ii. 15; Tournefort, i. 38; *Ancient Universal History*, viii. 200, 8 vo. ed.)

Mytilene was taken and sacked by Julius Cæsar; but Pompey restored it to the full enjoyment of its privileges; and Trajan, who enriched it with several costly buildings, gave it the name of *Trojanopolis*, which, however, it did not retain. Mollvo, on the N. coast of the island, is the modern representative of the ancient Methymna.

N.

NAAS, an inland town of Ireland, prov. Leinster, co. Kildare, 18 m. S.W. Dublin. Population, in 1831, 3698. "The town possesses considerable local advantages. Situated in a rich agricultural district, 18 miles from the metropolis, its communication with that city is facilitated by good roads and by means of a branch of the grand canal that enters the town. Its main street, also, presents some appearance of activity, owing to its forming the place of junction of the leading roads from Cork, Limerick, Kilkenny, Waterford, &c., to Dublin. However, far from keeping pace in improvement with the market towns in its vicinity possessed of none of these advantages, its prosperity has been on the decline for the last 15 years. The appearance of the cabins on the outskirts of the town is poor and miserable, many being ruinous." (*Municipal Bound. Report*.) The public edifices are the parish church, a Roman Catholic chapel, a meeting-house for Independents, military and police barracks, a market-house, a fever hospital and dis-

NAIRN.

pensary, a courthouse, and a prison. The spring amises for the county are held here, and the summer amises at Athy. Its trade in grain, flour, and provisions, is not so considerable as might have been expected. Markets, especially for poultry, on Mondays and Thursdays. Postoffice revenue in 1830, £439; in 1836, £647.

NAKHITCHEVAN, a town of European Russia, on the Don, about 25 miles above where it falls into the sea of Azoff. Population above 10,000, principally Armenians. This and the contiguous town of Rostoff are, as it were, the entrepôts of the Don. Except timber, most of the produce brought down that great river is landed at one or other of these towns, and is thence forwarded by coasters for Tanagerog. Nakhitchevan is built in the oriental style, and its inhabitants are distinguished by their commercial enterprise.

"The connections they have formed with Astrakhan, Mordok, and Kislar, also colonies of Armenians, almost annihilates the distance that is between them. They draw from these countries rice, silk, a vast quantity of wine, and about 500 casks of Kislar brandy, in great esteem in Russia. They receive, moreover, from the Caucasus, all the rough produce of the country. By constantly frequenting the fairs which, in the adjacent towns and villages are very numerous, even to the distance of some hundred versts, the Armenians have formed the means of making themselves masters of the trade of the interior of the S. part of Russia." (*Hagmeister on the trade of the Black Sea*, p. 36. Eng. trans.)

NAGPOOR (*nagapura*, "the town of serpents"), a large city of Hindostan, prov. Gundwana, cap. of the dom. of the Rajah of Berar, between the Wyngunga and Wardah rivers; lat. 21° 9' N., long. 76° 11' E. Population of the city and suburbs in 1855 estimated at 115,000. Its site is low and swampy in the rains; and the principal street, with one exception, are narrow, mean, dirty, and intersected by warcoorses. The great number of trees intermixed with the huts and houses give it, at a distance, the appearance of large wood. It presents few good specimens of architecture; the rajah's palace, though an extensive building, has no pretensions to beauty, and has crowded round it a multitude of mean huts of mud and thatch. Some of the principal chiefs and bankers have large houses of brick and mortar, with flat roofs; but these, for the greater part, are old and dilapidated. In 1855, of 27,000 houses in Nagpoor, about 1300 were of mason-work, the rest being principally of mud, thatched or roofed with tiles.

The dom. of which Nagpoor is the cap., extends between the 18th and 23d degs. of N. lat. and long. 76° 37' and 80° E., having N. the Bengal Presidency, E. Bengal and the presidency of Madras and S.W. and W. the dominion of the Nizam. Area estimated, in round numbers, at 64,000 sq. m.; and population at somewhat less than 3,000,000. The general slope of this country is towards the S.E.; the surface is generally mountainous and woody, interspersed with occasional tracts of cultivated land. Principal rivers, the Wardah, Wyngunga, and other tributaries of the Godavary and the Mubandary. The land is sown in the village system. Wheat, jowaree, and rice; teak and sand timber; cotton, sugar, hemp, tobacco, arrow-root, betel leaf, wild silk, iron, and limestone, are the principal products; some of which are sent in considerable quantities to Bombay, in exchange for European manufactures. Nagpoor had always a large trade with Poona, though this has very much diminished since the breaking up of the Maratha empire; and some trade with Benares and Mirzapur, in muslins, brocades, &c. The population of the country is nearly all Hindoo, or composed of wild Gonds, and other tribes; and very ignorant, the children of only Brahmins and the mercantile classes being educated. The government is better administered than that of the Nizam dominion. The revenue, which is estimated at between 46 and 47 lacs rupees a year, is collected under the superintendence of British officers. The rajah furnishes a contingent of at least 1000 men to the Anglo-Indian army. (*Hamilton's E. I. Gaz.*; *Evid. of Mr. Jenkins in Parl. Rep.*, 1833; *Report*, 1840, &c.)

NAIRN, a small marit. co. of Scotland, on the S. side of the Moray frith, having N. the sea, E. Moray, and S. and W. Inverness: it also includes the detached district of Ferintosh, in the centre of Inverness. Area, 194,380 acres, of which about a third is supposed to be arable. It is in all respects similar to Moray, with which it is united under one sheriff. Along the shore it has a belt of low, flat, sandy soil, mostly suitable for the turnip culture but in parts barren, owing to the sand being dry and moveable. The valley watered by the Nairn is generally fertile and well cultivated; but the rest of the county is mostly rugged and mountainous. The statements as to the size of estates and farms, houses, tillage, stock, &c., in the article MORAY, apply equally to this county. The average rent of land, in 1810, 1s. 10d. an acre. Exclusive of the Nairn, it is watered by the Findhorn (*see vol. i. p. 963*), and some smaller

NAMUR.

streams. Except Naira it has no town of any importance; and it has neither mines nor manufactures. The county which unites with Moray in sending 1 mem. to the House of Commons, had 190 registered voters in 1830-40: the borough of Naira unites with Inverness, &c., in sending another member to the House of Commons. Naira is divided into six parishes, and had, in 1831, 3074 inhabited houses, 2946 families, and 9254 inhabitants, of whom 4207 were males and 5047 females. Valued rent, £15,162 Scotch: annual value of real property, in 1815, £14,903.

NAIRN, a royal bur., seaport, and market-town of Scotland, cap. of the above co., near the mouth of the river of the same name, on the public road between Aberdeen and Inverness, 154 m. N.E. the latter, and 73 m. N.W. by W. the former. Pop., in 1823, inc. the par., 3906. The river is here crossed by a substantial bridge, which, however, was greatly injured by the floods of Aug. 1839. "The principal street is tolerably spacious, but all the others are narrow and confined." (*Bounty Report*.) The only public buildings are the courthouse, jail, established church, two dissenting chapels, and a large inn, built by subscription. The harbour is accessible only for small vessels; and grain, cattle, timber, salmon, herring, and other white fish are exported to London and other markets. Indeed, the fisheries may be said to be the staple branch of industry of the town. The means of education are ample. The town has no fewer than three banks.

Nairn was created a royal borough, by William I., in the 13th century. In the vicinity is Cawdor castle, once a fortress of great strength, but now a ruin. It gave the title of "Thane" to Macbeth, and Shakespeare has made it the scene of the murder of the "gracious Duncan." It now gives the title of earl to a branch of the Campbells of Argyll. Lord Lovat found refuge in a corner of this fortress, after the battle of Culoden, in 1746. (*Edinburgh Philoe. Trans.* ii.: *Scenes of Scotland*, § Nairn.)

NAMUR, (Flem. *Neuman*, Lat. *Nemurum*.) a strongly fortified town of Belgium, cap. prov. of same name, on the Meuse and Sambre at their junction, 334 m. S.W. Liege, and the same distance S.E. Brussels; lat. 50° 38' 30" N., long. 5° 0' 7" E. Pop., in 1836, 30,176. It is surrounded with good walls, and has been considerably strengthened since the last war: it has strong outworks on both sides the Meuse and Sambre, and is further defended by a citadel, erected in 1817, on the elevated site of a former citadel, demolished by Joseph II. It is well built; many of the streets are broad and clean, and the houses are mostly of bluish stone, roofed with tiles. The cathedral, a modern edifice, with handsome Corinthian portico, and a dome, is principally remarkable for its containing the tomb of Don John of Austria, the conqueror of the Turks at the famous battle of Lepanto. The church of St. Loep, a richly ornamented building, and that of Notre Dame, with some good sculptures; the new townhall, several hospitals, and a theatre are the other principal public edifices. A bridge crosses each river, that over the Meuse having nine arches; a dam has here also been thrown across the Sambre in the view of raising its waters so as to render it navigable; but this design appears to have only partially succeeded. Namur is a bishop's see; the seat of tribunals of primary jurisdiction and commerce, with appeal to the superior courts at Liege, and the residence of the civil governor of the province, a military commandant, a provincial receiver of taxes, &c. It has an episcopal seminary; an atheneum with a library and cabinets of mineralogy, chemistry, &c.; various public and superior private schools, a society for the benefit of the poorer classes, a deaf and dumb and many other asylums, a *mont de piété*, founded in 1619, &c. The situation of Namur is favourable for commerce. Its cutlery is much esteemed, on the continent, and it has tanneries, potteries and brass and iron works; but its manufactures are less flourishing than formerly. The coal and iron mines, and marble quarries of its neighbourhood, are, at present, the principal sources of employment and wealth to its inhabitants. It has four annual fairs, one of which, beginning on July 3d, lasts 15 days.

Namur is supposed to occupy the site of the *Oppidum Aduacorum*, mentioned by Cæsar. Like other cities in the low countries, it has frequently suffered from the ravages of war. In modern times it has sustained two memorable sieges, one in 1693, when it was taken by Louis XIV.; and the second in 1695, when it was retaken by the Anglo-Dutch under William III. The first is the subject of Boileau's famous ode *Sur la Prise de Namur*. (*Fædermaiden, Dict. de Namur*; *Dict. Olog.*; *Murray's Hand-book*, &c.)

NANCY, a town of France, dep. Meurthe, of which it is the cap. in a fine plain, near the Meurthe, 30 m. S. Metz, and 175 m. E. by S. Paris; lat. 48° 41' 58" N., long. 6° 10' 31" E. Pop., in 1836, ex. comm. 99,999. This is one of the handsomest towns of France. It was formerly surrounded with walls, but these were demolished under Louis XIII, and Louis XIV.; and the citadel is its only

NANGASAKI.

existing fortification. It is, however, still entered by several gates, some of which have much beauty. Nancy is divided into the old and new town. The first is, in general, irregularly laid out, though it comprises several good streets and squares, many superior private residences, and most of the principal public edifices. Among the latter, are the remains of the palace of the dukes of Lorraine, now converted into a barrack for the gendarmes; the church of the Cordeliers, a structure of the 15th century, in which are various interesting monuments; the church of St. Epore, and the ducal chapel. The royal court, the tribunal of commerce, and prefecture are in the *Place Carrière*, a square communicating with the *Place Royale*, in the new town, by a noble triumphal arch. The new town, which, however, is as old as 1603, is remarkable for the elegance and regularity of its streets, which mostly intersect each other at right angles. The *Place Royale* or *Stanislas*, is a square surrounded by edifices, all built on the same plan, comprising the town-hall, the bishop's palace, theatre, &c. Its angles are ornamented with iron gateways and fountains; and in its centre is a bronze statue of Stanislaus, king of Poland and duke of Lorraine, erected by voluntary subscription throughout the duchy, in 1823. Stanislaus, to whom numerous establishments in the town, both scientific and charitable, owe their foundation, is buried, as well as his consort, in the church of *Bon Secours*, which has two marble monuments to their memory. The cathedral is a modern edifice of Corinthian and composite architecture. The remaining principal buildings are the university, with a library of 23,000 vol., the royal college, seminary, civil and military hospitals, a work-house for the dèp. Meurthe, and Vonges, and a house of correction. Nancy is a bishop's see, and the seat of a royal court for the dèp. Meurthe, tribunals of original jurisdiction and commerce, a board of taxation, a chamber of manufactures, &c. It has an *académie universitaire*, a royal society of science and literature, a royal school of forest economy, a communal college, Protestant, Jewish, and other schools; manufactures of woollen cloth, hosiery, lace, muslins, cotton yarn, Huguere, chemical products, &c.; with tanneries, dyeing-houses, and refineries of saltpetre for the gunpowder factory at Metz. Nancy is famous for its shot (*boules vulnérables d'acier*). No record exists of this town previously to the 11th century, but in the 13th, it became the capital of Lorraine. It was twice besieged by Charles the Bold, of Burgundy, who was killed under its walls in 1477. (*Hugo, art. Meurthe*; *Guide du Voyageur en France*, &c.)

NANGASAKI, a large town and seaport of Japan, on the S.W. side the island of Kiu-siu, and the only place in that empire accessible to Europeans, 608 m. W.S.W. Yedo; lat. 33° 43' 4" N., long. 130° 11' 47" E. Pop. from 60,000 to 70,000. It is situated on the slope of a hill, and, like every other Japanese town, is regularly built, with wide and clean streets. The houses, however, are low, none containing more than one good story, to which is added in some a sort of cockpit; in others, a low cellar; all are constructed of wood and a mixture of clay and chopped straw; but the walls are coated with a cement that gives them the appearance of stone. The height of the street-front, and even the number of the windows are determined by sumptuary laws. Oiled paper supplies the place of glass, and the windows are further protected from the weather by external wooden shutters and Venetian blinds; a verandah, into which the different rooms open, runs round the outside of the houses, to which are invariably attached curiously laid out gardens. Large detached fire-proof store-rooms belong to each dwelling, and are so constructed as fully to answer their purpose of preserving the valuables of the inhabitants from the conflagrations so common here and elsewhere in Japan. The chief public buildings are the palaces of the governor and grandees of the empire, some of which cover a considerable extent of ground: there are also in the town and neighbourhood 61 temples, or *yasuris*, usually on commanding eminences, and enclosed in large gardens, the habitual resort of pleasure parties. These buildings are as plain and little ornamented as the private dwellings, and comprise, also, apartments, which are let out to travellers, or used for banqueting rooms, and other purposes. The tea-houses, or *bagans*, are another favorite resort of the natives; and of these, according to Siebold, there are 750 in Nangasaki. The artificial island of Dezima, to which the Dutch merchants are rigorously confined, is about 600 ft. in length by 340 ft. in breadth, a few yards from the shore, close to which stands the town, connected with it by a stone bridge, closed by a gate and guard-house, constantly occupied by soldiery. Neither Dutch nor Japanese may pass the gate without being searched; the number of European residents is limited to *eleven*; and the mental service is performed exclusively by Japanese; all of whom, except courtesans, are compelled to leave the island at sunset. From this imprisonment the Dutch are allowed to escape twice or thrice a year, rather to be ex-

NANKIN.

hibited to the great as a curiosity than out of indignance. A corps of constables and interpreters (the latter of whom form a regular guild, receiving salaries from the *sjogén*), are appointed to watch over their minutest actions; and the most degrading servilities are exacted even from the *opportuñs*, or president of the mission, by the meanest officers of the Japanese government. As respects trade, the Dutch are placed under restrictions elsewhere unparalleled; but these and other particulars have already been detailed in the general article JAPAN, to which the reader is referred. The harbour of Nangasaki extends N.E. and S.W. about 7 m., being in most places less than a mile in width. Ships lie in five or six fathoms water within gunshot of the town, and protected from all winds. (Siebold, i. ch. 1, 2; *Crawford's Hist. of the Indian Archipelago*, iii. 305-308; *Manners and Customs of the Japanese*, 24-51.)

NANKIN, a city of China, in the district of Kiangning-foo, and prov. Keang-soo, near the S. bank of the Yang-tse-kiang, and about 110 m. from its mouth, lat. 32° 4' N., long. 118° 24' E. Pop. (acc. to Ellis) about 400,000. The walls, which are of limestone, cemented with sun-baked clay, enclose a very irregular triangular area of about 30 sq. m., and this circuit, as measured by the Jesuits, amounts to 57 li, or nearly 30 m., a fact fully proving the absurdity of the Chinese statement that "if two horsemen should go out in the morning at the same gate and ride round in opposite directions, they would not meet before night!" This enclosure, moreover, comprises groves, fields, and even hills, of considerable extent; less than three fourths of it being covered by the town, which is situated at the S. extremity, and about 6 m. from the river bank. The city has declined much both in size and splendour since the end of the 13th century, when Kublai-Khan removed the imperial residence to Peking. It now consists of four rather wide and parallel avenues, intersected by six or eight others of less width. The streets are not so broad as those of Peking, but are, on the whole, handsome, clean, well-paved, and bordered with well-furnished shops. A palace of the emperor which once existed, and many other monuments of grandeur, have now almost disappeared. Nor are the palaces of the mandarins in any respect distinguished from those found in the capitals of other provinces of China; indeed, Nankin possesses no public edifices corresponding to its rank as the second city of the empire, except its famous porcelain tower, belonging to one of the pagodas, several temples, and its gates, some of which are of extreme beauty. The Porcelain tower (called *Pao-pan-tse*) "pagoda of gratitade," which is unquestionably finer than any similar structure throughout China, is an octagonal building, each side 15 ft. wide. It consists of nine equal stories, communicating by a spiral staircase running up the centre of the building, and each comprising one saloon finely painted, gilt, and adorned with idols. The outside wall is white, made of the white bricks commonly used in China: a kind of carved gallery or verandah, ornamented with lightly-tinkling bells, runs round each story, and the whole is surmounted by a gilt conical roof, the height of which from the base somewhat exceeds 300 ft. It was completed in 1433, at a cost of 400,000 taels. An observatory stands about a league N. ward of the pagoda, but though formerly well provided with instruments, &c., it is now almost in ruins. Nankin has extensive manufactures of satin and crape, the quality of the former, both plain and figured, not being equalled by that of any other city in China. The cotton fabric called Nankeen receives its name from this city; but in fact it is made in every part of the province, and scarcely a cottage can be found where the thrifty housewife has not a loom for weaving Nankeen. (*China opened*, i. 79.) The paper of Nankin is highly esteemed; and Indian-ink (as it is called in Europe) is manufactured in large quantities both in the town and neighbourhood, forming an important article of commerce. Nankin is celebrated also for its manufacture of artificial flowers from the pith of a shrub, and so extensive is this branch of industry as to give rise to a large trade. The commerce of the city is very considerable, owing to its position in the centre of the empire, and on the Yang-tse-kiang, which is navigable for small boats to the ports of Soo-cheo-foo and Shang-hai, its great entrepôts for corn, manufactured goods, and other articles. Its communication with Peking is effected by the Imperial canal, which leaves the river about 40 m. below Nankin: the principal trade with the capital is during April and May, when flat boats, which accomplish the distance in about nine days, are constantly employed in exporting to the Imperial court the produce of the Nankin fishery packed in ice. Nankin according to Du Halde, is not less celebrated for literature than commerce: the arts and sciences are studied there with great diligence, and it furnishes more doctors and mandarins than many towns together; its libraries are also extensive and valuable. The booksellers' shops are well provided with the best native publications, and the editions published here are the most esteemed in the empire.

NANTES.

Nankin, which began to decrease in the time of Kublai-khan, was further diminished by the removal of the six great tribunals to Peking, which caused its name Nankin ("Court of the South") to be changed to Kian-nin in all the public acts: in common usage, however, it retains its old appellation. It is still the residence of one of the great viceroys called *Tsang-tai*, to whose jurisdiction are committed all the judicial affairs, not only of this province but of that also of *Kiang-si* and *Gen-sing*. The Manchoo-Tartars have here an extensive military dépôt under a general of their own nation, and their quarters are separated from the rest of the town by a lofty wall. (*Du Halde*, i. 149-151; *Ellis's Journal of a Miss. to China*, 325-326; *Ritter's Erdkunde von Asien*, iii. 681-686; *Gutslaff's China opened*, i. 76-79; *Private Information*.)

NANTES (an. *Nannetes*, or *Ovitas Nannetum*), a large and celebrated commercial city and port of France, dep. Loire-Inférieure, of which it is the capital, on the Loire, where it is joined by the Erdre and Sèvre-Nantaise, about 24 m. from its mouth, and 210 m. S.W. Paris; lat. 47° 13' N., long. 1° 32' 44" W. Pop. in 1836 (ex. comm.), 73,138. "Nantes is a noble city, and its situation can scarcely be excelled. It stands upon the slopes and summit of a gentle hill, half encircled by the Loire, which is broad, clear, and tolerably rapid; and its beauty is greatly increased by several islets which dot the river exactly opposite to the town, and which are covered with pretty country-houses and gardens." (*Ingis*, p. 338.) The banks of the Erdre now are very agreeable, abounding with chestnut woods, gardens, and country-houses. The declivities of the neighboring hills are in great part covered with vineyards, which add much to the beauty of the scene, though their produce is very inferior. Nantes is built mostly on the N. bank of the Loire, but partly, also, on the islands *Puydeux* and *Gloriette*, in which are some of the handsomest quarters. Both the N. bank and the islands are bordered by fine quays, one of which, *Quai de la Fosse*, full half a league in length, is broad, and shaded by fine elms, and bordered with balconied terraces and warehouses. The Quays *des Braces* and *Port Maillard* are also planted with trees, being at once well frequented promenades, and the principal seats of commercial activity.

Nantes was formerly fortified, but its ramparts have been mostly demolished, and it is now an open town communicating with four considerable suburbs. Towards the E. end of the city are the *Cours de St. Pierre* and *St. André*, two public walks planted with trees and separated by the quays of Louis XVI., in which is a statue of that monarch surmounting a Doric column about 80 ft. in height. These *Cours* with the *Boulevard*, W. of the Erdre, another fine promenade of the same kind, are on a portion of the site formerly occupied by the fortifications. There are, however, some remains existing of various fortresses erected in the middle ages. In the E. part of the city, skirting the river, is the large and imposing castle of the ancient dukes of Brittany, a mass of irregular buildings, surrounded by thick walls flanked with solid round towers. It was founded in the 10th, but it was not until the 15th century that it became a place of any great strength. It is now chiefly dismantled, and is the residence of the military governor, and has a powder magazine. Between the Erdre and Loire are some remains of the Chateau de Bouffay, a structure also dating from the 10th century, consisting of some lofty walls surrounding a polygonal tower; and on the bank of the Loire are the ruins of the Tour de Pirmin, erected in 1365. The city is, in general, regularly laid out, and well built and paved. Most of its houses are of stone roofed with slate. There are between 30 and 40 squares, or rather open spaces; the principal of which, the *Place Royale*, is surrounded by handsome shops, and, together with the quarters *Graslin* and *Puydeux*, may be compared with the best parts of the capital.

The different parts of the city communicate by numerous bridges, several of which are handsome, and one, the *Pont de Pirmin*, 277 yards in length, has 16 arches. The cathedral, though not imposing either without or within, has a front ornamented with good though mutilated sculptures, and flanked with two towers, 170 feet high: in its interior is a magnificent marble tomb, erected by Anne of Brittany, in memory of her father Francis II., the last duke of that province. No other church demands particular notice. The finest building in Nantes is the Prefecture. It was erected between 1750 and 1777, and was formerly appropriated to the *Cour des Comptes*. It has two noble fronts of the Ionian order, a fine staircase, and several large halls and other apartments: it is partly used as the depository of the departmental archives. The exchange is a large and convenient building, constructed chiefly within the present century; the theatre, in the *Place Graslin*, built in 1810, is, perhaps, the handsomest provincial theatre in France, after those of Bordeaux and Dijon. The town-hall was commenced in 1697, since which it has received several additions: it has

NANTES.

three façades, ornamented with Corinthian pilasters, and over its principal front are sculptured figures, emblematical of the Loire and Sèvre. The remaining public buildings include the mint, corn exchange, and linen hall; the *Hôtel-Dieu*, on the île Gloriette, erected in 1655, with 670 beds; the *Hospice de Sanitat*, or general infirmary and asylum, with 800 beds; the Hospital of Incurables; the Protestant church, formerly that of the Carmelites; mansion-house, chapter-house, the large prison, public slaughter-house, barracks, college; the museum, with an excellent mineralogical collection; the *Salerges*, a general dépôt for merchandise, &c.

Nantes is a bishop's see, the capital of the 13th military division of the kingdom, the seat of a Lutheran consistory, of tribunals of primary jurisdiction and commerce, a chamber of commerce, &c.; and is the residence of the consuls of many foreign powers. It has a royal college, an academical society, two episcopal seminaries, a public library with 30,000 printed volumes, and many valuable MSS., collections of engravings, paintings, and an observatory, and botanic garden, schools of navigation, medicine, drawing, riding, &c., maternity and Protestant Bible societies, a savings' bank, a *mont de piété*, and a maritime insurance office. The bank of Nantes has a capital of 900,000 francs, in 900 shares.

Ships of 900 tons, in the ordinary state of the river, reach the city quays without difficulty; but vessels of a larger burden have to load and unload in the roads of Paimboeuf, about 94 m. lower down the river. But notwithstanding this disadvantage, the Loire, opposite the city, is crowded with inland craft, and vessels of all nations, but principally from N. Germany, Sweden, Denmark, and Russia. Nantes, Brest, Pontivy, Redon, and other towns in Brittany, will directly communicate with each other on the completion of the canal from Nantes to Brest, now in progress, and which, when finished, will have an entire length of about 230 m.

The manufactures of this city are various, and on the increase. Coarse woollen-cloths and flannels, cambrics, printed cotton goods, handkerchiefs, tickings, and hosiery, are made on a large scale, besides which there are extensive biscuit-baking houses, chemical works, potteries, rope-walks, copper-foundries, manufactories of iron-cables, cannon, and other stores, with breweries, distilleries, sugar-houses, tanneries, vinegar establishments, and ship-yards for the construction of merchant-ships, corvettes, and smaller vessels.

Nantes was formerly famous for her quick sailing vessels; but this is not the case at present, and more ships are now built at Bordeaux. At Indret, near Nantes, on an island towards the mouth of the Loire, the French government has lately founded an establishment for building steam-boats. In 1840, there were here five ships, on some of which, steamboats of from 160 to 320 tons each were in course of being built; the establishment employed altogether 980 workmen, and four marine engineers; and a sum of 2,000,000 francs was voted by the legislature for its maintenance. (*Porte, &c., of France*, p. 152.) Large naval storehouses are established at Nantes, from which Brest, L'Orient, and Rochfort receive supplies both of provisions and ammunition. Previously to the revolution, the foreign trade of Nantes was much larger than at present; and during the time that the slave-trade was carried on, Nantes was more extensively engaged in it than any other French port. Now Marseilles and Havre both rank above her as commercial cities; but she is still the emporium of all the rich and extensive country traversed by the Loire, and has a considerable import and export trade, particularly with the French W. India, S. America, and the different ports of Europe. The exports comprise all sorts of French produce, but principally brandy, wine, and vinegar, silk, woolen, and linen goods, refined sugar, wheat, rye, ship-biscuits, &c. The chief imports are sugar, coffee, and other colonial produce; cotton, indigo, timber, hemp, &c. Nantes is likewise a considerable entrepôt for the commerce of the salt made in the department, chiefly at Noirmoutier and Crotic. (See *LOIRE INFÉRIEURE*.) The customs' duties amount to about 15,000,000 francs a year.

Subjoined is a statement of the French and foreign ships that entered and cleared from the port in 1838, specifying the departments in which the French ships were engaged, and the number in each.

Branch of Trade.	Entered.		Cleared.	
	Ships.	Tons.	Ships.	Tons.
French ships in foreign trade	801	24,319	135	19,317
" colonial do.	80	15,151	84	19,291

" fisheries	12	2,475		
Foreign ships	176	26,385	138	22,765
Steam-vessels chiefly to and from Bordeaux	10	736	13	1,040
	4,498	501,230	4,672	151,743

* Of these, 60 vessels of 6615 tons left in ballast.

NANTUCKET.

Of the vessels engaged in the fisheries, 10 came from the banks of Newfoundland, laden with 15,635 cwt. of codfish and 900 cwt. of oil: three whalers brought in, during the same year, 13,433 cwt. of whale-oil, and 306 cwt. of whale-bone. The pickard fishery is also carried on with great activity; and employs, in the season, 700 boats, manned by about 3000 seamen. Nantes has two weekly markets, and 12 yearly fairs, one of which, beginning May 25th, lasts 15 days. Living is cheap; and fish of many varieties, as well as the fine fruits of the S. of France, are abundant in the markets. According to Hugo, there are annually killed in Nantes 2700 bullocks, 90,600 calves, 34,300 sheep, and 9000 hogs.

The era of the foundation of Nantes is unknown; but before the conquest of Gaul by the Romans, it was already a considerable city, and the capital of the *Nannetes*, who distinguished themselves by their opposition to Julius Cæsar. In 445, it was unsuccessfully besieged by the Huns, and, in the middle of the 9th century, was sacked by the Normans. In 992, it was added to the possessions of the dukes of Brittany, with whom it remained down to the union of that kingdom with France, by the marriage of Anne of Brittany to Louis XII. But Nantes is chiefly distinguished in history from the famous edict issued here in 1598 by Henry IV., and hence called the Edict of Nantes, which secured to the Protestants the free exercise of their religion, and an equal claim with the Catholics to all offices and dignities. The revocation of this edict by Louis XIV., in 1685, is the grand blot in his reign; and by occasioning the emigration of great numbers of his most industrious subjects, was even more injurious to his kingdom than the victories of Marlborough and Eugene.

During the revolutionary phrenzy, Nantes was the scene of the atrocities of Carrier, the most sanguinary of the republican agents in the reign of terror. Nantes has produced numerous distinguished individuals, including Anne, Duchess of Brittany; the Egyptian traveller, Callaud; the physiologist, Laennec; Pouche, minister of police, &c. Near it is the Château de Buron, celebrated as having been long occupied by M^{ad}. de Sevigné. (*Hugo, art. Loire-Inférieure; Guide du Voyageur en France; Parl. Reports; Commercial Dict.*, &c.)

NANSEMOND, county, Va. Situated in the S.E. part of the state, and contains 444 sq. m. Watered by Nansemond river and its branches. The dismal swamp, and lake Drummond, which it contains, lie partly in this co. It contained in 1840, 7239 neat cattle, 4340 sheep, 23,257 swine; and produced 5351 bushels of wheat, 315,672 of Indian corn, 34,514 of oats, 80,308 of potatoes, 153,640 pounds of cotton. It had 43 stores, five lumber-yards, one cotton factory with 1040 spindles, 17 grist-mills, six saw-mills, one oil-mill, one tannery, one distillery; four academies, 154 students; 13 schools, 270 scholars. Pop.: whites, 4298; slaves, 4530; free coloured, 1407; total, 10,785. Capital, Suffolk.

NANTICOKE, hand., Sussex co., Del. Watered by Nanticoke river and its branches. It has seven stores, one forge, five grist-mills, five saw-mills; one school, 60 scholars. Pop. 1975.

NANTUCKET, island and county, Mass. It is situated in the Atlantic ocean, 16 m. E. of Martha's Vineyard, and 30 m. S. of Cape Cod. It is 15 m. long with an average breadth of 4 m., containing 60 sq. m. It is mostly a sandy plain, almost entirely destitute of trees and shrubbery. The S. part is a plain, elevated not more than 25 feet above the level of the ocean; but in the N. part the land rises into hills, which are 40 feet high. The highest land on the island is 80 feet high. The inhabitants hold their land in common, and 500 cows feed in one pasture, and 7000 sheep in one flock. The inhabitants are mostly seamen, engaged especially in the whale fishery, which they pursue in the Northern sea and the Pacific ocean. S.E. of the island are Nantucket shoals, 50 m. long and 45 wide, where numerous vessels have been wrecked. The island of Nantucket, with four small islands W. of it, two of which are of no value, constitutes the county of the same name. The original right of Nantucket was obtained by Thomas Mayhew of William, Earl of Stirling, in 1641, at New York. It was granted by Governor Mayhew in 1730 to 37 proprietors, many of whom removed to the island in 1660, among whom were three men by the name of Coffin, and Peter Folger, the grandfather of Benjamin Franklin, the father of his mother, who was a man of great influence. Each of the proprietors was at liberty to select a house lot of 60 rods square, of land not taken up. The island is still held as a joint-stock property, and the proprietors have increased to over 3000, mostly Friends. The county contained in 1840, 528 neat cattle, 7500 sheep, 378 swine; and produced 91 bushels of wheat, 521 of Indian corn, 374 of barley, 354 of oats, 4585 of potatoes. It had 33 stores, capital invested in the fisheries, \$2,296,000, one fulling-mill, two woolen factories, four rope-walks, three grist-mills, two printing-offices, two weekly and one semi-weekly newspapers; five

NANTWICH.

academies, 630 students; 28 schools, 3080 scholars. Pop. 9012.

NANTUCKET, p. v., capital of Nantucket co., Mass., 119 m. S.E. Boston, 500 W. Situated at the bottom of a bay on the N. side of the island. It has a good harbour, nearly land locked by two projecting beaches, about three fourths of a mile apart, on one of which, denominated Brant Point, is a lighthouse. Nearly 3 m. N. of the harbour is a bar, with 9 feet of water. About 150 vessels belong to the port, navigated by 3000 men and boys. The village is compactly built with wooden houses and narrow streets, and contains nine churches, a Congregational, Unitarian, two Friends, a Methodist Episcopal, Methodist Reform, Episcopal, two African, one of which is a Baptist, three banks, two insurance companies, an atheneum, with a neat edifice, and a library of over 3000 volumes, a fine museum, and the Coffin school. This last institution was founded by the liberal bequest of Admiral Sir Isaac Coffin of the British navy, who visited the island in 1696, and found that a large part of the inhabitants were remotely related to him. It was incorporated in 1837, and endowed by its founder with a building, and £3500 sterling for its support. The place has daily communication with New Bedford by a steamboat, stopping at Holmes'-hole, Martha's Vineyard, and Wood's-hole, near Falmouth. The tonnage of the port in 1840, was 31,916 tons.

NANTWICH, a market town and par. of England, co. Chester, and hund. of its own name, on the Weaver, crossed here by a stone bridge, 17½ m. S.W. Chester, and 146 m. W.N.W. London. Area of par. (comprising five townships), 3490 acres. Pop. in 1831, 5357: do. of township, 4896. It is situated in a luxuriant vale near the borders of Staffordshire and Shropshire, is irregularly laid out, and comprises three principal streets, badly paved and lined with mean-looking houses, uniting near the church, a very beautiful cruciform building of red sandstone, built in the early English style, and highly ornamental, with an octagonal tower rising from the intersection of the nave and transepts. There are likewise several places of worship for dissenters, with attached Sunday-schools, which, in 1855, furnished instruction to 840 children of both sexes. Two endowed day-schools are attended by about 130 children; and there are several almshouses, besides minor charities. A market house and town-hall were built in the last century. Nantwich formerly owed its prosperity to the abundance of its salt-springs; but only one spring is now worked, and nearly the whole trade has been removed to other places. Large quantities of excellent cheese are made in the town and its fertile neighbourhood, besides which, the manufacture of shoes for the London market forms an important branch of industry. Cotton goods, also, are made here in considerable quantities; and in 1839 there was a cotton-mill, employing 111 hands. The glove trade is carried on to some extent. Great facilities of intercourse are furnished by the Birmingham and Liverpool, as well as by the Chester and Ellesmere, canals; and the Grand Junction canal passes at only a few miles distance. Petty sessions for the hundred are held here; and the Marquis Cholmondeley, as lord of the manor, holds a baronial court for the recovery of debts under £10. Markets on Saturday; and fairs, May 15, June 13, September 4, and December 4, 18, 19.

Nantwich, mentioned in Domesday simply as "Wich," was the scene, in 1089, of an unsuccessful attempt by the Cheshiremen to resist the advance of the Normans. In 1438 and 1583, the town suffered considerably from fire; and during the parliamentary wars, it was besieged by the royalists under Lord Byron, but soon after relieved by Sir Thomas Fairfax. It also deserves notice, from having been the birthplace of General Harrison, one of the regicides, and of Milton's widow, who died here in 1726.

NAPLES (KINGDOM OF), otherwise called the Kingdom of the Two Sicilies, a European state of the second class, nearly identical with the *Magna Græcia* of antiquity, comprising the S. portion of Italy, with Sicily and the adjacent islands, included between the 36th and 43d degs. of N. lat., and the 13th and 19th of E. long. It has N. the papal states, E. the Adriatic, and elsewhere the Mediterranean. Its total area may be estimated at about 42,000 sq. m., and its population at nearly eight millions.

The Neapolitan territory is divided into two principal portions, the continental and the insular, the first being called the *Dominij al di qua del Faro* (the country on this side the Faro, or Straits of Messina), and the latter, the *Dominij al di là del Faro* (or the country beyond the Faro). The latter portion will be fully treated of under the head SICILY; we have now only to deal with the continental portion, the area, population, subdivisions, &c., of which are as follow: (See up of next column.)

Physical Geography.—The continental part of the kingdom of Naples, the limits of which have scarcely varied for the last eight centuries, is about 400 m. in length, N.N.W. to S.S.E., and 130 m. in its greatest breadth, from cape Cam-

panella to the Garganian promontory. Its shape is very irregular; at its S.E. extremity are the two peninsulas of Calabria and Otranto, forming one the foot and the heel of the boot which Italy is supposed to resemble, while to the N.W. of the latter is the conspicuous promontory of Gargano, extending into the Adriatic, representing the spur. On the W. coast also are many promontories and headlands, as those of Sorrento, Gaeta, Baise, cape Vaticano, and others, which respectively bound the bay of Naples, the gulfs of Gaeta, Salerno, Policastro, St. Eufemia, &c. The peninsulas of Calabria and Otranto include the extensive gulfs of Taranto, N. and S. of which are the less spacious gulfs of Manfredonia and Equilicæ. The coasts are for the most part bold and abrupt, but the W. and S.W. are much more so than the E. and N.E. On either side however the kingdom has several good ports.

The surface of Naples, like that of the greater part of Italy, is mountainous, but it contains extensive and beautiful plains and valleys, which under the influence of an invariably mild climate present a luxuriance of vegetation, and a beauty of scenery, hardly to be met with in any other part of Europe. The Apennines traverse the kingdom nearly in its centre from end to end. In the Abruzzi, where they reach their greatest altitude, they consist of the lateral ranges, but these unite near Isernia, and the main chain thence proceeds undivided to Monte Caruso, about 14 m. N. Potenza, where it finally bifurcates, the principal range running through Calabria to its farthest extremity, and a less elevated range through the S. part of Apulia. Many important ramifications are given off by the Apennines, both before and after their bifurcation, and thus forming the lofty promontory of Sorrento, that of Gargano, the mountain knot of La Sila in Calabria, &c. The Apennines rise to a much greater elevation in S. than in Central Italy. The *Gran Sasso d'Italia* (M. Corno) in the Abruzzi, reaches the height of 10,185 English feet, and M. Majella, in the same province, that of 9335 feet. There are some separate or detached groups of mountains, of which Vesuvius, though not the largest, is by far the most celebrated. It owes this distinction to its situation close to the city of Naples, and still more to its having long been an active and sometimes a most destructive volcano, *Ætnæi ignis imitator*.

The largest of the Neapolitan plains is that of Capitanata, having Foggia in its centre. It is mostly appropriated to pasture, and is in part sandy and arid. (See *encl.* p. 2.) But the most celebrated plain is that of the Terra di Lavoro round Naples, anciently the *Campania Felix*, an epithet to which it is still well entitled. The choicest gifts of nature have been lavished upon this noble plain. It is above 40 m. in length by from 15 m. to 30 m. in breadth, and, excepting Vesuvius and a ridge between Naples and Minervæ, it is everywhere a dead level. The soil, which is deep and loamy, is of the most extraordinary fertility, frequently producing two crops in a season. It is carefully, if not skilfully, cultivated; the vegetation is most luxuriant; and being free from malaria, the air mild and genial, and the sky usually clear, it goes far to realise the poetical descriptions of the Elysian fields—*Omnium non modo Italia, sed toto orbe terrarum, pulcherrima Campaniæ plaga est. Nil mollius celo: denique his floribus vernat. Nil uberior solo: idæ Liberi Cereæ certamen dicitur.* (Florus, lib. 1, cap. 10; see also *encl.* p. 51.)

The rivers are numerous, but mostly inconsiderable. The principal are the Garigliano (an. *Liris*), and the Volturno flowing through Campania to the Mediterranean, the Pescara, Biferno, Candelaro, Cervaro, Ofanto (an. *Asclæus*), &c., falling into the Adriatic; and the Bradano, Basento, Crati, &c., which carry their waters to the gulf of Taranto.

The only lake of any size is that of Celano or Fucino (an. *Fucinus*), in Abruzzo Ultra, 11 m. in length by 7 m. in its greatest breadth, in a basin surrounded by high mountains. This lake receives the waters of several considerable

* In 1838, the population had diminished to 6,021,294, a diminution principally owing to the cholera and febrile diseases, which had been particularly prevalent in the city and province of Naples during the previous year. (Sordani, *Statistica d'Italia*; *Abruzzo e della Sicilia*, &c.)

NAPLES (KINGDOM OF).

streams, and having no outlet, is apt, occasionally, to overspread the surrounding country. To obviate this effect, the Emperor Claudius, in imitation of a similar undertaking at the Alban lake (see vol. I, 30, of this work), carried an *emissario*, or aqueduct, 3 m. in length, partly by tunnelling and partly by excavating, from the Liris, through Monte Salviano, to the lake, by which its waters were at once reduced and prevented from again rising to a higher level. (See *Sustentio in Claud.*, cap. 30; *Tacit. Annal.*, lib. xii., cap. 56, 57.) This great and useful work was, however, in later ages, suffered to fill up and become useless. Later, however, it has been renovated under the direction of Affan de Rivers, in whose work (*Considerazioni sui Mossi, &c.*, I., 305) the reader will find an account of the undertaking.

In respect of *climate*, S. Italy is artificially divided into three regions, according to the elevation of the surface. In the lower parts of the country, the winter is so mild that vegetation is never interrupted; and at the S. extremity of the kingdom, the aloe, palm, and other tropical plants flourish in the open air. In the plains and valleys, near the foot of the mountains, snow seldom falls, and remains only a short time on the ground: but in the higher portions of the Abruzzi, &c., the cold of winter is piercing and long continued. There is a marked difference in the climate on the E. and W. sides of the Appennines. In the plains of Apulia and Bari, for example, rain seldom falls; the ground is, in parts, arid, and almost desert, and, during summer, vegetation is parched up, and the heats are oppressive: but, on the W. coast of the kingdom, and especially in Campania, showers are frequent in summer, and in winter the ground is saturated with moisture. At an average of the kingdom, the annual fall of rain may be estimated at about 39 inches. Except in some marshy tracts on the coast, the climate is in general as healthy as it is genial. The heats of July, August, and Sept. are sometimes, however, rather hazardous, especially when the *sciocco*, from the Syrian and Arabian deserts, exerts its pernicious influence. Its ensnaring and suffocating blast, notwithstanding the cooling it has sustained in passing over the Mediterranean, becomes positively dangerous, when it lasts more than 30 or thirty hours, and is not followed by a breeze from the N. In Naples and other large cities, the streets are deserted during the prevalence of the *sciocco*, the inhabitants shutting themselves up in their houses, and closing all the doors and windows to exclude the air as much as possible.

Geology, Natural Products, &c.—Granite and gneiss which are absent from the Appennines of central Italy, again appear in the S., and are the predominate rocks in the main chain from the Abruzzi to the end of Calabria. They are intermixed with mica, talc, clay slate, serpentine, &c., and accompanied on either side by the calcareous formations, of which the Italian peninsula is mainly composed. Calcareous or sandy formations constitute the principal portion of the upper soil; but in some parts, especially in the neighbourhood of the capital, the ground consists of volcanic tufa, lava, ashes, &c., which contribute to its prodigious fertility. Vesuvius is at present the only active volcano of continental Naples; but there are numerous extinct volcanoes, the craters of some of which supply salt ammoniac, sulphur, vitriol, alum, and other volcanic products. These with pumice stone from the Lipari islands, salt, lime, and crystals of several kinds, form the chief mineral wealth of the kingdom. Iron is dug up at Stilo in Calabria, and at Vesuvius, but in no great quantity. In Calabria Citra, veins of gold and silver have been detected, but not such as to pay for the expense of working. Salt is procured from salt lakes near Taranto.

The *vegetable products* have been already noticed with those of the rest of Italy (see vol. I., p. 53); but in addition to the ordinary forest trees, shrubs, and fruits of Italy, the pistachio, date, sugar cane, &c., flourish, in some places cotton is rather extensively cultivated. Immediately on entering the Terra di Lavoro from the papal states, an increasing luxuriance of vegetation is perceptible, and many new plants common to the tropical climates are added to the *flora* of other parts of Italy.

Bears, wild boars, and an abundance of game, inhabit the forests; and the crested porcupine is an animal said to be peculiar to this part of Italy. The shores abound with fish, and the gulf of Taranto is celebrated now, as of old, for the number and excellence of its shell fish. Among these are the *Pisana maritima*, the silky fibres of which are woven into stockings, gloves, &c.; and the *Murex*, still used, as in antiquity, in dyeing wool. The tarantula and cantharides are met with in the S., which is also occasionally devastated by swarms of locusts.

State of Property, Agriculture.—Notwithstanding the backward state of Naples at the present day, in respect of agriculture and other branches of industry, it has made a very considerable progress during the last century, and especially during the last 30 years. When the Austrian dominion ceased, in 1733, the industry of Naples was at its lowest ebb. The abuses inherent in the feudal system had

then attained to a maximum. The entire property of the country belonged to the crown, the church, the nobility, many of whom had vast entailed estates, and the corporations. The bulk of the people were in a state of predial slavery. Every feudal right and service, however onerous and absurd, was rigidly insisted upon. The game laws existed in their utmost extent; justice, if we may so abuse the word, was administered in baronial courts; the services which the peasantry had to render to their lords were not defined, and they could hardly do any thing except with their consent. The roads were neglected, commerce despised; the country, notwithstanding its fertility, frequently suffered from famine; and the people, oppressed, dejected, and without the means of improving their condition, mostly sank in a state of indolence and apathy, while the more adventurous spirits became bandits and robbers. (See the *Saggio Politico sul Regno delle Due Sicilie*, by *Don R.*, p. 16 and passim.)

The Bourbon government laudably exerted itself to suppress some of the worst of these disorders; and it so far succeeded as to introduce a better system of administration, to improve the roads and towns, and to provide, in some degree, for the growth of manufactures and commerce. But the abuses with which the whole frame of society were infected, were too deeply seated to be eradicated by its feeble and timid hands. The wants of the country were set forth by Filangieri, and other able writers, but things continued nearly on their old footing until the French had established their ascendancy in the countries on this side the Faro. We have already seen that Napoleon has an unquestionable title to be regarded as the best friend and benefactor of Italy (see ante, p. 57); and this, perhaps, is more especially true of Naples than any other part of the peninsula. In 1806 Joseph Bonaparte, then king of Naples, promulgated, no doubt with the approval of his brother, a law, which overturned the feudal system from its foundations, and produced an extraordinary and most beneficial change in the constitution of property and of society. "The feudal system," says the law, "and all feudal jurisdiction, are abolished; all towns, villages, hamlets, are subjected to the general laws of the country. All feudal dues to the exchequer cease, and feudal estates are subject to the same taxes as others. All feudal burdens, services, and dues of a personal nature, levied from communes or individuals, are abolished without compensation; as are all prohibitive rights or monopolies, wherever they did not originate in purchase. Rivers are public property. The feudality of offices and *feudi commissari* shall cease."

This law was followed by others of an equally decisive and stringent character; and at the same time convents were secularized, the (prodigal) drosses by which they were occupied were turned out, with only a small stipend, and their estates sold at very low prices. Happily, the changes that these laws had introduced into the distribution of property and the state of society, previously to the revolution that restored the Bourbons to the throne, were such as to render a return to the old state of things impossible. The nobility have, however, recovered some of their old privileges, and have been permitted to establish majordomos. The attempts to restore the property and influence of the clergy have been successful with greater zeal, and have been, perhaps, more successful. But, though many convents of monks and nuns have been again established, a comparatively small amount of property is now in their hands; and it is to be hoped that the growing intelligence of the people may at length put a final stop to this most wasteful and vicious mode of employing the public wealth.

The measures now noticed, coupled with the introduction of the law of equal succession in cases of intestacy, have had a much greater influence over the distribution of property than might, *a priori*, have been anticipated. It appears from the returns under the land-tax (*Contribuzione Foderale*), that in 1839 there were in continental Naples no fewer than 1,419,191 properties rated to the tax, and that these were held by 1,093,179 individuals, showing that there is, in fact, nearly a proprietor for every family in this part of the kingdom! (*Don R.*, *Saggio Politico*, p. 53.) As houses as well as land are rated to the land-tax, and as there are no means by which to classify the contributors according to the sums paid by each, we are unable to hazard any estimate of the size and value of the different classes of properties. There can, however, be no doubt that the number of small and middle-sized properties has been prodigiously augmented since 1806. Indeed, the danger now is that the tendency to divide and subdivide estates should be carried too far. When all feudal privileges are abolished, and land is placed on the same footing as other property, the interests of society will be best promoted by adopting a system of primogeniture; and preventing, in as far as practicable, by indirect methods, the division of the land into minute portions.

The method of holding the land by tenants differs in different parts of Naples. In some of the richest and most populous districts round the capital and elsewhere, the land,

NAPLES (KINGDOM OF).

when not occupied by the proprietor, is mostly let in small lots of four or five acres, on the *metayer* system; but in general this system is but little followed, and in most parts of the country the land is either occupied by proprietors, or by tenants holding under a lease of some years' duration at a fixed rent. The size of farms varies in different districts; and in those where pasture predominates, they are sometimes very large. But notwithstanding the impetus given to industry of late years, agriculture is still extremely backward. The nobility, who are usually involved in debt, care little for agriculture, and their tenants are mostly without either adequate capital or skill. Drainage in some quarters, and irrigation in others, though of essential importance, are generally neglected; and the sowing of artificial grasses, and even the application of manure, are comparatively unknown. "Farming implements, carts, ploughs, and tools of every kind are of the most wretched description." (Macgregor.) The more common kinds of grain are wheat, maize, or Indian corn, and, in the older situations, rye. In Calabria, and the more distant provinces, grain is thrashed out by driving cars over it, or by trampling it with the feet of horses and oxen. In many parts few or no ploughs are used in tillage. In the *Campania*, for example, the soil is so very friable, that it is easily turned up even by children; and such is its fertility that no fallows are required in its culture, and but little manure, the gathering of one crop being followed by immediate preparations for another. According to Châteaueux six crops are obtained round Naples in five years, exclusive of the produce of vines, fruits, and beans, which grow in the same land without prejudice to the corn crops. Most parts, indeed, of the kingdom, except where there is a deficiency of water, are extraordinarily fertile; the crops of wheat and maize are especially most abundant; and there can be no doubt that, with a skillful and careful system of agriculture, the kingdom might afford ample subsistence for four or five times its present population. But here as elsewhere, the fertility of the soil, and the mildness of the climate, contribute, with bad government, to enfeeble the cultivators; and by lessening their wants, and enabling them to supply them with little labour, generate that indolence and apathy that are so universal. In the finest districts numerous families live in the meanest hovels, and in a state that in Great Britain would be reckoned to approach closely to absolute indigence. But under such a climate, and occupying such a soil, they do not often suffer the extreme of want. They rarely, however, partake of any of the enjoyments and luxuries of life, other than those which they share in common with the lower animals. Without ambition, or the desire of rising in the world, and without knowledge of the liberal, and but little of the mechanical arts, they pass their days in a state of brutish apathy and indifference.

The plain of Sorrento, according to Châteaueux, is almost the only part of the kingdom of Naples where agriculture may be said to be skillfully and actively carried on. The rotation of crops is there, 1st year, maize; 2d, wheat, succeeded by beans; 3d, cotton; 4th, wheat, followed by clover; 5th, melons, followed by peas or beans; making eight crops in five years. Next to the above, rice, barley, rye, onions, and other kitchen vegetables, oil, wine, hemp, flax, tobacco, saffron, and fruits of various kinds, form the principal products; and each might be produced in quantities at least equal to twice the consumption of the inhabitants. The olive is found in all the low and temperate parts of the country, and its culture is widely extended. In Apulia, especially, a great extent of land is covered with olive-trees, which frequently reach the ordinary size of oaks; and throughout the province of Bari, and a part of that of Otranto, a broad belt of olives lines the coast for 100 m. In 1857, a good oil year, the produce of these provinces was estimated at 360,000 *salme* (3,314,000 galls.). In Calabria, also, from Rossano to Gioia, olives grow in great abundance; and the W. shore of the kingdom, from the last-named town to Gaeta, produces large quantities of oil. The average annual produce of Calabria is estimated at 100,000 *salme*. The culture of the olive, and the preparation of the oil, have of late years attracted a great deal more attention than formerly, and have been materially improved; and were it not for the anti-commercial policy of the government, would become of vast importance. At an average of the three years ending with 1839, the exports of olive oil amounted to 2,800,123 staja a year; whereas, at an average of the three years ending with 1832, the exports were 3,008,887 staja a year, or above 6,000,000 imperial gallons. (Serriani, p. 61.) Gallipoli is one of the greatest marts in Italy for oil; and that shipped from it is considered equal to that of Genoa or Lucca; a superiority for which it is mainly indebted to the influence of the tufa cisterns in which the oil is purified before being shipped. (See vol. i., p. 359.)

The Neapolitan wines are mostly full bodied, and some are of a good flavour; but the principle of the division of labour is very imperfectly understood, and, instead of being

pursued as a separate branch, requiring the undivided attention of the husbandman, the culture of the vine is commonly carried on upon the same farm with that of corn, olives, &c. In the Terra de Lavoro and other parts of the country, elms and poplars are seen, planted in rows for the support of the vines, the intermediate spaces being sown with corn, pulses, and other crops. In parts of the Abruzzi, however, the vines are cut low, and tied to canes, as in France; and in the province of Otranto, they are cut off to about 3 feet above the ground, which is hoed around them with a degree of care by no means general in S. Italy. The wines of Taranto, Gerace, and other parts of Apulia and Calabria, might become very superior by proper treatment. Rosend Vossius some fine growths are obtained, among which is the celebrated *Lacryma Christi*: this, which is a red incense wine, is little known except to visitors at the royal table at Naples, the quantity grown being small, and principally purchased for the court. On the whole, though the wines of Naples be probably superior to those of the rest of Italy, they are very inferior to those of France or Spain; are seldom met with out of Italy; and, except the sweet wines, are mostly converted into brandy.

Oranges and lemons are grown in large quantities in Capitanata and about Salerno and Reggio, from which latter towns a good many are sent to France and Genoa; tobacco is pretty largely cultivated in Bari and Otranto, and cotton in Calabria Ultra, the Abruzzi, and Basilicata. But excepting flax and hemp, which are extensively cultivated, few crops furnish materials for manufactures; these generally speaking, being imported from abroad. Licquorice is grown in Calabria and the Abruzzi, and about 15,000 *centari* a year of juice are exported. Manna is a product of some importance in Calabria; it exudes from gashes cut in the bark of the manna-ash (*Fraxinus ornus*). The product is farmed by the crown; and the labourers who cut the bark and collect the manna are debarré, while so employed, from attending to any other occupation, though they receive only a small pittance, amounting to three *centesimi* or about 1s. for every *rotolo* of manna they collect. Manna is also produced near Salerno, where, however, about five *centesimi* per *rotolo* are paid for its collections.

The forests might become an important source of wealth; but, in consequence of the suppression of the feudal system, the sale of monastic and other domains, and the division of the communal property under the French, numerous woods were felled, and the ground they occupied was subjected to tillage; but, after a few favourable harvests, the soil was exhausted; and it was further exposed to the redoubled violence of inundations, which by washing away the mould and stones from the mountain declivities, caused great injury to the lands below. For these reasons, in 1818, a special board of superintendence over forests, &c., was appointed; and it was forbidden to appropriate the ground occupied by woods to tillage, except where the site is level and fertile, or under certain other circumstances: neither is any proprietor allowed to fell timber without express permission. These regulations have checked the diminution of the woods; but their preservation has been next to useless; for although in many parts of the interior there is abundance of timber admirably adapted for ship-building, the roads and means of conveyance are so bad that its carriage to the coast would more than cover the cost of importing it into Naples from other countries. And, moreover, government discourages the efforts of individuals to improve the roads by prohibiting the export of timber, at the same time that it obliges it to be cut down by laying a heavy duty on the importation of coal!

If we except sheep, the rearing of live stock is not much attended to. There are estimated to be 4,000,000 head of sheep in the kingdom, a great number of which are migratory, being kept on the mountains in summer, and driven, in winter, into the valleys, and the *tavolere* of Apulia. The last named region is a tract of about 95 sq. m. belonging to the crown, and which, a few short intervals excepted, has been wholly devoted to pasturage from the time of the Romans, its tillage having, indeed, been prohibited. Under the French, however, a law was passed in 1805, which, for a time, completely changed the state of the *tavolere*. Instead of the ground being farmed exclusively as pasture, a fixed rent was substituted; and every one was allowed to apply the land, as he pleased, to pasturage or tillage. But in 1817, the judicious law was repealed, and a new act passed, by the provisions of which (in order to keep up as it was alleged, the due proportion between pasture and arable land,) no one was to till more than one fifth part of his land, on penalty of paying tenfold rent, &c. Latterly, however, we believe that this absurd enactment has been materially modified, it having fortunately been found impossible to enforce its provisions. The horned cattle are estimated at about 300,000 head, exclusive of about 50,000 buffaloes, which wander in large herds over the marshy plains in the N.W. The oxen are of different breeds, and excellent quality, being used both for the plough and for carts. They are

NAPLES (KINGDOM OF).

mostly stall-fed, on vine leaves, maize, stubble, &c., except in Apulia, or districts where the pasture lands are very extensive. The horses are but indifferent: but a fine small active breed, with dark frizzled hair, is peculiar to Calabria. Mules and asses are the most common beasts of burden. Hogs and goats are very numerous; the former, which are of a large, dark, hairless breed, wander wild in the forest; the milk of the latter is converted into cheese. The herdsmen throughout the kingdom are principally from the Abruzzi.

Except in the S., where the cottages are sometimes built of stone, it is rare that the agricultural labourers inhabit anything but wooden huts, roofed with straw or dles, in which three or four generations often live together. They live almost wholly on vegetable food; and into this, fruits and pulses enter more largely than corn. Their clothes are coarse, and the dress of the shepherds and poorer peasantry consists almost solely of sheep or goat skins, with the hair outside. The wages of an ordinary field labourer may average about 16 *grani* (or *6d.*) a day.

The culture of *silk* is widely diffused, and it now forms a valuable article of export from the kingdom. The greatest quantity of silk is produced in the provinces of Lavoro, Principati, and Calabria, but especially the last. At Reggio, in particular, many families furnish houses expressly for rearing silkworms. The total produce of Naples was estimated, in 1833, at 800,000 lbs., of which 536,000 lbs., worth 2,005,000 ducats, were exported raw and wrought. (*Serviziari*, p. 61.) The remainder is consumed in the country. The silk of Calabria is stronger and more compact than that of other parts of the kingdom; a consequence, it is supposed, of the worms being fed with the leaf of the red mulberry peculiar to that province. Much less attention is, however, paid to the culture of the mulberry, both there and throughout the Neapolitan dominion, than in N. Italy. In the vicinity of Naples, where two crops of cocoons are annually collected, the breeders of silkworms are accustomed to buy mulberry leaves at a dear rate, at the same time that they use the poplar as a support for the vines in their farms.

The *fisheries* rank next to the foregoing branches of industry. The tunny (*Scomber thyngus*) frequents the W. coast in large shoals in the early part of the year, and the taking of the fish employs a large number of hands. Large meshed nets, perhaps 1500 feet in length, and divided into several compartments, are laid across the track of the shoals at a considerable distance from the shore, with which they are connected by strong lines and nets of still larger meshes. The fish, having got into the nets, are prevented finding their way out again by the number of compartments; and after the lapse of a day or two, men in flat-bottomed boats surround the nets with harpoons, and kill the larger fish, which are sometimes 8 feet in length. The whole draught is afterward hauled on shore. Anchovies are caught in abundance in the spring; and many mullets are taken, the cores of which are made into *bologna*. A great many of the inhabitants of Taranto employ themselves in taking the shell-fish of the gulf, leaving the adjacent lands to be cultivated by natives of Calabria and Abruzzo. But the quantity of fish taken for food is by no means equal to the home demand, and salted fish is a principal article of import. *Coral* is raised on different parts of the coast.

Manufactures are, for the most part, domestic; and the majority of the goods made scarcely ever find their way out of the country. Of late years, however, manufactures have been considerably improved, and several considerable manufacturing establishments are now to be met with in different parts of the kingdom. Those of silk are the most extensive; and next to them are those of woollens, principally established in the capital and at Sora and Lodi. Linen stuffs are made in several of the provincial towns, and there are numerous paper-mills.

Naples has manufactures of gloves and straw hats, in imitation of those of Tuscany; and the princes of Butora and Gerace, with other partners, have established a considerable glass manufactory at Paestulippo. Reggio has manufactures of gloves, waistcoats, and hosiery; and Avellino, of woollen cloth, muscogs, and macaroni. Campobasso is famed throughout the kingdom for its cutlery. The establishments in which it is made are on a very small scale.

"Great was my surprise," says Mr. Craven, "at finding that the various articles of this nature are all fabricated in detached small workshops, containing little more than a common blacksmith's apparatus, and possessing so contracted an assortment of articles that I could with difficulty obtain a selection of a dozen knives and scissors. They all work by commission for dealers in the metropolis and other large towns, with such limited means and capital, that they are entirely incapacitated from executing and maintaining in their laboratories a collection exhibiting anything like variety or choice." (*Excursions in the Abruzzi*, &c., ii., 142.) A miserable cotton factory, a sort of government monopoly established at Salerno, some time ago,

and the iron mine and forge at Stilo, comprise nearly all the remaining branches of manufacturing industry. (*Peri. Report*, 1840; *Châteauxvieux, Italy*, &c., p. 187-206; *Von Rasmer's Italy*, ii., 248-264; *Rampoldi, Simend, Craven, Swinburne*, &c., *passim*.)

Commerce.—The extraordinary fertility of her soil, the variety and superior quality of her raw products, and her admirable situation, give Naples the means of carrying on a very advantageous and extensive commerce. But her natural advantages have been, in this respect, all but nullified by the perverse policy of her government. Her oils, silks, sulphur, corn, wines, &c., would all meet with a ready and advantageous sale abroad, provided the manufactured goods and other products which foreigners have to give in exchange for them, were admitted on anything like reasonable terms into the Neapolitan dominions. Such, however, is not the case. The importation of a great variety of foreign articles is prohibited; and most of those that are admitted are loaded with oppressive duties, varying from 50 to 100 and 150 per cent. *ad valorem*. But this is not all. Not satisfied with attempting to shut out foreign products, the Neapolitan government lays heavy duties on many of the most important articles produced in the kingdom, when exported; and thus by raising their price to the foreigner, and lessening the demand for them, does all in its power to limit and hinder their production! Olive oil, for example, is charged on its exportation with a heavy duty; and as oil is largely produced in Lucca, Tuscany, Genoa, and elsewhere, the effect of this *felo de se* tax is to depress that branch of industry which is most suitable for the country, and to encourage the culture of olives and the oil trade in other parts of the peninsula! After this specimen of the commercial policy of Naples, the reader will not be surprised to hear that the *bonding* of goods is not permitted in any part of the kingdom; in other words, all foreign goods must pay duty on being imported, and no part of this duty is remitted, or drawn back, on their being again re-exported.

Under such multiplied difficulties the wonder is, not that the commerce of the country is confined within comparatively narrow limits, but that it exists, and is so extensive as we find it to be. The great superiority enjoyed by Naples in the production of certain articles, and the wants of the people originating in the low state of manufactures, and the demand for colonial products, spices, dye-stuffs, and other indispensable articles, have however proved too strong for the anti-commercial policy of the government, and occasion a considerable intercourse with foreigners. No accurate accounts have, however, been published of the quantities and values of the principal articles imported into, and exported from, the Neapolitan dominions; but, according to the information obtained by Mr. Macgregor and others, the value of the exports from the continental portion of the country may, perhaps, be estimated at about £2,000,000, and that of the imports at about as much. The latter consist of cottons, woollens, linens, and other manufactured goods; sugar, coffee, and other colonial products; spices, dye-stuff, salted fish, iron and hardware, &c. The exports consist principally of olive oil, silk, flax and hemp, wool, wine, corn, linseed, cream of tartar, grapes, macaroni, lamb and kid skins, liquorice, coral, bones, &c. The trade of continental Naples principally centres in the capital; and the reader will find in the following article as account of the principal articles exported from it in 1836.

Subjoined is an Account of the Vessels belonging to the different Neapolitan Ports in 1834:—

Provinces.	Emp. in Foreign Trade.	Emp. in Fisheries and Coast-trading Trade.	Total Vessels.	Burden in Tons.	Men.
Naples	2,680	681	3,360	126,040	22,220
Terra di Lavoro	94	73	167	9,396	1,846
Principato Citra	233	22	255	3,565	2,473
Samnio	15	15	30	180	96
Capitanata	43	16	57	1,029	329
Bari	509	129	638	14,236	3,120
Otranto	324	7	331	1,197	791
Abruzzo Citra	78	14	92	1,550	635
" Ultr. I.	24	6	30	414	194
Basilicata	23	8	31	114	62
Calabria Citra	182	6	190	1,204	1,288
" Ultr. I.	351	26	377	4,661	1,600
" Ultr. II.	120	18	138	1,119	1,596
Total	4,555	906	5,460	169,200	36,363

The principal weights in use are, the lb. of 12 *once* = 11 oz. avoird.; the *rotolo* = about 31 oz.; and the *cantaro* of 100 *rotoli* = 1964 lbs. avoird. The *tomolo* of corn = 1.45 Winchester bushels; the *barile* of wine, &c. = 9½ imp. galls.; the *salma* of oil = 354 imp. galls. nearly. The *canna* of 8 palmi = 6 ft. 11 in. Eng.; the *palmi* divided into 12 *once* = 10.36 Eng. in. The Neapolitan mile of 7000 palmi = about 14 Eng. m.; the *moggio* = 73 Eng. acre. Accounts are kept in ducats (20. *sc.* each), divided into 10 carlini and 100 *grani* (*Balbi*; *Serviziari*, &c.)

NAPLES (KINGDOM OF).

The Government is a monarchy, hereditary in both the male and female line; and at present in the hands of a branch of the house of Bourbon. The monarchy in respect to the continental portion of the kingdom, was formerly quite unlimited, while Sicily had a parliament of its own. But in 1811 a *consulta* was established for each separate division of the Neapolitan dominion; that for the continental portion consisting of 16 members, and that for Sicily of eight members, appointed by the government from lists of candidates named by the inhabitants of the different provinces. Each *consulta* was presided over by a vice-president nominated by the king; and both assemblies frequently meet in one, termed the *consulta generale*, in which a state minister, also appointed by the king, sat as president. In 1837, these *consulti particolari* were permanently amalgamated into one parliament, which sits at Naples. But the functions of this body are of the most restricted description; and, as is truly observed in the "Quadro del Governo," non s'ha altra suprema autorità legislativa che quella del monarca; essa è assediata, ed in qualunque modo faccia egli conoscere la sua volontà debbono i sudditi obbedirvi. The king is, however, assisted by a cabinet of nine ministers, and a privy council composed principally of noblemen.

Every province is governed by an *intendente* appointed by the king, to whom all the internal administration of the province is confided: at the head of every district (*circondario*) is a sub-intendant; and in every commune a syndic or mayor. Each commune has also a body of *decurions* elected from the heads of families-paying taxes of from 12 to 24 ducats a year, according to circumstances, and who consult, under the presidency of the syndic, on the affairs of the commune, fixing the rates, and appointing municipal officers; but their resolutions do not acquire the force of law till they have received the sanction of the *intendente*. Every district has a council of 10 members; and in every province is a council of from 15 to 20 members, nominated by the communes, and chosen by the minister of the interior; which council assemblies once a year to examine the proposals of the district councils, to draw up, under the direction of the intendant, the projects proposed for the province, and to examine the provincial accounts, &c. The provincial council must not, however, consult upon any matters but such as are submitted to it; and the entire authority in the province remains with the intendant and his council, which consist of from three to five members, and is formed after the model of the French *council de préfecture*.

Justice is administered in a supreme court of cassation in the capital; high civil courts at Naples, Aquila, Trani, and Catanzaro; civil and criminal courts in the capital of each province, by a judge *d'istruttione* in each district, with authority from the provincial criminal court; and by a *consigliere* in each commune, who decide in cases to the amount of six ducats. In 1834, tribunals of commerce were in operation at Naples, Foggia, and Monteleone. Judges, as well as most other functionaries, usually hold their appointments for three years. Trials are public, and the code of laws, as well as the judicial forms, established by the French, have been generally adopted, except that trials by jury are unknown. Some late statistics and details show that the average of persons accused is as 1 to 1030, and of those convicted as 1 to 1438 of the population. Of 5613 accusations, in a given period, 194 were for offences against religion, 998 for homicide, intentional or otherwise, and 1703 for violations of property. In Capitanata, 1 in 807 of the population was convicted; in Abruzzo Ultra, 1 in 3611. The proportion of the accused, was 1 in 559 of the rural population, 1 in 199 of artisans and servants, 1 in 508 of persons occupied in liberal arts, and 1 in 3619 of landed proprietors. (See *Reamer's Italy*, &c., ii., 229-230.) According to these reports, Capitanata is a province distinguished for crime; and both it and Samio have been, in fact, noted for bandage on a large scale. Mr. Craven states, that even the favourite amusements of the children, in some districts in these provinces, consist in mock representations of attacks by brigands on travellers, &c., in which the former invariably gain the advantage. The country bordering on the Papal territories is also infamous for robberies. Under the French, the police was well organized, but it is now extremely corrupt and bad. Popular feeling, in the capital at least, is also generally in favour of an offender.

The established religion is the Roman Catholic; but the S. provinces have about 75,000 Greeks, chiefly the descendants of Greek colonists, who settled in S. Italy after the destruction of the Greek empire by the Turks. Jews are few; and there are only about 800 Protestants in the kingdom. In the continental dominions of Naples, there are 30 archbishops and 66 bishops, each of whom receives an income of not less than 3000 ducats. According to Serriero there were altogether, in 1837, 26,304 secular, and 20,906 regular clergy. Under the French, in 1807, about

250 convents were dissolved, their conventual property sold to pay the creditors of the state, and the monks, &c., allowed only a small stipend annually, which sum was afterward considerably diminished. But, as already stated, since 1830, everything has been moving in the contrary direction. Many convents and religious foundations have been restored; many new ecclesiastical fraternities founded; and the Jesuits have been re-established and endowed. According to the concordat concluded with the Papal court in 1818, the pope has the sole privilege of confirming the archbishops and bishops of the Neapolitan dominions in their sees, with other important privileges. Still, however, "the Neapolitan government does not allow the publication and application of any Papal rescripts without its own consent, and displays such firmness, nay, sometimes severity, in matters concerning the bishops and clergy, as the court of Rome would scarcely suffer a Protestant sovereign to exercise without reprimand." (*Reamer's Italy*, &c., ii., 312.)

Public instruction is in the most miserable state. Popular or elementary instruction is confined to the clergy. The Jesuits have, since their re-establishment in 1832, opened day-schools for the gratis instruction of youth, though they have not yet been allowed to re-open their former colleges for lay-boarders. There are grammar schools, as in other parts of Italy; and some attempts have been made to establish Lancasterian schools in Naples, but they seem to have failed. (*Journal of Educ.* v., 25.) There is, except to be, a primary school for boys in every commune; but there are few, if any, primary schools for girls, and universities for teachers have only just begun to be established. In some of the provinces, scarcely one in 150 or 160 persons learns to read and write.

Naples has a university, with faculties of theology, physics and mathematics, literature, jurisprudence, and medicine, which is attended by about 1500 students; royal lycées in Naples, Salerno, Bari, Catanzaro, and Aquila; royal colleges in all the other provincial capitals; and 45 secondary schools; in which, however, little is taught beyond reading and writing, and the mere elements of Latin and Greek. But, with the exception of mathematics, antiquities, and perhaps physics, all the higher branches of science and philosophy are in the most degraded state, and even the fine arts have not escaped the general paralysis.

In 1811, a royal society of science was established in Naples, which has been replaced by the royal Borbonic society, with 60 members in three divisions: many other institutions which were founded by the French have disappeared. In 1834, as many as 20 periodical publications appeared in the kingdom; of these, some that were scientific journals had a high character, but the others were mostly indifferent or worthless. The censorship of the press prevents native talent, if it exist, from distinguishing itself; and the oppressive duties on foreign books hinder the people from acquiring that information from abroad which they cannot obtain at home.

Monti frumentarii are established in the different towns for the relief of the poor, in which contributions of one are received and distributed to the indigent. The hospitals and other charitable foundations were formerly very rich; but they suffered a good deal from the encroachments on their funds by the French government. Their revenue, however, amounts at present (1840) to about 1,300,000 ducats a year: they are generally managed by the clergy. Prisoners in public jails are allowed, but not compelled, to work.

But the provision for the poor is certainly inadequate; and owing partly to this, and partly to the defective state of the police, mendicancy is excessively prevalent. St. Maciaren says, that in "all the towns and villages near Naples, strangers are besieged with crowds of mendicants, whose importunities know no bounds. To give anything to the first hire merely excites others to follow you. It is nothing less than a persecution, and is really one of the greatest nuisances a traveller has to endure."

The military force in 1838 amounted to nearly 45,000 men, of whom 39,000 were infantry of the line, 4300 cavalry, 2800 artillery and engineers, and 5080 *gendarmes*. In time of war, the effective force amounts to 64,587 men. (*Serviziarii, Statist. delle Due Sicilie*.)

From the completion of the 18th to that of the 25th year every one (with certain exceptions) is liable to the conscription. A law of 1834 fixes the time of service at five years in the army and five years in the reserve: but gendarmes, artillerymen, and volunteers, serve eight years without reserve. A provincial militia was instituted in 1818; but it was suppressed three years afterward. The soldiers have, at different times, been employed in useful public works, such as paving the streets, &c.; but it must be added, that the troops are ill paid, and deficient in courage, morale, and most of the qualities that constitute good

NAPLES.

soldiers. In fact, 25,000 English, French, or Austrian troops, would suffice to conquer and retain the kingdom. The principal fortresses are Civitella del Tronto, Pescara, Aquila, Gaeta and Capua, all in the N. provinces: Manfredonia, Brindisi, and Taranto, are only partially fortified.

The naval force consists of two ships of the line, five frigates, two corvettes, and a number of smaller vessels, mounting altogether 406 guns. There are three battalions of marines—two of 1000 men each, and one of 600 men. The principal dockyard is at Castellamare, in the bay of Naples. (*Serristori, Ordinet, &c.*)

The revenues are derived partly from direct and partly from indirect taxes. Of the former the *contribuzioni fondiaria*, or land-tax, is by far the most important. Previously to the French régime, the estates of the church and the nobility were exempted from direct taxation; but the French made an end of this unjust distinction, and imposed the *contribuzioni fondiaria* equally on all descriptions of land, without reference to its proprietors or occupants. The tax was originally fixed at 25 per cent. of the rent, and has not since been changed. The other principal sources of revenue are the customs' duties, the tolls on articles consumed in the different towns, the salt and tobacco monopolies, lottery, &c. The indirect taxes paid by the different districts are insured by companies of the inhabitants, who collect them at a certain per centage. We are not sufficiently informed as to the working of this plan to be able to say whether it be as advantageous as it is ingenious. We subjoin an

History.—At a very early period most part of the coasts of Naples and Sicily were occupied by Greek colonists, the founders of some of the greatest and most flourishing cities of the ancient world. They received from this circumstance the name of *Magna Græcia*. Continental Naples was wholly subjugated by the Romans soon after their war with Pyrrhus; and formed a most valuable portion of their empire. In modern times it has undergone many vicissitudes. It was united to Spain in the early part of the 16th century; and continued, as an appanage of that kingdom, to be governed by viceroys sent from Madrid, till the treaty of Utrecht, when it was ceded to Austria. In 1734 it was erected into an independent monarchy, under the Infanta Don Carlos of Spain, who took the name of Charles III. It continued under the Bourbon dynasty till 1798, when it was overrun by the French, who held it from 1803 till 1815.

These circumstances account in part, at least, for the degraded character of the Neapolitans. Down to the invasion of the French they had groined under a succession of tyrannical or imbecile rulers; and with such a government, and with the feudal system in full vigour, a servile and ignorant nobility, a priesthood always ready to protect and absolve every scoundrel who had money and power, it would have been a miracle had the people not become as worthless, as corrupt, and as degraded as their rulers. Had the government of the French been continued for half a century, the regeneration of the country might have been effected. But Naples has again become the prey of dotage and imbecility. And, till a new order of things shall be introduced, a vigorous government established, and the oppressive restrictions on foreign trade and on the circulation of books and papers have been abolished, it would be idle to expect any material improvement in the condition or character of the people.

NAPLES (an. *Parthenope* and *Neapolis*), a famous city and seaport of Italy, cap. of the above kingdom, and the residence of the sovereign, on its W. coast, on the N. side of the bay or gulf of Naples, 118 m. S.E. Rome, in the immediate vicinity of Vesuvius, the lower elevations of which approach to within a little distance of the city, on the S.E.; lat. (Fort St. Elmo) 40° 50' N. long. 14° 15' 50" E. Pop. on the 1st of January, 1837, 351,719; but, owing to the ravages of cholera in the course of that year, the population was reduced, on the 1st of January, 1838, to 336,302. It

may be taken at present (1841) at 356,000. The situation of Naples is one of the finest that can be imagined. Seated partly on the declivity of a hill, and partly on the margin of a spacious bay, it spreads its buildings along the shore, and covers the shelving coasts and adjacent eminences with its villas and gardens. Its suburbs stretch in a magnificent and lengthened sweep, from Portici on the E. to the promontory of Misenum on the W. The bay is extensive, and presents an almost unrivalled assemblage of picturesque and beautiful scenery. On its N.W. side the shores of Poszuoli rise in a gentle swell from the surface of the water; while on the E. Vesuvius, with its verdant sides and black smoking summit, bounds the prospect: the centre contains the city, with its palaces, churches, and gardens rising one above the other, backed by the heights on which are the royal palace of Capo di Monte, the observatory, and the castle of St. Elmo. The view from the city seaward commands the whole sweep of the bay, bounded on the S. by the promontory of Sorrentum, and having near its mouth the islands of Capri Ischia, &c. The clearness of the atmosphere and the mildness of the climate complete the gratification inspired by the scene, and justify the epithet of *mitta* given to the city by the ancients. The city has an oblong form; but, when viewed from an elevated position, such as the Carthusian monastery, the castle of St. Elmo, or the church of Santa Maria del Parto, it appears irregular, the surrounding country being so studded with houses and villages, that it is impracticable to mark the line of separation between the town and the environs.

But it is principally in respect of its situation that Naples is superior to most other cities. The streets, indeed, are generally straight and well paved, though without foot-paths; but they are universally narrow, and, being bordered by lofty houses, have a dark gloomy appearance, that contrasts singularly with the splendour of the surrounding country. The Strada di Toledo, the principal street, having at the one end the Piazza di Mercato, and on the other the royal palace, runs N. and S. for about a mile; but it is only from 40 to 60 feet in width, while the houses on either side are from five to seven stories in height. Few of the other streets are more than 30 feet in width, and many not more than from 15 to 20 feet, and some not so much: The houses are flat-roofed, and covered with a kind of stucco made of Pozzuolana sand, which becomes indurated on exposure to the atmosphere. Most of them have balconies in front; and these, and the booths and stalls with which the streets are constantly occupied, make them look narrower than they really are. There are several open spaces or *larghi*; for they cannot be called squares; but they are very irregular both in aspect and plan. The principal are the Largo di Castello, the Largo di Palazzo, and the Piazza di Mercato. Some of the *larghi* are decorated with fountains and obelisks; and the city is, on the whole, pretty well supplied with water.

The houses in Naples bear no analogy to those in London, but correspond pretty closely to those of Paris, except that they are generally on a larger scale. "You see," says Mr. Maciaren, "a vast tenement, with a front as long as that of Edinburgh college, but two stories higher—a grande porte, as large as the college gate, and decorated, too, with columns. This porte opens into a court as long as the building, but perhaps only 30 or 40 feet wide. The tenement, in fact, forms a parallelogram, built all round the court, with wide spacious stairs in each of its interior fronts. The whole of the ground story externally consists of a series of arched cells, probably 10 feet wide, 12 feet high, and 15 or 20 feet long. These are occupied as sale shops, cafes, and workshops. The door is always in three high and narrow divisions: in cold or wet weather the middle only is opened; in mild weather all the three are folded back, and the business is carried on in the open air. In cell No. 1, for instance, you have an oil-shop; in No. 2, tripe, sausages, &c.; in No. 3, cloth of some kind; in No. 4, sacks of flour; in No. 5, a coppermith hammering away; in No. 6 you see half a dozen tailors stitching; in No. 7 you find a confectioner, who is kneading the dough on his counter; in No. 8, a modiste, or dealer in women's dresses; in No. 9, a carpenter; in No. 10, a bookseller; in No. 11, a watchmaker. The cells are all of the same shape and size, and not one front only, but often all the four external fronts of the building are thus arranged and occupied. Such a building is called a *palazzo*, which does not mean a palace, but simply a house, or rather a tenement. In the ground story of which a crowd of shopkeepers and artisans carry on their business, and in the upper part a crowd of other persons live. Naples is almost entirely composed of palazzos, great or small, such as I have described, and they are crowded together amazingly. The ground may be said to bear a crop of houses, as a field bears a crop of corn; for gardens, or open plots of ground for drying clothes, or securing the advantages of light and air, are never dreamed of here, except as appendages to villas in the suburbs. In one thing

* Serristori, *Statist. delle Due Sicilie*.

† The public debt in 1836 amounted to 4,567,000 ducats.

NAPLES.

Naples is magnificent—its street pavement, which invariably consists of squared blocks of lava, joined as closely and exactly as the flags of our foot pavement. They are said to be laid in mortar, as the old Roman roads were, and hence may be considered as built roads. So firm is the work, that you never see one block an inch higher or lower than another." (*Notes*, p. 51.) There is not, however, a single shop in Naples that would be reckoned handsome in London or Paris. Neither has it any good coffee-house or restaurant.

Notwithstanding his disposition to eulogize, Eustace admits that Naples has but little architectural magnificence. The prevailing taste, if a series of absurd fashions deserve that name, has always been bad. Moresco, Spanish, and Roman, corrupted and intermingled together, destroy all appearance of unity and symmetry, and form a monstrous jumble of discordance. Hence the magnificence of the churches and palaces consists principally in their magnitude, and their paintings, marbles, and other decorations.

The cathedral, built on or near the site of a temple of Apollo, a large Gothic edifice, is overcharged with ornaments in the most discordant style. It is supported by more than 100 granite columns, which originally belonged to the edifice it has replaced. In the subterranean chapel, under the choir, is the body of St. Gennaro, the tutelary saint of Naples, whose blood, carefully preserved in a crystal vase, and miraculously liquefied three times a year, is regarded by the orthodox Neapolitans as the boast of the cathedral, and the great glory and honour of the city. The Santi Apostoli, erected on the ruins of a temple of Mercury, is perhaps the most ancient church in the city, having, it is alleged, been originally erected by Constantine, but subsequently rebuilt with greater magnificence. The churches of St. Paul, St. Filippo Neri, Spirito Santo, and S. Martino, are all well deserving of attention; the latter, indeed, is said to be the most splendid and beautiful church in the city. The church Del Parto, though inferior to most others in size and decorations, deserves notice from the fact of its having been erected and dedicated to the *Virgini parienti*, by Sannazarius, author of the famous Latin poem, *De Partu Virginis*. It contains the remains of its illustrious founder, a native of the city where he expired in 1530, enclosed in a magnificent tomb, with the following distich by Bembo:

"Da sacre ciceri flores: hic ille Maroni
Sycærus: nam proximus, ut tumulo."

In all there are said to be about 200 churches in the city; and the priests compose a large, though certainly not the most valuable, part of the population.

The Neapolitans appear to entertain the most perfect indifference as to the manner in which their mortal remains are disposed of. The great burying-place of the city lies alongside the splendid road leading to the *Campo Marzio*. It consists of 365 deep cells, dug into the Pozzolana, of which the hill is composed. One of these cells is opened in rotation every morning, and receives all the dead bodies of the day, brought in carts, and tumbled into it, like as much rubbish; this done, it is shut up again for a year, and is then opened to receive a fresh supply of carcases! But, exclusive of this vast golgotha, a considerable number of funerals take place in churches.

The palaces and mansions of the nobility, like the churches, have little pretensions to purity of architecture; and though in many the apartments are on a grand scale, they are in general too much loaded with ornaments. The kings of Naples have been distinguished by their rage for building. The royal palace (*Palazzo Reale*) in the city, near the quay, at the S. extremity of the Strada di Toledo, though a part only of the original design, is a vast building, three stories in height, with four interior courts; the first story is of the Doric, the second the Ionic, and the third the Corinthian order of architecture. Its interior is splendidly fitted up, and it has some good paintings. Another royal residence, the Capo di Monte, finely situated on an eminence outside the town, on the N. commands a magnificent view. It has attached to it some fine gardens; and it possessed, a few years ago, some remains of the famous Parma gallery, including portraits by Raphael, Andrea del Sarto, and Parmagliano, and some fine sculptures; these, however, have been mostly removed to the museum. This palace is now united to the city by a magnificent road, constructed by the French, and called, during their ascendancy, the Strada di Napoleone. The old palace of the Neapolitan monarchs is now occupied by the courts of justice, and by the archives of the Kingdom.

The *Palazzo degli Studii Publici*, erected in the early part of the 17th century, from designs by Fontana, is by far the most interesting building in Naples. It was intended for the university, and was used as such from 1616, when it was completed, down to 1790, when the university was re-

moved to the convent of Gesù-Vecchio, and the *Palazzo degli Studii* was converted into a great national museum, the *Museo Borbonico*. In addition to a noble library, comprising about 150,000 volumes, and many MSS., this museum contains a matchless collection of bronzes, gems, paintings, household furniture, papyrus, and Etruscan vases, from Herculaneum, Pompeii, Stabia, Nola, Capua, and other ancient cities; and, in addition to these treasures, which are, in all respects, unique and unrivalled, it contains, exclusive of others, most of the statues and pictures formerly comprised in the Farnese palace at Rome, brought thither when the king of Naples succeeded to the rich inheritances of that family. The collection of statues is, in fact, inferior only to those of the capital and Vatican, and the gallery at Florence, while in paintings it yields only to Rome, Florence, and Bologna. But, despite all the treasures of the small, Naples is not at present either a school or a cradle of art, which is at a lower ebb here than in any other considerable city of Italy.

The university of Naples, founded in 1224, has above 1500 students. It is presided over by a rector, and divided into faculties, under deans, who, with the professors, receive very inadequate salaries from the crown. The professors are frequently chosen with little regard to merit; and the instruction they afford in all the higher branches of science and philosophy is most inefficient and worthless. Public law, moral and political philosophy, and even theology, can hardly be said to be taught at all; or, if taught, the instruction is not intended to expand or enlighten the mind, but to imbue it with the grossest prejudices. There are, besides the university, many superior, as well as inferior, schools; but, speaking generally, they are all miserably bad; and, Turkey excepted, education is nowhere at a lower ebb than in Naples. The censorship is extremely strict; and such foreign works as are admitted, are burdened with an extremely high duty. Under such circumstances, one comes to be surprised at the gross ignorance prevalent among the mass of the population: the wonder, in fact, is, that there should be so much intelligence among them as is found really to exist.

Naples has a *Società Reale Borbonica*, or Royal society, divided into the three sections of the fine arts, science, and archaeology; and other literary and scientific associations; a military and naval college; a royal medical college, a veterinary college, a royal college of music; a fine botanical garden, constructed by the French; an observatory, in an elevated situation to the N. of the city, &c. One of the most curious institutions in Naples is a school where natives of China are instructed in the principles of Christianity, and qualified to act as missionaries. The number of pupils is small, seldom exceeding six.

Naples has numerous and some very extensive establishments for the support and relief of the poor, including a school for the deaf and dumb, and an asylum for the blind. The two principal hospitals are those, *Degli Incoronati* and *Della Annunziata*: the former, notwithstanding its name, is open to the sick of all descriptions, and has a revenue of about 300,000 ducats a year. The latter is destined to receive foundlings and penitent females. Here, however, as everywhere else, the opening of hospitals for the reception of foundlings is productive of a vast amount of mortality and immorality. Their influence in the latter respect is too obvious to require illustration; and they are really the most efficient means that could be devised for occasioning the destruction of the children they are intended to preserve. In Naples, for example, in 1837, 2319 children were taken to the different receiving houses attached to the Foundling hospital, of which 1064 died in the course of the year: the greater number being, in fact, in a dead or dying state when they were received! The truth is, that, instead of discouraging, founding hospitals really act as a powerful incentive to infanticide. The *Reclusoria*, or *Albergo dei Poveri*, is an immense workhouse, or rather asylum for the destitute poor who are able to work, and for orphans and poor children of both sexes, who are lodged and educated. The hospital of San Gennaro, near the hill of Capo di Monte, is intended for the reception of infirm and aged poor, or poor unable to work. But, despite its hospitals, such is the want of industry, and the defects of the police, that there probably is no other city whose streets are infested by so large a proportion of poor, miserable, wretched mendicants.

Naples has six or seven theatres. That of San Carlo, the largest and finest in Italy, was nearly burnt down in 1815; but it was soon after repaired, and reopened with more than its original splendour. Among the minor theatres, two or three are wholly devoted to the exhibition of Pulcinella, or Punch, who is here seen in his glory. "What," asks *Forster*, "is a drama in Naples without Punch? or what is Punch out of Naples? Here, in his native tongue, and among his own countrymen, Punch is a person of real power; he dresses up and retails all the drolleries of the day; he is the channel, and sometimes the source, of the passing

* A Latin name given to Sannazarius.

NAPLES.

opinions; he can inflict ridicule, he could gain a mob, or keep the whole kingdom in good humour. Such was De Fiori, the Aristophanes of his nation, immortal in buffoonery." (P. 368.)

The finest promenade is that called the Chiaia, extending along the shore from the Castello dell' Ovo, E. to Virgil's tomb and the hill of Pausilippo: it is in part planted and ornamented with maitres and fountains, and is, altogether, one of the finest public walks that is anywhere to be met with. The mole also, is a favourite promenade, and the quays that stretch E. from it towards Portici.

Though Naples could offer no effectual resistance to an invading armament, it is not altogether unprovided with the means of defence, having the castle of St. Elmo on a hill on its N.W. side, the Castello Nuovo adjoining the royal palace and the bay, and the Castello dell' Ovo on a rock projecting into the sea. The Castello Nuovo is so situated as to afford a safe retreat to the royal family and court in the event of any disturbance in the capital. The castle of St. Elmo has extensive subterranean bomb-proof works. The arsenal and cannon foundry are situated between the *Palazzo Reale* and the sea.

A vast number of employments must necessarily be carried on in so great a city; but there are few manufacturing establishments on anything like a large scale. Some woolen, silk, and linen stuffs are, however, produced; as are hats, gloves, earthenware, jewellery, &c.; foundries, wrought on account of government, furnish cannon, fire-arms, iron cables, &c. The preparation of macaroni may, however, be said to be the distinguishing business of Naples. It forms the principal food of the bulk of the population, and is, therefore, largely produced. The best macaroni is made of the flour of the hard wheat (*grano duro*) brought from the Black sea. Being mixed with water, it is kneaded by means of heavy wooden blocks wrought by levers, till it acquires a sufficient degree of tenacity; it is then forced, by simple pressure, through a number of holes, so contrived that it is formed into hollow cylinders. The name given to the tubes depends on their diameter; those of the largest size being macaroni, the next to them vermicelli, and the smallest fidefili. When properly prepared and boiled to a nicety, Neapolitan macaroni assumes a greenish tinge. It is then taken out of the caldron, drained of the water, and being saturated with concentrated meat gravy, and sprinkled with finely grated cheese, forms a dish of which all classes, from the prince to the beggar, are passionately fond. But the macaroni used by the poor is merely boiled in plain water, and it is rarely eaten with any condiment whatever. When properly prepared, it is nutritious and easy of digestion. The Lazzaroni pique themselves on the dexterity with which they swallow long strings of macaroni and vermicelli without breaking them.

Commerce.—The harbour of Naples is formed by a mole projecting from the centre of the city, nearly in the form of the letter L, having a lighthouse on its elbow. Immediately within the mole there are from three to four fathoms water, the ground being soft, but only small vessels can approach the town. The water in the bay is deep, and there is no bar, but it is a good deal exposed to the S. westerly winds; and, to guard against their influence, vessels in the bay moor with open haws in that direction. For remarks on the system under which the trade of Naples and the kingdom generally is conducted, we beg to refer to the previous article. Subjoined is

During the same year, there cleared out from the harbour 1937 ships, of which 1051 were Neapolitana, 80 English, 23 French, 43 Sardinian, 90 Tuscan, &c. Naples and Castellamare have about 3500 registered vessels of the burden of nearly 100,000 tons. The duties collected at the Neapolitan custom-house amount, at an average, to about 3,500,000 ducats, or about 600,000*l.* a year.

There are four or five companies for the insurance of ships, and one for lives. Their terms are generally higher than those of similar establishments in London. Houses are never insured at Naples, their construction rendering fires very rare. The companies are established by royal authority, the shareholders being only liable for the amount of their shares.

The principal merchants of Naples are all, more or less, bankers, inasmuch as they advance money on letters of credit, and deal in foreign exchange, and other financial operations. But the only banking establishment at present in existence, is the Bank of the Two Sicilies, founded by government, and guaranteed by the possession of landed property. It is not a bank for the issue of notes on credit, like the Bank of England, but for their issue on deposits somewhat on the principle of the Bank of Hamburg. Government makes all its payments by means of notes or orders on the bank; and they are issued to individuals for whatever sums they desire, on their paying an equivalent sum of money to the bank. These notes or orders form a considerable part of the circulating medium of Naples; they are paid in cash on demand. The building occupied by the bank is one of the finest in the city.

Government has also established a discount office, where bills endorsed by two persons of good credit, and not at more than three months' date, are discounted at 4 per cent. Goods are universally sold at long credits, mostly from four to eight months, and for manufactured goods sometimes longer. Discount for ready money is at the rate of 6 per cent. per annum. Merchants are arranged by the Chamber of Commerce into five different classes, and a sixth months' credit is given at the custom-house for duties, to the extent of 60,000, 40,000, 30,000, 20,000, and 15,000 ducats, to individuals, according to the class in which they happen to be enrolled. But this is of little importance, as the transactions of a merchant must be very limited indeed, if the duties he have to pay be not much more than the credit he is allowed. High discriminating duties are charged on all foreign ships entering the port.

Society.—*Naples* has undergone many considerable changes during the present century; but its distinguishing features have not materially varied for a lengthened period, and Goldsmith's admirable picture of Italian manners is still more applicable to this than to any other portion of the peninsula.

But small the bliss that comes alone bestows,
And sensual bliss is all the nation knows.
In florid beauty groves and fields appear,
Man ceases the only growth that divines here.
Contracted faith through all his manners reign;
Though poor, luxurious; though sublime, vain;
Though grave, yet trifling; malicious, yet untrue;
And even in penance pleasing sin is new.

The nobility are exceedingly numerous, and are as fond as ever of splendour and parade. Previously to the occupation of the country by the French, the greater number of them were very poor; and the changes introduced in 1806, and the subdivision of property that has taken place in the interval, have considerably reduced the fortunes of those who had formerly large estates. "Titles are here so common that you find at every corner Principi or de Principi without a virtue or a ducat." The rage for carriages and equipages is as great at this moment as it was in the days of Dr. Moore: "Women at all above the lower ranks do not walk; those who cannot afford a carriage, are doomed by pride to perpetual imprisonment in their own houses, or only go to church with one or two poor devils hired for the occasion, who put on antiquated livery, and carry a book or a cushion. I am told that husbands sometimes perform the office, trusting probably that they shall escape recognition under the disguise of a footman, and choosing to gratify vanity at the expense of pride. The roofs of the houses, which are flat, and adorned with flowers and shrubs in boxes, afford air and exercise to the women. Thus living in idle retirement, their mind is exclusively bent on the means of procuring a lover; and the tales of Boccaccio and Lafontaine convey a likeness of their moral habits and manners." (*Simonds's Italy*, 435.)

The numbers and wealth of the clergy were greatly diminished by the measures adopted by the French; and though both have been increased since the Restoration, their wealth has not been increased in proportion to their numbers. They are, speaking generally, poor, ignorant, and servile; and though the outward forms of religion be respected, it has nowhere so little real influence as at Naples. The lawyers, merchants, physicians, artists, and

NAPLES.

such-like persons, form the most intelligent and most valuable portion of society.

The *lazzaroni*, so prominent in the descriptions of Naples, formerly included most part of the lower classes, comprising street-porters, hawkers, water-carriers, boatmen, hackney-coachmen, mendicants, &c. Their numbers were loosely estimated at from 30,000 to 40,000, and they were said to constitute a distinct race, immersed in poverty, only half-clothed and not half-fed, without lodgings, and sleeping in the open air in the porches of churches and other public buildings. But it is now admitted that the *lazzaroni*, properly so called, or the houseless poor, are merely the dregs of the population, and that they owe their gipsy-like complexion and cast of features to their constant exposure to the sun and air. It is singular that wretches in so destitute a condition, and frequently involved in all but the extremity of want, should, speaking generally, be remarkable for their fine symmetrical and muscular forms, and be distinguished by their vivacity and humour. Great efforts have been made for many years past to lessen the numbers of the *lazzaroni*; and, under Murat, many of them were drafted into the army. But they are still extremely numerous; Mr. Maclearen says he saw numbers of half-clothed wretches (*lazzaroni*) asleep, in sunny days, on the pavement of the Chiaja. "They are the refuse of civilization, sunk to the condition of savages. It is said there are individuals among them who do not know their own names, and who go to the priest and confess anonymously, owning sins of whose designation in the decalogue they are ignorant." Unless when pressed by hunger, or under some peculiar and extraordinary excitement, the *lazzaroni* are neither turbulent nor licentious; but on such occasions they evince all the sanguinary ferocity of savages. They seem, however, to be wholly incapable of any vigorous or long-continued exertion for any public purpose, and may, speaking generally, be regarded as submissive, docile slaves. It used to be a common saying at Naples, that, to keep the populace quiet, three things only were necessary—*festa, ferine, and ferche*; that is, shows, food, and gibbets! And this compendious principle has not yet fallen into disrepute, though certainly they are supplied with but a very scanty portion of *farina*.

Lottery offices are extremely numerous in Naples, and have, as might be expected, a most injurious operation. Tickets are so subdivided, that shares may be purchased for about 2d.: the moral pestilence consequently descends to the very lowest ranks, and even the *lazzaroni* are speculators. There are, probably, a greater number of pick-pockets in Naples than in any other city; and deceit and falsehood are so common as hardly to excite attention. The *domus hère* are also extremely numerous.

Owing principally, no doubt, to its mild climate, a large proportion of the population of Naples may be said to inhabit the streets, and to carry on their business out of doors; and the competition arising among parties so situated, has probably given rise to that universal turmoil and effort to attract notice, that is at once so grotesque and so disgusting to a stranger.

"Naples," says Mr. Forsyth, "in its interior, has no parallel on earth. The crowd of London is uniform and unintelligible; it is a double line in quick motion; it is the crowd of business. The crowd of Naples consists in a general tide, rolling up and down; and in the middle of this tide, a hundred eddies of men. Here you are swept on by the current; there you are wheeled round by the vortex.

Qui vid' i genti, più che altro troppa
E d'una parte e d'altra con gran urli,
Pancroterano! incontro ——— Danti.

A diversity of trades dispute with you the streets. You are stopped by a carpenter's bench, you are lost among shoemakers' stools, you dash among the pots of a *maccheroni* stall, and you escape behind a *lazzaroni's* night-basket. In this region of caricature, every bargain sounds like a battle: the popular exhibitions are full of the grotesque: some of their church processions would frighten a war-horse.

"The mole seems, on holidays, an epitome of the town, and exhibits most of its humours. Here stands a methodical friar, preaching to one row of *lazzaroni*; there, Punch, the representative of the nation, holds forth to a crowd. Yonder, another orator recounts the miracles performed by a sacred war-work, on which he rubs his *agnus dei*, and sells them, thus impregnated with grace, for a grain a piece. Beyond him are quacks in Hussar uniforms, extolling their drugs and brandishing their sabres, as if not content with one mode of killing. The next *professore* is a dog of knowledge, great in his own little circle of admirers. Opposite to him stand two jocular old men, in the centres of an oval group, singing alternately to their crazy guitars. Further on is a motley audience, seated on planks, and listening to a tragic-comic *floresce*, who reads, sings, and gesticulates, old Gothic tales of Orlando and his Paladins.

"If Naples be 'a paradise inhabited by devils' I am sure

it is by merry devils. Even the lowest class enjoy every blessing that can make the animal happy—a delicious climate, high spirits, a facility of satisfying every appetite, a conscience which gives no pain, a convenient ignorance of their duty, and a church which ensures heaven to every ruffian that has faith. Here terrors are not misery, for the climate requires little covering; filth is not misery to them who are born to it; and a few fingerings of *maccheroni* can wind up the rattling machine for the day.

"They are, perhaps, the only people on earth that do not pretend to virtue. On their own stage, they suffer the Neapolitan of the drama to be always a rogue. If detected in theft, a *lazzaroni* will ask you, with impudent surprise, how you could possibly expect a poor man to be an angel. Yet what are these wretches? Why, men whose persons might stand as models to a sculptor; whose gestures strike you with the commanding energy of a savage; whose language, gaping and broad as it is, when kindled by passion, bursts into oriental metaphor; whose ideas are cooped, indeed, within a narrow circle—but a circle in which they are invincible. If you attack them there, you are beaten. Their exertion of soul, their humour, their fancy, their quickness of argument, their address at flattery, their rapidity of utterance, their pantomime and grimace, none can resist but a *lazzaroni* himself.

"These gifts of nature are left to luxuriate unrepressed by education, by any notions of honesty, or habits of labour. Hence their ingenuity is wasted in crooked little views. Intent on the piddling game of cheating only for their own day, they let the great chance lazily go by, and left a few immortal patriots to stake their all for posterity, and lose it." (P. 364-367, and 412.)

"The people," says M. Simond, "seem, in general, peaceful and contented, unconscious of want at least; they consume little, and that little is cheap. For three grains a day (three half-pence sterling) a man has his fill of *maccheroni*, and for three grains more he may have his frittan (very good fish or vegetables fried in oil) at any of the innumerable stands of itinerant cooks about the streets, which is not the only luxury of the gastronomic kind within his reach. A glass of ice-water costs one sixth of a grain (one twelfth part of a penny sterling), and, if properly seasoned with lime-juice and sugar, two grains. The price of these things is kept down by government, ice or hardened snow being abundantly supplied at the public expense from natural ice-houses, in certain cavernous rocks above Stabie and Sorrento, and even on Vesuvius. The ice in baskets is made to slide down the mountain, along light ropes, into boats, which sail across the bay during the night, and land their precarious cargoes before day.

"The lower people have clubs, where they assemble twenty or thirty together, and contribute each one grain for wine of an evening. They elect a president and vice-president. The president calls upon one of the members to drink a glass of wine filled by the vice-president; but when the member challenged is about to take it, the vice-president has the right to say, I take it for myself, and actually drink it to his health; a standing joke, which he may repeat as long as he pleases, or as long as he can, but which the disappointed expectant, who has the laugh of the company against him, does not always relish; and in the end there is sometimes fighting and stabbing." (P. 439.)

The country round Naples is the most beautiful that can well be imagined, and is peculiarly interesting from its classical associations. Virgil was buried in the immediate vicinity of the city; and the ruins of an ancient mausoleum on the left hand side of the road, leading from the promenade of Chiaja to the grutto of Paullippo, is said to have contained the remains of the prince of Latin poets. There is, however, no really good foundation for this statement.

The grutto of Paullippo, now alluded to, is a tunnel cut through the hill of that name, being a part of the road from Naples to Pozzuoli. It is about two thirds of a mile in length, 60 feet in height, and broad enough to serve for a highway. This work is of great, but unknown, antiquity. Seneca, in his 7th epistle, complains bitterly of its length, darkness, and dust. (*Nihil ille cœcæ longius, nihil alius fastidius obsecutus; etiam si locus habere lacum, patris amiserat.*) Its dimensions were, however, enlarged in 1537; and it is now well paved and lighted with lamps by day as well as by night. (For further information as to the environs of Naples, see the articles BAIA, Herculaneum, Pompeii, Pozzuoli, Vesuvius, &c., in this work.)

Historical Notice.—Naples is very ancient. It was founded by the people of Cumæ, a colony from Greece, who gradually spread themselves round the bay of Naples, and was called from this circumstance Neapolis, or the new city. It was also called Parthenope, from its being the burying-place of one of the sirens of that name. (*Poëme Paterculus*, lib. i., cap. 4; *Strabo*, lib. x.) It was, therefore, to all intents and purposes, a Greek city; its inhabitants spoke the Greek language, and were long distinguished by

NAPOLEON.

Their attachment to the manners and customs of their ancestors. It was on this account, according to Tacitus, that it was selected by Nero to make his *début* on the stage; such a proceeding being less offensive there, and less repugnant to the prevailing sentiments, than in Rome. (*Tacit. Hist. lib. xv., cap. 33.*) Naples, in truth, was then, as now, a chosen seat of pleasure. Its hot baths were reckoned equal to those of Bala; and the number and excellence of its theatres and other places of amusement, its matchless scenery, the mildness of the climate, and the luxury and effeminacy of the inhabitants, made it a favourite retreat of the wealthy and luxurious Romans, and justified Ovid in calling it *in otia sates Parthenopem*. After the fall of the Roman empire, it underwent many vicissitudes. It, however, early became the capital of the modern kingdom of Naples; and, notwithstanding the calamities it has suffered from war, earthquakes, &c., it has long been the most populous city of Italy, and one of the most interesting that is anywhere to be met with. (Besides the authorities already referred to, see *Sorriero, Statistica d'Italia, parte settima, passim*; *Official Statement of the Population of Naples on the 1st of January, 1838*; *Stark's and Vallery's Guides*; *Com. Dict.*; *Macgrager's Report*, &c.)

NAPOLES, p. t. Ontario co., N. Y., 18 m. S. Canandaigua, 230 m. W. Albany, 325 W. Drained by inlets of Canandaigua and Hemoye lakes. It contains three churches, a Presbyterian, Congregational and Methodist, seven stores, three fulling-mills, three flouring-mills, 16 saw-mills, two tanneries, one distillery, one printing-office, one weekly newspaper; 14 schools, 665 scholars. Pop. 2345.

NAPOLES, p. v., Scott county, Ill., 26 m. W. Springfield, 834 W. Situated on the E. bank of Illinois river, 2 m. above the mouth of Maudslaw's creek. It contains several stores, some of which are wholesale, three steam saw and grist mills, 100 dwellings and about 600 inhabitants. A ferry here crosses Illinois river. Several hundreds of arrivals and departures of steamboats take place annually.

NAPOLEON, p. t., capital of Henry county, O., 154 m. N.W. Columbus, 495 W. It contains four stores, one grist-mill, one saw-mill; two schools, 69 scholars. Pop. 615. The village is on the N. side of Maumee river, and contains a courthouse, jail, and a few stores and dwellings.

NAPOLEON, p. t., Jackson co., Mich., 66 m. W. Detroit, 542 W. It has three stores, one flouring-mill, two saw-mills, one academy, 86 students; two schools, 131 scholars. Pop. 1098.

NAPOLEON, p. v., Chicot county, Ark., 148 m. S.E. Little Rock, 1097 W. Situated on the W. bank of Mississippi river, at the mouth of Arkansas river. It contains three stores, and about 250 inhabitants.

NAPOLI, p. t., Cattaraugus co., N. Y., 306 m. W. by S. Albany, 341 W. Watered by Coldspring creek. It has one store, two saw-mills; seven schools, 316 scholars. Pop. 1145.

NARBONNE (an. *Narbo Martius*), an ancient city of France, dep. Aude, about 4 m. S. from the Aude, and 7 or 8 m. from the Mediterranean, on a navigable canal that unites it with the sea, on the one hand, and with the river on the other, and which also unites it with the canal du Midi, a little to the N. of the Aude, 52 m. S.W. Montpellier, and 34 m. N. by E. Perpignan; lat. 43° 11' 13" N., long. 2° 0' 94" E. Pop., in 1838, ex. com., 10,792. It stands in a fine plain, and is surrounded by a wall flanked with towers, and entered by four gates. Streets narrow and tortuous, and houses mean and ill-built; it is divided by the canal into two nearly equal parts, *la Bourg* and *la Ville*, connected by three bridges; and is plentifully supplied with water by numerous fountains connected with springs outside the walls. The esplanade, or *Place des Barques*, in the centre of the town, is a fine open space; but its beauty is much impaired by the almost total absence of vegetation. Other promenades are formed near the gates; on the banks of the canal is a fine public walk, planted with trees, and the environs generally are extremely beautiful. Narbonne has few buildings worthy of notice, except the cathedral and archbishop's palace. The former, built in the 13th and 14th centuries, is one of the finest specimens of Gothic architecture in Europe: the choir, however, is the only part complete, the nave, commenced in 1706, being unfinished. Two towers rise from its W. end; but they are deficient in that lightness and elegance observable in similar structures of the same era. The archbishop's palace (celebrated in history, as having been the place where Louis XIII. signed the order for the trial of De Thou and Cinq-Mars), is an ancient castellated building in the *Place des Barques*, having attached to it a massive square tower, built in the middle ages: in the front court are the remains of a marble altar, erected by the Narbonnese to Augustus Caesar, and, in the garden, a fine tomb of white marble. The two parish churches are ancient and massive structures, but built in very bad taste,

NARNI.

and remarkable only for some curious sculptures. The other chief buildings are three hospitals, the exchange, arsenal, barracks, prison, a museum, theatre, and public baths. Narbonne is the seat of a tribunal of original jurisdiction and commerce; and has some silk flatures, fabrics of coarse linen cloth, worsted caps, and paper, with numerous distilleries, potteries, chemical works, tanyards, &c. It is the centre of the wine and spirit trade of the department and the principal support of its inhabitants is derived from its trade in wine, corn, brandy, silk, oil, salt (obtained from the neighbouring lagoons), wax, and honey, which it exports, partly to Bordeaux, by the canal du Midi, and partly to Marseilles and other markets on the Mediterranean, by its port of La Nouvelle, at the mouth of the canal on which it is built. The honey of Narbonne is said to be the sweetest in the world. "Its peculiar excellence is owing to the variety of nourishment for the bees. The hives are moved from one place to another. From the gardens of Narbonne they are carried to the meadows in the neighbourhood; and they are afterwards conveyed 30 or 40 m., as far as the low Pyrenees, so that the treasures of the gardens, meadows, and mountains, are all rified to produce the honey of Narbonne. In England this system, though doubtless it would be advantageous, could not effect what it accomplishes at Narbonne, because numerous aromatic plants, abounding in the S. of France, are not indigenous to Great Britain. It is of a much higher flavour than any other honey, and so odouriferous that one might fancy himself eating a bouquet." (*Agassiz, Switzerland, France, &c., p. 911.*) Fruit is extremely abundant and cheap. The wages of labour do not exceed a franc a day, but the necessities of life are obtained at the same easy rate. Most, however, is not reckoned among them by the lower orders; for "at Narbonne we have gone so far south, as to discover something of those indolent habits which produce, in still more southern countries, a distaste for all exertion beyond that necessary to preserve existence, and which limit the necessities of life to the natural productions of the soil." (P. 912.) It is worthy of remark, also, that the dress of the peasantry in the neighbourhood bears a striking resemblance to that worn by the Catalonians. The neighbourhood is fertile in corn, but is rendered unhealthy in summer by the salt lagoons fringing the shores of the Mediterranean. There are numerous salt-pans, and marble is quarried near the town.

Narbo, one of the most ancient towns of Gaul, and the chief city of the Volce Arcomici, was formed into a Roman colony anno 116 B.C.; Julius Caesar further enlarged it by sending thither the veterans of the tenth legion, and Cicero (Or. pro M. Fonteio, c. 1.) terms it *colonia nostrorum civium, specula populi Romani ac propugnaculum*. At the distribution of Gaul into provinces by Augustus it gave its name to the S.W. province, called *Narbonensis*: Mela speaks of it as a place *unde olim terris auxilium anno et nomen et deus est*, and Strabo designates it as the emporium of all Gaul. Its public buildings, and great commercial wealth, are mentioned by other authors; but the present remains of its ancient grandeur are confined to a few fragments and inscriptions, chiefly incorporated in the walls of the town. It fell into the hands of the Visigoths, A.D. 462, and was shortly after made the capital of their kingdom. In 720 it was taken by the Saracens, and by Pepin-le-bref in 759; after many vicissitudes it was finally annexed to the crown of France in the early part of the 16th century. Its ancient walls were demolished by Simon de Montfort during the wars against the Albigenses: those by which it is now surrounded having been constructed, considerably within the limits of the old walls, by Francis I. It has, at different times, suffered severely from the plague. In the wars of the League, Narbonne embraced the cause of the Huguenots; but in 1591 it submitted to Henry IV. (*Hugo, art. Aude*; *Guide du Voy. en France*; *Inglish*.)

NARDO (an. *Neritum*), a town of the Neapolitan dom., prov. Otranto, cap. cant., on the road from Lecce to Gallipoli, 16 m. S.W. the former, and 10 m. N.N.E. the latter, city. Pop. about 6000. It is a substantial, flourishing town, neatly built, and well paved. It is a bishop's see; and has numerous churches, a hospital, and manufactures of cotton goods, the raw material of which is grown in its vicinity. It was a place of some note in antiquity, as a city of the Salernitines; and was held in esteem as a seminary of learning as late as the middle of the 15th century. (*Crescen. Tur. &c., p. 138, 139*; *Rampoldi*.)

NARNI (an. *Nesinium* and *Narnia*), a town of central Italy, Papal states, deleg. Spoleto, on a lofty eminence, at the foot of which flows the Nera (an. *Nar*), 44 m. N. by E. Rome. Pop. about 3600. The town has nothing but its antiquity and picturesque appearance to recommend it: it is badly built, with steep and narrow streets, and exhibits every mark of poverty and decay. It has a cathedral, several other churches, numerous convents, a modern aqueduct, which supplies several public fountains, and the

NARO.

ruins of an amphitheatre. But it is principally celebrated for the remains of a noble bridge thrown by Augustus over the Nar, constructed after the Etruscan method, of large blocks of marble without cement: it is supposed to have been originally upwards of 630 ft. in length. Only one of the arches remains perfect, the span of which is above 60 ft.: the piers supporting it are 26 ft. in breadth. Additional styles this bridge "one of the sturdiest ruins in Italy;" and few relics of antiquity are better adapted to impress the mind with high ideas of Roman magnificence. Narni was the birth-place of the Emperor Nerva. (*Green's Ancient Italy*, l. 377, 378; *Rampoldi's Conder's Italy*, &c.)

NARO (supposed to be the an. *Narona*), a town of Sicily, intend. Girgenti, cap. tant. on the Naro (an. *Hippe*), 13 ly, intend. Girgenti, and 21 m. S.W. Caltanissetta. Pop. in 1831, 10,105. It is situated on an eminence, surrounded by picturesque valleys and glens; has a royal college, and a house of refuge, and some trade in oil, wine, and sulphur, which last is very abundant in its vicinity. Many sepulchres, medals, and other vestiges of antiquity, have been found here. (*Smyth's Sicily*, p. 303; *Dict. Geog. Ortolani, Dis. della Sicilia*.)

NARRAGANSETT BAY, R. I., is 28 m. long, and from 3 to 19 broad, and sets up from the Atlantic, between point Judith on the W. and Seacoast rocks on the E. It receives Providence and Pawtucket rivers on the N.W., Taunton river on the N.E. and Pawtuxet river on the W. side. It contains the beautiful islands of Rhode Island, Conanicut, Patience, Prudence and Hope. Mount Hope bay branches from it on the N.E. It has many good harbours, accessible at all seasons. It is a fine naval station.

NARRAINGUNGE, a considerable trading town of British India, prov. Bengal, distr. Dacca-Jelapore, on a branch of Brahmaputra, 8 m. S.E. Dacca. Lat. 23° 37' N.; long. 90° 35' E. Pop. estimated at 15,000. The inhabitants carry on a large trade in salt, grain, tobacco, and lime; and the town exhibits a scene of bustle and activity seldom witnessed in a community of Bengalees. The banks of the river are studded with indigo factories, and the remains of forts erected to repel former invasions of the Arracanese. (*Hamilton's E. I. Gaz.*)

NARVA, a town of European Russia, gov. of Petersburg, on the Narova, about 8 m. from its mouth, and 81 m. W.S.W. St. Petersburg, lat. 59° 22' 53" N., and long. 26° 34' 40" E. Pop. 3000. It is divided into an old and more recent part; the latter, placed on high ground, is surrounded with fortifications in a good state of repair, and consists of respectable stone houses; the lower and older part comprising only a few wretched wooden tenements, with two churches, one of which belongs to the Greek, the other to the Lutheran, religion. Three other churches, a town-hall, exchange, and the half-ruinous fortress of Ivangorod (built in 1492, by the Czar Ivan III. Vassilievitch), are the only other public edifices.

The place, in fact, would not be worth notice but for the famous battle fought in its vicinity, on the 30th of November, 1700; when Charles XII., king of Sweden, at the head of only 8000 men, attacked and forced the entrenched camp of the Russian army, consisting of about 80,000 men, which had been besieging Narva. The Swedes gained a complete victory. Above 18,000 Russians were killed in their intrenchments, besides a great number drowned in the river: next day above 30,000 Russian troops surrendered to the Swedes, by whom they were disarmed, and dismissed. This extraordinary success did not cost the Swedes above 600 men! On hearing of this disaster, the czar, Peter the Great, said, "Je sais bien que les Suédois nous battent long temps; mais à la fin ils nous apprendront eux-mêmes à les vaincre;" and the event proved that he was in the right. (*See Voltaire, Histoire de Charles XII.*, liv. ii.)

NASBEY, a decayed market town and par. of England, co. Northampton, hund. Gillsborough, 11½ m. N.N.W. Northampton, and 72 m. N.W. London. Area of par. 2660 acres. Pop., in 1831, 707. This village formerly possessed a market and a worsted manufactory, but they have long ceased to exist; and the market cross, in the centre of the village, is the only extant sign of its past importance.

But, how unimportant soever in other respects, this trifling village will be ever memorable in British history for the battle fought near it on the 14th of June, 1645, between the royalists under Charles I. and the parliamentary army commanded by Cromwell and Fairfax. The action was obstinate and well contested; but in the end the parliamentary leaders gained a complete and decisive victory. The loss in killed on both sides was nearly equal; but the republicans took 500 officers and 4000 soldiers, and all the king's artillery and ammunition. This action may be said to have terminated the civil war.

NASH county, N. C. Situated a little N.E. of the centre of the state, and contains 640 sq. m. Watered by Tar river, and drained by its branches. It contained in 1840, 753 neat cattle, 635 sheep, 2937 swine; and produced 833

NASHVILLE.

bushels of wheat, 32,325 of Indian corn, 3938 of oats, 7391 of potatoes, 50,736 pounds of clover. It had nine schools, 138 scholars. Pop.: whites, 4941; slaves, 3697; free coloured 409; total, 9047. Capital, Nashville.

NASHUA, a p. l. Hillsborough county, N. H. 12 m. N.W. Lowell, 36 m. S. by E. Concord, 447 W. Bonadad E. by Merrimac river, 8 E. by Nashua river, which has a fall of 65 ft. in 2 m., producing a great water power. It contains six churches, two Congregational, a Unitarian, a Free-will Baptist, a Christian and a Universalist, 50 stores, five cotton factories with 34,348 spindles, three saw-mills, one tannery, one pottery, two printing-offices, (two weekly newspapers: one academy, 214 students; 36 schools, 1476 scholars. Pop. 6054.

NASHVILLE, city, a capital of Davidson co. and the state of Tennessee is in 36° 9' 33" N. lat., and 86° 49' 3" W. long., and in 9° 48' 3" W. long. from W.; 116 m. N. Huntsville, Ala., 183 m. W. Knoxville, Ky., 350 m. S.W. Lexington, Ky., 900 m. S.W. New-York, 648 W. The population in 1830, was 5593; in 1840, 6930; in 1844, 7000 within the city limits, and including its suburbs, 11,000. It is pleasantly situated on the S. side of Cumberland river, 139 m. from its mouth, at the head of steamboat navigation, though keelboats go much farther. The site is undulating and rocky, with unequal elevation, from 50 to 175 feet, interspersed with beautiful groves of cedar. The environs present a rich variety of landscape scenery, and the place is remarkably healthy. The city was originally laid out on 900 acres of ground, in lots of one acre each, with a reservation of four acres for public buildings. The boundaries have since been largely altered. It has convenient streets, lanes and alleys, crossing each other at right angles, having a good drainage, and many handsome sites for residences. It contains a courthouse, jail, a market-house, a lunatic hospital, a state penitentiary, three banks, 10 churches, two Presbyterian, an Episcopal, three Methodist, one of which is an African, a Baptist, a Campbellite or Reformed Baptist, a Cumberland Presbyterian, and a Roman Catholic; the halls of the Nashville university, a female academy, besides other schools of a high order. A splendid state-house is about to be erected on the highest hill in the city. The site, consisting of four acres of ground, has been purchased by the city for \$30,000, and presented to the state for the purpose. The courthouse stands on the public square, and presents a handsome front of 105 feet, and is 63 feet deep, and three stories high including the basement, surmounted by a dome, 90 feet high, from the bottom to its top. The basement is 11 feet high, and contains a number of public offices. The two principal stories are each 18 feet high. The foundation, and part of the lower story, is of fine hewn stone, and the remainder of brick. The two fronts are ornamented with four white pilasters, each. The dome contains a good city clock, and is supported by eight columns of the Ionic order. The second story besides some offices has two court rooms. Two large rooms in the third story are handsomely fitted up for the accommodation of the state legislature, until the new statehouse shall be prepared for their reception. The market-house, situated on the public square, is one of the finest buildings of the kind in the west. At each end there are spacious rooms, one of which is occupied as a city hall and recorder's office. The Episcopal church is a fine stone building handsomely stuccoed, in the Gothic style of architecture. The basement 9 ft. high, contains a lecture room 40 by 45 ft., besides rooms for the vestry, &c. The body of the church is 45 ft. wide by 69 ft. long and 94 ft. high, is neatly fitted up, and has a fine toned organ. The whole is surmounted with a Gothic cupola, and a bell; and the whole cost about \$16,000. The Campbellite Baptist church is a neat brick building 45 by 60 ft., two stories high, with a tall steeple and an excellent bell, and cost \$6000. The principal Methodist church is a spacious and elegant building in the form of a parallelogram, 60 ft. in front, and extending 90 ft. back. In the basement are rooms for Sunday schools and class-meetings. In front is a recessed portico of two massive Doric columns. The interior of the building is neatly finished. The whole cost of the building was over \$12,000. The Methodists have other convenient churches. The Presbyterian church, erected on the site of one which was burned in 1832, is 91 ft. long, and 69 wide, and is an elegant building. The basement is 11 ft. high, and has a room 64 ft. square for a lecture room and Sunday school. The main room is 65 ft. square, and, with its gallery, will accommodate 1300 persons. The vestibule, approached by a flight of stone steps the whole width of the building, has a portico with six massive brick columns, cased and fluted. The cost of the whole was \$16,000. The Cumberland Presbyterian church, is a plain and neat building of brick, 57 by 70 ft., two stories high above the basement story, which is partly below the surface. The front has recessed arches, resting on pillars forming an open vestibule. The main room of the interior

NASO.

is 60 by 55 ft., and with its gallery, will accommodate 1000 persons, and cost, exclusive of a steeple, \$7000. The Baptist church, recently erected, is a neat building in the Gothic style of architecture. The Roman Catholic church has a commanding site on the northern declivity of Campbell's hill, and presents a handsome appearance. The female academy, situated in the western suburbs of the city, is a flourishing institution with 200 scholars. There are several other schools for young ladies of the highest order. There are eight excellent preparatory classical schools in the city. The primary schools for both sexes are numerous and good. Probably no city in the union, of its extent, is better supplied with schools and teachers, of every description. The Roman Catholics are particularly active on the subject of schools. The penitentiary, located in the western suburbs, of the city, presents a front of 310 ft., and is 350 ft. deep. The two wings of the front building contain 200 cells. Half of the front building is occupied by the keeper, and the other half is used as a hospital, guard room, &c. The yard walls are 8 ft. thick at bottom and 3 ft. at top, with an average height of 30 ft. The cost of the whole was about \$25,000. The lunatic hospital is a large and commodious building, 3 stories high including the basement, with an additional tier of rooms in the centre building. The basement and front walls are of stone, and the remainder is of brick. The whole will accommodate over 100 patients. The water works, located on the bank of the river above the city, supply it with water, raised by a steam engine, to a reservoir, 65 ft. above low-water-mark, and 45 ft. above the level of the public square. There may be raised in 24 hours over 900,000 gallons. Vauxhall garden on the southern border of the city, is a fashionable place of resort. It contains a large circular railway, on which the cars are propelled by cranks, turned with the hands of the riders. It contains also a fine assembly room. In the lower suburbs of the city is a strong salt sulphur spring, fitted up with cold and warm baths.

The city is the seat of Nashville university, founded in 1806, has a president and four professors and two tutors, 391 alumni, 100 students, and 10,000 volumes in its libraries. The commencement is on the first Wednesday in October. It has connected with the institution a number of buildings of brick or stone. The main college edifice is 200 ft. long, 50 ft. wide and 3 stories high, containing a chapel, recitation rooms, and 44 rooms for students. To the east of the main building an E. wing has been erected, 76 by 54 ft. for the library, apparatus and lectures. It is in contemplation to erect a corresponding W. wing. A building of one story, 180 by 40 ft. constitutes the chemical laboratory. A steward's house 56 by 42 ft. 2 stories high, with a piazza through the whole front, constitutes the refectory. These buildings are within the college campus, containing eight acres. The president's house is of brick, 55 by 43 ft., with a kitchen in the rear 46 by 22 ft., both 2 stories high, with 34 acres of ground attached to it. The mineralogical cabinet has 20,000 specimens, and the apparatus for illustrating the experimental sciences is very complete. Medical and law faculties are about to be organized, and will commence operations during the present year, 1844.

According to the census of 1840, there were in the city, three commercial and eight commission houses in foreign trade, capital \$235,000, 73 retail dry goods and other stores, capital \$1,006,400, one foreign, one paper-mill, one tannery, four printing-offices, two binderies, one daily, five weekly and three semi-weekly newspapers; total capital in manufactures \$151,000; three academies, 320 students; two schools, 123 scholars. Tonnage of the port in 1840, 4733, a considerable portion of which is steamboats. Cumberland river is here navigable at low water for vessels of 30 or 40 tons; and in high water, for vessels of 400 tons.

NASHVILLE, D. V., capital of Nash co., N. C., 44 m. E. by N. Raleigh, 254 W. It contains a courthouse, jail, and a few stores and dwellings. Nett proceeds of the postoffice \$110.

NASO (an. *Agathysmus*), a town of Sicily, intend. Messina, distr. Palù, cap. cant. on the Naso, near its mouth, in the Mediterranean, 10 m. W. by S. Palù: Pop., in 1831, 6235. It is situated on a hill, in a finely wooded and healthy neighbourhood; is walled, and has some handsome buildings; several warehouses on the sea shore belong to its inhabitants. It acquired some notoriety in 1812, by reason of its population having refused the constitution then promulgated, and armed themselves on behalf of king Ferdinand. (*Swyts's Sicily*, p. 99, &c.)

NASSAU (Duchy of), a state of W. Germany, principally between lat. 50° and 51° N., and long. 7° 32' and 8° 45' E.; having N. and W. Rhenish Prussia, S. Hesse-Darmstadt, and E. the latter, Hesse-Cassel, the ter. of Frankfurt and the Prussian circle of Westphalia. Length, N. to S., 55 m.; average breadth, about 33 m. Area, about 1800 sq. m. Pop., in 1838, 338,321. Almost the whole of the surface is hilly with a general slope towards the W. The

NASSAU.

Taunus mountains cover the S., and the Westerwald the N. part of the duchy; the Feldberg, the highest point of the former, rises to nearly 2700 ft.; and the Salzburger-head (*Salzburger Kopf*), in the Westerwald, reaches the height of 2830 ft. above the sea. No portion of level surface is sufficiently extensive to be called a plain; and the valleys are generally narrow and confined, though many are highly picturesque.

The Rhine forms a considerable portion of the S. and W. boundaries. The Mayne limits the duchy to the S.E., and the Lahn intersects it near its centre, having, for the most part, a S.W. course. The Lahn receives within this duchy the Elz, Ems, Aar, Muhl, &c.; and joins the Rhine at Lahnstein; being navigable as far as Weilburg, 14 leagues from its mouth. There are no lakes; but Nassau has a number of mineral springs, especially in the Taunus, where are Ems, Seifers, Schlungenbad, Wiesbaden, &c., among the most frequented spas in Germany. The climate is cold in the mountains, particularly in the Westerwald, but so mild in the sheltered valleys that the vine comes to very considerable perfection. The mean temperature of the year in the Rheingau, S. of Wiesbaden, is 10° centigr., or 50° Fahrenheit. Every part of the duchy is tolerably healthy. The soil is nowhere remarkably fertile, but only a small portion of it is barren; it is least productive in the N., where, however, there are good natural pastures. A portion of the soil in Westerwald is volcanic, consisting of basalt and lava; and near Weilburg are traces of an extinct volcano. In 1831, of 1,812,541 *moergen* of land, 702,004 were arable, 196,190 in meadows, 15,543 in vineyards, 7473 in gardens, no fewer than 736,377 in woods, 6545 occupied with buildings, 106,981 in natural pastures, &c., and 40,247 altogether waste. Agriculture is the principal branch of industry. The land is mostly divided into small parcels, which are not, however, farmed by their actual proprietors. "The whole country, from the Heidelberg to the Rheingau and Hamburg mountains, and from the Rhine to the mountains of the Spessart (which tract includes, besides the S. part of Nassau, part of Hesse-Darmstadt, Frankfurt, Hesse-Cassel, and Bavaria), presents one uniform face. This plain is divided between large forests of the common *pinus silvestris*, occasionally interspersed with oak and beech woods, and large flat districts of corn and vegetables, unrelieved by a single tree or hedge. The open fields are divided into small patches, by the difference of culture, which frequently denotes the boundaries of each peasant's little farm. The farms rarely exceed 50 acres; gentlemen farmers, or speculative agriculturists, are unknown; and the opposite extreme, the class of agricultural day-labourers, is very small. The peasant generally holds his little possession at a fixed rent, due to the lord of the soil, which is never increased. He cannot be dispossessed; and his land descends from father to son, subject to this burthen—a tenure much resembling English copyholds. *Leibeigenschaft* (personal vassalage) is now completely abolished in this, and, indeed, in most parts of Germany. (*Autumn near the Rhine*, 112, 113.) Wheat is grown in the valleys of the larger rivers; but on the uplands, rye, barley, and oats, are almost the only grains cultivated, with potatoes; and in the Westerwald, buckwheat. The S. declivities of the Taunus are covered with chestnut woods and orchards. In the district called the *Rheingau*, further S., along the Rhine and Mayne, the culture of the vine occupies a large share of attention. The finest growths of the Rhine, as Hockheim, Steinberger, Rudesheim, and above all Johannisberg (which see) come from this duchy; in which nearly a third part as much land is appropriated to the culture of the vine, as in all Rhenish Prussia. (*Bergbau*.) The soil of the Rheingau is thin and sandy; but it is well manured and very productive. The Hockheim, properly so called, or *lock*, is grown at Hockheim, on a little hill behind the ancient denary, on a space of about eight acres, open to the southern sun, and sheltered from N. winds by the town. Each acre has about 4000 vine plants, valued at a ducat each; and the little hill produces, in good seasons, about 12 large casks (*tonneaux*) of wine, each of which sells, frequently as soon as made, for 1500 florins (125*l.*) or upwards. A constant supply of water is afforded to the plants by a small rivulet, and they are protected from too much wet by moveable wooden sheds. (*Schreiber*, 171.) But there is another vineyard little inferior to the above; and the surrounding lands yield an abundant produce which, as in the case of other wines, often passes for the first growths. The produce of the Steinberger vineyard, which belonged to the suppressed monastery of Eberbach, and is now the property of the grand duke, is the strongest of all the Rhenish wines; and, in favourable years, has much sweetness and delicacy of flavour. The quantity made is about 300 hhds., of which about 60 is first rate, and has occasionally been sold on the spot at 10*z.* a bottle (*Henderson on Wine*, 293.) Flax, hemp, fruits, hops, tobacco, turnips, and chicory, are among the other principal

NASSAU.

kinds of produce. The pastures are well attended to, and a good many crops are grown for fodder, the rearing live stock being an important branch of husbandry. Berghaus estimates that there are 173,600 head of cattle, 136,000 sheep, and 54,000 hogs in the duchy. (*Allg. Lnder, &c.*, III., 513.) The various breeds are said to be improving. Bees are numerous, and game abounds in the woods. Iron, lead, copper, and silver, are the principal mineral products; bovey coal also is found in the Westerwald, and chalk, marble, roofing slate, and potters' clay elsewhere. Mining, forges, &c., are estimated to employ 8000 workmen. Working in metals is, however, the chief branch of manufacturing industry; the other manufactures are mostly domestic. Linen cloths are woven by the peasantry at their own houses; and some cotton cloths, carpets, woollen yarn and hosiery, morocco leather, slives, soap, sealing wax, &c., are made; few, however, of the manufactured articles find their way out of the duchy, the exports consisting principally of mineral waters, wine, cattle, wool, mineral products, and hardware and earthenware. The roads are good; and the Rhine, Mayn, and Lahn, present great facilities for commerce; but the trade of the duchy is by no means so flourishing as it might be. Nassau has of late years joined the Prussian commercial league.

Accounts are kept in florins (*gulden*) of 60 kreutzers, containing four pfennigs each; the florin=12. 84d. Engl. The Heaman morgen (*steternormalmorgen*)=about eight eleventh of an English acre.

The government is a constitutional monarchy, hereditary in the male line; and is among the most liberal of W. Germany. The *landstnde*, or parliament, of the duchy, consists of two chambers: the first composed of the princes of the ducal house, the heads of eight noble families, and six representatives for the rest of the nobility; the second consisting of 23 members, 15 of whom are representatives of the landed proprietors, and three of the clergy. The states are convoked yearly. The press is free, and personal liberty, the right of petitioning, and eligibility to all public offices are privileges belonging to every subject. Civil justice is administered in a primary court in the capital of each of the 98 districts of the duchy; in secondary courts at Dillenburg and Usingen; and a high court of appeal at Wiesbaden. The principal criminal courts are at Wiesbaden and Dillenburg. There are elementary, royal, and grammar schools at Diaz, Usingen, Dillenburg, Hadamar, Wiesbaden, &c., and a gymnasium in Weilburg, besides female schools, many special academies, and deaf and dumb and other charitable schools. The government has taken considerable pains to promote popular education, but it does not seem to be yet much diffused, few children attending the public elementary schools. By an agreement with Hanover, the university of Gttingen has been constituted the high school for the duchy; except in Roman Catholic theology, for which students resort to Marburg, in Hesse Cassel. In respect of religion about 905,000 of the population are Protestants, 175,000 Roman Catholics, and 6900 Jews; the Lutherans and Calvinists have united in one communion. The military force consists of about 4000 men under arms, with a reserve of 1550 more. Public revenue estimated at 1,800,000 florins; year: public debt about 3,000,000 florins, but this is in process of liquidation. Nassau holds, with Brunswick, the ninth place in the German confederation; it has two votes in the full council, and, with Brunswick, one in the committee. It furnishes to the army of the confederation a contingent of 3036 men.

This country, like Hesse, was anciently inhabited by the Catti. The founder of the reigning house of Nassau was Otho of Laurenburg, brother of the emperor Conrad I. In 1253, two collateral lines were formed; and the descendants of the elder have remained in possession of this territory; while those of the younger (Orange-Nassau) have been seated on the throne of Holland. (*Berghaus, Allg. Lnder, &c.*, IV., 431-440; *Herzogthum Nassau's Stein*; *Schreder, Guida du Rhin, &c.*)

NASSAU, county, Florida. Situated in the N.E. part of the territory; and contains 576 sq. m. Bounded N. and W. by St. Mary's river; S.E. by St. John's river. Watered by Nassau river. It contained in 1840, 9636 neat cattle, 436 sheep, 5011 swine; and produced 17,400 bushels of Indian corn, 16,000 of potatoes, 31,500 pounds of rice, 66,425 of cotton. It had two stores, one lumber-yard, one grist-mill, two saw-mills, five schools, 60 scholars. Pop.: whites, 964; slaves, 908; free coloured, 30; total, 1892. Capital, Nassau courthouse.

NASSAU, p. t. Rennselaer co., N. Y., 12 m. S.E. Albany, 385 W. Drained by Kinderhook creek and its tributaries. It contains five churches, two Baptist, two Methodist, and a Presbyterian, 10 stores, three fulling-mills, six woollen factories, two cotton factories with 3158 spindles, one flouring-mill, six grist-mills, 12 saw-mills, three tanneries; 15 schools, 679 scholars. Pop. 3236.

NATOLIA.

NATCHEZ, city, and capital of Adams co., Miss., 169 m. S.W. Jackson, 1110 W. Situated on the E. bank of Mississippi river, chiefly on a bluff, elevated over 300 ft. above the level of the river, 292 m. above New-Orleans, by the course of the river. A part of the place called *Natchez below the hill* lies on the margin of the river, and contains a collection of warehouses, stores for supplying boatsmen, and grog shops, is the place where the boatsmen principally congregate, and is the seat of much vice. But the greater part of the place is situated on the elevated ground, and is of a different character. It is laid out in the form of a parallelogram, with broad streets, crossing each other at right angles, and ornamented with the China tree. The ground is uneven, and the houses of the more wealthy inhabitants are widely separated, each seeming to occupy a square, surrounded with orange trees, palm-trees, and other beautiful shrubbery. The inhabitants are distinguished for their refinement, intelligence, and hospitality. Many of the wealthy planters in the vicinity spend most of their time in the city, which is generally healthy, though sometimes visited with yellow fever, especially when it prevails in New-Orleans. It contains a courthouse, jail, four churches, an Episcopal, a Presbyterian, Methodist, Baptist, and Roman Catholic, three banks, an academy, a female seminary, a hospital, and an orphan asylum, a masonic hall, a theatre, two steam oil mills for manufacturing oil from cotton seed, and 4600 inhabitants. Cotton is extensively raised in the back country, and Natchez is a great cotton mart; and at the proper season, the streets are almost barricaded with cotton bales. Its trade is very extensive. Steamboats are continually arriving and departing, and its elevated situation affords a fine view of the river, with its numerous cmt. and of the country to the west, including the village of Concordia on the opposite side of the Mississippi, and a vast region beyond. This place was first settled by the French in 1716, and destroyed by the Indians in 1728. It is now one of the most beautiful places in the valley of the Mississippi. Some of the houses are elegant, but they are mostly of wood, only one story high, with a piazza and balcony. It is much the largest town in the state, and is its commercial metropolis. See the statistics of Adams co.

NATCHEITOCHES, parish, Louisiana. Situated in the N.W. part of the state, and contains 4000 sq. m. Bounded S.W. by Sabine river, and drained by its branches, and by Red river and its tributaries. It contained in 1840, 12,217 neat cattle, 1938 sheep, 15,849 swine; and produced 202,596 bushels of Indian corn, 10,050 of oats, 35,563 of potatoes, 14,350 pounds of tobacco, 10,636,709 of cotton. It had 49 stores, 10 grist-mills, 12 saw-mills, four tanneries, two printing-offices, two weekly newspapers; two academies, 129 students; five schools, 58 scholars. Pop.: whites, 7648; slaves, 6651; free coloured, 657; total, 14,350. Capital, Natchitoches.

NATCHETOCHES (pronounced *Natchitach*), p. v. capital of Natchitoches parish, La., 368 m. N.W. by W. New-Orleans, 1267 W. Situated on the W. side of Red river, 900 m. from its mouth, at the foot of a bluff, and built chiefly on one street, it contains a courthouse, jail, Roman Catholic church, a U. States garrison, two printing-offices, two weekly newspapers, and about 3000 inhabitants. It was settled by the French in 1717, and half of its present inhabitants are of French descent.

NATICE, p. t. Middlesex co., Mass., 17 m. W.S.W. Boston, 423 W. It contains three churches, a Congregational, Unitarian, and Methodist, three stores, two grist-mills, six saw-mills; one academy, 30 students; six schools, 209 scholars. Pop. 1285. The Boston and Worcester railroad passes through it. The first Indian church in New-England was founded here by the Rev. Mr. Elliot, the apostle of the Indians, in 1606.

NATOLIA, ANATOLIA, or ANADOLI (a corruption from *anadolos*, the East, or *Lycania*), a peninsula of W. Asia, anciently called *Asia Minor*, and now constituting a pachalik of Asiatic Turkey: it extends between lat. 36 and 43° N., and between long. 36° and 49° E., being bounded N. by the Black sea, E. by Armenia and the Euphrates, S. by Syria and the Mediterranean, and W. by the archipelago. Length, from C. Kara-burun to the Euphrates, 670 m.; breadth from 300 to 440 m.; estimated area, 258,000 sq. m., or about one sixteenth more than that of the Spanish peninsula. Pop. probably about 4,350,000. The coastline is very irregular, especially on its W. and S. sides, where it is deeply indented by the gulphs of Adramytti, Smyrna, Koa, Makry, Adalia, and Scanderoon. Surface very irregular, but may generally be described as a high table-land, dotted with salt lakes, and enclosed by two ranges, detached from the plateau of Armenia, and running nearly parallel to the N. and S. coasts. The latter of these chains, the *mons Taurus* of the ancients, and *Sultan-dagh* of the Turks, runs close to the shore in some parts of Karamania, forming a bluff precipitous coast, intersected here and there by narrow gorges, through which numerous tor-

NATOLIA.

runs run into the sea. One of the heights, close to the gulf of Adalia, was ascertained by captain Beaufort to be 7800 ft. high; but there are several summits in the interior, the snow on which descending one fourth the way down their sides, indicates a height of 10,000 ft., or nearly equal to that of Mount Etna. (*Beaufort's Karamania*, p. 57.) The N. range is much less clearly defined, the only snow covered peak being *mount Olympus*, about 35 m. S. the sea of Marmara. Connected with Olympus westward is the celebrated *mount Ida*, overlooking the plain of Troy; and the highest summit of which, called *Gargarus* by Homer, and *Kaz-dagh* by the Turks, rises about 5000 ft. above the sea. About 100 m. S. of Ida runs another range, the *Tma-ha* of antiquity, mentioned by Ovid, Virgil, and Seneca, as being celebrated for its excellent vines and rich metallic veins. The central table-land is partly drained by the rivers flowing into the Black sea; but a large portion, lying N. and N.W. the range of Taurus, about 940 m. in length, by 150 m. in breadth, is covered with numerous salt lakes, marshes, and rivers, having no visible outlet. In rainy seasons these lakes overflow, and but for the ridges that cross the plain and separate it into basins, would submerge nearly 200 sq. m. of the surface. The largest of these is the lake *Behabur*, 43 m. W.S.W. *Konieh*; but by far the most curious in the peninsula is the *Tatta palus* of antiquity (about 50 m. N. *Konieh*, and 9500 ft. above the sea), the waters of which, according to Strabo, were so impregnated with brine, that anything immersed in it was soon covered with a saline incrustation: the Turks call it *Tuzia*, and it still furnishes in abundance the article for which it was anciently famous; but it contains neither fish nor conchiferous animals. (*Geog. Jour.*, i. 200.)

The largest rivers of Natolia flow into the Black sea. The *Halya*, or *Kizil-Ermak* ("Red River"), rises by two branches on the E. side of *mount Erdjli* (anciently *Arges*), and flows by a tortuous course of about 500 m., first N.W., and subsequently N.E., into the Black sea, where it is about as wide as the Seine at Paris. It is the largest river of Asia Minor; and in ancient times was considered the boundary between the Lydian and Median kingdoms, as well as a natural dividing line of the peninsula. (See *Herod.*, i. 72.) E. of the *Halya* is the *Iris* (now the *Sekil Ernak*), a much smaller river, rising in the N. range of the table-land, and flowing W. by N. past *Tokat* into the Black sea, about 30 m. E. *Samsoun* (an *Amisus*). In the N.W. part of Natolia is the large and celebrated river *Sengarius* (now *Bakaria*), the most distant source of which is in the central plateau, about 60 m. S.S.W. *Angora*; lat. 39° 5' N., long. 39° 3' E. After receiving numerous tributaries, it turns northward, near the modern town of *Eski-cher* (an. *Doryleum*), and flows into the Black sea, about 50 m. W. by S. *Erekli*. The three principal rivers flowing into the archipelago are the *Caicus*, the *euvo turbidus Hermus* of Virgil (*Georg.*, ii. 137), now the *Sarabat*, the marshy *Ceyhan*, at the mouth of which was the *Λαϊος λιμὴν* of Homer (*Il.*, ii. 470), and the *Meander* (now *Mendere*), by far the largest of the three, and celebrated in antiquity, not only for the sinuosity of its course, but for the fertility of its valleys, and the number of flourishing cities on its banks. It rises by numerous sources in long. 30° 8' E., and takes a general course W. by S. about 220 m. to its mouth, near the ruins of *Miletus*. The rivers on the S. side of the peninsula, are, with one or two exceptions, little more than brooks or mountain torrents; and the *Odyneus*, the scope of the splendid pageant of Cleopatra, is at present only 160 ft. wide, and inaccessible to any but the smallest boats. (*Beaufort's Karamania*, 275.)

The geological formation of Natolia partakes in many parts of a volcanic character. The high region of Phrygia, called *arcossusculptus*, abounds with lava and other substances, indicating the existence of igneous action at some previous period; earthquakes have frequently visited the W. part of the peninsula, and all but demolished *Laodicea*, *Apamea*, *Cidessus*, *Sardes*, and other cities of antiquity; and it has still numerous thermal and sulphureous springs. The most general formation, however, is of white limestone, bold cliffs of which rise in Karamania, from 600 ft. to 700 ft. perpendicularly from the sea, exhibiting the most curious contortions of strata. (*Beaufort*, p. 212, 213.) On the N. side of the peninsula the same description of strata prevails, covered with gypsum, and in the highest mountain serpentine is found alternating with the blue mountain limestone. The marble of Asia Minor was extensively used by the wealthy Romans, in building their houses and villas. These mountains abound in mineral riches; copper is wrought to a considerable extent near Trebizond, *Samsoun*, and *Sivas*; and the region of the *Chalybes*

has been found in several places, though not wrought; but rock-alum is procured near *Unieh* (anciently *Uxus*), and exported in considerable quantities.

The climate of Natolia, owing to the varying elevation and different aspects of its surface, will admit of no general description. On the central plateau, the height of which (exclusive of mountains) varies from 2800 to 3000 ft. above the sea, it is cold, though salubrious, and snow lies, in many parts, for two or three months of winter; but, in July and August, the heat is often intense, and rendered more oppressive by the tendency of the sandy surface to absorb heat. On the W. shores the climate is genial, and the soil very productive; but in some parts, as at *Smyrna* and elsewhere, epidemics are prevalent, and the plague often makes great ravages among the population. The heat in July is stated by Mr. Addison to range from 84° to 94° Fahrenheit in the shade; rain seldom falls, though the want of it is, in some measure, compensated by heavy dews. (*Demasius and Paisyris*, i. 320, 331.) The climate on the N. side is far more temperate, and rain is frequent. The soil on the coasts is tolerably fertile, producing wines, olives, rice, millet, and other grains; but tillage is much neglected, irrigation and the manuring of land being little practised. The N. shores are covered with forests of oak, ash, larch, beech trees, &c., furnishing abundant supplies of timber for the Turkish navy. The mountains of Karamania are covered principally with pines. Large flocks of sheep and goats graze on the lofty plains of the interior; their wool and hair forming an important article of commerce between *Angora* and *Smyrna*.

Natolia is under a pasha or military governor, to whom are subject the respective beglerbegs of *Anadoli*, *Karamania*, *Marash*, *Siwas*, and *Trebizond*, the country being farther subdivided into 17 sandjaks. The fixed population consists principally of Turks and Greeks, with smaller numbers of Armenians and Jews; besides whom, there are nomadic tribes, both Kurds and Turcomans, employed partly in pastoral, but partly also in marauding occupations. (For farther particulars, see *TURKEY*.)

Natolia, which was first called simply *Asia*, afterward *ἡ κατὰ Ἀσίαν*, to distinguish it from that more to the E. *ἡ ἀπὸ Ἀ. Ἀ.*, was called *Asia propria* or *proconularis*, by the Romans, and did not receive its appellation of *Asia Minor* earlier than the time of Oroonius, in the beginning of the fifth century. With respect to the original inhabitants of this celebrated peninsula, we have little information on which any reliance can be placed; but there is reason to believe that the Phœnicians had settlements, at a very early period, on its S. and W. coasts, and that there were frequent emigrations to it from Thrace, as well as Thessaly, soon after the Trojan war. The great Ionian immigration (composed of colonists from Attica and Achæa) took place *anno* 1130 B.C.; and, about 80 years afterward, a colony of Dorians, from Megara, Trozene, and Argos, settled on the S.W. coast, a little S. of those last mentioned. Subsequently to the establishment of these Greek colonies, and during the existence of the Lydian monarchy (which lasted from a period of obscure antiquity down to the overthrow of *Croesus* by Cyrus, B.C. 556), *Asia Minor* was overrun successively by large bodies of Cimmerians and Scythians, who, however, though they penetrated as far as Lydia, and took *Sardes*, were unable to secure a permanent footing in the country. (*Herod.*, i. 15.) The numerous revolutions, indeed, caused both by conquest and colonization, are sufficiently attested by the statement of Herodotus, that the peninsula, between four and five centuries prior to the Christian era, comprised 30 different nations (*ἔθνη*). At the fall of the Lydian kingdom *Asia Minor* was formed into four satrapies, belonging to the Medo-Persian empire, under which it remained upward of two centuries, though the interior of the country, inhabited by nomadic tribes, was never fully subdued. Notwithstanding the oppressions of the provincial governors, and their occasional struggles with the "Great King," the Greek colonists continued to flourish, and they gradually spread themselves northward, along the Euxine sea, as far as *Trapesus* (now *Trebizond*), and southward, on the shores of the Mediterranean, to the gulf of *Iesus*, everywhere distinguishing themselves by their industry and commercial activity. In refinement, also, and the cultivation of the arts, they were at least equal, if not superior, to their European brethren; at all events, if *Asia Minor* have not given birth to great warriors and statesmen, she may justly boast of the all but unrivalled excellence of her poets, historians, philosophers, sculptors, architects, and musicians. In poetry the lays claim to Homer, Hesiod, Sappho, Alceus, and Nicander; in philosophy to Thales, Pythagoras, Anaxagoras, Bias, Anax, and Pittacus; and in history to Hecateus, Hellanicus, Herodotus, Ctesias, and Dionysius of Halicarnassus. The Macedonians succeeded the Persian dominion *anno* 331 B.C.; from which time, during nearly two centuries, *Asia Minor* was subject to many vicissitudes consequent on the changing fortunes of Alexander's suc-

F. *Phil. Arg.*, iv., 610.

is still an important mining district of the peninsula. Lead

NATURAL BRIDGE.

cessors and their descendants, as well as the formation of several minor kingdoms (as Pontus, Bithynia, &c.) under native princes. During the century immediately preceding the Christian era the various parts of the peninsula fell, one by one, into the hands of the Romans, under whom it formed a proconsulship; and it attained, during their dominion, not only its most uniform and settled, but also its most prosperous state; a fact sufficiently proved by the number of large cities built or embellished, and the great works undertaken and completed, during the earlier period of the empire. The decline of the Roman power exposed the peninsula to fresh invasions from the E.; and at the commencement of the eighth century the Mohammedans began to settle themselves on its E. borders. At the period of the first crusade they had spread over almost the whole peninsula, and reduced it to a state, in many respects, similar to that in which we find it at the present day, except that it was more populous. It was ravaged by the crusaders in the 12th and 13th centuries, and was overrun by the Tartar hordes under Timour after the battle of Angora (1402 A.D.); but neither produced any permanent effect on the condition of the population. (*Leake's Asia Minor*, p. 1-144; *Cramer's Asia Minor*, passim; *Geog. Journ.*, vi., x.)

NATURAL BRIDGE, Rockbridge co., Va., next to the falls of Niagara, the greatest natural curiosity in the United States, and one of the greatest in the world, 156 m. W. Richmond, 9 m. N. of James river, 12 m. S.S.W. Lexington, the capital of the county, 6 m. from the head of James river and Kanawha canal, at which point starts the Natural Bridge turnpike, passing over the bridge. The bridge consists of a stupendous arch of limestone rock, over an unimportant and small stream, called Cedar creek. The height of the bridge above the stream to the top, is 215 feet, its average width is 90 feet, its extreme length at top is 93 feet, and its thickness from its under to its upper side is 55 feet. The chasm over which it passes is 50 feet wide at bottom, and 90 feet at top. The bridge is covered, to the depth of from 4 to 6 feet, with a clayey earth, with a natural parapet of rocks on its sides, rendered firm by trees and shrubbery. The view from the top, to those who dare take it, is awfully grand; but the view from below, being divested of terror, is equally sublime, and more interesting. The chasm continues narrow, deep, and straight, for a considerable distance above and below the bridge, and presents a short but pleasing view of North mountain on one side, and Blue ridge on the other, each about 5 m. distant. The bridge is of important use, as it constitutes a safe and convenient passage for a road, over this great chasm, not otherwise possible, for some miles above and below.

NAUMBURG, a town of Prussian Saxony, distr. of its own name, on the Saale, 25 m. S. Halle, and 28 m. S.V. Leipzig; lat. 51° 8' N., long. 11° 54' E. Pop. 12,000. It is situated in a fertile vale, and is tolerably well built, having several good and wide streets, with three suburbs. Its principal public buildings are the citadel, town-hall, and arsenal, a noble Gothic cathedral, five Calvinistic churches, two orphan asylums, six hospitals, a poorhouse, gymnasium, and trade school. It is the seat of a superior and ordinary tribunal for the circle, a council for do., and board of taxation. It has manufactures of woollen cloths, hosiery, and shoes, and large chemical works. The two annual fairs of Naumburg were formerly much celebrated, but have recently declined in importance.

Naumburg is celebrated in history as having been besieged in 1433 by the Hussites, under Procopius. This general, irritated by the resistance of the inhabitants, made a vow to put them all to the sword, but was deterred from his purpose by the earnest supplications of the children of the town, who came out in procession and threw themselves at his feet. The anniversary of this event (called the *Kindersfest*, or "Children's Fête"), is still celebrated on the 28th July, and has furnished Kotzebue with the subject of one of his plays. (*Von Zedlitz, Neukirch Pruss. Staat.*, iii., 225; *Berghaus; Murray's Hand-Book of N. Germ.*, p. 352.)

NAUPLIA, or **NAPOLI DI ROMANI**, a city and seaport of independent Greece, on the E. side of the Morea, at the extremity of the bay of its own name, 5 m. S.E. Argos, 58 m. W.S.W. Athens; lat. 37° 33' 50" N., long. 23° 47' 30" E. Pop., according to Burgess, 16,000. The town, which stands on the N.E. side of a hill, with a tabular summit, and is built in the form of an amphitheatre, has been greatly enlarged and improved since the war of independence.

"Nauplia," says Mr. Burgess, the most recent traveller in Greece, "has no longer any similarity to its former internal appearance (which was that of a filthy and miserable Turkish town). The features of the Palamidi rock, the heights of Itchali, the low coast sweeping round by Tyrus and the Lermdan marsh, with the citadel of Argos rising out of the plain, the mountainous shores flanking the E. parts, and the headlands jutting beyond the reach of the

NAUVOO.

naked eye, must endure as long as the landscape remains undissolved; but everything that man and his institutions can change is now changed at Nauplia" (l., 186). It now comprises several wide streets, regularly laid out, and lined with good houses, in the European style; some of which, for size and elegance, might pass, in Greece, for minor palaces. The principal public buildings, besides the churches (one of which belongs to the Roman Catholics), are a royal palace, formerly the residence of Count Capo d'Istria, a new court of justice, called the *Benactepier*, and a garrison, occupied by Bavarian troops. The shops are well stored with provisions and other articles; and there are numerous cafés about the port, and in the chief thoroughfares. A quay faces the harbour, which is commanded by the ancient fort Palamede, one of the strongest castles in Greece; at its foot is a stone aqueduct, from which the town is well supplied with water. Nauplia possesses one of the largest government dock-yards in Greece, and extensive storehouses. Its trade is very considerable, the principal exports being oil, wine, gall-nuts, wax, silk, wool, and cotton; while the imports comprise corn, manufactured and colonial goods, with timber, &c. The commerce is principally carried on in Greek bottoms. In 1836 there arrived 86 vessels of 6086 tons, and 58 vessels of 3738 tons left the port in the same year. The roadstead of Nauplia is W. of the town, in 8 and 9 fathoms; but within the harbour there are only 2½ fathoms, and in entering it is necessary to keep in mid-channel, to avoid a shoal of 6 ft. water.

Nauplia is, in comparison with the rest of Greece, well provided with literary establishments. They comprise a military academy, school for the middle classes, circulating library, several book societies, two lithographic establishments, and five printing-houses, one of which is the property of the government, and exclusively employed in printing their official paper. The *Συμπ.* or "Saviour," a political and literary newspaper, is published here in Greek and French, and has a wide circulation. The population of Nauplia comprises a considerable number of Germans, French, and Italians: house-rent is high, and the rate of living is not much cheaper than at Paris or Naples. The climate is unhealthy, owing to the miasma from the neighbouring marshes in summer, and the cold, searching, N.E. winds that prevail during winter: the town has likewise been recently ravaged by the plague.

The ancient Nauplia was the port and arsenal of Argos during the flourishing period of Grecian history; but it was deserted and in ruins when visited by Pausanias, who noticed the vestiges of its walls and docks (*Ἀκρές*), the temple of Neptune, and a fountain called Canathus, still existing. The inhabitants had been expelled several centuries before by the Argives, on suspicion of having favoured the Spartans, who in consequence received them into their territory, and established them at Methone in Messenia. The town revived under the Byzantine emperors, and was occupied in the 13th century by the Venetians, who made it their chief settlement in the Morea. It was taken by Sultan Solymán in 1537, but was soon afterward recovered; nor did the Venetians finally lose possession of it till the treaty of Passarowitz in 1718 secured it to the Porte, which retained it down to the close of the war of independence. Nauplia was the seat of the new government from 1829 to 1834, when it was transferred to Athens. (*Burgess's Greece and the Levant*, i., 185-188; *Leake's Morea*, ii., 355-361; *Off. Rep.; Journ. of Educ.*, vol. ix., &c.)

NAUVOO, city, Hancock co., Ill., 194 m. N.W. Springfield, 801 W. Situated on the E. bank of Mississippi river, 181 m. above the mouth of Illinois river, and inhabited by the Mormons. The river is here about 3 m. wide, and there is a good steamboat landing. The city limits are 4 m. long, and at its greatest width 3 m. wide, bounded W. and S. by the river. At the end of three years from its establishment, it contained 1000 houses, chiefly whitewashed log cabins, with a few framed and brick houses. The public buildings are the "Nauvoo house," a spacious hotel, fronting on two streets, 130 feet on each, 40 feet wide, and three stories high above the basement. In this building Joe Smith, the pretended prophet and leader of these "Latter-day Saints" is furnished with a suite of rooms. The *Nauvoo temple*, not yet completed, will be 130 feet long, and 100 feet wide. In the basement is a baptistery, supported on 12 gilded oxen, the model of which is derived from the brazen sea of Solomon. The *Nauvoo legion* consists of from 2000 to 3000 men, with proper officers, armed and disciplined. They have a *university*, which contains a president, a professor of mathematics and English literature, a professor of the learned languages, and a professor of church history. The city is laid out with streets of ample width, crossing each other at right angles. Their property is held as private; but they have a large farm without the city, which is occupied and cultivated in common. The population within the city limits is about 7000, many of whom are from England, besides about 3000 of the frater-

NAVAN.

city, who reside in the vicinity. The city has a mayor, and is divided into four wards, having two aldermen, four common-council men, and a constable for each of the wards. The city is a curiosity, and the success of its leader has scarcely been paralleled, since that of the prophet of Arabia.

NAVAN, an inland town of Ireland, prov. Leinster, co. Meath, at the confluence of the Blackwater with the Boyne, 26 m. N. by W. Dublin. Pop. in 1831, 4416, and, including its suburbs, about 6000. It has a parish church, a Roman Catholic chapel, a convent, an endowed grammar school, a national school, a preparatory Roman Catholic college, with a chapel, courthouse, bridewell, fever hospital, the infirmary for the county, and cavalry barracks. At one end of the town is a large rath or mote. Owing to the opening of the Boyne navigation to Drogheda, Navan has become a place of considerable trade, especially for all sorts of agricultural produce, sent principally to Drogheda, but partly also to Dublin. It has also five corn or flour mills, two paper-mills, two distilleries, and a tannery. The old corporation sent two members to the Irish House of Commons till the union, when it was disfranchised. Markets on Wednesdays; fairs on Easter and Trinity Monday, the second Monday in September, and the first Monday in December. Postoffice revenue, in 1830, £603, in 1836, £664. (*Railway Rep.*; *Man. Boundary Rep.*)

NAVARINO, a town and seaport of indep. Greece, on the S.W. coast of the Morea, 136 m. S.W. Athens, and 22 m. S. by W. Patras; lat. 36° 28' 15" N., long. 21° 41' E. Pop. 3000. It stands on the S. side of a fine semicircular bay of the same name, and is surrounded by walls, and defended by a strong citadel, placed on a lofty rock. Streets narrow, steep, and irregular, lined with small, mean-looking houses, chiefly of stone cemented with mud, and encumbered in many places with the fallen ruins of former habitations. At the opposite extremity of the bay are the remains of Navarino Vecchio, consisting of a fort covering the summit of the hilly peninsula of *Coryphasium*, on the S. slope of which once stood the ancient *Pylae*. The long rocky island of Sphagia (na. *Sphacteria*) stretches about 4 m. from N. to S. across the mouth of the bay, forming a kind of natural breakwater for its protection from the heavy seas that would otherwise be thrown in from the W. The entrance is at the S. side of the island, and the bay is one of the finest asylums for shipping in the Mediterranean. It has water to float the largest ships, and good holding ground. Ships usually moor about one quarter of a mile from the town, or behind the island of Marathoussi, near the centre of the harbour. The circular lagoon, on the N. side of the harbour, directly E. Navarino Vecchio, abounds with fish; but, as it is not protected either by *Thucydides* or *Pausanias*, it is probably of modern formation.

The ancient *Pylae*, one of those towns that claimed to be the birthplace of Nestor (called by Homer *Νηϊϊον ἄρτυ*), was deserted by its inhabitants after the Trojan war. When the town was restored, we have no information; but in the time of Pausanias, it was inhabited, and comprised, among other monuments, a temple of Minerva, *Coryphasia*, and a monument of Nestor. (See *Paus. Mors.* 36, quoted by *Leake*, i. 413.) The island of *Sphacteria*, which *Thucydides* (iv. 25-36) has described as "desert, pathless, and covered with wood" (*ἄλσος ἡ καὶ ἀρδιὰς ἡνὶ βα' Ἰσχυρίης*), is celebrated in the history of the Peloponnesian war as having been occupied by the Lacedaemonians after the defeat of their fleet by the Athenians, under Demosthenes. They were detained here during 72 days, and were at length compelled to give themselves up as prisoners, and to surrender their fleet in pledge of their fidelity to their engagement. The battle which preceded this blockade took place in the bay of *Pylae*, or Navarino, which has also obtained celebrity in modern times, during the late war of independence, for the decisive victory gained (October 20, 1827) by the combined fleets of England, France, and Russia, under Sir E. Codrington, over the Turco-Egyptian fleet, commanded by Ibrahim Pacha. Notwithstanding the great preponderance of force and science on the part of the allies, the Turco-Egyptian fleet made an obstinate resistance, but in the end it was almost totally destroyed. A convention was soon after entered into, by which the Turks agreed to evacuate the Morea; and this battle finally led to the acknowledgment by the Porte of the independence of Greece, in the treaty of Adrianople, in 1830. (*Leake's Mors.*, i. 400-415; *Gall's Mors.*, p. 19-33, &c.)

NAVARRÉ (Sp. *Navarra*), a portion of Spain forming a dependent kingdom under that monarchy, on the N.E. side of that peninsula, between lat. 41° 57' and 43° 19' N., and long. 0° 41' and 3° 25' W.; being bounded N. by France and the Pyrenees, E. by Aragon, S. by Old Castile, and W. by the Basque provinces. Greatest length from S.W. to N.E., 75 m.; breadth, about 50 m. Estimated area, 9440 sq. m. Pop. 371,580. The surface consists in a great measure of subordinate mountain ranges, running southward

NAVARRÉ.

from the main ridge of the Pyrenees; but the S. part of the province, near the Ebro, has some extensive and fruitful valleys. The principal summits within the limits of the province are Albocacer, 5360 ft. high; Adi, 5218 ft.; and three others rising above 3000 ft. from the sea. The highest points of the Pyrenees, however, are considerably to the E. in the kingdom of Aragon. The principal passes over the Pyrenees from Navarre into France are, proceeding eastward, those of Verra, Maya, and Roncesvalles, the last of which is, according to Bory St. Vincent, 5771 ft. above the sea. The mountains are chiefly of transition and secondary formation, consisting, in a great measure, of the rock called Pyrenean limestone. Jasper and marbles also, occur in large beds; and there are several iron-mines, besides one of copper. Rock-salt is quarried at Valtierra, near the Ebro; and the yearly returns, according to Miñano, amount to 12,000 arrobas; the province, also, comprises numerous thermal springs. Principal rivers, the Aragon, Zidacos, and Arga, uniting their waters in one channel, which falls into the Ebro opposite Alfaro: the only river flowing into the bay of Biscay is the Bidassoa, which rises in the mountains, forming the Val de Bastan, and has a course E.N.E. of about 45 m., falling into the sea near Fuenterrabia. The climate of the mountainous districts is very severe in winter, and not genial even in summer; but in the valleys of the Ebro and Aragon the temperature is much higher, and the climate delightful, as well as healthy. The forest trees of the Pyrenees consist chiefly of the pine, large quantities of which are sent down the Ebro to Zaragosa and other places; but there are also considerable numbers of beeches, deciduous oaks, chestnut-trees, &c.; and so provinces furnish a good supply as Navarre of useful building timber. (*Cook's Sketches*, ii. 366.) The wild animals of the mountains are wolves, wild boars, foxes, and wild cats; game is abundant in every part of the province. Pasturage, extensively followed, especially in the N. districts; and, according to Miñano, the stock at the last general census included 43,636 oxen, 4616 calves, 55,760 mules, 639,500 sheep, 68,500 goats, and 31,760 hogs; the produce of wool being estimated at 54,490 arrobas (15,609 cwt.). The higher part of the kingdom, on the frontiers of France, is bleak, cold, and unsuitable for tillage; but the plains near the Ebro have a rich, productive soil, well watered by numerous streamlets connected with the larger rivers. The principal crops are wheat, maize, barley, and oats. Hemp and flax are also raised, with oil and wine. About the half of the latter, with the greater part of the wool, and about 30,000 bushels of corn are exported, chiefly to France, in return for silk and cotton fabrics, colonial produce, &c. Cider is made in the Val de Baztan, and liquorice is raised in the S. districts for exportation. Agriculture, however, is much neglected, and was recently rendered almost futile, in consequence of this part of the peninsula being the scene of the civil war between the adherents of the present queen and Don Carlos. Manufactures are also inconsiderable, including only those that are most indispensable, and some distilleries. The intercourse with the adjoining provinces is maintained partly by the canal of Aragon, running from Tudela to Zaragosa, and partly, also, by roads intersecting the country in various directions; the great road from Pampluna to Madrid is said by Captain Cook, and other recent travellers, to be little inferior to the modern roads of England.

The kingdom of Navarre is still governed by its separate laws, and has, nominally at least, the same constitution which it enjoyed when it was a separate monarchy; but its cortes, or estates, have not met since 1713, and cannot be convoked without the authority of the crown. A council, however, representing the cortes, sits permanently at Pampluna, decides on the method of raising the revenue, fixes the tariff, and exercises other commercial privileges. The supreme power is vested in the vicary, who presides at the royal council (*Consejo Real*), consisting of six judges, an attorney-general, and four *alcaldes*: this is the highest tribunal for civil and criminal causes. The inhabitants of Navarre are tall, and strongly built, resembling the Biscayans in independence of spirit, attachment to their religion, and jealousy of their ancient national privileges. Castilian is the general language of Navarre; but the Basque is spoken in the N. and W. districts.

Navarre is divided into 17 *partidos*, which are again subdivided into 74 *merindades*, or districts; and the kingdom comprises nine cities, the principal of which are Pampluna, the capital and seat of government (pop. 15,000), Tudela (8150), the once royal city of Olite (5000), and E-tella, the stronghold of the Carlists during the late war (4600).

The inhabitants of Navarre, in the time of the Romans, were called *Vascones*, in common with those in the neighbouring parts of the peninsula, and were faithful subjects of the empire till the close of the fifth century, when they were subdued by the Visigoths, under whose sway they remained between 300 and 300 years. The Arabs overran

NAXIA.

the country in the eighth century; but were unable to effect its conquest. Inigo, count of Bigorre, having been elected king in the ninth century, the crown remained upward of five centuries in his family, till in 1500 it became united, through intermarriage, with that of France, the title of whose monarchs, from the time of Henry IV. (with the exception of Napoleon), to that of Charles X., was "King of France and Navarre." In 1512, however, Ferdinand of Aragon united all the country S. of the Pyrenees to the crown of Spain; so that only the small portion N. of that chain remained annexed to the French monarchy: this formed the province of Bearn before the revolution, and is at present included in the department of the Lower Pyrenees. (*Cook's Sketches in Spain*, I, 118-123; II, 236; *Atkins*; *Dict. Geog.*, &c.)

NAXIA (an. *Naxos*), an island of the Grecian archipelago, the largest of the group called the Cyclades, about 5 m. E. Paros, its cap. of the same name being in lat. 37° 7' N., long. 35° 26' E. Shape, oval: circuit, about 48 m.: area, 106 sq. m. Population, according to Burgess, 18,000. The coast is much indented and precipitous, especially on the N.E. side; and the surface is very uneven, comprising several high mountains of primitive formation, on which are superimposed strata of grauwacke and mountain limestone: the culminating point of the island, anciently called the hill of Zeus 3310 feet high, is still called Zia: it attained some celebrity from its containing a cavern or grotto, to which, according to tradition, the Bacchantes came to celebrate their mysteries and festivals. Emery is wrought in one part of the island; and, according to Dr. Clarke, almost all the emery of commerce comes from Naxia. Large flocks of sheep feed on the mountain sides; but both their wool and flesh are of inferior quality.

Naxia has few large trees, but is pretty thickly covered with lemon trees, myrtles, oleanders, thorny brooms, the arbutus and labdanum plant, *stracetylus graminifera*, the produce of which is chewed by the natives, and various kinds of leguminous plants, besides the olive, fig, and vine, which are extensively cultivated. The wine, however, though characterised by Athenians as the "nectar of the gods," is now of very indifferent quality, owing to the want of care in its preparation. The oil, also, is inferior to that produced in most of the other islands. The island was famous in antiquity for its fertility; but agriculture is now so much neglected that the corn raised is sufficient only for six months' consumption of the inhabitants. Vegetables, however, are so abundant, that considerable quantities are sent to Syria. (*Burgess*, II, 21.) Lime juice also is exported, chiefly to Russia. In the S. of the island is a small saltpan, from which the capital is supplied with salt. The island abounds with game, and field-sports constitute a favourite occupation of the inhabitants.

Naxia, the capital of the island, occupies an eminence close to the sea on the W. coast (which is the only part accessible to shipping), and has 4000 inhabitants. Its narrow streets lined with dilapidated houses exhibit a profusion of marble; and there is scarcely a dwelling in which there are not ancient inscriptions or other monuments. A castle, built by the Venetians, occupies the summit of a hill above the town. The principal remains of the ancient Naxos are a gate belonging to a temple of Bacchus, on a lofty crag, an aqueduct, and a jetty now under water, but still distinguishable in calm weather. It is the residence of a Greek and Latin archbishop, and there are several churches and convents belonging to both religions. The harbour of Naxia, called the Porto Saline on account of the salt collected there, is exposed to the N. and N.W. winds, and being almost surrounded by hidden rocks, is unfit for the anchorage of large ships. The island comprises 40 villages; and there are numerous country-houses, forming the residences of the nobles and gentry.

Naxos (which, according to Pliny, was called at different times Strongyle, Dia, Dionysias, and Callipolis), was probably first colonised by Carians. The Naxians were among the most steadfast opponents of Persian aggression, and the failure of the expedition undertaken by the Persians against this island at the suggestion of Aristagoras, led to the revolt of the Ionian states. Soon afterwards, Naxos was conquered by the Persian fleet under Datis and Artaphernes, who destroyed the city and enslaved its inhabitants. (*Herod.* v. 98, vi. 96.) The Naxians, however, had sufficiently recovered seven years afterwards to enable them to furnish four well equipped triremes for the fleet at Salamis. The Athenians, even in the time of Pausanias, claimed them as colonial dependents; and, after the Persian war, they deprived them of their liberty. Naxos was celebrated in ancient mythology for the worship of Bacchus, who is alleged to have been born in the island. It became tributary to the Romans after the fall of Corinth, 146 B.C., but was ceded by Mark Antony to the Rhodians after the battle of Philippi. The island was afterwards annexed to the possessions of the eastern empire, and subsequently became

NAZARETH.

the possession of the Venetians, and the capital of a duchy which embraced most of the other Cyclades. Although, in the reign of Selim II. (A.D. 1570), it was united to the Ottoman empire. The Turks, however, allowed the inhabitants to retain their ancient laws and government, contenting themselves with occasionally sending a *wassala* to collect the land tax and customs. It now forms a part of the new kingdom of Greece. (*Thurneysen*, I, 228-231; *Burgess*, II, 21; *Cramer's Greece*, III, 403; *Clarke's Greece*, &c., VI, 90-113.)

NAZARETH, or NASSARA, a small town of European Turkey, in the pachalic of Acre, celebrated as having been the residence, during his youth, of the founder of Christianity, 17 m. E.S.E. Acre, and 70 m. N. by E. Jerusalem. Population 3000, of whom 500 are Turks, and the rest Christians. It stands on the W. slope of a delightful valley, encompassed by rocky mountains of no great height, which rise round it like the edge of a shell, as if to guard it from intrusion. The houses are mostly wretched stone cottages, with mud floors and roofs; nor does it compare any thing worthy of notice, except a Latin church and convent, with two other churches, belonging respectively to the Maronites and Greek Catholics. The Turks also have a mosque, erected at the beginning of the present century. The Latin convent, belonging to the missionaries of the Terra Santa, at the E. end of the village, is a spacious and commodious building of stone, surrounded by high walls, which enclose a church, cells for the friars, and extensive accommodation for pilgrims and travellers. The church, called that of the Annunciation, is an ill-proportioned and gaudily ornamented building, said to occupy the spot where, according to tradition, the house of Joseph and Mary stood before its miraculous removal to Loretto. The columns and interior walls are hung round with silk damask, and there are two tolerably good organs. Beneath the high altar is the descent to a subterranean cave, in which the Virgin is said to have lived, and which is divided into small grottoes, pointed out as her kitchen, parlour, and bed-room. Here also are two granite columns, each two feet one inch in diameter, and about three feet apart, which are supposed to occupy the very places where the Angel and the Virgin stood at the precise moment of the Annunciation. The innermost pillar is broken through, above the pedestal, and although it touches the roof, it is represented to be self-supported in the air. "The fact, however," says Dr. Clarke, "that the capital, and a piece of the shaft of a pygmy granite pillar, have been fastened on to the roof of the cave; so clumsily, also, is the rest of the *Acropolis* contrived, that what is shown for the lower fragment of the same pillar is not of the same substance, but of Opus à la Turque." (*Travels in Greece and the Holy Land*, iv. 178.) It was formerly the custom of the sick, during the prevalence of the plague, to rub thither for the purpose of rubbing themselves against the pillars, believing that to obtain a certain cure; but, within the last few years, a milking has been found to exclude the patients, who, however, still flock round in hopes of relief from being in its immediate vicinity. Different interesting localities are pointed out to the pilgrims, such as Joseph's workshop, enclosed in a small chapel, the synagogue in which Christ explained the celebrated passage of Isaiah (*Luke*, iv. 16-22), the table on which Jesus ate his last meal previously to his final departure for Jerusalem; and even the precipice, or "bow of the hill," to which they led him, "that they might cast him down headlong" (*Luke*, iv. 23). Here, however, as at Jerusalem, fancy, and the desire of imposing on the credulity of the devotees, have had a far greater share in fixing these localities, than any regard for authenticity. The chamber containing the fictitious *mensa Christi* is the favourite resort of all pilgrims, Turks as well as Christians; and to Roman Catholics, who say the Paternoster and Ave Maria in it, the pope grants a plenary indulgence of seven years! The present inhabitants of Nazareth are, with the exception of a few weavers employed in rural pursuits. Corn is raised abundantly in the neighbourhood, especially by the monks of Terra Santa, who are the chief farmers; and a small portion of it is sent to Acre, which is the chief source of supply for the town. The pasturage of cattle and goats, also, is extensively pursued, from the milk of which is made a large quantity of butter and cheese, both of indifferent quality. (*Turner's Lebanon*, I, 130.)

Nazareth is not mentioned in the Old Testament: it was a city of the tribe of Zebulun, and afterwards of the N. portion of Palestine, called Galilee, and was held in so little esteem by the Jews of Jerusalem as to give rise to the exclamation, "Can any good thing come out of Nazareth?" (*John*, i. 46): it owes its entire celebrity to the circumstance of having been the residence of Jesus Christ almost from his birth to the commencement of his sublimation. Here the angel Gabriel announced to the Virgin the approaching birth of the Saviour; thither the holy family returned 33 days after his birth at Bethlehem; and during

NEAGH (LOUGH).

his infancy spent in the house of Joseph the carpenter "the child grew and waxed strong in spirit, filled with wisdom, and increasing in favour with God and man." (*Luke*, ii. 40, 52.) Christ preached here "the acceptable year of the Lord," immediately after the temptation; and found from the unfavourable manner in which he was received that "no prophet is accepted in his own country." His hearers were filled with wrath, rose up, thrust him out of the city, and led him to a precipice to destroy him; but he passing through the midst of them, went his way (*Luke*, ii. 58-59); and thenceforward Capernaum seems to have been his general residence, though there can be little doubt that he occasionally visited Nazareth to see his mother, and the members of her family. (*Clarke's Travels in Greece and the Holy Land*, iv. 164-183; *Turner's Travels*, ii. 129-132; *Robinson's Palestine*, i. 205-209; *Mod. Trav.*; *Calver's Dict. ad vocem.*)

NEAGH (LOUGH) a lake of Ireland, the largest in the United Kingdom, in the centre of the province of Ulster, having N. and E. the county of Antrim, S.E. Down, by which it is merely touched, S. Armagh, W. Tyrone, and N.W. Londonderry. It is about 17 m. in length, by about 9 m. in breadth; occupying, inclusive of Lough Beg (355½ acres), which is joined to it, an area of 61,636 Irish, or 26,823 statute acres, at ordinary high-water mark. (*Third Report of Commissioners on Irish Bogs*.) It is fed by several rivers of considerable magnitude, while the Lower Bann is the only channel through which its redundant waters find a passage to the sea. Though by far the largest, it is by no means the most beautiful of the Irish lakes. Its shores consist mostly either of a level sand, or marshy border, liable to frequent floods; and are of course deficient in those varied banks, and bold promontories, without which such extensive sheets of water want picturesque effect, except when their uniformity is broken by islands; and of those there are only two small and uninteresting ones in this lake. Frequent squalls and want of shelter render its navigation rather dangerous for sailing vessels; but these inconveniences will most probably be obviated by the introduction of steam packets. According to Mr. Sampson (*Survey of Londonderry*, p. 118), the mean level of Lough Neagh is about 36 feet above that of the sea; and it is said that nearly 10,000 acres of land contiguous to its banks, now annually flooded, might be made available for agricultural purposes, by the outlay of a moderate sum on the removal of some obstructions in the channel of the Lower Bann. Its waters are celebrated for their purifying quality. (*Statistical Account of British Empire*, ii. 377.)

NEATH, or NEDD (the *an. Nidion* of Antonine's Itin.), a part and mun. bor., market town, and par. of S. Wales, co. Glamorgan, and hund. its own name, on the Neath (crossed here by a stone bridge), 7 m. E.N.E. Swansea, and 159 m. W. by N. London. Population of parl. bor., in 1831, 4043. The town, situated in a picturesque valley on the E. side of the river, is "indifferent in appearance: the streets are narrow, and badly paved; there are few good houses, and the place is only partially lighted with gas. The cottages of the poor extend irregularly beyond the town, particularly on the Cardiff road." (*Wes. Bound. Report*.) The town hall is a handsome modern building, the lower part of which is used for a corn market; a church, with a lofty square tower, and six places of worship for dissenters, are the only other public edifices. There are two national schools, two Sunday-schools, and two infant schools.

Neath is situated in the immediate vicinity of an extensive copper, iron, and coal district, and it depends in a great measure on the great smelting-houses and foundries that have been established round it, chiefly on the W. bank of the river. "The commerce of Neath is very considerable, and has been steadily increasing for some years; but though vessels of 200 tons can get up to the town, the trade is generally carried on by barge communication with Britten Ferry, which is about 2½ m. lower down the river, and is connected with Neath by a canal running northward, 12 m. higher up the valley. By Britten Ferry, in fact, Neath acts as the vent of all the mineral districts connected with the vale. Another canal joins the last mentioned at Aberdula, and terminates in a sea-lock and basin on the E. side of Swansea harbour. The exports are coal, culm, copper, iron, iron castings, fire bricks, oak bark and timber; the imports comprising copper and iron ore, corn and flour, foreign timber, black jack, and general shop goods. (*Parl. Bound. Rep.*)

Neath is a bor. by prescription, and has been governed since the Municipal Reform Act by a mayor and three other aldermen, with 12 councillors: it has also a commission of the peace under a recorder. Before the Reform Act, Neath was a contributory borough to Cardiff; that act annexed it, with Aberavon, Keeging, and Loughor, to Swansea, which sends one member to the House of Commons. At the same time the electoral limits were so enlarged as to include, with the old borough, that portion of the suburbs on the W.

NEGROPONTE.

side of the river. Registered electors of Neath in 1830—40,174; ditto, of entire borough, 1947. Neath is also one of the polling places at elections for the county; and the petty sessions for the hund. are held here, as well as the quarter sessions alternately with three other towns. Markets on Wednesday and Saturday; fairs, July 3, Sept. 12, and the first Thursday after Trinity Sunday.

About one mile from the town, on the low ground bordering the river, are the ruins of Neath Abbey, founded by Richard de Granville in the 12th century; the church is a mere heap of ruins; but the chapter house, a curious specimen of early English architecture, is still in tolerable preservation; and foundations of buildings may be traced to a considerable distance. (*Parl. Rep.*; *Nicholson's Cambrian Guide*.)

NEEDHAM, p. t. Norfolk co., Mass., 12 m. S.W. Boston, 437 W. Bounded S. and N.E. by Charles river which has here two falls, one of them 30 feet, affording good water-power. It has five churches, two Congregational, two Methodist and a Baptist, four stores, one cotton factory with 1200 spindles, two grist-mills, one saw-mill, three paper-mills; three academies, 65 students, six schools, 360 scholars. Pop. 1468.

NEGAPATAM, a decayed town of Hindostan, presid. Madras, distr. Tanjore, and the residence of the British collector for the district, on the shore of the bay of Bengal, 162 m. S. by E. Madras. The European town, which was formerly the capital of the Dutch possessions in the Carnatic, now scarcely exists. Negapatam being seldom resorted to, except by ships, for water and provisions, both of which are plentiful. The native town is tolerably extensive and regular, and on its N. side is a remarkable tower 80 feet high, the origin of which is unknown, but which is very useful as a land-mark. The anchoring ground here is about three miles from shore. Negapatam was taken by the English in 1781. (*Hamilton's E. I. Gaz.*)

NEGOMBO (*Negomah*, "the land of serpents"), A seaport town of Ceylon, on the W. coast of that island, 20 m. N. Colombo, and beside the canal, from the latter city to Calpentin. Lat. 7° 11' N.; long. 75° 44'. It has a small fort, and several ranges of European buildings; and is principally inhabited by Dutch families in reduced circumstances, attracted thither by the cheapness of provisions, and the salubrity of the climate.

NEGROPONTE, or EGRIPPO (*an. Eubœa*), a long, straggling island of the Grecian archipelago, lying close to the E. coast of independent Greece, and forming, with the Sporades, a separate monarchy of its own name. Length, 110 m.; breadth from 5 to 36 m., the widest part being measured from Chalcis to C. Kili; area, 1460 sq. m. Population, in 1836, 60,000. Eubœa is very similar in its mountainous character and geological constitution to the neighbouring continent, from which it seems to have been separated by some sudden convulsion of nature. Grey limestone and clay slate are the chief stratifications, and there are clear indications both of old and more recent volcanic action. The whole country is bold and rugged, with a bluff coast, especially on its E. side, which is dangerous to navigators; the highest points of the mountain range, proceeding from N. to S. through the island, are mount Lithada, 2637 feet high; mount Kandilli, 3067 feet; mount Delphi (*an. Dorphœus*), 5795 feet, and St. Elias d'Oro (*an. Oake*). The soil of the slopes near the shore is very fertile, but only imperfectly cultivated. The orange, citron, almond, and other trees peculiar the climate of Greece, grow abundantly on the lowlands; while the chestnut, oak, and fir, skirt the regions nearer the mountains. The staple produce of the N. part of the island consists of grapes, from which the farmers make large quantities of a thin red wine, very commonly drunk in Greece, and fetching, according to Colonel Leake, about five piastres per barrel. Corn and olives are raised chiefly in the S. districts; but the island has lost the character which it anciently held of being the granary of Greece. (*Comp. Trav.* i. 2, with *Herod.* v. 77.) Excellent herbage for grazing is found in the more elevated lands; but oxen are bred only for farming purposes. Sheep, however, are numerous, and of an excellent breed, furnishing large quantities both of wool and cheese.

The chief town and port of Eubœa is Chalcis, or Egripus (lat. 39° 30' N., long. 23° 54' E.), on the Euripus, or channel of Talanti, where it is only 40 yards wide, and crossed by a bridge, supposed to have been erected by Mahmoud Pacha in 1493. Population 6000. The town (which, according to Strabo, was founded by the Athenians before the Trojan war) is walled and strongly fortified, comprising numerous ancient fragments; but few of them are sufficiently large to be intelligible. It has also two tolerably good harbours, one of which on the N. side, though small, is deep, secure, and capable of containing many merchant ships. The only other town of Eubœa is *Carystus*, or Castel Rosso, a fortified post near its S. extremity, with 2000 inhabitants. There are, also, numerous villages.

NEJIN.

The most ancient name of Eubœa was Macris; but it was also known, at different times, by the various appellations of Ocha, Ellopia, Asopia and Abanti. Its inhabitants, called Abantes by Homer, were among the earliest navigators of Greece, and, according to Herodotus, joined the Ionian colonists on the coast of Asia Minor, (l. 146). They also founded settlements at a very early period in Illyria, Sicily, and Campania. Soon after the expulsion of the Pisistratids, the island became a dependency of Athens, but recovered its liberty after a hard struggle, in the 21st year of the Peloponnesian war. It afterwards became attached to the Macedonian interests, and was taken by the Romans from Philip, the son of Demetrius. It then gradually declined in population and importance; and Pausanias alludes to its fallen state under the emperors. At the dismemberment of the Eastern empire by the Franks, the Venetians obtained possession of Eubœa; but were expelled from it, in 1470, by the Turks, who held it till the formation of the new kingdom of Greece in 1830. (*Leake's N. Greece*, vol. ii.; *Dodwell*, ii. 149-153; *Cramer's Greece*, ii. 123-125, &c.)

NEJIN, a town of Russia in Europe, gov. Tchernigoff, cap. district, on the Oster, 400 m. S. W. Moscow, lat. 51° 3' 45" N., long. 31° 49' 45" E. Pop. 16,000. It is surrounded by a rampart, most of its houses are of stone, and it is one of the handsomest, best built towns of Little Russia. It has several churches, two convents, a hospital, and a grammar-school founded by Prince Beszerodko. It produces silk, soap, leather, and preserves, and liquors that are highly celebrated all over Russia. It is also the entrepôt of a considerable portion of the commerce carried on between the provinces on the Baltic and those on the Black sea. Its merchants are principally Greeks, who enjoy certain peculiar privileges, but they are partly, also, Armenians and Jews. It has several well frequented fairs. (*Schottler, in Russia*, &c. p. 464; *Diet. Geog.*)

NEIGHERRY HILLS, or NEILGHERRIES, a collection of mountains of S. Hindostan. (*See MADRAS PRESID.*, 245.)

NEISSA, a fortified town of Prussian Silesia, reg. Oppeln, on the river Neisse, which divides the city into two parts, in a marshy district, 48 m. S.E. of Breslau. Pop. in 1837, 10,787. It is, on the whole, well built, having been greatly enlarged by Frederick II., who also constructed its best fortifications: it is entered by three gates, and comprises among its public buildings a large castle, a commandant's residence, district-hall, seven Catholic and two Calvinist churches, extensive barracks, powder-mills and arsenals, a small theatre, two hospitals, two high schools, a Catholic gymnasium, a poor-school, and an asylum for poor Catholic clergy (called *domus emeritorum*). Neissa is the seat of a council for the circle, a tribute for the principality, a board of taxation, and a consistory court: it has some printing establishments, manufactures of linen and woollen cloths, several distilleries, and a few good hotels. Large yearly fairs are also held here. (*Von Zedlitz; Neukirch; Preuss. Stat.*, iii. 133; *Borghese*, &c.)

NELLORE, a town of British India, presid. Madras, cap. distr. of same name, on the Pennar, 134 m. from the bay of Bengal, and 100 m. N. by W. Madras. It was, in the last century, a fortress of considerable strength; and is still a populous and busy town, about 4 m. in length, full of shops well stocked with commodities, though without a single public or private building of note. The suburbs without the walls are large. The residence of the British collector, &c., is on an elevated ridge S. of the town. A curious discovery was made here in 1787, of a number of Roman gold coins and medals, enclosed in a small pot under the ruins of a Hindoo temple. Many had, unfortunately, been sold and melted: but about 30 were preserved, and found to be of the second century, mostly Trajans, Adrians, and Faustinas. (*Hamilton's E. I. Gazetteer; Madras Almanack*.)

NELSON, county, Va. Situated in the central part of the state, and contains 490 sq. m. Bounded S.E. by James river, N.W. by the Blue Ridge. Watered by Tye and Rockfish rivers. The James river and Kanawha canal passes through it. It contained in 1840, 8139 neat cattle, 7,754 sheep, 30,341 swine; and produced 128,478 bushels of wheat, 35,880 of rye, 337,253 of Indian corn, 90,777 of oats; 18,814 of potatoes; 2,938,817 pounds of tobacco; 994 of cotton. It had 19 stores, one furnace, five flouring mills, 23 grist-mills, 13 saw-mills, six tanneries, eight distilleries; one academy, 70 students; 13 schools, 265 scholars. Pop.: whites, 6,168; slaves, 5,967; free coloured, 159; total 12,987. Capital, Livingston.

NELSON, county, Ky. situated a little N. of the centre of the state, and contains 460 sq. m. Drained by Beechfork, and Rolling fork of salt r. It contained in 1840, 18,508 neat cattle, 30,353 sheep, 46,667 swine; and produced 191,244 bushels of wheat, 56,078 of rye, 473,374 of Indian corn, 3610 of buckwheat, 155,179 of oats, 12,571 of potatoes, 14,711 pounds of sugar. It had 27 stores, six lumber yards, one

NEMI.

furnace, one woollen factory, seven flouring mills, 46 grist-mills, 25 saw-mills, one oil-mill, 65 tanneries, 41 distilleries, three printing-offices, two weekly newspapers; one college, 108 students; three academies, 341 students; one school, 25 scholars. Pop.: whites, 8,878; slaves, 4,643; free coloured, 116; total, 13,637. Capital, Bardstown.

NELSON, p. t., Cheshire co., N.H. 44 m. S.W. Concord, 44 W. Watered by several ponds, which flow into Ashuelot and Contoocook rivers. Chartered in 1774 by the name of Packersfield. It contains one store, one cotton factory with 640 spindles, two grist-mills, four saw-mills; one academy, 37 students; nine schools, 336 scholars. Pop. 635.

NELSON, p. t., Madison co., N.Y., 109 m. W. by N. Albany, 358 W. Drained by Chittenango cr. and branches of Chenango r. It contains three churches, a Methodist, Baptist, and Universalist, three stores, two fulling-mills, two grist-mills, eleven saw-mills, three tanneries; ten schools, 713 scholars. Pop. 2,100.

NELSON, p. t., Portage co., O., 164 m. N.E. Columbus, 220 W. It has nine schools, 291 scholars. Pop. 1,398.

NEMEA, an ancient town of Greece, famous for the games celebrated in its neighbouring grove, but now marked only by the modern village of Agio-Georgio, 12 m. S.W. Corinth, and 10 m. N. by W. Argos. The extant ruins of the town, or village, (for Pausanias terms it merely a *χῆμα*), comprise fragments of a temple of Jupiter, a church, and a few black and broken Doric pillars, supposed to have formed parts of the tomb of Opheltes. Of the temple "three columns only are standing, two of which, belonging to the space between the antæ, support their architrave. These columns are 6 ft. 6 in. in diameter, and nearly 32 ft. high, exclusive of their capitals. The temple was hexastyle and peripteral, being supposed by Mr. Wilkins to have had 14 columns on the sides." The lower part of the walls, enclosing the cells, is complete, and the pillars, of which there are numerous fragments, have fallen in such regular order, that the temple appears to have been destroyed by an earthquake, rather than by the lingering and desolatory decay of time. Mr. Dodwell says: "I have not seen in Greece any Doric temple, the columns of which are so slender, and the capitals so disproportionately small, as those of Nemea: the whole is of soft calcareous stone, and the columns are coated with a fine stucco." Sir W. Gell mentions, also, "that there are indications of the Nemean theatre at the foot of a neighbouring hill; and probably vestiges of the stadium and hippodrome might be discovered by a search similar to that instituted at Herculaneum and Pompeii." (*Ibid.*, p. 120.)

Nemea was celebrated in mythical history as having been the scene of the first labour of Hercules in destroying the Nemean lion; and the den of this animal was pointed out to travellers even in the time of Pausanias, near the end of the second century of the Christian era. The games are of doubtful origin; but the national mythology ascribes them to the respect entertained for the memory of Opheltes or Archemorus, son of Lycargus, a king of Nemea. They were celebrated in the grove of Molochus, and are thus alluded to by Statius (*Theb.* iv. 159):—

Da Nemea comites ut quos in prælia viris
Mæra Cleonæi cognita vincta Molochi.

With respect to the periods at which these festivals were celebrated, different accounts are given by the old writers; but the most consistent statement is, that they were celebrated triennially, in the Athenian month *Boedromion*, corresponding with the modern August. The Argives were the judges at these games, which comprised boxing and athletic contests, as well as chariot-races; and the conquerors were crowned with olive till the time of the Persian war, when, in consequence of the losses that the Argolic republic had sustained in that struggle for independence, smallage, a funeral plant, was introduced in its stead. It appears from Polybius and Livy (xvii. 30), that the games were in a flourishing state in the reign of Philip, son of Demetrius, in the second century preceding the Christian era. It may be inferred, however, from the slight mention that Pausanias makes of the Nemean games, that they had in his time fallen into great neglect. (*Dodwell's Greece*, ii. 206-210; *Cramer's Ancient Greece*, iii. 285; *Burgess's Greece*, i. 171-177.)

NEMI, a village and lake of central Italy, Papal states, in the Comarca di Roma. The village on the N.E. bank of the Lago di Nemi is 2 m. N.E. Albano, and 16 m. S.E. Rome. Nemi, so called from the forest or *nemus* by which it was anciently surrounded, was famous in antiquity for the worship of the Scythian Diana—*nemus glaciæ Trivia*—to whom human sacrifices were offered. No remains that can with certainty be ascribed to the temple dedicated to the goddess are now to be met with. The Lago di Nemi is 222 ft. above the level of the sea; and is now, as of old, beautifully sequestered, and well entitled to its classical epithet of *Speculum Diana*. But its principal celebrity in modern times has been derived from the discovery at its bottom, in

NEMOURS.

1835, of the remains of a very large ship, 500 ft. in length, constructed by one of the early emperors, most probably for some of the *naumachia*, or sham sea-fights, exhibited on the lake. (*Gall's Rome and its Vicinity*, li. 113; *Cramer's Ancient Italy*, li. 34.)

NEMOURS, a small town of France, dep. Seine-et-Marne, cap. canton, on the Loing, 18 m. S. by E. Melun. Pop. in 1836, 3,635. It is surrounded by the river and the canal du Loing, and inclosed by walls. It is well built, and has a fine old castle, which now serves for several public institutions, including a public library of 10,000 vols.; several suburbs, a hospital, a small theatre, and a handsome bridge over the Loing. It has some large tanneries and leather factories, and a brisk trade in agricultural produce. The seignior of Nemours was given to the house of Orleans, by Louis XIV. (*Hugo*, art. *Seine-et-Marne*, &c.)

NENAGH, an incl. town of Ireland, prov. Munster, co. Tipperary, near the Nenagh river, an affluent of the Shannon, within 44 m. of that river, 62 m. W.S.W. Dublin. Pop. in 1831, 8,446. It is situated in a rich and fertile portion of the co., and was once defended by a strong castle, now in ruins. The principal streets are well and regularly built, and it is decidedly the best town between the cities of Dublin and Limerick. It has a church, a Roman Catholic chapel, Methodist and Independent meeting-houses, an endowment and a national school, a fever hospital, a dispensary, and a large infantry barracks. General sessions are held twice a year, and petty sessions weekly. It is a constabulary station. Its contiguity to the Shannon, or rather to its enlargement called Lough Dergh, gives it considerable advantages, and has made it a considerable market for corn and cattle. Markets on Thursdays; fairs on 24th April, 29th May, 4th July, 4th Sept., 10th Oct., and 1st Nov. Postoffice revenue in 1830, £958, in 1836, £1,026. Branches of the Agricultural and National banks were opened in 1834-5. (*Railway Rep.* &c.)

NEOT'S (ST.), a market-town and par. of England, hund. Toecland, co. Huntingdon, on the Ouse, (crossed here by a handsome stone bridge), 8 m. S.S.W. Huntingdon, and 49 m. N. by W. London. Area of par. 4,750 acres. Pop. in 1831, 2,617. The town comprises three or four respectable streets, intersecting each other, with a large market-place. The church is a fine building in the perpendicular English style, with large windows of painted glass and an elegant tower 150 ft. high, at its W. end. There are also three places of worship for dissenters, and, in 1834, four Sunday-schools were attended by 520 children. It has also an endowed school for 25 boys, and a large paper-mill; but the principal dependence of the inhab. is on the retail trade with the surrounding district. Markets on Thursday, three large horse and cattle fairs; and a statute fair on Aug. 1.

NEPAUL (Hind. *Nepala*), an indep. kingdom of N. Hindoostan, extending through 8 degs. of long., and comprising a great portion of the S. declivity of the Himalaya chain. It lies between lat. 26° 30' and 30° 50' N., and long. 80° and 86° E., having N. and N.E. the table-land of Tibet, E. the territory of Sikkim, and elsewhere the British territories. Length, E. to W., about 500 m., average breadth, rather more than 100 m. Area may be estimated at 53,000 sq. m.; and pop. at 2,000,000. This country may be divided into four regions, according to its elevation. The lowest, or *terracas*, is a part of the great plain of Hindoostan. In a few places, the British districts reach to the base of the mountains, but in most parts, the Nepaul dominions stretch for about 20 m. into the plain. This region is not wholly level, but undulating, and comprises a good deal of poor land, overgrown with trees and bushes of little value; but there is also a large proportion of rich land, and, upon the whole, the soil is much better than in the adjacent parts of the British territory, the products being, however, nearly the same. The surface here is intersected by numerous small rivers, which not only serve for watering the crops, but, in the rainy season, are used for the transit of agricultural produce to the markets of British India, and to float down the valuable lumber of the forests. The very name *terracas* (or *terracas*), implies, indeed, the country's being navigable. Bounding this region on the N. is another of nearly the same width, consisting of small hills composed chiefly of clay intermixed, however, with many primary rocks.

The lower portion of this region, with a part of the last-named, is the grand site of the soul forests, among which are many sissoo and toon trees. Higher up the hills are covered with a great variety of trees; and in the N. are many pines and mimosa, from which catechu is obtained. In this region are many fine valleys, some of which are tolerably cultivated; while others, though possessing a very rich soil, are almost wholly neglected. A few straggling villages are scattered through the woods, the inhabitants of which grow cotton, rice, and other articles with the hoe, having first cleared away the trees. The third region is that of the mountains, which rise so high as to be covered with snow for a great part of the year, and are divided by valleys,

NEPAUL.

rising to from 3,000 to 6,000 ft. above the great plain of Hindoostan. Of course, these valleys differ very much as to temperature; some abound with rattans and bamboo, and ripen the sugar-cane and pine-apple; while others produce only barley, millet, and other grains of cold countries; and oaks and pines are their only forest trees. The breadth of this belt or region generally may be from 30 to 40 m. N. to S., though further W. it is probably greater. The fourth, or Alpine region, is probably of nearly equal extent, and consists of immense rocks, rising into sharp peaks and tremendous precipices, which, where not perpendicular, are covered with perpetual snow, and almost constantly involved in clouds. The interior, or most lofty chain of the Himalaya, forms the farthest boundary of Nepaul to the N.: through which, however, are several passes into Tibet, while several tributaries of the Ganges, which intersect this country, are supposed to rise on the N. side of the main chain.

The land in the third or mountain region is considered the most valuable in the country, and is that in which all the officers and servants of the crown are paid, and from whence all endowments are made. From the abundance of rain in the warm season (for the periodical rains extend to Nepaul with nearly the same violence and duration as in Bahar), the land here, considering the inequality of surface, is uncommonly productive of grain. Wherever it can be levelled into terraces, however narrow, it is exceedingly well suited for transplanted rice, which ripens after the rains have ceased, so that the harvest is never injured; and as most of these terraces can be supplied at pleasure with water from springs, the crops are almost certain. In some parts the same land gives a winter crop of wheat and barley, but in most parts this is judiciously avoided. Where the land is too steep for terraces, it is generally cultivated after fallows with the hoe, and produces rice (sown broadcast), maize, cotton, several kinds of pulse, a kind of mustard, Indian madder, wheat, barley, sugar-cane, and a large species of cardamom; and in the country between Nepaul Proper (the valley of Caimandoo) and the Kail, ginger is a valuable product; but transplanted rice may generally be considered as half the entire produce. The sugar-cane is planted in considerable quantities in the valley of Nepaul Proper, and it seems to thrive. Most European kitchen vegetables have been introduced; but they are only to be found in the gardens of men of distinction, and in very small quantities. From the abundance of rain, the climate is not favourable for many kinds of fruit; the heats of spring not sufficient to bring them to maturity before the rainy season sets in, as is the case in Bengal. Peaches grow wild by every rill, but the one side of the fruit is rotted by the rain, while the other is still green. The grapes are also bad from the same cause.

The pasture on the mountains, though not so harsh and watery as that of the low country, is by no means good, and is said to be inferior to that even of the heaths of Scotland. The pastures are in general common. Nothing is paid for pasturage; but as it is scarce, and as the principal tribes do not employ cattle in agriculture, very few are bred in the country. Buffaloes and goats are imported from the low country, and horses, yaks, (*Bos græniensis*), shawi-goats, common goats, and sheep, are brought from Tibet, and become tolerably fat on the hills. The buffaloes furnish pretty good beef. The shepherds of some tribes are provided with numerous flocks. In winter they retire to the lower mountains and valleys; but in summer they ascend to the Alpine regions, and feed their herds in the vicinity of perpetual snow. The sheep which these people possess are very large, and have fine wool, which is woven into a cloth finer than that of Bootan: they give also an abundance of milk, from which is made a kind of cheese.

The lands in Nepaul Proper have long been divided into *khats*, or fields, each of which, in ordinary seasons, produces about 234 bushels of paddy, or rice, in the husk, which, on the supposition that each *kat* is equivalent to 84 English acres, would be at the rate of 28 bushels an acre. The arable lands are partly retained as the property of the court for defraying the rajah's household expenses; but the produce of the land so employed is not sold, but serves for the consumption of the court, and for distribution in charity at the temples and among religious mendicants. But by far the greater portion of these lands are let to tenants, or granted in fee for military service; and the rent of the lands let, as in the former case, forms a principal portion of the rajah's revenue. Landholders who do not cultivate their own estates, in general let them for half the produce. The persons who rent lands from the owners are of two kinds: the *kurayas*, who occupy free land, and are exempt from any services to government, except the repair of roads, &c.: and the *prajias*, who occupy the crown land, whether that be held by the prince, or granted for military service. Most great proprietors, however, like the rajah, employ stewards, with their servants and slaves, to cultivate land for the supply of their families.

NEPAUL.

Money rent for land can seldom be procured, and is very low, only from four to twelve annas being paid as a fixed rent in money for land capable of producing a crop, the half of which is worth about 50 annas.

But when the lands are alienated for sale, they fetch from 1600 to 2000 *mohurs* a *khat*, which high price is owing to the very small quantity of land that is brought to market. The agricultural implements are very inferior, and almost comprised in an awkward kind of hoe, a weeding-iron and fans for winnowing the corn. In Nepaul, however, they have made a further progress than in India, by the introduction of water-mills for grinding corn.

The mountain region of Nepaul contains a good deal of iron, copper, lead, and some zinc, the first three being found quite on the surface. The copper ore is dug from trenches open above, so that the workmen cannot get in the rainy season, not having sagacity to make a drain. Each mine has attached to it certain families, who seem to be a kind of proprietors, as no one else is allowed to dig. The total quantity of ore dug by each miner may be estimated at 2000 lbs. a year. This is delivered to another set of workmen, by whom it is smelted and wrought, the rajah, to whom the forests mostly belong, furnishing the materials for the charcoal. The ore yields, at an average, 82½ per cent. metal, 1-3d of which becomes the share of the rajah; 1-3d that of the miner, and 1-5th the share of the smelter; the remainder is divided among the rajah, the miner, and the keeper of the accounts, who usually advances a subsistence to the whole working party, and often furnishes loansevent to the rajah. Iron-ore is found near the surface, and is wrought nearly on the same principle as copper, the miner receiving 1-2d per lb. of the produce. Some of the iron is so excellent that even without being converted into steel, it is made into knives and swords. Only two lead-mines are now wrought; but lead is found in many parts of the country close to the surface, and it contains much silver. There are numerous sulphur mines; but some have been deserted on account of their injurious effects on the workmen. Corundum, here called *Kurra*, is found in great quantities on the hills of Imma and Muskot; but the masses, which always lie close to the surface, are much smaller than those found in the British territory, and seldom exceed four or five pounds in weight.

The most extensive manufacture of Nepaul is that of coarse cotton cloth, woven by the native women of all ranks, and by the men of the Parabatiya caste. These cloths constitute the dress of the middle and lower classes of people, though woollen would be better suited to the temperate of a Nepaul winter. All those, however, who are not very poor, cover themselves with woollen blankets imported from Bootan. The entire dress of the higher ranks is of foreign manufacture, and comprises Chinese silks and shawls, with muslins and calicoes from the low countries. The military alone wear European broadcloth. There are also at Lalita-Patan and Bhatnag extensive manufactures of copper and brass goods, as well as of bells, made from a mixed metal, called *Phul*; these, with iron vessels and lamps, are exported in large quantities to Thibet. A strong paper is made at Bhatnag, from the bark of the *Daphne papyfera*; but the supply is insufficient for the home consumption, and paper is imported from Bootan.

The trade of Nepaul was formerly pretty considerable, though the rajah's territories produce few articles for exportation, except metallic wares and drugs; but at present the badness of the police, and total want of credit, owing partly to the weakness of the law, and partly to the falsehood of the people, operate as a great hindrance to commercial intercourse. The merchants of Cashmere carry their goods, by way of Leh, to different parts of Thibet and W. China, exchanging them for goats' hair, tea, and silks; they also send to China other skins, to the value of about 50,000 rupees a year, procured chiefly from the neighbourhood of Decca, in Bengal. The merchants of Bootan and Thibet bring to Catmandoo paper, coarse woollen cloths, horses, shawl-goats, sheep, horned cattle, *cheungri*, musk, salt, sal-ammoniac, yellow arsenic, borax, gold dust, silver, and preserved fruit; much of which is again exported to Patna, in exchange for buffaloes and goats, broadcloths, cutlery, glass-ware, and other European articles, Indian cotton cloths, mother of pearl, coral, pepper and other spices, camphor, tobacco, and *phags*, a red powder thrown about by the Hindoos at their festivals. Most of these articles, with metallic utensils and bells, are sold to the merchants of Thibet. The money of Nepaul consists of *dama*, 4 of which are equal to 1 *paisah*; 4 *paisah* = 1 *anna*; and 8 *anna* = 1 *mohur*. Gold coins are called *ashrafis*; but the half *ashrafi*, = 13½ *mohurs*, is the highest piece now coined: it weighs 84½ grains, and is worth nearly 6s. 3d. at the mint price of Calcutta. The *mohur* is the common silver coin of the country, and is worth about 4-10ths the Calcutta rupee. The *paisah* and half-*paisah*

are the principal copper coins. Grain is sold by measure, 1 *muri* being equivalent to 2½ Winchester bushels.

The Nepalese government, which for many years has been monopolised by the tribe called Gorkha, is essentially despotic, modified, however, by certain observances enjoined by immemorial custom. The *Dharmastra* forms the basis of jurisprudence both in civil and criminal cases, the principal punishments being by fines, confiscations of property, banishment, degradation of caste, maiming, and death by hanging as well as by flogging. Women are never put to death, but are subject to mutilation and torture. The provinces are governed by *subahs*, who are the supreme officers of revenue, justice, and police; each farms the revenue of his own district, and either collects it on his own account, or undertakes it to *taxadars*. The amount paid by the subahs, however, forms by no means the whole of the royal revenue; for, besides compulsory presents made by all visitors of the court, a general income-tax is levied on all classes according to the exigencies of the state. Nepaul Proper is governed by a rajah, assisted by the *baradar*, or council of the 12 great officers of the court; for the support of which Catmandoo pays 18,000 rupees; Lalita Patan, 18,000; Bhatnag, 14,000; and Kirithpur, 7000. Each farm is assessed at a certain quantity of grain, which may be paid either in kind or in money at the market price. A large proportion of the valley, however, has been alienated either in fee or as charity land. A town called Sughoo, worth annually 4000 rupees, is the jointure of the queen-regent, and Dewapatan, which is still larger, belongs wholly to certain temples. The religion of the Nepalese is Buddhism; but in the distinctions of caste and the nature of the priesthood there are essential differences between the religion of the Buddhists of Ava and that professed by those of Nepaul, both of whom are held in equal abhorrence by the Brahmans of Bengal.

The population of Nepaul comprises numerous tribes partly of Mongol and partly of Hindoo descent. The Magars, who occupy the hills in the W. part of the kingdom, form the greater part of the rajah's army, and the Gurungs, who employ themselves either in mining or pasturage. The Newars live in the plain of Catmandoo, and devote themselves to agriculture and the useful arts. They are of middle size, with broad shoulders and chest, flat noses, small eyes, and spreading noses, with a sallow complexion. The grand basis of subsistence in Nepaul is rice, with which the poorer classes eat raw garlic, radishes, and lentils; those in more easy circumstances add oil or *ghas*; and the rich eat a great deal of animal food. Even the poorest are occasionally able to sacrifice a pigeon, fowl, or duck, which they afterward eat. The rajpoots of Nepaul, indeed, are so fond of animal food, that, to the astonishment of the Bengalese, they drink the blood of a sacrifice as it flows from the victim. All classes drink spirituous liquors, to which they are excessively addicted. Most of the Nepalese domestic servants are slaves, the price of which varies between 30 and 40 *mohurs*. Even some of the Brahmans are slaves to the rajpoots; but they are not degraded, and are employed in great families either as cooks or in the service of the private chapels. All other ranks are sold as common slaves, and persons of the best families have often been deprived of their caste; but this is not usual, as the Nepalese are particular in maintaining the distinction of castes. Most of the slaves have been born free; a few perhaps, have been degraded on account of crimes; but by far the greater number have been sold by necessitous parents. The female slaves, even those of the queen, are *denne libera*, compelled to sell their favours for clothes, no allowance being made to them by their masters except a little rice. Hence they seldom have children, and beggary is the usual lot of the old and infirm. The queen's daws form her body-guard, and follow her on horseback armed with swords and riding like men. The ordinary language of Nepaul is the Parabatiya, or mountain-Hindoo dialect, which is continually becoming more prevalent, and in some districts has already superseded the language of the same tribes: it is exclusively spoken by the reigning family and the higher castes. The Newars have a language peculiar to themselves, quite different from that of their neighbours, and alleged to possess a copious literature.

Nepaul, which was formerly divided among numerous independent princes, became united by conquest in the middle of the last century under the sovereignty of a chief of the Ghoraks, who in about 40 years subjected all the countries between the Sutledge westward and Bootan on the E. The aggressions of the Ghoraks on the Chinese territory were stopped in 1792 by an army of 70,000 men, who, after many victories, advanced within 25 m. of Catmandoo, and obliged the rajah to make an ignominious peace. The Ghoraks afterward turned their arms against the British, who, after a war of two years, obliged them, in 1816, to cede all the countries between the Sutledge and Kali, as well as to evacuate the territories of the Sikim-rajah. Ac-

NEPI.

five symptoms of hostility to the English were displayed in 1839; but these were checked by the events of Afghanistan. (*Hamilton's Nepal*, passim.)

NEPI (an. *Nepete*), a town of central Italy, Papal states, deleg. Viterbo, 25 m. N.N.W. Rome. Pop. about 1300. It is beautifully situated, and surrounded by a high Gothic wall, partly founded on the original walls erected by the Etruscans. It has numerous churches and convents, and a fine modern aqueduct, but a gloomy and desolate appearance within. Some Roman antiquities exist here. Combined with Satri, Nepi constitutes a bishop's see. (*Gell's Rome*, &c., ii., 118.)

NERAC, a town of France, dep. Lot-et-Garonne, cap. arrond. on the Baise, a tributary of the Garonne, 16 m. S.W. Agen. Pop., in 1836, ex. com., 3664. It is divided into the old and new town, one on either bank of the river, here crossed by two stone bridges. The old town, on a steep declivity, and partly surrounded with Gothic walls, is ill built and gloomy; but the new town, on a level site, and encircled by promenades, is well laid out, and handsome. Nercac has the remains of an extensive castle, said to have been constructed by the English, a fine parish church, a large hall, and several other good public buildings. One of the promenades has a good statue of Henry IV. who passed most part of his youth in the castle of Nercac. This town has manufactures of coarse woollens, ship biscuit, and corks; and a good deal of trade in linen fabrics, corn, flour, wine, and brandy. Numerous Roman antiquities, including baths and other edifices, medals, inscriptions, &c., have been discovered at Nercac, from which it would appear that it was anciently called *Aque Nercæ*, and was either founded or greatly embellished by Totilas, in the reign of Gallienus. (*Hugo, art. Lot-et-Garonne*, &c.)

NERBUDDAH, (*Narmada*, "The bestower of pleasure," called by Ptolemy the *Nemadosis*), a river of Hindostan, extending through 9 degs. of long. in the N. part of the Deccan. It rises in the table-land of Gundwanah, lat. 20° 40' N., long. 81° 45' E., near the sources of the Bone and Mahanuddy. It has a general W. direction, with fewer windings than most Indian rivers; and, after a course of about 700 m., falls into the gulf of Cambay, lat. 21° 38', long. 79° 30', 28 m. W. Baroch. It varies considerably in breadth; being 600 yards across near Jubulpour, in long. 80°, and 1200 yards at Mundleyar, 210 m. from its mouth; while above and below Baroch, it sometimes expands to a breadth of 3 m. At its source, the Nerbuddah may be 2460 feet above the level of the sea: its total rate of descent will be therefore nearly 34 feet in a mile. During its passage it is greatly obstructed by rocks, islands, shallows, and rapids, which render its navigation in most parts difficult or impracticable through the provinces Gundwanah, Malwah, &c.; but, after entering Gujrat, it becomes navigable for small craft for about 100 m. from the sea. The Nerbuddah is joined by no affluent of any consequence. For so considerable a river its basin is remarkably narrow and restricted; it being inclosed on the N., for the most part, by the Vindhyan mountains, and on the S. by the Satpooora and other parallel ranges, which are seldom more than from 50 to 60 m. from the former. The valley through which it flows, consists of fertile alluvial soil, in which many fossil remains have been found. (See *Journ. of the Asiatic Soc. of Bengal*.) Mundlah, Gurrah Warrah, Hussingabad, Hinda, Mbeyur, and Baroch, are the principal towns on this river. By the war of 1817-18, the British obtained an extent of nearly 30,000 sq. m. of the country watered by this river from the rajah of Bernar, which, under the term of "Ceded Districts on the Nerbuddah," has been annexed to the Bengal presidency, and, in 1820, produced a total revenue of 1,876,398 rupees. (*Parl. Reports; Asiatic Journals; Hamilton's E. I. Gazetteer*.)

NESCOEPECK, p. t., Luzerne co., Pa., 98 m. N.E. Harrisburg, 308 W. Watered by Big and Little Wapwallopen and Nescopeck creeks, flowing into Susquehanna river, which bounds it on the N.W. A covered bridge 1256 feet long, which cost \$31,000, here crosses the Susquehanna. It contains two stores, one forge, two flouring-mills, six saw-mills; six schools, 265 scholars. Pop. 1370.

NESHANNOCK, t., Mercer co., Pa., 12 m. S.W. Mercer. Watered by Neshannock creek. It contains two commission houses in foreign trade, three stores, one furnace, one fulling-mill, three woollen factories, seven grist-mills, 12 saw-mills; 13 schools, 555 scholars. Pop. 2068.

NESHOBA, county, Miss. Situated toward the E. part of the state, and contains 600 sq. m. Watered by Pearl river and its head branches. It contained in 1840, 10,003 head cattle, 677 sheep, 8663 swine; and produced 7163 bushels of wheat, 83,320 of Indian corn, 1810 of oats, 14,508 of potatoes, 1563 pounds of rice, 2918 of tobacco, 1,032,947 of cotton. It had three stores, four grist-mills, three saw-mills, three tanneries; four schools, 65 scholars. Pop.: whites, 1693; slaves, 744; total, 2437. Capital, Philadelphia.

NEUCHÂTEL.

NETHER PROVIDENCE, p. t., Delaware co., Pa., 12 m. W. Philadelphia, 90 m. E. by S. Harrisburg, 124 W. Bounded W. by Ridley creek, and E. by Crum creek, both flowing into Delaware river. It contains seven stores, one flouring-mill, three grist-mills, five saw-mills; one school, 144 scholars. Pop. 1025.

NETHERLANDS. See HOLLAND.

NETTUNO, a small seaport of southern Italy, in the Campagna and Comarca di Roma, 31½ m. S.S.E. Rome. Pop. about 3000. It seems to have derived its name from an ancient temple dedicated to Neptune, and is built round the bastions of a Papal fortress. It has now but little activity or commerce, owing to the unhealthiness and depopulation of its vicinity; but in antiquity, under the name of Cœno, or Cerio, it was the port of Antium, the capital of the Volsci, some remains of which city exist about 2 m. W. by S. (*Gell's Rome*, &c., ii., 132.)

NEUBURG, a town of Bavaria, circle Swabia and Neuburg; on the Danube, here crossed by two bridges, 28½ m. N.N.E. Augsburg, and 45 m. W.S.W. Katisbon. Pop. 6000. It is divided into the upper and lower town; and has some remains of its ancient walls, a royal castle, in which many curiosities are kept, an arsenal, a royal institute, a hospital, a gymnasium, and a teacher's seminary. It is neat and well built; and is the seat of the high court of appeal for the circle. (*Bayreuth*, &c.)

NEUCHÂTEL, or **NEUFCHÂTEL**, a canton in the W. of Switzerland, forming a principality belonging to Prussia, between lat. 46° 50' and 47° 10', and long. 6° 35' and 7° 5' E.; having N.E. and E. the canton Bern, S.E. the lake of Neuchâtel, S.W. Vaud, and W. and N.W. the dep. of Doubs, in France. Length N.E. to S.W., 33 m.; average breadth about 9 m.; area, 280 sq. m. Pop., in 1837, 58,616, of whom 17,744 were either citizens of other cantons, or foreigners. The Jura chain runs through the canton in its entire length, dividing it into two parts, one belonging to the basin of the Rhine, and the other to that of the Rhone. This mountain range often rises to 5000 feet in elevation; and the Chasseral, its highest point within the canton, rises 5385 ft. above the sea. The valleys extend generally in a longitudinal direction, parallel to the mountains. The principal lakes are those of Neuchâtel (which see), and a part of that of Bienné; principal rivers, the Doubs, constituting the N.W. boundary; the Reuse, Thielle, Tyon, &c. The climate varies greatly; the vine is cultivated on the banks of the lake of Neuchâtel; but in some of the more elevated valleys the winter is very severe, and on many of the mountains snow remains continuously for seven or eight months. The soil is principally calcareous. Of 256,000 *poeses* or arpents of land, which the canton is estimated to comprise, 35,000 are arable, 4600 vineyards, 58,000 in artificial, and 66,000 in natural pastures, and 45,000 in forests. There are very few large proprietors: the savings of the labouring population, both agricultural and manufacturing, are generally laid out on the purchase of cottages, with a small portion of adjacent land. Excepting wine and vegetables, this canton does not yield enough of agricultural produce for its own consumption; and the principal part of its supply of corn is imported from the neighbouring cantons of Basle and Bern. Considerable quantities of wine grown around Neuchâtel are exported to the neighbouring Swiss cantons. The best wines are those of Cortallud, Neuchâtel, and Boudry. The first in fine years is said to approach pretty closely to Burgundy. Within the last few years the preparation of sparkling wines, sold as champagne, has become a pretty extensive branch of business, from 190,000 to 140,000 bottles being annually exported. A good many cattle are reared, principally cows; and cheese is one of the principal articles of export. Hay is also extensively exported.

Neuchâtel is one of the principal manufacturing cantons of Switzerland, especially for watches, printed cottons, and lace. Watch-making, which was introduced early in the 17th century, is carried on to a great extent in the mountainous districts, but particularly in and near Le Locle and Chaux de Fond. It is estimated that from 18,000 to 30,000 hands are employed in this branch of industry, or in manufacturing instruments for the construction of watches. From 100,000 to 130,000 watches are supposed to be annually produced, of which 35,000 are of gold; they are exported to France, Germany, Holland, Italy, Spain, America, Turkey, &c. Mostly all the watches sold in Paris are made in Neuchâtel, and the neighbouring Swiss cantons, whence they are either smuggled into France, or regularly imported, the gold watches paying a duty of six and those of silver of 10 per cent. The capital employed in the watch trade has been estimated at 7,000,000 of Swiss francs, or upward of £286,000 sterling. It is difficult to ascertain the ordinary rate of wages, workmen being generally paid by the job, and not by a stipulated salary. But it is believed that a man's wages may be estimated, at an average, at from 1000 to 1500 francs (£55 10s. to £83) a year. Lace

NEUCHÂTEL.

making was said by Ebel to occupy from 5000 to 6000 hands; but it has declined, and many persons formerly engaged in it have embraced some branch of watch-making. The printed cotton manufacture was established early in the last century, towards the latter end of which it was in its most flourishing state. At present most of the cotton cloths printed in Neuchâtel are furnished by Zürich and other Swiss cantons; and only about 1000 men, women, and children, are employed in this manufacture, who produce annually about 60,000 pieces, each containing about 38 English yards. Of these prints about 30,000 pieces are sent to the Prussian territories, and the remaining 50,000 to Holland, Belgium, and Italy. Hosiery, cutlery, mathematical instruments, and metallic wares of various kinds, are among the other manufactures of the canton. Neuchâtel is not a member of the Prussian Commercial League, but its manufactures are admitted into the Prussian dominions at a diminished duty. Watches, &c., pay one half, wine two fifths, and printed cottons pay 30 six-dollars per cwt. of the ordinary tariff duty. The livre or franc of Neuchâtel (of 90 sols of 12 deniers each) = 16 batzen, or about 1s. 8d. English.

Neuchâtel recognizes the sovereignty of the king of Prussia, and pays him an annual tribute of 70,000 Neuchâtel francs, or nearly £4000. All the administrative functionaries are nominated by the king, without a veto on the part of the legislature. The representative body (*audiences générales*) consists of the 10 oldest members of the governor's council of state; of 14 members not councillors, chosen for life by the king from lists presented by the inhabitants of the canton; of the head magistrates of the canton, whose number must not exceed 24; and of 30 deputies each at least 25 years of age, elected by all the male inhabitants of more than 23 years, being neither condemned criminals, bankrupts, nor receiving pecuniary relief. This body is convoked and prorogued at the command of the governor, but it must assemble once in two years. No law can be passed, changed, or abrogated, without the consent of the *audiences générales*; but no resolution of the latter becomes law till it have received the sanction of the king. The budgets are voted by the *audiences générales*, on whose account the imposts are received, through agents nominated by the king. No custom-houses exist in any part of the canton; and the turnpike dues are much lower than in most of the other Swiss cantons. There is no impediment to the free exercise of any profession, no poll-tax or other direct contribution, duty on raw materials, impost on carriage or communication, or taxes on food or drink, direct or indirect. There are neither stamps nor patents; and the complete absence of all restrictions, and of almost all taxation, is a primary cause of the cheapness of most articles, and the general prosperity of the canton. There are few districts of Europe where so large a proportion of the inhabitants are interested in savings' banks. In 1834, 1 in 18 of the population was a depositor. Paupers are provided for by the communes to which they belong; no general tax can be established for their support. The number of illegitimate children is about 24 per cent.

The administration of justice is both prompt and economical. There are 91 courts of primary jurisdiction; and two of appeal, at Neuchâtel and Valangin. The laws are, in many respects, similar to those formerly prevalent in Burgundy. The inhabitants speak a French dialect; they are Protestants, except about 3000 individuals under the authority of the bishop of Lausanne. Public instruction is pretty generally diffused, few individuals being ignorant of writing and arithmetic. There are colleges in Neuchâtel, the capital, and Chaux de Fond; and schools of watch-making and other arts in those towns and Le Locle. Many societies for instruction, and benevolent purposes, exist. The militia comprises all males between the ages of 18 and 50. Neuchâtel furnishes a battalion of light infantry to the Prussian service, and a contingent to the Swiss confederacy. The public revenues, derived from rents, a small tithe or land tax, posts, turnpikes, salt and auction duties, &c., amounted, in 1834, to 302,311 francs, and the expenditure in the same year to 238,153 francs, of which 14,517 francs formed the contribution to the Swiss confederacy.

Neuchâtel belonged, in the 11th century, to the German emperors; and was ceded to Burgundy by Rodolph of Hapsburg. In 1406 the town of Neuchâtel entered into a treaty with Bern, and soon after allied itself to the Swiss confederacy. In 1707, the last direct inheritor of this territory dying, the states chose the king of Prussia for their sovereign. Napoleon created Neuchâtel into a principality, which he conferred on Marshal Berthier; but in 1814 it reverted to Prussia, being constituted, however, at the same time, the 21st among the Swiss cantons. (*Ebel; Manuel de la Suisse; Picot, Statistique; Lutz, Geogr.-&c.; Bourring's Rep. on Switzerland; Helvetic Almanach, &c.*)

NEUCHÂTEL (Germ. *Neuenburg*), a town of Switzerland, cap. of the above canton, on the N.W. shore of the lake of

NEUSOHL.

Neuchâtel, 17 m. N.W. Freyberg, and 45 m. E.S.E. Bannock. Pop. from 5000 to 6000. It is built upon the steep slope of the Jura mountains, and along a narrow strip of level ground between the hills and the lake. Its objects of curiosity comprise the castle, formerly occupied by the French princes of Neuchâtel, but now by the Prussian governor; the church, a Gothic edifice of the 12th century; the town-hall, in which the *audiences générales* meet; the gymnasium, with a museum of natural history, &c. Its charitable institutions are on a large scale; one hospital and poor-house was founded and endowed with a sum of £166,000 by a townsman; and another, the Hospital Portales, is also an extensive establishment, and open to all persons without respect of country. It has, also, an orphan asylum, a house of correction, some public granaries, several good hotels, &c. The *extraits d'absinthe* is produced here, and it has a considerable traffic in the agricultural and manufactured produce of the canton. (*Ebel, &c.*)

NEUCHÂTEL (LAKE OF), otherwise called the lake of Yverdon (Germ. *Neuenburger-See*), a lake of Switzerland, in the W. part of the confederacy, between the cantons Neuchâtel, Vaud, Freyberg, and Bern. It is of an elongated shape; length N.E. to S.W. 24 m.: average breadth nearly 4 m.; area probably 90 sq. m. The elevation of its surface above the sea is estimated at 1320 feet; its greatest depth is 400 feet. Several considerable rivers empty themselves into this lake, which also receives the surplus waters of the lake of Morat. Its own surplus waters are conveyed by the Thièle to the lake of Bièvre; and thence to the Aar and the Rhine. Neuchâtel, Granson, Yverdon, Estavayer, and Coudrefin, are on its banks. Its scenery is agreeable, but tame in comparison with that of most other Swiss lakes. Its navigation is sometimes dangerous, from its being subject to sudden gusts of wind. A steamer, however, plies on it daily from Neuchâtel to Yverdon. (*Picot's Suisse; Murray's Handbook for Switzerland.*)

NEUILLY, a village of France, dep. Seine, cap. canton, on the Seine, here crossed by a handsome stone bridge, on the road from Paris to St. Germain, $\frac{1}{2}$ m. V.N.W. the Barrière de l'Écluse. Pop., in 1836, ex. com., 3753. The bridge of Neuilly, regarded as a *chef-d'œuvre* of the architect Peronnet, has an entire length of 500 feet (the span across the river being 710 feet), with five arches, each nearly 18 feet in breadth, and 32 feet in height. The *château* of Neuilly, built in the time of Louis XV., is a favourite summer residence of Louis Philippe, king of the French. The village has manufactures of earthenware and chemical products, and distilleries of raisin, &c. (*Hugo, art. Seine.*)

NEUSATZ (Hungar. *Új-Szék*), a royal free town of Hungary, cap. Bacs, on the Danube, opposite Peterwaradin, with which it is connected by a bridge of boats, 46 m. N.W. Belgrade. Pop. 20,921. (*Borghaus.*) It consists of long straggling streets, but, being of modern origin, some of these are tolerably well built, and they are generally paved. The Greeks have five churches, the Roman Catholics one church, and the Armenians one. It has also a synagogue, a gymnasium, a Roman Catholic high school, Jewish school, &c. Neusatz is a place of considerable traffic, particularly with Turkey, for which it is chiefly indebted to its position on the Danube, being the influx of its three largest tributaries, the Theiss, Drave, and Save. Its numerous shops are said to be full of "grocery, and clothes, ironmongery, tin-ware, earthenware, wooden bowls, dishes, and trawlers, all of very rude fashion, and jewellery of an ordinary description." (*Quin's Voyage down the Danube.*) Neusatz is the residence of the Greek bishop of Bacs, and of a *protopapas*. There are remains of a Roman wall stretching from Neusatz to Csurog on the Theiss, 19 m. N.N.E. (*Oesterr., Nat. Encyc.; Borghaus, &c.*)

NEUSE, river, N. C., rises in Person and Orange counties, and enters a large estuary connected with Pamlico sound. It is about 400 m. long, is navigable for sea vessels 23 m. above Newbern, and for boats upwards of 300 miles. Much of the land on its borders is fertile, but is liable to inundation.

NEUSOHL, a royal free town of Hungary, beyond the Danube, cap. co. of its own name, on the Gran, at the influx of the Bistrica, 80 m. N. Pesth. Pop. 5214, nearly half being Protestants. "Neisohl has wide streets, and is a tolerably well built country town, rather imposing in its appearance, because all the houses appear to be in the Italian style, with flat roofs, though probably it is only a high parapet carried up to hide the roof." (*Paget, l. 355.*) In the parish church (a Gothic structure), is a bell weighing 100 centners. Neisohl has an old castle, a hospital, several superior schools, &c., and is the residence of a bishop, the seat of a mining council and tribunal. Near it are the mines of Herrensgrub, producing 1500 cwts. of copper a year, and some silver; and in the town is the largest smelting-house in Hungary. Neisohl has also manufactures of sword-blades, and beet-root sugar. (*Oesterr., Nat. Encyc.; Paget's Hungary, &c.*)

NEUTRA.

NEUTRA, or NEITRA, an episcopal town of Hungary, cap. co. on the Neutra, in a finely wooded country, 45 m. E.N.E. Presburg. Pop. 4563. It has a castle, a county hall, a cathedral and bishop's palace, a lyceum, and several high schools; and carries on a considerable traffic in the wine grown in its vicinity.

NEUWIED, a town of Rhenish Prussia, circle Neuwied, of which, and of a mediatised principality, it is the cap., on the Rhine, 7 m. N.N.W. Coblenz. Pop., in 1837, 5708. It was founded early in the last century by a count of Wied, on the broad principle of perfect toleration for all sects; in consequence of which a neat and flourishing town soon sprung up. It is laid out in squares of houses, formed by nine streets intersecting each other at right angles. At its W. extremity, overlooking the Rhine, is a castle, the residence of the princes of Wied: the town has also, several churches, and other places of worship, a gymnasium, teacher's seminary, hospital, orphan asylum, house of industry, a prosperous Moravian establishment, &c. Its manufactures are of silk, cotton and linen fabrics, and yarn, stockings, iron goods, tobacco pipes, Prussian blue, chicley, potash, and soap: it is the seat of the judicial court for the principality, the circle court, and a mining tribunal. The museums of natural history in the castle and in the Moravian establishment, are worth notice: but the principal object of interest at Neuwied is its collection of antiquities: these were found in the buried Roman city of Victoria, about 2 m. N. the town, supposed to have been destroyed by the Germans towards the end of the 4th century. (A full description of this collection may be found in *Schreiber, Guide du Rhin*, 290-293; *Berghaus*; *Von Zedlitz, Der Preussische Staat*, &c.)

NEVERS (an. *Noviodunum*, and *Nivernum*), a city of France, dep. Nièvre, of which it is the cap.; on the Loire, where it is joined by the Nièvre, and a little above the influx of the Allier: 133 m. S.E. Paris; lat. 46° 59' 17" N., long. 3° 9' 31" E. Pop., in 1836, ex. commune, 13,275. It is agreeably situated on the declivity of a hill facing the S., but is in general ill built and ill laid-out, its streets being narrow, steep, and crooked, and its houses old and gloomy. In its centre, however, is a large and regularly constructed square, on one side of which is the ancient residence of the dukes of Nivernais. Some of the entrances to Nevers are imposing: that from Bourges is ornamented with a triumphal arch, and on the road from Moulins the Loire is crossed by a solid stone bridge of 20 arches. The quays on the river are bordered with good houses, and look clean. The cathedral, on the site of a very ancient church, is an edifice principally constructed between the 13th and 16th centuries. It is large, and has a lofty square tower; in its choir is some fine stained glass. Several other churches, as well as the cathedral, are curious specimens of Gothic architecture. The other public buildings are mostly in a simple but appropriate style: the principal are the barracks, arsenal, prefecture, and public library with 5500 volumes. The park, formerly belonging to the dukes of Nivernais, has now become one of the many public promenades surrounding Nevers. The city preserves but a few remains of its ancient fortifications. It is the see of a bishop, whose diocese extends over the dep. Nièvre; and is the seat of tribunals of primary jurisdiction and commerce, of a chamber of manufactures, a communal college, &c. It has several hospitals, a handsome little theatre, two episcopal seminaries, schools of drawing, geometry, &c., a free school of arts, a *commission d'antiquités*, and many other scientific establishments. It is also distinguished by its manufacturing industry. It has a royal cannon foundry, in which from 300 to 250 cannons, weighing in all about 350,000 kilograms, are cast annually, besides 50,000 kilos. weight of other kinds of artillery. (*Atter.*) It also produces chain cables, iron works for suspension bridges, and other heavy iron goods. Nevers has been famous for many centuries for its china-ware, which, for durability and solidity, is said to be the best made in France; it is sent in large quantities to Paris, and throughout the country watered by the Loire and its tributaries. The manufacture employs about 700 workmen, whose wages are said to average 1 fr. 75 c. a day. Glass wares, metal buttons, coarse woollen cloths, violin strings, vinegar, lye, brandy, and leather are among the other principal manufactures. It has also a considerable trade in timber or ship-building, charcoal, iron and steel, wine, salt, &c., being the great entrepôt for the upper Loire. Its trade is facilitated by a commodious haven at the mouth of the Nièvre. It has nine annual fairs, one of which lasts eight days.

This town existed at the conquest of Gaul by Cæsar; it became a bishopric in 506, and the capital of Nivernais; in 55 it was burned by Hugh Capet; and in the middle ages it suffered severely from plague, the inundations of the Loire, the invasions of the English, and religious wars. (*Hugo, Le Nièvre*; *Diet. Géog.*)

NEVIS one of the British W. India Islands, belonging to

NEWARK.

the Leeward group; in about lat. 17° 10', long. 62° 33' W., separated by a strait 2 m. in breadth, from the S.E. extremity of St. Christopher's. Shape circular; greatest length, N.E. to S.W., 6½ m.; extreme breadth, about the same. Pop. 11,500. It consists of a conical hill, rising from the sea to a height of 2500 feet. Soil mostly a strong tenacious marl, not readily absorbent of moisture: the climate is similar to that of St. Kitt's and Tortola. It is well watered, and, in general, fertile. The inhabitants are nearly all occupied in the raising of the sugar-cane and provisions, and in the preparation of rum and sugar. In 1830, 36,466 cwts. sugar, 39,253 gallons rum, and 3501 cwts. molasses, were imported from Nevis into Great Britain. The total value of the exports amounted, during the same year, to £19,903; that of the imports to £27,183. It is divided into five parishes; Charlestown, the capital, is at its S.W. extremity. This colony is placed under a governor and council, and assembly. It has nine public schools, in which about 400 children are educated. The portion of the compensation for slaves paid to the proprietors of Nevis, amounted to £151,007; the number of slaves by the last registration having been 8722, and the average value of a slave, from 1822 to 1830, £39 4s. Columbus discovered Nevis; which was settled by the English in 1628. (*Parl. Papers*, &c.)

NEW ALBANY, a city, and capital of Floyd co., Ia., 121 m. S. by E. Indianapolis, 600 W. Situated on the N. bank of the Ohio, 2 m. below the foot of the falls at Louisville, where the river descends 33 ft. in the course of a mile. It is 358 m. above the mouth of the Ohio, and is the largest place in the state. It contains a courthouse, jail, nine churches, two Presbyterian, an Episcopal, two Methodist, two Baptist, a Campbellite Baptist, and a Roman Catholic, a bank, an insurance company, a male and a female seminary, a lyceum, a theological college, four schools, 40 or 50 stores of different kinds, an iron foundry and steam engine factory, a rope-walk, one steam grist-mill, one steam saw-mill, one hemp and bagging factory, and 4236 inhabitants. It is regularly laid out with six streets, running parallel with the river, crossed at right angles by 11 other streets. The streets are from 70 to 80 or 100 feet wide. From 10 to 15 steamboats are built here annually, besides sloops and schooners, to be sold at New-Orleans, and there are several extensive ship-yards. A Macadamized road is finished for 50 m., designed to be continued to St. Louis, Mo. The town, exclusive of the city, has 1308 inhabitants.

NEW ALBION, p. l., Cattaraugus co., N.Y., 307 m. W. by S. Albany, 347 W. Drained by Cattaraugus creek, and branches of Conewango creek. It has one store, one grist-mill, four saw-mills; six schools, 354 scholars. Population, 1016.

NEWARK, a pari. and mun. bor., market town, and par. of England, co. Nottingham, S. div. wap. of its own name, on a lateral stream of the Trent, crossed here by a handsome bridge of seven arches, 16 m. N.E. Nottingham, and 116 m. N. by W. London. Area of pari. bor. 2000 acres. Pop., in 1831, 9537. The approach to Newark from the N. is by a long causeway carried over a flat island formed by the Trent, and the Newark branch, and under it are numerous bridges to give free passage to the waters during the floods. The town, consisting of a principal street to the Nottingham and Lincoln road, crossed by several others, and having a large market-place near its centre, is on the whole well built, paved, lighted with gas, and abundantly supplied with water. Among the public buildings, one of the most interesting, though now in ruins, is the castle near the bridge, called the *New Work*, from the circumstance of its having been re-edified by Stephen. It comprises a square of large dimensions, with two massive towers, and seems to have had five stories: the interior area is used as a bowling green, but several of the lower rooms are still entire. King John died in this castle, 18th October, 1216. The town-hall, in the market-place, a handsome building of stone, erected in 1776, comprises several large apartments for the corporate business, assemblies, balls, &c. It has also a courthouse for the quarter sessions, with a small jail, which, however, is "wholly inadequate and unfit for its purpose." (*Pris. Inspec.*, 54a Rep.) The church, said by Mr. Rickman to be one of the largest and finest in England, was built in the reign of Henry VI.; it is a cruciform structure, with large aisles, transepts, and chapels, having at its W. end a highly ornamented tower, surmounted by an extremely light steeple, 349 feet in height, round which are niches containing statues of the twelve apostles. Some of the windows have stained glass, representing the history of Jesus Christ; the choir is separated from the rest of the church by a screen of rich oak-carving, and in the interior are several curious monuments. The fabric is kept in repair by the produce of estates belonging to the borough, so that there is no necessity for a church-rate. The living is a vicarage in crown patronage. It has also four places of worship for dissenters, with various Sunday schools, attended by about 100 children. The grammar school was

NEWARK.

founded in 1590; its endowment, at the time of the Char. Comm. Inquiry, amounted to £3380 a year, and in consequence of a suit in Chancery, the corporation, its trustees, have founded two exhibitions of £30 a year each, tenable for four years at Oxford or Cambridge. The master has a salary of £390 a year with a good house, and £60 a year are paid to an usher; the school is attended by about 40 boys. Two national schools furnish instruction to about 250 children of both sexes, and there are two or three smaller schools wholly or in part supported by subscription. The estates held in trust by the borough for charitable purposes, independently of that above mentioned, are very extensive; and there are several almshouses, a workhouse, and dispensary. A library and small theatre are the only other public establishments.

Newark carries on a considerable trade in malt and corn, and in coal, cattle, and wool. It has also two large brass and iron foundries: bricks and tiles are made here, and large quantities of gypsum and limestone, quarried and prepared in the neighbourhood, are sent by sea to London. Here are two pretty extensive linen manufactories, and two private banks, besides a savings' bank and a branch of the Nottingham banking company. The arm of the Trent on which Newark stands is made navigable by means of a lock close to the town.

Newark was divided by the Municipal Reform Act into three wards; the corporation comprising a mayor and five other aldermen, with 18 councillors. It has, also, a commission of the peace under a recorder, with a court of requests for the recovery of debts under £5. Corporation revenue in 1839, £1259. The quarter sessions for the S.E. division of the county are held here. Newark has sent two members to the House of Commons since the 39th Charles II., the right of election down to the Reform Act being in the mayor, aldermen, and inhabitants paying scot and lot. The electoral limits were not changed by the Boundary Act; registered electors in 1839—40, 1130. Newark is also the election town for the S.E. division of the county. Large markets, especially for corn, on Wednesday; fairs, Friday in Mid-land, May 14, August 2, November 1, and Monday before December 11.

Newark, which takes its name from the castle, became a place of considerable importance soon after the Norman conquest; but its principal celebrity is owing to the fact of its having been one of the chief garrisons of the royalists during the civil wars of Charles I. It was besieged by the parliamentary forces in 1643; but both the town and castle were held by the royal army till 11th May, 1646, when it was surrendered to the Scotch by command of the king, who was then a prisoner. The castle was at the same time demolished by order of parliament. (*Parl. Rep.; Char. Comm. Rep.*, &c.)

NEWARK, L., Tugan co., N.Y., 8 m. N. Owego, 161 W.S.W. Albany. Drained by East and West Owego creeks. It has five stores, one fulling-mill, five grist-mills, 90 saw-mills, three tanneries; 511 scholars in schools. Population, 1616.

NEWARK, city, port of entry, and capital of Essex co., N.J., 9 m. W. New-York, 49 N.E. Trenton, 915 W. It is in 40° 45' N. lat., and 74° 10' W. long., and 90° 49' W. long. from W. Situated on the W. side of Passaic river, between four and five miles, by the course of the river, from its entrance into Newark bay. It stands on a plain of fertile loam, resting on old red sand-stone, with a rising ground on the W. It is the most populous and flourishing place in the state. The population in 1830 was 10,950; in 1840, 17,506. Of these 327 were employed in agriculture, 906 in commerce, 9494 in manufactures and trades, 19 in navigating the ocean, 47 do. rivers and canals, 101 in the learned professions. It had six academies, 319 students; 30 schools, 1955 scholars.

The Passaic river is navigable to this place for vessels of 100 tons burden. There is a communication twice a day, through a large part of the year, by steamboat, to the city of New-York, and several times a day by railroad. The Morris canal passes through it.

The city is regularly laid out with broad and straight streets, with two large and elegant public grounds, bordered with lofty trees, and bounded by the principal avenues. The ground is elevated 30 or 40 feet above the level of the river, and is open and airy. The city is abundantly supplied with pure water from a spring, over a mile distant, in pipes laid by a joint stock company; and seven miles of iron pipes have been laid for the distribution of the water to the inhabitants. The city is generally well built and neat in its appearance. It contains about 1900 dwellings, many of them of wood, but a considerable number of brick. The wooden houses are generally painted white, and many of the houses are large and elegant. The courthouse is a large edifice, in a commanding position in the W. part of the city, built of brown freestone, in the Egyptian style of architecture. The New-Jersey railroad company have

NEW-ATHENS

a large and fine building for a depot, which is an ornament to the place.

There are 17 churches: five Presbyterian, one Episcopal, three Methodist, two Baptist, an Associate Reformed, a Dutch Reformed, an African Methodist, a Roman Catholic, a Bethel, and a Universalist. Of these, four are built of stone, one of brick, and the rest of wood. Several of them exhibit much architectural beauty. There are in the city three banks, with an aggregate capital of \$1,408,000, not more than two thirds of which has been paid in. There is an apprentices' library, a circulating library, a mechanic's association for scientific and literary improvement, who have a library and philosophical apparatus, and a mercantile literary association, who support public lectures.

The commerce of Newark is considerable and increasing. The coasting trade employs 65 vessels of 100 tons each. A whaling company was incorporated in 1833, who are successfully prosecuting the business. The tonnage of the port in 1840 was 6087.

According to the census of 1840, there were, in the city, two commercial and two commission houses in foreign trade, with a capital of \$15,000; 114 retail drygoods and other stores, capital \$321,250; 43 lumber yards, capital \$38,000; 55 men employed in internal transportation, with two butchers and packers, used a capital of \$80,000; 38 men produced 12,000 gallons of spermaceti oil, and 60,000 gallons of whale and other fish oil, and whalebone to the amount of \$4000, with a capital of \$80,000; 16 persons produced machinery to the amount of \$7000; 36 persons produced hardware and cutlery to the amount of \$30,000; 102 persons manufactured the precious metals to the amount of \$154,302; 15 persons manufactured various metals to the amount of \$33,000; seven persons manufactured tobacco to the amount of \$9000, with a capital of \$1350; hats and caps were manufactured to the amount of \$476,648, and straw bonnets to the amount of \$463, the whole employing 383 persons, and a capital of \$121,350; one tannery, employing 455 persons, produced 3000 skins of upper leather, with a capital of \$4000; 33 other manufactories of leather, as saddlery, harness, boots and shoes, &c., produced to the amount of \$708,345, with a capital of \$285,351; 10 persons produced 315,000 pounds of soap, and 115,000 pounds of tallow candles, with a capital of \$15,000; two breweries employed 78 men, and produced 54,000 gallons of beer, with a capital of \$13,000; four persons produced turpentine and varnish to the amount of \$20,000, with a capital of 25,000; one glass-house employed three persons, produced to the amount of \$5000, with a capital of \$5000; two potteries employed eight persons, produced to the amount of \$650, with a capital of \$2300; 453 persons produced carriages and wagons to the amount of \$604,900, with a capital of \$218,700; vessels were built to the amount of \$6000; six persons manufactured furniture, used to the amount of \$6000, with a capital of \$4000; five printing-offices, two bookstores, one daily and three weekly newspapers, and three periodicals, employed 49 persons, and a capital of \$2300; five brick and 15 wooden houses built, employed 71 persons, and cost \$44,175. The total amount of capital employed in manufactures was \$1,511,339. In addition to the above, there has been recently established an extensive manufactory of fine cutlery, said to equal that of the best imported. For its extent, Newark is a great manufacturing place.

This town was settled in 1695, by a company from Guilford, Branford, Milford, and New-Haven, Conn. It is therefore eminently New-England and puritanic in its origin. They purchased the territory, including several neighboring towns, of the Indians, for £130 New-England currency, 13 Indian blankets, and 19 guns. They formed a government and administered it, often disputing the claims of the proprietaries, by holding to an original and superior right, derived from purchase from the natives. Robert Treat, Esq. afterwards governor of Connecticut, was chosen the first recorder, or town clerk.

NEWARK, P. T., Licking co., O. It contains Newark v. the capital of the co., 39 m. E.N.E. Columbus, 368 W. The village is situated at the confluence of the three principal branches of Licking river, and on the Ohio canal, which passes along one of its principal streets. It is regularly laid out with streets from six to eight rods wide, crossing each other at right angles, with a large public square in the centre, on which stands an elegant brick courthouse. It has a jail, several churches, a market house, two academies, 15 stores, several large warehouses, two printing-offices, 10 schools, 670 scholars, 350 dwellings, and 785 inhabitants. The town, exclusive of the village, has two schools, 998 scholars. Pop. 1433. It contains some interesting ancient mounds.

NEW-ATHENS, P. V., Athens co., O., 115 m. E. by N. Columbus, 391 W. It contains four stores and 300 inhabitants. It is the seat of Franklin college, founded in 1825, which has a president and six professors or other

NEW-BALTIMORE.

Instructors, 84 alumni, 51 students, and 1000 volumes in its libraries. The commencement is on the last Wednesday in September.

NEW-BALTIMORE, p. t., Greene co., N.Y., 15 m. S. Albany, 354 W. Bounded E. by Hudson river. Drained by Deppe and other creeks flowing into Hudson river. It contains five churches: a Dutch Reformed, Episcopal, Methodist, Baptist, and Christian, seven stores, one fulling-mill, one flouring-mill, three grist-mills, seven saw-mills, one paper-mill, three tanneries; 16 schools, 637 scholars. Pop. 9306.

NEW-BARBADOES, t., Bergen co., N.J. Watered by Hackensack r. It contains Hackensack v., the capital of the county, and has seven stores, six grist-mills, four saw-mills; one academy, 25 students; six schools, 218 scholars. Pop. 3104.

NEW-BEDFORD, p. t., port of entry, and semi-capital of Bristol co., Mass., 96 m. S.E. Taunton, 58 S. Boston, 434 W. It is in 41° 38' 7" N. lat., and 70° 58' 49" W. long. Pop. in 1820, 3047; 1830, 7592; 1840, 15,087. Situated on the W. side of an arm of the sea which sets up from Buzzard's bay. The ground rises rapidly from the water, and presents a fine appearance when approached by water, or from the E. It contains many splendid dwellings, in commanding situations. A wooden bridge and causeway, three fourths of a mile long, which cost \$30,000, connects it with Fairhaven. It contains a courthouse, jail, four banks, with an aggregate capital of \$1,300,000, three insurance offices, total capital \$350,000; a savings institution, with an invested amount of \$200,000; 14 churches: a Baptist, two Congregational, an Episcopal, two Christian, two Methodist, a Friends, a Unitarian, a Universalist, a Bethel, and an African. The harbour is spacious and safe, though not easy of access. It has from three to four fathoms of water. The business of the place is chiefly devoted to the whale fishery. The tonnage of the port, in 1840, was 89,069, being the second district in the state, in this respect. It contained, in 1840, 374 stores, capital \$482,350; six lumber-yards, capital, \$34,800; capital employed in the fisheries, \$4,512,000, salt produced, 13,100 bushels; four grist-mills, two saw-mills, one rope-walk, one paper-mill, three tanneries, three printing-offices, one bindery, two dally and two weekly newspapers; two academies, 118 students; 53 schools, 3455 scholars. A railroad, 24 m. long, connects this place with Taunton.

NEW-BERLIN, p. t., Chenango co., N.Y., 8 m. N.E. Norwich, 68 W. Albany, 347 W. Drained by Unadilla r. It contains seven churches: a Presbyterian, two Methodist, two Baptist, an Episcopal, and a Universalist; 13 stores, one fulling-mill, one cotton factory with 4400 spindles, five grist-mills, 11 saw-mills, one paper-mill, four tanneries, one printing-office, one bindery, one weekly newspaper; 23 schools, 765 scholars. Pop. 3086.

NEWBURN, p. v., port of entry, and capital of Craven co., N.C., 190 m. E.S.E. Raleigh, 100 N.N.E. Wilmington, 348 W. Situated on the S.W. bank of Newse river, at the junction of Trent river. Pop. in 1830, 3776; in 1840, 3690; it was formerly the capital of the state. The Newse river is here a mile and a half wide, and the Trent three fourths of a mile wide. It is favourably situated, and more healthy than most places in the state so near the seaboard. It contains a courthouse, jail, a theatre, a masonic hall, two banks, three churches, an Episcopal, Methodist, and Baptist. It is pleasantly situated and handsomely built, mostly of brick. It has considerable commerce, and exports grain, pork, lumber, and naval stores. A steamboat plies to Elizabeth city, and forms a part of the line from Norfolk to Charleston. It had, in 1840, 33 stores, capital \$379,410; one flouring-mill, three grist-mills, five saw-mills, two tanneries; exported 83,000 barrels of tar, pitch or turpentine; had one printing-office, one weekly newspaper; four academies, 151 students; three schools, 98 scholars.

NEWBERRY, district, B.C., situated a little N.W. of the centre of the state, and contains 540 sq. m. Bounded N.E. by Broad river, S. by Saluda river. Watered by their branches. It contained, in 1840, 19,060 neat cattle, 7183 sheep, 35,606 swine; and produced 357,350 bushels of wheat, 708 of rye, 635,634 of Indian corn, 1159 of barley, 73,185 of oats, 33,480 of potatoes, 3,105,107 pounds of cotton. It had 34 stores, 15 flouring-mills, 18 grist-mills, 18 saw-mills, four tanneries, three distilleries; three academies, 134 students; 20 schools, 737 scholars. Pop.: whites, 8908; slaves, 9904; free coloured, 228; total, 16,350. Capital, Newberry.

NEWBERRY, C.H., p. v., capital of Newberry district, B.C., 40 m. W.N.W. Columbia, 304 W. Situated on elevated ground, 3 m. E. of Bush river, and has a fine view of the surrounding country. It contains a handsome courthouse, a jail, two academies, a social library, and about 300 dwellings, some of them handsome.

NEWBERRY, L., York co., Pa., 19 m. N. of York. Bounded E. by Susquehanna river, S. by Conewago creek. Watered by Fishing creek. It contains seven stores, six grist-mills, five saw-mills, one oil-mill, two tanneries, seven distilleries, three potteries; 13 schools, 400 scholars. Pop. 1850.

NEW-BRUNSWICK.

NEW-BLOOMFIELD, p. b., Juniata t., capital of Perry co., Pa., 34 m. W. by N. Harrisburg, 196 W. It contains a brick courthouse and county offices, a stone jail, two churches, a Presbyterian and Methodist, five stores, a printing-office issuing a weekly newspaper, about 60 dwellings, and 400 inhabitants. The borough was incorporated in 1831.

NEW-BOSTON, p. t., Hillsborough co., N.H., 26 m. S. by W. Concord, 467 W. Watered by the S. branch of Piscataquog river. Incorporated in 1763. It contains three churches, a Presbyterian, Baptist and Universalist, three stores, one fulling-mill, four grist-mills, 19 saw-mills, three tanneries; 18 schools, 558 scholars. Pop. 1569.

NEW-BRAINTREE, p. t., Worcester co., Mass., 66 m. W. Boston, 399 W. Bounded N.W. by Ware river. It contains one store, one grist-mill, two saw-mills; 7 schools, 933 scholars. Pop. 752.

NEW-BRIGHTON, v., Castleton t., Richmond co., N.Y. Beautifully situated on the N. shore of Staten Island, fronting N. York city, from which it is six miles distant, connected by a steam ferry. It contains a young ladies' seminary, and a number of beautiful dwellings, on ground which rises abruptly from the water; and near the shore, two large and elegant hotels, much resorted to in the summer season. The Sailor's Snug-harbour is one mile W.

NEW-BRIGHTON, b., Beaver co., Pa. Situated on the E. bank of Beaver river, 3 m. from its mouth. It contains six churches: a Methodist, Presbyterian, Associate Reformed, Unitarian, and two Friends; a female seminary, the New Brighton Institute, six stores, one furnace, two fulling-mills, two woollen factories, two flouring-mills, two saw-mills, one printing-office, and one weekly newspaper; two academies, 95 students; three schools, 93 scholars. Pop. 981. A bridge crosses Beaver river at each end of the village. It is regularly laid out, with broad streets crossing each other at right angles, and has a number of beautiful residences.

NEW-BRITAIN, p. v., Berlin t., Hartford co., Conn., 10 m. S.W. Hartford, 396 W. It contains three churches, a Congregational, Methodist, and Baptist, 45 factories, chiefly of brass, employing 700 persons, and a capital of \$650,000; and about 1500 inhabitants.

NEW-BRITAIN, p. t., Bucks co., Pa., 25 m. N.W. Philadelphia, 96 E. Harrisburg, 165 W. Drained by branches of Neeshamling creek, which afford water-power. It contains 30 stores, five grist-mills, five saw-mills, one oil-mill; two schools, 48 scholars. Pop. 1304.

NEW-BRUNSWICK, a tract of country in British N. America, on the W. side of the gulf of St. Lawrence, between lat. 45° S and 48° S' N., and long. 63° 47 and 67° 53' W., bounded S. by Nova Scotia and the bay of Fundy, N. by Lower Canada, and W. by the state of Maine in the U. States. Extreme length, from N. to S., 180 m.: average breadth, 150 m.: estimated area, 95,931 sq. m. Pop. in 1834, 119,557. This colony, which is divided into 11 counties, has a much less indented coast-line than Canada or Nova Scotia: the surface, however, is broken and undulating, though not mountainous, and considerable rivers intersect it in all directions, the largest being St. John's (which see), Miramichi, and Restigouche. The principal gulfs are the bay of Chaleur and Miramichi, on its E. coast, and that of Passamaquoddy on the S., into which runs the river St. Croix, which divides the province from Maine, in the U. States. Its geology is very little known; but limestone seems to be the prevailing feature, though clay-slate, gneiss, and even the primitive formations occasionally occur. Coal is abundant, and is wrought, near the Grand lake, by a joint-stock company. Iron and gypsum occur also in considerable quantities. Dense forests cover, by far, the greater part of the surface, and though the soil is generally rich and fertile, except in a few swampy tracts, only one-sixteenth of the whole province has been surveyed and laid open for settlers. The cutting down, and exportation of the fine timber, with which these forests abound, has, however, been extensively pursued for some years, and the quantity of cleared land is progressively increasing. The fauna and flora of the colony nearly resemble those of Nova Scotia, to which, indeed, it formerly belonged. The climate is very similar to that of Canada: winter lasts from November to April, when a sudden change takes place, and vegetation becomes extremely rapid. The temperature in the S. part is milder and more equable; but the prevalence of sea-fogs, on the shores of the bay of Fundy, render the cultivation of wheat near the coast very uncertain, though it does not seem to injure the health of the settlers. Indeed, the climate altogether is uncommonly healthy, and will bear to be compared with that of any part of England. Rheumatism, consumption, and low typhus are the prevalent diseases; but they are in a great measure brought on by exposure to the damp, and the sudden changes of temperature. Agriculture, notwithstanding the rich tracts of alluvial soil skirting the rivers, is considerably less advanced than in

NEW-BRUNSWICK.

Nova Scotia and the Canadas, owing, in part, to its later settlement, but principally to the superior importance attached to its timber trade. Within the last few years, however, great improvements have taken place in these respects; agricultural societies have been formed, new settlers have introduced, in many parts, the more approved systems of husbandry, and emulation has been generally excited by ploughing-matches, cattle-shows, and the distribution of premiums. Wheat, Indian corn, barley, and oats are the principal grain crops; but by far the most important article of produce is the potatoe, the crop of which, in 1835, was estimated at 3,100,000 bushels. Red and white clover are the grasses most cultivated, and beans, peas, turnips, mangel-wurzel, and beetroot thrive well, and are raised in pretty considerable quantities. Pasturage is followed to some extent, and it was estimated that the live-stock of the colony, in 1835, comprised 11,000 horses, 91,000 cattle, 143,000 sheep, and 59,000 hogs. The selling and conveyance of timber constitutes, however, as before observed, the great employment of the labouring classes; but most of the lumberers are dissolute and depraved, and the occupation prevents them from paying proper attention to agriculture. Many of the trees, especially the yellow pines, attain a great size, and furnish timber of good quality, though inferior to that of Norway and the Baltic. It is principally conveyed to Great Britain in the log, the remainder being manufactured into deals, boards, staves, &c.

The timber exported from New Brunswick to Great Britain in 1837 was valued at £476,670; that of Lower Canada during the same year having been estimated at £651,788. This trade is wholly forced and artificial, being a consequence of the high discriminating duties imposed in England on Baltic timber. It is contended, however, that the equalization of the duties, how advantageous soever to England, would be injurious to Canada and New Brunswick, by diminishing their trade in timber. But the truth is, that this, so far from being advantageous to either, is distinctly and completely the reverse. The habits which it generates are quite subversive of that sober, steady spirit of industry, so essential to a settler in a rude country: to such a degree, indeed, is this the case, that lumberers have been described as the pests of a colony, "made and kept vicious by the very trade by which they live." Ship-building is pretty extensively carried on, chiefly at St. John's, the capital. In 1830, 164 ships were built, of the aggregate burden of 45,864 tons; but they are of the class called "slop built," and do not enjoy a high character for solidity or durability. Though less deeply indented with fishing bays than Nova Scotia, the coast and rivers of New-Brunswick abound with fish, especially cod, herrings, salmon, and mackerel; the entire value of the exports of fish and fish-oil having amounted, in 1837, to £208,000. The whale fishery, introduced only within the last few years, has already attained considerable importance; the exports of oil and whalebone, in 1837, having been estimated at £37,442.

Except timber, and the produce of its fisheries, the exports of New-Brunswick are quite inconsiderable: the imports consist of corn (chiefly from the United States), of the value, in 1837, of £150,899. British and Irish manufactured goods, valued at £317,391, and various minor articles, making a sum total of £730,563. Subjoined is an account of the ships that entered and left the ports of New-Brunswick in 1830:

Countries.	Inwards.		Outwards.	
	Ships.	Tons.	Ships.	Tons.
Great Britain . . .	573	226,712	585	264,935
British Colonies . .	1,208	115,176	1,509	118,400
United States . . .	944	64,053	796	53,688
Other foreign ports .	57	8,181	4	638
Total . . .	3,482	396,122	3,522	444,051

The colony seems, on the whole, to be improving. The Brunswick land company have done much to promote the immigration of industrious British settlers, and several joint stock companies and banks have been recently established. The premium for bills on England varies from 8 per cent. to 11½ per cent.; and the difference between the currency and sterling price of money in the province amounts to 11½ per cent. The paper currency, which is very general, consists of the notes of the different banks, and of those issued by the corporation of the city of St. John's. The sum in circulation amounted, in 1839, to about £350,000.

The constitution of New-Brunswick is very similar to that of Nova Scotia, which it resembles in several other particulars, and to which the reader is referred for farther information. The representative body, or parliament, comprises 26 members, and sits at Fredericton, about 90 m. above St. John's. The judiciary courts are the court of chancery, in which the governor presides, the supreme court, directed by four justices, circuit courts, a court of common pleas, and numerous courts for the recovery of small debts. The revenue is extremely variable, and has been much increased of

late years by the sale of unoccupied lands; besides which, a few light taxes are levied for poor rates and other local purposes. After the payment of the local magistracy, &c., the surplus is appropriated to the improvement of the colony, and especially to the formation of roads, that have recently been completed to a very considerable extent. The expense of the regular army is defrayed by the British government; but there is likewise a native militia comprising upward of 30,000 men. The religion of New-Brunswick is similar to that of Nova Scotia; and the diocese of the colonial bishop of that peninsula extends over the province. There are, likewise, Roman Catholics, Presbyterians, Methodists, and Baptists; but the religion of the colonists partakes more of fanaticism than sober, rational worship. As respects education, New-Brunswick enjoys more than ordinary advantages. King's college, at Fredericton, owes its origin to the exertions of Sir Howard Douglas, and has been in active operation for some years. Its maintenance is chiefly provided for by an annual grant of £3000 from the local government, and the mode of instruction nearly resembles that pursued in Oxford; subscription to articles is not, however, required, except from students of divinity; a grammar school also is supported out of the college funds. Nine other grammar schools, which, in 1839, had 331 pupils, are either wholly or partially supported by legislative grant. English schools also are established in all the parishes of the provinces; and, in 1839, there were 477 schools, furnishing elementary instruction to 7019 boys and 5619 girls.

The population of New-Brunswick consists of a mixed race of English, Irish, Welsh, and Scotch; but the last are far less numerous than in the neighbouring colonies. The French also have three small settlements on the E. side of the province. The Indian aborigines have been for many years fast declining in numbers, and all attempts to civilize them or improve their condition have failed: they have a few small villages scattered in different parts, and are all Roman Catholics. In manners and customs the British settlers nearly resemble those of Canada, Nova Scotia, and Cape Breton. The women are handsome; the men generally tall, well made, muscular, and scarcely ever corpulent. They are remarkably spirited, adventurous, and attached to their country; nor can there be any doubt that they would, if well disciplined, make excellent soldiers.

The country now called New-Brunswick was, in the early part of last century, comprised by the French under the appellation of New France, and viewed as an appendage to Acadia. At the peace of 1763 it was ceded, with the rest of Canada, to the English, and, from that time to 1785, was considered as part of Nova Scotia. The country, however, was little more than a mere wilderness, till General Sir Guy Carleton procured for it a royal charter, constituting New-Brunswick a distinct province, with himself as governor. To his exertions it chiefly owes the rapid rise of its prosperity; but it also owes many material improvements in its roads, schools, agriculture, judicial arrangements, &c., to Sir H. Douglas, governor from 1834 to 1831. (*McGrew's America*, ii., 5-102; *Murray's B. America*, ii., 394-396, &c.)

New-Brunswick, city, capital of Middlesex co. N. J., 30 m. S.W. New-York, 37 m. N.E. Trenton, 193 W. Situated on the S.W. bank of Raritan river, 15 m. from its entrance into Raritan bay at Amboy, by the course of the river. Although it is the capital of Middlesex co., it lies partly in Somerset co., Albany-street being the dividing line between the two counties. The streets on the river are narrow and crooked, and the ground low; those on the upper bank are wide, and many of the dwellings are very neat and elegant, surrounded by fine gardens. The streets are generally paved: this is rendered necessary by the soil which is a red sandy loam, that causes the unpaved streets to become deep with mud in wet weather. From the site of Rutgers's college, on the hill, there is a wide prospect, terminated by mountains on the N. and by Raritan bay on the E. A toll-bridge crosses Raritan river, originally built in 1796, and rebuilt in 1811, at a cost of \$65,657, which is 1000 feet long, divided into two carriage-ways by a wood partition. It is constructed of wood, and rests on 11 stone piers and abutments. A railroad bridge crosses the river a little above. It was incorporated as a city in 1794, and contains eight churches, a Dutch Reformed, two Presbyterians, an Episcopal, Methodist, Baptist, a Roman Catholic, and a coloured Methodist, two banks, 130 stores, 600 dwellings, and 8693 inhabitants. The first Dutch church was built in 1717; the present was completed in 1822. The first Presbyterian church was erected before 1726, burned by the British during the revolutionary war, and the present one erected in 1784. The Episcopal church was erected in 1763, burned in 1803, and immediately rebuilt. It is the seat of Rutgers's college, founded in 1770, which has a president and 10 professors or other instructors, 391 alumni, of whom 77 have been ministers of the gospel, 21 students, and 12,609 volumes in its libraries. The commencement is on the

NEWBURG.

fourth Wednesday in July. Connected with it is the theological department, under the Dutch Reformed church, of 36 students, besides an academic department. The Delaware and Raritan canal commences here, and extends 43 m. to Trenton. It is 75 feet wide and 7 feet deep, admitting the passage of sloops of 75 or 100 tons burden; and, in connexion with Delaware and Raritan rivers, and Staten Island sound, forming a complete inland water communication between the cities of New-York and Philadelphia. The New-Jersey railroad also passes through the city, forming a part of the great railroad communication from New-York to Philadelphia, Baltimore, and Washington. Having these and other facilities of communication, its trade is extensive. The tide sets up in the Raritan, 3 m. above the city, and the river admits vessels of 300 tons burden to its wharves. It has a communication by steamboat with New-York, twice daily.

NEWBURG, p. v., semi-capital of Orange co., N. Y., 60 m. New-York, 84 m. E. by W. Albany, 985 W. It is pleasantly situated on the W. side of Hudson river. The ground rises rapidly from the river, exhibiting the place to great advantage from the water, and in its back parts, 300 feet high, commands a fine view of the river, the highlands, the village of Fishkill opposite, and a beautiful surrounding country. It contains a courthouse, jail, 10 churches, two Presbyterian, two Associate Reformed, a Methodist, Baptist, Episcopal, Dutch Reformed, Roman Catholic, and an African, an incorporated academy, a high school, a theological seminary of the Associate Reformed church, three banks, 100 stores, a large wharf and storehouses, a large iron foundry and machine-shop, one extensive hat factory, a large brewery, two Morocco factories, two paper-mills, four plaster-mills, a powder-mill, extensive brick-yards, 850 dwellings, and about 6000 inhabitants. Several sloops and four steamboats are owned here, which trade with New-York city; and a steam ferry-boat crosses the river, here a mile wide, to Fishkill. Some of the above mills are on Chambers' creek, a little S. of the village. The steamboats from New-York to Albany stop at the place. S. of the village stands an old house, in which Washington had his head quarters in March, 1783, when the famous "Newburg letters," designed to excite the army to mutiny, were anonymously addressed to them by some of the officers, and which Washington, by his great influence, nobly quelled and defeated. Here the American army was disbanded in June 23d, 1783. The town has two academies, 149 students; 23 schools, 1983 scholars. Pop. 8093.

NEWBURG, p. t., Cuyahoga co., O., 150 m. N.E. by N. Columbus, 353 W. Mill creek, on which the village stands, has a great fall, affording extensive water-power. It has one store, one flouring-mill, one saw-mill; eight schools, 457 scholars. Pop. 1349.

NEWBURGH, a seaport and market town of Scotland, co. Fife, on the S. bank of the Tay, 134 m. S.W. Dundee, and 9 m. S.E. Perth. Pop., in 1831, 2642. It consists chiefly of one street, running E. and W. along the line of the shore, with another at right angles leading down to the harbour. The town is mostly of modern date, particularly toward its outskirts, though many old buildings remain to mark its ancient state. The public buildings are the town-house, with a spire, the parish church, and a dissenting chapel. The splendid mansion-house of Mugdum is close to the borough on the N.W. The means of education are ample and efficient; from one tenth to one seventh part of the population are at school. The town is lighted with gas.

The harbour is pretty good; but only 10 vessels from 60 to 150 tons, exclusive of fishing-boats, belong to the borough. It has, notwithstanding, a considerable trade, being the port for the greater part of Kincros-shire, Strathairn, and other contiguous districts, both for the export of their agricultural produce, and for importing coals, lime, &c. Most vessels bound for Perth wait here for the flow of the tide; and some of them unload part of their cargo before they can, even at high water, proceed up the river. Newburgh, indeed, is, next to Kirkcaldy, the most important seaport of Fifeshire. The weaving of coarse linens is largely carried on, employing from 550 to 600 looms.

Newburgh existed in the 12th century, and was subject to the neighbouring monastery of Lindores, whose remains are yet pretty entire. In 1631 it was created a royal borough by Charles I.; but, like Falkland, being unable to defray the expenses of its parliamentary representative, it petitioned to be relieved from the burden, which was granted. It has otherwise, however, all the marks of a royal borough, and is governed by two bailies and 15 councillors. Municipal revenue, derived from land, about £170 per annum. There are two curious crosses of remote antiquity in the neighbourhood; one called the Mugdum cross, the other Macduff's cross. The former is supposed to commemorate a victory over the Danes in the 10th century; the latter was erected as a sanctuary to any of the kindred of Macduff, thane of Fife, who might commit murder. If they fled

NEWBURY.

thither, and paid a certain fixed satisfaction to their chief, they obtained protection. (*New Stat. Account of Scotland, \$Fife-shire, p. 56-81.*)

NEWBURY, a mun. bor., market town, and par. of England, co. Berks, on the Kennett, crossed here by a stone bridge of three arches, 241 m. S. Oxford, and 53 m. W. by S. London. Population of the municipal borough, which includes, with the parish of Newbury, portions of the parishes of Speen and Greenham, in 1831, 8400. The town, a considerable portion of which on the N. bank of the Kennett is in the hamlet of Speenhamland, consists of two principal, wide, and well-built streets, arranged in the form of the letter T, with smaller and very irregular streets at its S. extremity. The market-place, opposite the church, is a large open square, in which is the guildhall. The church, erected in the reign of Henry VII., is a large but plain building, with a square tower: the living is a rectory in the patronage of the crown. A diatric church, in the Gothic style, has recently been erected on the London road, and is remarkable for its extensive catacombs. There are, likewise, five places of worship for dissenters; and the town comprises several Sunday schools, and an endowed free-school, besides numerous and wealthy corporation charities, which, however, had been greatly neglected previously to the passing of the Municipal Reform Act. (*Mun. Corp. Rep.*) The almshouses have accommodation for 60 aged people: there is a small borough jail, and about half a mile S. of the town is a large union workhouse.

"Newbury, which is situated on the main road between London and Bath, has a large posting business, which employs a considerable number of hands, besides occasioning a large importation of horse provender. The Kennett and Avon canal, connecting the Severn with the Thames, passes through the town, and affords the advantage of water-carriage from London, Bristol, and S. Wales. In the immediate neighbourhood are two silk manufactories and a paper-mill; but they are not considerable. The rapid declivity and copious supply of water in the Kennett, have occasioned the erection of numerous large corn-mills, two of which are within the town. There are also considerable maltings, and some extensive breweries. The quantity of grain annually exported from Newbury, either as flour, malt, or in its natural state, amounts to upward of 7000 tons, in return for which it imports large quantities of building materials, and various articles of general consumption from the ports of London and Bristol. The town has the appearance of being in a prosperous and improving condition; and there has been a great increase of buildings and population, especially in Speenhamland. High rents are readily obtained in situations favourable to trade. The poor rates are much higher than in the adjoining parishes, and higher also than they should be with reference to the description of the population, a circumstance chiefly attributable to the attractions offered to the lower classes by the numerous charitable foundations attached to the corporation." (*Mun. Corp. Rep.*)

Newbury, which is a borough by prescription, and was afterward chartered in 38 Elizabeth, has been governed, since the Reform Act, by a mayor and three aldermen, with 12 councillors; it has a commission of the peace under a recorder. Corporation revenue in 1839, £1057. The spring quarter-sessions for the county, and petty sessions for the hundred, are held here, and is one of the polling places for the county elections. Large corn markets on Thursday: horse and cattle fairs, Holy Thursday, July 5, September 4, and November 8.

Newbury returned two members to parliament in the reign of Edward I.; and it is not known at what period, or for what cause, it lost the franchise. It was formerly also celebrated for its manufacture of serges, shaloms, &c.; and in the reign of Henry VIII., John Winchcomb, known as Jack of Newbury, kept 100 looms, from the produce of which he became so wealthy as to be able to entertain the king and his retinue during their passage through the town. He was a great benefactor to Newbury; and his house, a large brick structure, is still shown in the High-street, his manufactory being now occupied by a large inn, "the Jack of Newbury." The vicinity is remarkable for two battles fought during the civil wars between the royalist and parliamentary forces, Charles I. commanding his army in person on both occasions. The first was fought on a common called the Wash, on 20th September, 1643; the second on 37th October in the following year; but neither had any decided result. Donnington Castle, a short distance N.W. of Newbury, was the property of Chaucer, the earliest English classic poet, and in it he spent the last two years of his life, which terminated in 1400. (*Mun. Reports, &c.*)

NEWBURY, p. t., Orange co., Vt., 36 m. S.E. Montpelier, 518 W. Situated on the W. side of Connecticut river, opposite to Haverhill, N. H. It has a fine alluvial tract of 450 acres on the river, called the Great Oxbow. A bridge crosses Connecticut river in its N. part, and another in its

NEWBURYPORT.

S. part, the latter leading to Haverhill Corners. It contains four churches, a Congregational, Methodist, and two others, the Newbury seminary, under the patronage of the Methodists, with a principal and five assistants, seven stores, three fulling-mills, three grist-mills, six saw-mills, one paper-mill, one printing-office, one bindery; one academy, 369 students; 21 schools, 865 scholars. Pop. 2578.

NEWBURY, t. Essex co., Mass., 31 m. N. by E. Boston, 17 m. N. Salem. Bounded N. by Merrimac river, E. by the Atlantic. Plumb island, 9 m. long, and 1 broad, is partly in this township. Parker river has a fall of 50 feet in 1½ m., affording good water-power. It contains four churches, three Congregational and a Methodist, 15 stores, one fulling-mill, five grist-mills, one saw-mill, three tanneries; four academies, 115 students; 14 schools, 757 scholars. Pop. 3789. Dummer academy, in Byfield parish, was founded in 1756, and is richly endowed.

NEWBURY, t. York co., Pa., 19 m. N. York. Bounded E. by Conewago creek. Watered by Beaver creek. It contains seven stores, two flouring-mills, one grist-mill, three saw-mills, two tanneries, seven distilleries, three potteries; 13 schools, 400 scholars. Pop. 1815.

NEWBURYPORT, p. t., port of entry, and one of the three capitals of Essex co., Mass., 36 m. N. by E. Boston, 478 W. It is the smallest town in its territorial limits in the state, containing about 647 acres. It is beautifully situated on the S. bank of Merrimac river, 3 m. from its mouth. It is laid out with great regularity, in the form of a parallelogram. The lower street, called Water-street, on which the wharves and docks open, follows the course of the river. Parallel to this, on more elevated ground, High-street extends the whole length of the town, about 3 m., and overlooks a delightful prospect on the opposite bank of the river, the harbour, Plumb island, and the ocean. These streets are crossed nearly at right angles by various other streets. In the centre is a large and convenient market-place, surrounded by brick stores, which is in the vicinity of the principal wharves and docks. The houses are generally neat, and many of them elegant, often surrounded by fine gardens, which give a rural aspect to the place. A bridge crosses Merrimac river, in the N. part of the town, built in 1827, connecting it with Salisbury. The abutment, faced with stone, and filled with sods and gravel, on the Newburyport side is 240 yards, that on the Salisbury side 187 yards. The bridge rests on three abutments and four stone piers, and is supported by chains passing over the tops of pyramids erected on the piers, and under the centre of the arches. It is three sevenths of a mile long, and cost \$70,000. A turnpike and bridge connects this town with Plumb island. The road is about 3 m. long, and the bridge about 500 feet in length. This road accommodates parties of pleasure visiting the island, and enables the inhabitants to afford assistance to ship-wrecked mariners. The public buildings and institutions are a brick courthouse, a stone jail, a custom-house of rough granite, with a fine wrought Grecian-Doric portico, with pilasters on the sides, which cost \$25,000; eight churches, two Presbyterian, a Congregational, Independent, Episcopal, Methodist, and Baptist; an academy with a fund of \$50,000, a brick market-house, an almshouse, a lyceum, three banks with an aggregate capital of \$700,000, a savings' bank, and three insurance companies. The harbour is spacious and safe, but difficult of entrance, in consequence of a shifting sand bar at the mouth of the river. The United States erected a breakwater at the mouth of the river in 1830, which cost \$30,000. It has numerous vessels employed chiefly in the coasting trade, and in the cod and mackerel fisheries, in which latter 1000 persons are employed. Its commerce was formerly more extensive than at present. The Middlesex canal has diverted much of the trade from the valley of the Merrimac to Boston. It has 12 commercial and three commission houses in foreign trade, capital \$781,000; 116 retail stores, capital \$253,500; four lumber-yards, capital \$35,000; four cotton factories with 17,736 spindles, two distilleries, three printing-offices, one daily, one semi-weekly, and one weekly newspaper; total capital in manufactures, \$647,800; 15 academies, 699 students; 39 schools, 1339 scholars. Population, in 1830, 6398; in 1840, 7161. Tonnage of the port in 1840, 23,965.

A fire on May 31, 1811, destroyed 350 buildings in the fairest part of the town, covering over 16 acres with ruins, including nearly all the dry goods stores, four printing-offices, the postoffice, two insurance offices, four book stores, one church, and the dwellings of more than 90 of the inhabitants. Contributions were made in various places for the relief of the inhabitants, and Boston contributed over \$24,000. Mr. Whitefield, the celebrated preacher, died here, September 30, 1770, and his remains repose under the pulpit of the first Presbyterian church, according to his request.

An elegant monument of Egyptian and Italian marble, erected to his memory in one corner of the church by an eminent merchant, records, among other things, that "in a

NEWCASTLE-UPON-TYNE.

ministry of 34 years, he crossed the Atlantic 12 times, and preached more than 18,000 sermons."

NEW-CANAAN, p. t., Fairfield co., Ct., 74 m. S.W. Hartford, 273 W. Incorporated in 1801. It contains three churches, a Congregational, Episcopal, and Methodist, eight stores, two fulling-mills, two grist-mills, six saw-mills, three tanneries; two academies, 63 students; nine schools, 561 scholars. Pop. 5317.

NEW-CASTLE, county, Del. Situated in the N. part of the state, and contains 456 sq. m. Bounded E. by Delaware river, S. by Duck creek. Drained by Brandywine, Christina and other creeks, flowing into Delaware river. The railroad from Philadelphia to Baltimore passes through it. Another railroad extends from New-Castle, Delaware, to Frenchtown, Md. A ship canal connects the Delaware with the Chesapeake bay 13½ m. long, 66 ft. wide at top, and 10 ft. deep, which cost \$2,750,000. It contained in 1840, 17,450 neat cattle, 7471 sheep, 14,094 swine; and produced 191,274 bushels of wheat, 3157 of rye, 599,767 of Indian corn, 7538 of buckwheat, 564,915 of oats, 5393 of barley, 84,166 of potatoes. It had 150 stores, 13 lumber yards, two fulling-mills, one woolen factory, 11 cotton factories with 24,492 spindles, 37 flouring-mills, 20 grist-mills, 59 saw-mills, 37 powder-mills, one paper-mill, four tanneries, three breweries, two potteries, three printing-offices, three weekly, and three semi-weekly newspapers; one college, 23 students; 19 academies, 479 students; 69 schools, 2618 scholars. Pop. 33,190. Capital New-Castle.

NEW-CASTLE, p. t., Lincoln co., Me., 35 m. S.E. Augusta, 603 W. Incorporated in 1735. Bounded E. by Damariscotta river, W. by Sheepscot river. It contains a Congregational and a Roman Catholic church, and the Lincoln academy. The Damariscotta river, which may be considered an arm of the sea, is navigable for large vessels, 15 m. from the sea to Damariscotta bridge, where is a village. It contains two commercial houses in foreign trade, five stores, one fulling-mill, one woolen factory, two flouring-mills, two grist-mills, six saw-mills, two tanneries; one academy, 70 students; 10 schools, 602 scholars. Pop. 1719.

NEW-CASTLE, p. v., capital of New-Castle co., Del. 5 m. S.E.W. Wilmington, 43 m. N. Dover, 115 W. Situated on the W. bank of Delaware river, 33 m. S.W. of Philadelphia. It contains a courthouse, jail, a townhouse, market-house, an arsenal, five churches, a Presbyterian, Episcopal, a Methodist, coloured Methodist, and Roman Catholic, a public library of 4000 volumes, 10 stores, 195 dwellings, and 1900 inhabitants. The New-Castle and Freetown railroad have here a large establishment for the manufacture of steam engines, locomotives, and other things connected with railroads, including an iron foundry, brass foundry, &c., with a capital of \$110,000. There are in the hundred, one academy, 13 students; eight schools, 34 scholars. Pop. 3737. It is surrounded by a beautiful and fertile country. Tonnage of the port in 1840, 3561.

NEW-CASTLE, p. v., capital of Henry co., Ia., 47 m. E. by N. Indianapolis, 534 W. Situated on Blue river, and contains a courthouse, jail, an academy, a public library, four stores, 50 dwellings; 10 schools, 359 scholars. Population 593.

NEWCASTLE-UPON-TYNE, a parl. and mun. bor. and river-port of England, locally situated in Castle ward, co. Northumberland, of which it is the cap. but it is also a county by itself, and is celebrated as the principal British port for the shipment of coal, on the N. bank of the Tyne, about 9½ m. from its mouth, 54 m. E. Carlisle, and 344 m. N. by W. London: lat. 54° 38' 30" N., long. 1° 37' 38" W. Area of parliamentary borough, which includes, with the town and county, the five townships of Byker, Heaton, Jesmond, Westgate, and Elswick, 9130 acres. Pop. in 1831, 53,613, but at present (1841) probably 65,000. The town, (which was formerly fortified, and still has a square Norman castle, with two ancient gates,) and a few remains of the old town wall, occupies the bottom and sides of its acclivity rising somewhat abruptly from the river; and though a few years back it was very irregularly laid out, and consisted, with but few exceptions, of narrow, circuitous, and ill-built lanes, it has been so improved within the last 30 years, (principally through the exertions of Mr. Grainger, a native of the town,) that it is now one of the handsomest towns of England. These improvements have cost nearly a million sterling; and include a great number of new streets and terraces, a handsome square, a market (the largest in England), a central exchange, theatre, dispensary, music-hall, lecture-room, two chapels, two assembly rooms, &c.

General description.—Grey-street, so called in honour of Earl Grey, the largest of Mr. Grainger's new streets, has now become the principal thoroughfare of the town: it ascends a gentle acclivity, and forms a continuation of Dean-street and the Side, which last reaches nearly to the river. Grey-street is nearly ½ m. in length, by 60 ft. in breadth, and is lined with substantial stone houses, which, in point

NEW-CASTLE-UPON-TYNE.

of architectural beauty, may vie with Regent-street, in London: the effect is heightened, also, by the curvilinear direction of the street. At the top of Grey-street, where it joins Blackett-street, one of Grainger's earlier and less ambitious works, stands the column dedicated to Earl Grey, 136 ft. high, and surmounted by a colossal statue of that nobleman, by Bailey. Grainger-street, another fine avenue, 200 yards in length, and 66 ft. wide, is on a similar design with Grey-street; and at their junction with Market-street is a large triangular space, on which has been erected the central exchange, a building having three uniform fronts, in the Corinthian style, with circular corners, faced with columns of the same order, and supporting light domes, after those of the temple of Vesta at Tivoli. The outside is formed into handsome shops and ware-rooms, enclosing the exchange, which has four large entrances, and is altogether lighted from above: the roof is ingeniously constructed, resting on the external walls, and inwardly on a circular entablature, supported by 14 Ionic columns, enclosing a platform, within which is the news-room, the outer space being open, and used for the promenades and rendezvous of the merchants. Adjoining the exchange is a handsome coffee-room. The establishment is supported by 1000 subscribers, and is managed by a committee; but the property belongs to Mr. Grainger. The proprietor offered it as a free gift to the corporation for a corn-market, but that body thought fit to decline it: the principal commercial business is transacted at the old exchange on the Sandhill. Clayton, Nelson, Nun, and Shakespeare-streets are the other principal thoroughfares in Mr. Grainger's splendid improvements; and besides these, Eldon Square, N. of Blackett-street, Westgate, Percy, and Northumberland-streets, deserve notice. The N. suburbs are open; and being removed from the bustle of town, are occupied by houses suited to the wealthier inhabitants, who have extended their residences into Jesmond township, forming a succession of terraces; and farther north is a group of new buildings, called Brandling Place. On Rye-hill, also, W. of Newcastle, terraces and villas are in course of formation; and the same is the case on the road to N. Shields: indeed, it may be said that the town is extending itself in every direction, with marked improvements in architectural taste. In Sandgate, however, and the lower parts of Newcastle, which extend along the banks of the Tyne for nearly 2 m., there are many narrow, inconvenient, and dirty streets, lined with manufactories, ware-houses, &c.; and comprising, also, many lanes and alleys, as filthy, close, and unwholesome, as the very worst of those of Liverpool and Manchester: indeed, "the mind cannot picture a state of greater destitution and misery than what appear in many of these houses; and in Sandgate, E. of the town, the condition of the people seems not much better." (*Rep. to British Association, 1838.*) The communication with the borough of Gateshead (which see), on the S. side of the river, is maintained by means of a handsome stone bridge, of nine elliptical arches; but it has been proposed to supersede this by another so lofty as to admit underneath the free passage of colliers and other masted vessels.

Corporation and Commercial Buildings, &c.—The guild-hall, which comprises also the exchange and the court belonging to the incorporated society of boatmen or coal-diggers (chartered in 1600), is a large building on Sandhill, much enlarged and altered at different periods, but of the most heterogeneous architecture, though at the same time pretty well adapted for business: the rooms contain some valuable portraits of public characters. On the quay, a fine open space faced with stone, and one of the largest in the kingdom, is the custom-house lately faced with stone from a design by Smirke. The Moot-hall, or assize court-house for the county of Northumberland, is within the precincts of the old Norman castle, and consists of a Grecian building, designed from the Temple of Theseus at Athens, and faced on two sides by Doric porticoes: the interior is well arranged for the business both of the civil and criminal courts. The town-jail, in Carlisle-square, is a strong and rather unattractive building, erected in 1827, on the panopticon principle, at a cost of £47,000: but it is reported, that both the site and construction are bad; solitary confinement is impossible, and a better prison might have been built at little more than half the expense. It comprises about 50 cells, and the same number of rooms: the average number of prisoners, not including debtors, amounts to about 80, and the daily cost of each prisoner may average about 1s. 2d. The Trinity house, in Trinity-chare, Quay-side, is an incorporated institution of great antiquity, intended not only to improve the navigation of the river by the appointment of licensed pilots, but to provide subsistence for poor and decayed brethren, their widows and children: it supports at present about 27 in-pensioners, at 28s. per month; 81 masters or their widows, out-pensioners, at £2 a year, and 27 seamen or their widows, at £6 a year. The Arcade in Pilgrim-street, one of Grainger's

erectations, though perhaps the least distinguished in point of taste, consists of an oblong pile of building, with a Corinthian frontage 94 ft. long and 75 ft. high. The N. of England joint-stock bank, and the savings' bank, occupy the front-rooms; and in other parts are the post, stamp, and excise offices, with auction-rooms, shops, and chambers for lawyers, engineers, &c. It was opened in 1838, and cost £46,000. The barracks on the N.W. side of the town, comprise an extensive range of building inclosed within a stone-wall, and accommodate nearly 1000 troops.

Markets.—The Corn-exchange, recently built, seems to be sufficiently capacious and convenient, as is the Fish market. A large butcher-market was built in 1808; but it has been removed; and the only great market now existing in Newcastle is that constructed by Grainger, the largest in England, 318 ft. in length, and comprising an area of 9050 sq. yds., exceeding that of St. John's in Liverpool by 2650 sq. yds.: it has 14 entrances, and is lined with 242 shops, besides stalls.

Literary, Scientific Institutions, &c.—The Literary and Philosophical Institution (founded in 1793, chiefly through the exertions of the Rev. W. Turner, a celebrated dissenting minister of Newcastle), occupies a building of Doric architecture in Westgate-street; and adjoining the library are the meeting-rooms and museums of the Natural History and Antiquarian Societies of Newcastle. A literary, scientific, and mechanical institution has an establishment in Blackett-street. A new Music-hall, beneath which is a large public lecture-room, has been built by Mr. Grainger, in Nelson-street. The old music-hall is now entered from Grey-street, and is occupied as an auction mart. The Newcastle Institution, for the promotion of the fine arts, in Black-street, a handsome building with a Corinthian front, comprises a saloon and octagon gallery well lighted from the top; the establishment is supported by a joint-stock company, and the annual exhibition is in June. Newcastle has six public libraries, and five weekly newspapers. A club, conducted in the modern style, called the Northern Counties' Club, has among its members the most distinguished nobility and gentry of that part of England. The principal places of amusement are the theatre, in Grey-street; the assembly-rooms, in Westgate-street; behind which is the racket-court, the riding-school in the public walk called the Forth, and the baths at the N. end of Northumberland-street. The theatre, built by Grainger in 1835, from designs by Mr. Green, an architect of Newcastle, instead of an older one that he had purchased and pulled down, has a front in Grey-street 120 feet in length, with a portico of six Corinthian columns, supporting a rich pediment; its interior shape is that of a flattened horse-shoe; and in point of size it is surpassed by few or no English theatres, except the Opera-house, and the patent theatres of the metropolis. Races are held in June on the Moor, about $\frac{1}{2}$ m. N. the town; and a good stand has been erected for the accommodation of visitors.

Churches, &c.—Newcastle has four parish churches, the oldest of which is St. Andrew's, a Norman building, at the top of Newgate-street. By far the finest, however, is St. Nicholas (now the parent church) a cruciform structure in the decorated English style, with a choir and nave 230 feet in length, and 74 feet in width, the choir only being enclosed for service; a painted E. window, and a magnificent altar-piece of the Last Supper, decorate the interior; and at the W. end is a tower in the early perpendicular style, surmounted by a crocketed steeple resting on four flying buttresses, the whole being 301 ft. in height. This steeple is said, by Mr. Rickman, "to be as fine a composition as any of its date, and the lightness and boldness of the upper part can hardly be exceeded." St. Giles's in Edinburgh, the college tower in Aberdeen, and St. Dunstan's in the E. of London, are imitations of this steeple, but they all fall far short of the original. A very good library, though chiefly of old or theological books, is attached to this church; the rules of admission are very liberal; and it is, in fact, open to the public free of charge. All Saints' is a modern Grecian building, with an elegant spire 202 feet in height; the interior is of an elliptical shape, and richly fitted up with solid mahogany. St. John's, in Westgate, is a cruciform church, built in the 13th century, having a square embattled tower at its W. end. The chapels of ease are, St. Anne's, on the New road; and another at Barras-bridge, called St. Thomas', in the early English style, and surmounted by a light tower 140 ft. high. An endowed charity school is attached to each of the churches, and a fifth to the chapel of St. Anne. The dissenters here are numerous, and most respectable; out of 30 places of worship, 24 belong to different classes of Methodists, and other dissenters, including Roman Catholics, members of the Church of Scotland, and the Society of Friends. Few of these, however, have any claim to notice from their architectural beauty. Within the borough are numerous Sunday-schools, furnishing religious instruc-

NEWCASTLE-UPON-TYNE.

tion to upwards of 5000 children of both sexes. Two public cemeteries have been formed of late years in the suburbs.

Schools and Benevolent Establishments.—The Royal grammar-school of Newcastle was founded by Thomas Howely, in 1525. Among its pupils have been the late lords Eldon, Stowell, and Collingwood, the poet Akenside, and several other distinguished characters: Dawes, author of the *Miscellaneous Critica*, was one of its masters. A Lancastrian school, known as the "Jubilee-school," founded in 1809, has a handsome school-house, with a large library, and is liberally supported by subscription. A second Jubilee-school was founded, to commemorate the 50th year of the prelacy of the late Dr. Shute Barrington: it is on the national plan, and supported chiefly by the clergy and lay members of the established church. There are several other endowed and subscription schools, including two infant-schools. According to a report made to the British Association, the number of children receiving instruction of some kind or other, in 1838, amounted to 8239, or to about 5½ per cent. of the population between the ages of 5 and 15. The principal benevolent institutions are, the infirmary, which has accommodation for 800 in-patients; a dispensary; two blind asylums; a small lying-in-hospital; asylum for poor keelmen; Jesus' hospital, for decayed freemen; mendicity society; domestic-guardian institution; and several ranges of almshouses; besides which, there are several minor charities and religious associations. Newcastle has also a large union-workhouse; the expense of maintaining the poor of the borough in 1839 amounted to £13,395.

Coal Trade.—The importance, if not existence, of Newcastle is owing to its convenient situation as a place of shipment for the coal wrought in its neighbourhood. The pits lie on each side the Tyne, from within 2 m. of its mouth to 16 or 18 m. up the river; and it appears from the evidence before the committee of the house of lords on the coal-trade, that, in 1839, there were 23 working collieries on the N. side, and 18 on the S. side of the Tyne. Several more have since been opened, and at present upwards of 50 pits are at work in the neighbourhood of Newcastle, some within ½ m. of the river, but others more than 8 m. distant. The coals are conveyed from the pits to the staiths in wooden or cast-iron wagons, brought along railways generally by means of successive inclined planes or locomotive engines. From such staiths (or coal-shipping wharves) as are above Newcastle-bridge, the coal is conveyed in keels (each capable of holding eight chalders or 22 tons) to Wallsend, Jarrow, or Shields, where it is delivered on board the ships; and the strength as well as activity of the Tyne keelmen, is proverbial in the N. of England. Within the last few years, however, the formation of the Bredding Junction and other railways, to S. Shields, has caused a diminution of the keel navigation. The coal shipped at Newcastle is sent not only to the port of London, but furnishes a large portion of the supply for the E. and S. counties of England, and a considerable quantity is exported, chiefly to France, Holland, and Denmark, as will be seen from the following returns of coal, culm, and clinders, shipped at the port of Newcastle in 1838 and 1839:—

	London.	Other Ports of the United Kingdom.	Colonies, or Foreign Ports.	Total.
	Tons.	Tons.	Tons.	Tons.
1838 . .	1,167,532	1,378,195	504,175	3,049,903
1839 . .	1,155,656	1,005,465	608,052	2,771,373

Owing to the circumstance of most of the vessels engaged in the coal trade with London and other British ports belonging to Newcastle, her registered tonnage is very nearly equal to that of Liverpool, having amounted, on the fifth of January, 1841, to 1330 ships, of the aggregate burden of 860,000 tons, manned by 13,500 seamen.

The principal exports of Newcastle, besides coal, comprise pig and sheet lead (from 6000 to 7000 tons of the former, and above 2000 tons of the latter) from the mines of Stanhope, glass, and other goods manufactured in the town, hams, grindstones from Gateshead-fell, &c. The gross customs' revenue of the port amounted, in 1840, to £442,951.

The salmon-fishery of the Tyne (once much celebrated) has nearly declined. About 90 steamboats belong to Newcastle, chiefly employed in towing ships up and down the river, or plying for passengers to and from Shields. Other and larger steam-packets ply between Newcastle and Stockton, Hull and Leith; and steamers of still greater size ply to and from London weekly, or even more frequently, during the summer months. The Tyne is navigable, from its mouth up to Newcastle bridge, for vessels of 250 tons, though in some intermediate places the depth, even in the middle of the stream, does not exceed 4 feet at ebb tide. Dredging machines, however, have been in use within the

last few years, and the navigation is said to have been much improved, though the bar at the mouth must always prove a great impediment to the entrance of large ships. It is high water at Newcastle about an hour later than at Tynemouth-bar, the average rise of spring-tides being 11 feet 7 inches, and that of neaps 7 feet 2 inches.

The principal manufactures are those of bottles and window glass, mostly carried on in the township of Byker, of mill-work, steam-engines, &c., and of leather and soap, of which last article 3,539,257 lbs. were made in 1839. Ship and boat building, rope and sail-making employ a considerable number of hands; besides which there are several malthouses, breweries, iron foundries, lead mills, and chemical works. The gross excise duty collected at Newcastle amounted, in 1839, to £318,331. It has a branch of the bank of England, with the north of England Joint-stock Banking Company, Newcastle-upon-Tyne Joint-stock Banking Company, Northumberland and the Durham District Banking Company, Newcastle Commercial Banking Company, a private bank, and a savings' bank. The lateral communication is maintained not only by the coal-pit railways already mentioned, but by the Carlisle and Newcastle railroad (61 m. in length, opened in 1839). The Brandling Junction railway connects the last-mentioned railway with the towns of S. Shields and Sunderland on the S. side of the Tyne; and on the N. side of which is the Newcastle and North Shields railway. It is probable, also, that Newcastle will soon be connected with the metropolis by the Great N. of England railway, which is already (1841) open as far as Darlington.

Newcastle was constituted a borough by William the Conqueror, and has received 36 charters from subsequent monarchs. It is divided by the Municipal Reform Act into seven wards, and is governed by a mayor and 13 other aldermen and 42 councillors, and has a commission of the peace under a recorder. Corporation revenue in 1838, £68,475, chiefly derived from ballast-dues, tolls, and rents. The assizes and Epiphany quarter-sessions for the county of Northumberland are held in the Moot-hall, besides which there is a mayor's court and sheriff's court for the recovery of debts to an unlimited amount, a court of conscience for debts under 40s., and a court of conservancy for the river. The town is well-paved, lighted, and cleaned by the corporation, and there is an efficient police. Newcastle has sent two members to the House of Commons since 27 Edward I., the election being vested, down to the Reform Act, in the free burgesses, both resident and non-resident. The electoral limits were enlarged by the Boundary Act, so as to include, with the old borough, the townships of Jesmond, Heston, Byker, Elswick and Westgate; and in 1839-40 it had 4390 reg. electors. It is one of the polling-places at elections for the county. Markets extremely well supplied, especially with corn, on Tuesday and Saturday: fairs for woollen cloth, hardware, leather, horses, and cattle, Aug. 12, and Oct. 29, each lasting nine days.

The wall of Adrian passes through the town, which is proved, by the numerous antiquities discovered in it, to have been the site of a Roman station; but there is no proof, though a strong presumption, that it was the *Pons Ælii*, mentioned in the "Notitia." Before the conquest it was called Monkchester, from its numerous monastic institutions (of which there are still rather extensive remains), and also from being the resort of pilgrims to the holy well of Jesus' mount (now corrupted into Jesmond). A fortress was built here by Robert, eldest son of William the Conqueror; and it received the name of *Newcastle*, probably, to distinguish it from some more ancient building. In 1569, the walls on the E. side were rebuilt, and in the reign of Edward III. the town was unsuccessfully attacked by David Bruce. Newcastle, at this early period, had become one of the largest commercial ports of the kingdom. It is curious, however, that the first authoritative mention of coal occurs in a charter by Henry III., authorising the burgesses of Newcastle to dig for that mineral. In 1821, the town had a considerable trade in coal, which soon after began to be imported into London; and in 1825 coals were exported to foreign countries. The town furnished, in 1346, 17 ships and 314 mariners for the siege of Calais, a greater force than any port N. of the Thames, except Yarmouth. It continued steadily to increase in commercial importance and mining industry till 1636, when it was visited by the plague, which carried off 5000 of its inhabitants. In the parliamentary war it warmly espoused the cause of Charles I. With respect to the progress of its coal-trade, it may be stated that in 1703 the masters of the Trinity house of Newcastle reported to the House of Commons that 600 ships, each carrying 80 Newcastle chalders, and navigated by 4500 men and boys, were required for the supply of other ports; and in 1772, 450 keels were employed on the Tyne, the quantity shipped amounting to 351,000 Newcastle chalders. The trade has thence been steadily increasing, and with greater rapidity since the introduction

NEWCASTLE-UNDER-LYNE.

of gas. Lately, however, there has been a slight diminution, owing to the opening of extensive pits in S. Durham, whence large supplies of coal are sent to the ports of Hartlepool and Middlesbrough. (*Parl. Papers; Penny Mag., art. Improvements of Newcastle; Scott's R. Com., &c.*)

NEWCASTLE-UNDER-LYNE, or LYME, a parl. and man. bor., market town, and par. of England, co. Stafford, N. div. hund. Prehill, 15 m. N.N.W. Stafford, and 135 m. N.W. London. Pop. of parl. bor., in 1831, 8192. The town, which is well paved and lighted, consists of two nearly parallel streets, entered from the London road, and crossed by several others of an inferior description. It is, on the whole, well built, though chiefly consisting of old houses; in the High-street is a large open market place. The guild-hall, a respectable-looking building, has good accommodation for the municipal and magisterial business. There are two churches, one of which, with the exception of its square tower, was rebuilt at the beginning of last century; the other, a district church, has recently been erected, the expense being defrayed chiefly by a grant of £2400, from the parliamentary commissioners, but partly, also, by private subscription. A handsome Roman Catholic chapel was built in 1834; and there are places of worship for Wesleyan and other Methodists, Independents, Baptists, and the Society of Friends. Six Sunday schools are attended by upwards of 1500 children; besides which, a national, Lancasterian, infant, and four subscription schools furnish daily instruction to about 800 boys and girls. Newcastle-under-Lyne has, also, a free grammar school, founded in 1603, and in trust of the corporation. The master's salary amounts to £63 a year; but though the sons of freemen may receive gratuitous classical instruction, the school is not much resorted to by the inhabitants of the town, and is seldom attended by more than 18 boys. (*Man. Corp. Rep.*) Almshouses for 90 aged women were established here in 1637, by the earl of Albemarle; and the town has several benevolent institutions, besides Bible, tract, and missionary associations, &c. A literary and scientific institution was founded in 1836, a public library has 9000 vols., and there is a small theatre, little patronized.

"The manufacture of hats is the chief business carried on at Newcastle, though there are three or four silk-mills and one cotton-mill at work." These mills, however, are not mentioned in the Report of the Factory Inspectors for 1836. "The town, a few years ago, was in some measure regarded as the capital of the pottery district, which includes several towns equal or even superior in population and importance to Newcastle itself. Lately, however, this connexion has been broken, and the town has suffered much in consequence. Trade has been very languid till within the last year or two, when it somewhat revived; and at present the labouring classes are in full employment." (*Man. Board. Rep.*)

Newcastle has more recently sustained a serious diminution of its traffic, from the removal of the great line of communication between London, Manchester, &c., to the Grand Junction railway, which passes upwards of 6 m. W. of the town. There is good reason, however, to believe that, on the completion of the Birmingham and Manchester, the Chester and Crewe railways, which are intended to run close by it, the losses occasioned by the opening of the former will be more than compensated. Iron-works and collieries are seated in the neighbourhood, and there are considerable tanneries and maltings, with a paper-mill employed in making tissue paper for the potteries. The town is connected by a branch canal with the Grand Trunk navigation, and has access by a similar line of communication to the coalfield of N. Stafford. A branch of the Manchester and Liverpool District banking company, and a private bank, are established here, and there is a savings' bank. Markets on Monday and Saturday: five yearly cattle markets.

Newcastle-under-Lyne, which received its first charter in the 19 Henry III., was divided by the Municipal Reform Act into two wards, and placed under a mayor and five other aldermen, with 18 councillors; it has also a commission of the peace, under a recorder. The borough has returned two members to the House of Commons from 37 Edward III., the right of voting down to the Reform Act being in the resident freemen (by gift, birth, and servitude). The Boundary Act added to the old borough a small extra-parochial part of the Penkull-towship: registered electors, in 1839-40, 1031. It is also one of the polling-places for the N. division of county of Stafford.

The distinguishing name of Newcastle (*under Lyne, or Lyne*) is of doubtful origin; but the best authorities refer it to the fact of its standing near the woodlands, which formed a *lime* (limb) or separating *line* between the county palatine of Chester, and the rest of England. Ashton-under-Lyne, Whitmore-under-Lyne, and Audlem, or Old Lyne, admit of similar explanations. It gives the title of duke to the Pelham-Clinton family. (*Parl. Rep., &c.*)

NEWFOUNDLAND.

NEW-DURHAM, p. t., Stafford co., N. H., 33 m. N.E. Concord, 514 W. Chartered in 1762. It contains Merry-meeting pond, which has an outlet in Merry-meeting bay of Winnipisogee lake. It has a Free-will Baptist church, one store, five grist-mills, four saw-mills; 14 schools, 325 scholars. Pop. 1032.

NEW-ENGLAND, the name commonly given to the N.E. portion of the United States, or to the territory including the states of Vermont, New-Hampshire, Massachusetts, Maine, Rhode Island, and Connecticut.

NEW-FANE, capital of Windham co., Vt., 12 m. N.W. Brattleboro', 100 m. S. Montpelier. Chartered in 1753 by New-Hampshire, charter returned in 1761. Chartered in 1772 by New-York. The land titles are held under this charter. Watered by West river and its tributaries, which afford water-power. The courthouse and jail are in Fayetteville village, in the E. part of the town. The church at the centre of the town is on elevated ground, from which some part of 50 towns may be seen, lying in Vermont, New-Hampshire and Massachusetts. It contains six stores, one fulling-mill, three grist-mills, 12 saw-mills, one oil-mill, two tanneries; 11 schools, 434 scholars. Pop. 1403.

NEW-FANE, p. t., Niagara co., N. Y., 379 m. W. by N. Albany, 416 W. Watered by Eighteen Mile creek. It contains five stores, one furnace, one flouring-mill, one grist-mill, five saw-mills; 13 schools, 549 scholars. Pop. 3372.

NEWFIELD, p. t., York co., Me., 80 m. S.W. by W. Augusta, 531 W. Incorporated in 1794. Watered by Little Ossipee river. It contains one furnace, four grist-mills, two saw-mills; 566 scholars in schools. Pop. 1351.

NEWFIELD, p. t., Tompkins co., N. Y., 283 m. W. Albany, 410 W. Drained by Cayuga creek, and the inlet of Cayuga lake. It contains two churches, a Methodist and Presbyterian, six stores, two fulling-mills, three grist-mills, 28 saw-mills, two tanneries; 27 schools, 1068 scholars. Pop. 3567.

NEWFOUND, lake, Grafton co., N. H., is 6 m. long, and 2½ broad, lies between Hebron and Bristol, and has its outlet into Penesseewassee river.

NEWFOUNDLAND, a large island of N. America, near the gulf of St. Lawrence, and off the E. coast of Labrador, from which it is separated by the narrow strait of Belleisle, between lat. 40° 30' and 51° 40' N., and long. 59° 15' and 50° 10' W. Greatest length from N. to S. 350 m.; average breadth, 130 m. Area, 57,000 sq. m. Fixed pop., in 1836, 70,957, exclusive of those who visit the different stations during the fishing season. It may be generally described as of a triangular form, but is broken and indented with broad and deep bays, harbours, coves, rivers, and lagoons, which, besides numerous capes and projecting points of land, form two peninsulas, on one of which, called Avalon, at the S.E. corner of the island, is the town and harbour of Avalon. Its surface is wild and rugged, and its aspect from the sea far from prepossessing. The interior, which, till within the last ten years, was almost unknown, is much broken with water; and lakes, marshes, and scrubby trees, form its general character. The only large and navigable streams are the Humber and that called the river of Exploits. Its prevalent geological constitution is of granite, on which are superimposed in some parts porphyry, quartz, gneiss, mica, and clay-slate, with secondary formations: coal and iron also occur in a few places. The E. half of the interior is generally a low, picturesque country, traversed by hills and lakes, the whole being diversified by trees of humble growth. The country westward is more rugged and mountainous, with little wood, except near the shore; but the mountains are not generally in ridges, each apparently having its own particular base. The highest part of the island is the N. peninsula, lying along the strait of Belleisle; near its centre are flats of considerable extent, swampy, unhealthy, and usually covered with peat or strong wiry grass. Spruce, birch and larch, are the principal forest trees. Pine seldom occurs, and never attains a large size; indeed, there is but little wood of any value, except for fuel and the building of small boats; so that it has scarcely timber enough for its own consumption, much less for exportation. Whortleberry bushes and *wirka capuca* (Indian tea) are the principal plants on high unwooded grounds. The best soil is along the rivers and at the heads of the bays fringing the island; but both the soil and climate generally are unfavourable to the raising of grain, though well adapted for pasturage and the cultivation of potatoes and other green crops. Vast herds of caribboe deer graze in the plains and woods of the interior, and their flesh constitutes nearly the whole food of the Mic-Mac Indians. Beavers are much scarcer than formerly; but foxes are still numerous along the rivers and seacoast. Among the other wild animals are wolves, and bears, hunted by the Indians from Labrador. Insects are numerous in swampy places, especially in hot weather. The best known and most celebrated of the animals belonging to Newfoundland are its dogs, famed for docility,

NEWFOUNDLAND.

obedience, and attachment to their masters. They are remarkably voracious, and are usually fed on salted fish; but like the aborigines of the country, they endure hunger for a very lengthened period. The true breed has become very scarce, and there are only a few specimens of it in England, the animal so called in this country, though equally sagacious, hardy, and fond of the water, being a breed crossed with the mastiff, or some other English dog. The E. and S. coasts, where the winds blow from the sea, are very humid; and during winter the cold is intense. The harbours on the Atlantic shore are not so long frozen over as those within the gulf of St. Lawrence, where the atmosphere is generally clear, and the climate not unlike that of Lower Canada. During the summer months the days and nights are commonly serene and pleasant; the temperature is very hot during summer, and in winter frequently falls as low as 30° below the freezing point. The island, however, is on the whole extremely healthy; and the inhabitants often attain a great age, attended with more than ordinary bodily as well as mental vigour. Agriculture is progressively increasing; but very few give it their exclusive attention, the population being principally employed in the fisheries. Almost every family, however, has a small quantity of land in cultivation, though tillage be very imperfectly understood.

Newfoundland has long been celebrated for its fisheries, on which, indeed, the inhabitants principally depend. The great bank, on the E. side of the island, is in some places about 300 m. in breadth, and 600 m. in length, the soundings being from 25 to 95 fathoms. There is also an outer bank, lying between lat. 44° 10' and 47° 30' N., and long. 44° 15' and 45° 35' W.; and a continuation of banks extends southward to Nova Scotia. Fog prevails almost without interruption on these banks, occasioned by the meeting of the waters brought thither by the gulf-stream from the tropics, with the waters carried by the influence of the winds from the polar regions. A counter-current from the N. sweeps, also, along the shore of Labrador, bringing with it large icebergs, and rendering navigation dangerous, especially during foggy weather. The best fishing-grounds on the great bank are between the 43d and 46th parallels; and the principal English settlement, besides St. John's, the capital, are Conception bay, Carbonier, Grace harbour, Trinity harbour, and Placentia, all on the E. side of the island.

The islands of St. Pierre and Mequelon, near the mouth of Fortune bay, on the S. coast, were ceded to France in 1814: the former has a harbour and town of its own name, and is the residence of a governor. The cod-fishery, which commenced a few years after the discovery of the island, attained so high an importance during the late war with France, that the exports of cod and cod-oil were valued, in 1814, at £2,604,000; but the English fishery has since rapidly declined, so that the average annual value of the fish exported during the years 1837-38-39, amounted only to £507,964. The number of ships employed in the fisheries cannot be ascertained; but, in 1839, there were 6159 boats. The cod-fishery commences early in June; and as the English have for some years abandoned the bank-shoals to the Americans and French, it is principally carried on close to the shore, in small boats, manned by two or four persons. Every fisherman is provided with two lines, each with two hooks, baited with herrings, mackerel, and fish-entrails. In some cases, *jiggers*, or artificial fish, are used, provided with two strong hooks, which the cod swallows with the bait. *Seines* are also used, by which multitudes of cod are hauled ashore in covers on the coast of Labrador. So abundant are the fish occasionally, that a couple of cod are hooked on each line before it reaches the bottom; and while one line is running out, the fisherman has only to turn round and pull in the other, with a fish on each hook. As soon as the boat is loaded, which, under favourable circumstances, will be in three or four hours, they proceed to the stage on the shore, where the process of cutting up, salting, and drying takes place; and after having delivered their cargo, return immediately to sea. The cod-fishery, however, is truly precarious. Sometimes the fish is not equally abundant on all parts of the coast, and the fishermen are compelled to go far from the stations, and in some cases, to split and salt the cod in the boat. The incessant labour, also, which attends the curing leaves the shoremen scarcely time during the season to eat their meals, and allows them little more than four hours' sleep. (*M. Greville's Brit. America*, i., 200-207.) The seal-fishery is conducted in vessels varying from 80 to 120 tons, with crews of 30 or 30 men. The season commences early in April: it is principally conducted close to the shore of Labrador, and has become important only within the last 30 years. The cod fishery on the W. coast has been given up to the French; but there is still a small whale-fishery conducted in boats on the S. side of the island. There is likewise a pretty ex-

tensive salmon-fishery, the value of which, in 1832, amounted to £11,692.

The trade of Newfoundland consists in the exportation of the products of its fisheries (valued, in 1839, at £244,800), in exchange for manufactured goods, colonial produce, com, ship-biscuits and a variety of articles for the consumption of the inhabitants. The following table exhibits the number and tonnage of ships that arrived at, and departed from, Newfoundland in 1839:

Countries.	Inwards.		Outwards.	
	Ships.	Tons.	Ships.	Tons.
Great Britain . . .	183	19,360	136	15,248
British Colonies . .	255	8,084	419	48,217
United States . . .	4	5,307	39	1,682
Foreign	4	39,000	229	32,390
Total	451	91,851	824	97,535

The government of Newfoundland was long administered by naval commanders appointed to cruise on the fishing station, who returned to Britain in winter. Within the last century, however, it has been deemed more eligible to have a resident governor. In 1832, in consequence of a petition from the inhabitants, a representative government was granted, the election being by almost universal suffrage. This system has hitherto worked very unbecomingly, the popular body having been in a state of violent collision, both with the executive and the commercial interests. Great complaints have also been made of the influence of the Roman Catholic clergy in the elections; and the principal merchants have made representations to the government at home, to the effect that trade is injured, and property rendered insecure, by the proceedings of the assembly. The assembly comprises 15 members; and attached to it is a legislative and executive council. The laws are in English, and administered by circuit courts; but the police is neither numerous nor effective. The militia of the island consisted, in 1838, of 6430 men, including 338 commissioned officers. Five schools are supported by the government; and the Newfoundland School Society has established 15 others: but education is greatly neglected, and in 1839 there were not more than 3000 children receiving any kind of instruction. It is believed, however, that there will be some improvement in this respect, when the Education Act, passed in 1836, has come into full operation. There is no church establishment, all sects having equal privileges; but a titular Roman Catholic bishop resides at St. John's, and a vicar-general at Grace harbour. The Roman Catholics are the prevailing body; but there are also Episcopalians, Presbyterians, and Wesleyan Methodists.

The inhabitants are honest and industrious, but often addicted to drunkenness, and superstitious to a degree almost beyond belief. Capital offences are exceedingly rare, and petty thefts are scarcely known. The people, consisting chiefly of Irish, Scotch, and the inhabitants of Jersey and Guernsey, or their descendants (the Indian aborigines having been long all but extinct), are employed either wholly or occasionally in the fisheries. The pasture of cattle and sheep, and the cultivation of small spots of land, are likewise partial sources of occupation. The women, besides assisting the men in catching and curing the fish, are engaged either in rural occupations, or spinning and knitting worsted stockings, mittens, and socks. In winter much time is occupied in bringing home fuel, building boats, and making or repairing the fishing implements. Marriages and christenings are commonly celebrated at the close of the fishing season, or in winter, and are always times of great festivity and merriment. St. Patrick's and Shrove-day's days are celebrated with riotous mirth by the Irish; and Christmas is a universal holiday, marked by the observance of many customs that are now exploded in England. Celibacy is rare, and families of 10 or 12 children are very common. The fishermen's houses are one story high, built of wood, and covered with boards and shingles, imported from Nova Scotia, New-Brunswick, &c. Their usual diet consists of ship-biscuit, potatoes and fish, salt pork and bobo tea, spruce beer being the common beverage for those living, as most of the people do, on fish and salt meat. Spirits are mixed with the beer, to make the mixture called *Calogary*, and rum is so cheap, that the labouring classes are apt to acquire habits of intoxication, which, however, is somewhat obviated by the practice of *lagging*, somewhat similar to taking the temperance-pledge, either for one or more years, and occasionally for life.

Newfoundland was probably first discovered by the Norwegians, at the beginning of the 11th century. But, if so, it was subsequently forgotten, till John Cabot visited it in the summer of 1497, and gave it its present name. As early as the year 1500 an extensive fishery was carried on, by the Portuguese and French, on the neighbouring banks; but, though Sir Walter Raleigh, and others, attempted to form a colony here, no successful settlement was made, till Sir

NEW-HAMPTON.

G. Calvert, afterward Lord Baltimore, in 1633, established himself on the S.E. part of the island, called Avalon, and appointed his son governor. Ten years afterwards a colony was sent over from Ireland, and in 1654 a few English settlers came over, under the authority of a parliamentary grant. The French, who, very early in the 17th century, had formed a station at Piacenta, were for many years a constant source of annoyance to the English; and though, by the peace of Utrecht, the possession of the island was confirmed to the English, the subject of fishery rights is still a *vacante questio* between the two nations. With respect to the fishery generally, it was chiefly carried on during the first half of the last century, by the English, Anglo-Americans, and French; but the capture of C. Breton, and other possessions in America, gave a severe blow to the fishery of the latter. The American war divided the British fishery: that portion of it that had previously been carried on from New-England being thereafter merged in that of the United States; but still the English contrived to preserve the largest share. The French were excluded from the fishery during the French war, in consequence of which the English had almost a monopoly of the business; but since the peace it has been carried on chiefly by the French and Americans, that of the English having declined fully three fourths since the peace. (See JOHN'S, ST., and ST. PIERRE.) (*M'Gregor's Brit. America*, i., 123-216; *Murray's Brit. America*, ii., 275-286; *Comm. Dict.*: *Peri. Papers* &c.)

NEW-HAMPTON, p. t., Belknap co., N. H., 29 m. N. W. Concord, 510 W. Incorporated in 1777. Bounded W. by Pemigewasset r. It contains four stores, two fulling-mills, two woollen factories, five cotton factories with 22,699 spindles, three grist-mills, five saw-mills, four tanneries; one academy, 363 students; 16 schools, 717 scholars. Pop. 1809.

NEW-HANOVER, county, N. C. Situated in the S.E. part of the state, and contains 995 sq. m. Drained by the N.E. branch of Cape Fear r. It contained in 1840, 11,605 neat cattle, 4789 sheep, 34,559 swine; and produced 460 bushels of wheat, 200,423 of Indian corn, 114,014 of potatoes, 1,476,000 pounds of rice, and 28,506 of cotton. It had two commercial and 11 commission houses in foreign trade, 58 stores, 49 grist-mills, 22 saw-mills, one oil-mill, one tannery, two distilleries, two printing-offices, two weekly newspapers; six academies, 216 students; 10 schools, 253 scholars. Pop.: whites, 6371; slaves, 6376; free coloured, 565; total, 13,312. Capital, Wilmington.

NEW-HARTFORD, p. t., Litchfield co., Ct., 30 m. W. by N. Hartford, 344 W. Watered by Farmington r. It contains three churches, two Congregational and a Baptist, six stores, two furnaces, four fulling-mills, one woollen factory, three grist-mills, seven saw-mills, one paper-mill; two academies, 61 students; 11 schools, 494 scholars. Pop. 1703.

NEW-HARTFORD, p. t., Oneida co., N. Y., 4 m. W. Utica, 95 W. N. W. Albany, 394 W. Drained by Badaquada creek, which affords good water-power. It contains four churches, a Presbyterian, Methodist, Episcopal, and Universalist, six stores, one fulling-mill, one woollen factory, five cotton factories, with 14,164 spindles, three grist-mills, seven saw-mills, one paper-mill; 18 schools, 960 scholars. Pop. 3619.

NEW-HAVEN, county, Ct. Situated in the S. part of the state, and contains 540 sq. m. Bounded S. by Long Island sound, S. W. and W. by Housatonic r. Watered by Naugatuck, Quinnipiac, Pomperaug, West, Mill, and Menunkatuck rivers. It contained in 1840, 31,627 neat cattle, 41,392 sheep, 17,234 swine; and produced 7032 bushels of wheat, 122,591 of rye, 234,548 of Indian corn, 30,081 of buckwheat, 2731 of barley, 167,640 of oats, 481,941 of potatoes, 1361 pounds of sugar. It had two commercial and six commission houses in foreign trade, with a capital of \$132,900, 342 retail stores, capital \$1,293,745, 14 lumber yards, capital \$149,000, three rope-walks, 30 fulling-mills, 14 woollen factories, four cotton factories with 3355 spindles, two flouring-mills, 49 grist-mills, 93 saw-mills, three paper-mills, 27 tanneries, 29 distilleries, one pottery, nine printing-offices, five binderies, one daily five weekly and one semi-weekly newspapers, and four periodicals; one college 561 students; 33 academies, 1030 students; 249 schools, 9339 scholars. Pop. 43,619. Capital New-Haven. The above statistics as in all cases, include the statistics of all places within the county, both cities and townships.

NEW-HAVEN, city and seaport, capital of New-Haven county, and semi-capital of the state of Connecticut, is beautifully situated round the head of a bay which sets up 4 m. from Long-Island sound, in 41° 18' 30" N. lat. and 72° 56' 45" W. long. from Greenwich, and 69° 4' 15" E. long. from Washington. It is 36 m. S. by W. Hartford, 32 m. W. New-London, 76 m. N.E. New-York, 134 m. W. S. W. Boston, 306 W. The population in 1810, was 3772; in 1820, 7147; in 1830, 10,136; in 1840, 12,900. Of these 180 were employed in agriculture, 474 in commerce, 1653 in manufactures and trades, 255 in navigating the ocean, 51 do. rivers and canals, 345 in the learned professions.

NEW-HAVEN.

It lies on a plain, with a gentle inclination toward the water, skirted in other directions by an amphitheatre of hills, two of which present, at their termination, bold bluffs of trap rocks, which rise almost perpendicularly to the height of from 330 to 370 feet, which constitute an imposing feature of the scenery. From the tops of these elevations is presented a beautiful view of the city, of Long Island sound, here about 20 m. wide, and of the surrounding country. The harbour of New-Haven is entered by three rivers, Quinnipiac river on the E., Mill river on the N., and West river on the W. The two latter are mere mill streams. Quinnipiac river rises in Farmington, and has a winding course of 35 m.; and towards its mouth furnishes an abundance of fine oysters and clams, the trade in which has principally built up the village of Fairhaven. The city extends about 3 m. from E. to W., and 2 m. from N. to S. It is laid out with great regularity, and consists of two parts; the old town, and the new township. The old town was laid out in the form of a square, half a mile on a side, divided into nine smaller squares, each 53 rods on a side, separated by streets 4 rods wide. These squares have been divided into four parts, by intersecting streets. The central square, however, was reserved for public purposes, and is only divided by Temple street, running northwardly and southwardly through it, and it constitutes one of the most beautiful public grounds in any city in the United States. The eastern part of this square is unoccupied by buildings, but shaded by lofty elms and other trees. Fronting on Temple street, and on its W. side, are three of the finest churches in the country, of various architecture. The Episcopal, or S. church in the row, is a beautiful Gothic structure of stone, and a fine sample of this style of building. North of it is the first Congregational church, built of brick, with a fine Doric portico, with carved oxen's skulls as an ornament of the cornice, and a lofty steeple. Back of the old church which stood on this spot, was a burying ground, containing the monuments of many venerable men, from the time of the first settlement of the place. For a long time the inhabitants refused to have it obliterated, though in the progress of events, it had become a mar to the beauty of the place; but at length the principal monuments were removed to the new burying ground in the outer part of the city, and the ground was levelled and smoothed over. North of the first, is the second Congregational church, a beautiful edifice, built of brick, with a handsome cupola. Near the centre of the western half of the public square is the statehouse, a large and splendid edifice of the Grecian Doric order of architecture, after the model of the Parthenon at Athens. On the N.W. corner of the public square, is the Methodist church, a plain building of brick. On the W. side of the public square, and facing to the E., is the fine row of buildings belonging to Yale college, remarkably symmetrical in their arrangement, with a pleasant yard in front, ornamented by trees. The public square affords a fine prospect, and an open airy situation for the college. The houses of the city are generally built of wood, two stories high, and neatly painted white, surrounded by court yards and gardens, ornamented by shrubbery and fruit trees. As a place for an elegant and quiet residence, it is unsurpassed. Many of the houses recently built are of brick, and generally constructed with elegance and taste. The new township, E. of the old, is regularly laid out, and finely built, and has a handsome public ground, containing 5 acres, called Wooster-square. At the N.W. corner of the old town is the public cemetery, so beautifully laid out and handsomely kept, that a foreign traveller has denominated it the Père-la-Chaise of the United States. It contains 17 acres of ground, intersected by avenues and alleys, at right angles with each other, and divided into family lots, 32 feet long, and 18 ft. broad. The avenues and alleys are bordered by railings painted white, with the names of the owners of the lots inscribed on them. The cemetery contains many elegant monuments, is beautifully ornamented with trees and shrubbery, and deservedly attracts much public attention. The city contains 6 sq. m.; the whole township contains 8; and the small village called Westville, at the foot of West Rock on the W., and about half the village of Fairhaven on the E., are within the town, but not within the limits of the city. The harbour of New-Haven is safe, but shallow, and gradually filling up with mud. At the time when the first settlers arrived in this town, the northwestern part of the harbour was sufficiently deep for all the purposes of commerce. Ships were built and launched, where are now meadows, gardens, and buildings. In 1765, Long wharf only extended 30 rods from the shore, and yet there was a greater depth of water at its termination than there is now, when it has been extended to 3943 feet in length. There is another wharf which has a basin, in which, by means of flood-gates, the water is always kept at the elevation of high tide. The maritime commerce is extensive; its foreign and coasting trade being both considerable. The

NEW-HAVEN.

sealing business, connected with the China trade, formerly brought considerable wealth into the city. At present its foreign trade is chiefly with the West Indies. The registered and licensed and enrolled tonnage of the port in 1840, was 11,500 tons. A line of three steamboats connects it daily with New-York, and also several lines of packets. The Farmington Canal connects it with Northampton, Mass., and with Connecticut river near it; and a railroad connects it with Hartford. The town contains 20 churches, nine Congregational, three Methodist, three Episcopal, one Baptist, one Roman Catholic, two coloured Methodist, one coloured Congregational. There is also a custom-house, a jail, an almshouse, a museum, three banks and a savings' institution, a young men's institute, and an institution for the support of popular lectures, with a well selected library. The state general hospital was completed in July 1833, and consists of a centre building with two wings; its whole length is 118 feet, and its breadth 48 feet, and two stories high above the basement. It is built of stone, and stuccoed. It stands about half a mile S.W. from the centre of the city. But the most important public institution in the city is Yale college. This institution was founded at Killingworth in 1701, removed to Saybrook in 1707, and permanently established in New-Haven in 1717. There are four college halls, 104 by 40 feet, four stories high, each containing 33 rooms for students. North of these is another hall, devoted to the use of the theological students. Between the colleges are three buildings with the ends in front, finished with cupolas or steeples. These are denominated the chapel, the lyceum, and the athenaeum. The chapel is devoted to religious worship and ordinary exhibitions; the lyceum contains the library and the recitation rooms; the athenaeum containing rooms for academic purposes. These college buildings, which are all of brick, stand in a uniform row, in the whole 600 feet long, including narrow passage ways, with a spacious yard in front, ornamented with elm and maple trees. There are college buildings of more elegant architecture, but none in the United States which present so imposing a front. In the rear of these, is another range of buildings, consisting of a chemical laboratory, the commons' hall, in the second story of which is a spacious apartment devoted to the most splendid mineralogical cabinet in the United States, consisting of over 16,000 specimens, many of them rare; and a stone building stuccoed, containing a splendid collection of paintings by Col. Trumbull and others. A short distance from these are the buildings devoted to the law and medical departments, the latter of which has a library and anatomical museum. Yale college, with limited funds, has more students than any other college in the United States; in every part of which, its graduates may be found, filling the most important stations. It contained in 1843, 534 students, of whom 376 were undergraduates, 76 in the theological, 52 in the medical, and 30 in the law departments. It has a president and 31 professors, 5189 alumni, of whom 1550 have been ministers of the gospel, and 33,000 vols. in its libraries. The commencement is on the third Thursday in August. The library contains many old and rare, as well as many splendid modern works. A fine new stone building, of handsome architecture, has recently been erected, to contain its libraries.

New-Haven has many subordinate seminaries, both male and female, of high reputation; among which are 11 select schools for males, 10 female seminaries, one Lancasterian school for boys and one for girls, besides several district and common schools.

According to the census of 1840, there were six commercial, and two commission houses in foreign trade, with a capital of \$132,000; 304 retail stores, with a capital of \$867,600; 10 lumber-yards, with a capital of \$126,000; 19 persons were employed in internal transportation, and with 17 butchers, packers, &c., employed a capital of \$46,600; 56 persons produced machinery to the amount of \$50,000; 66 persons produced hardware and cutlery to the amount of \$31,500; eight persons manufactured the precious metals to the amount of \$7000; 52 persons manufactured various metals to the amount of \$63,000; 10 persons manufactured granite and marble to the amount of \$11,500; four persons produced brick and lime to the amount of \$3,300; one woollen factory employed 60 persons, produced articles to the amount of \$70,000, with a capital of \$20,000; 13 persons produced hats and caps to the amount of \$9500, with a capital of \$3700; five tanneries employed 632 persons, and produced 6000 sides of sole leather, and 9000 sides of upper leather, with a capital of \$50,000; 37 other manufacturers of leather, as saddleries, &c., produced to the amount of \$283,300, with a capital of \$101,700; 11 persons produced 110,000 pounds of soap, and 144,000 pounds of tallow candles, with a capital of \$18,000; four persons produced turpentine and varnish to the amount of \$19,000, with a capital of \$34,000; one pottery employed three persons, producing \$3500 with a capital of \$3000; seven persons pro-

NEW-HAMPSHIRE.

duced confectionary to the amount of \$12,800, with a capital of \$7300; one rope-walk employed eight persons, producing cordage to the amount of \$4000, with a capital of \$2000; 311 persons produced carriages and wagons to the amount of \$234,031, with a capital of \$101,300; one grist-mill, employing two persons, produced to the amount of \$2500, with a capital of \$3000; vessels were built to the amount of \$30,000; 92 persons manufactured furniture to the amount of \$63,300, with a capital of \$39,900, nine printing-offices, five binderies, one daily, two weekly, and one semi-weekly, newspapers, and four periodicals, employed 89 persons, and cost \$119,000. The total capital employed in manufactures was \$291,300. There were one college with 561 students; 13 academies with 385 students; 27 schools, 1119 scholars. The above statistics are those of the city, exclusive of the township.

New-Haven was settled in 1633 by a colony under Theophilus Eaton, the first governor, and John Davenport, the first minister, whom Cotton Mather denominated the "Moses and Aaron of the settlement." Its original Indian name was Quinnipiac; and in 1640, it was decreed that the plantation at Quinnipiac should be called New-Haven. In 1639, it was ordered that a meeting-house be erected, of 50 ft. sq. In 1643, every planter was required to give in his name, the number of his family, and the amount of his estate; when there were found to be 419 persons in the colony, with a total estate of £23,126. In 1647, a ship of 150 tons was despatched for England, which was lost. The judges of Charles I., Goffe and Whalley, arrived at New-Haven, March 7th, 1661, and they were secreted, part of the time in a cave on West Rock, where the "judges' cave" is still shown. In 1672, they were joined by John Dixwell, another of the judges. In the old burying ground at New-Haven, there were stones supposed to mark their graves, inscribed with the initials of their names, and the date of their deaths, the last in 1688-9. In 1665, the colony of New-Haven was united by a royal charter to the colony of Connecticut. In 1667, Rev. Mr. Davenport removed to Boston, on a call from a church there, where he died, March 5th, 1670, in the 73rd year of his age. In 1696, Rev. James Pierpont was settled as minister of New-Haven, and continued there until his death in 1714. In 1718, Yale college was removed from Saybrook to New-Haven, which produced great excitement. It was named in honor of Elihu Yale, Esq., of London, who bequeathed to it £200 in money, and an equal amount in goods, the latter of which were never received. About this time the first college building was erected, 170 feet long, 23 feet wide, and three stories high, containing near 50 studies, besides the hall, library, and kitchen, and cost about £1000. In 1753, the building of the brick church, where the first Congregational church now stands, was commenced, which was completed before 1757. Difficulties having previously occurred in the church, in 1759 the White-Haven society was separated from the old church. This now constitutes the second Congregational church. About 1750, the Episcopal church was founded. On July 5th, 1779, New-Haven was entered by the British under Gov. Tryon, who in the short time in which they held the town, committed many outrages. They were at length driven off by the prompt gathering of the militia. The loss of property was estimated by commissioners, appointed by the general assembly for the purpose, at \$4,566, for which the sufferers were compensated by lands in the western part of the Connecticut Western Reserve, in the N. part of the state of Ohio.

NEW-HAVEN, p. t., Addison co., Vt., 60 m. W. Montpelier, 499 W. Chartered in 1761, first settled in 1760. Bounded W. by Otter creek. Watered by Little Otter creek and New-Haven rivers, which afford water-power. It contains a Congregational church, three stores, two fulling-mills, one woollen factory, two grist-mills, two saw-mills, two tanneries, one pottery; 12 schools, 630 scholars. Pop. 1503.

NEW-HAVEN, p. t., Oswego co., N. Y., 10 m. E. Oswego, 161 m. W.N.W. Albany, 335 W. Bounded N. by Lake Ontario. Drained by Cuthbert river flowing into it. It contains one store, two grist-mills, three saw-mills; 10 schools, 605 scholars. Pop. 1738.

NEW-HAVEN, p. t., Huron co., O., 82 m. N. Columbus, 394 W. It has six stores; six schools, 282 scholars. Pop. 1379.

NEW-HAMPSHIRE, one of the Northern United States is bounded N. by Lower Canada; E. by Maine; S.E. by the Atlantic, on which it has a sea coast of 18 miles; S. by Massachusetts; and W. by Vermont, from which it is separated by the western bank of Connecticut river. It is between 43° 41' and 45° 11' N. lat., and between 70° 46' and 72° 28' W. long. It is 168 miles long, and from 19 to 30 broad, containing 9491 square miles, or 6,074,240 acres, of which 110,000 acres are computed to be water. The population in 1790, was 141,855; in 1800, 183,858; in 1810, 214,469; in 1820, 244,161; in 1830, 269,338; in 1840, 294,574. Of these, 139,004 were white males; 143,032 were white females; 968 were coloured males; 290 were coloured females. Employed

NEW-HAMPSHIRE.

In agriculture, 77,949; in commerce, 1379; in manufactures and trades, 17,896; in navigating the ocean 455; do. lakes, rivers and canals, 198; in the learned professions, 1640.

The state is divided into 10 counties, which, with their population in 1840, were as follows:

Counties.	Pop. 1840.	Counties.	Pop. 1840.
Rockingham,	45,771	Stratford,	23,146
Merrimack,	36,283	Sullivan,	17,988
Billborough,	42,984	Carroll,	19,973
Cheshire,	26,430	Grafton,	4281
Sullivan,	20,340	Coe,	9849
		Total,	284,574

Concord, on Merrimack river, is the seat of government.

The shore of the sea coast in the S.E. part, is, in most places, a sandy beach, bordered with salt marshes, penetrated by creeks and coves, furnishing harbours for small craft, and affording but one harbour for ships, which is that of Portsmouth, at the mouth of Piscataqua r. This harbour is one of the best in the United States. For the distance of 20 or 30 miles back from the sea, the country is level, occasionally diversified with hills and valleys. Beyond this the hills increase in number, and in many parts of the state rise into lofty mountains, particularly in the N., where are situated the White mountains, which are among the highest in the United States, E. of the Rocky mountains; and others along the heights between Merrimack and Connecticut rivers. In different parts are some picturesque lakes, and fine waterfalls; and the beauty and grandeur of the scenery presented by its mountains and lakes has caused it to be denominated "the Switzerland of America." The principal mountain peaks are Grand Monadnock, toward the S.W. part of the state, 3254 ft. above the level of the sea; Sunapee mountain, near Sunapee lake, Keenawee mountain between Sutton and Salisbury, 2461 feet; Carr's mountain in Ellsworth; Moosehillcock in Benton, 4630 feet high; and mount Washington, the highest peak of the White mountains, 4498 feet high. These mountains, though not a continuous range, are sometimes regarded as a continuation of the Allegheny range. The Notch in the White mountains is justly regarded as a curiosity, being in some places not more than 82 feet wide, with lofty precipices on both sides, affording some of the wildest and grandest scenery in nature. A road passes through this Notch, being the only place in which the mountain can be passed. By this road, the produce of the N. part of New-Hampshire, and the N.E. part of Vermont, finds a market at Portland, Me.; and so important is this communication regarded by Maine, that its legislature has at sometimes made grants for its improvement.

The soil of New-Hampshire is generally fertile, particularly on the margins of the rivers, and especially on Connecticut r. And the hills have a moist and warm soil, particularly adapted to grazing. Indian corn, wheat, rye, oats, barley and flax are produced, and pork, beef, mutton, poultry, butter and cheese are annually exported. Apples, pears, plums, and cherries are produced in abundance. Among the natural growth are oak, elm, birch, maple, pine, and hemlock. Sugar is extensively made from the hard maple tree.

According to the census of 1840, there were 43,890 horses or mules, 275,562 neat cattle, 617,390 sheep, 121,671 swine. Poultry was raised to the value of \$107,092. There were produced 623,124 bushels of wheat, 308,145 of rye, 105,103 of buckwheat, 1,162,573 of Indian corn, 121,690 of barley, 1,304,114 of oats, 6,306,606 of potatoes, 1,900, 517 pounds of wool, 243,495 of hops, 1,182,368 of sugar, 496,107 tons of hay. The produce of the dairy was \$1,638,543, of the orchard, \$229,973, of lumber, \$433,917.

The climate is subject to great extremes of heat and cold, the thermometer ranging from 95° above to 15° below zero of Fahrenheit. Greater extremes occur very rarely. The air is salubrious, as is proved by the longevity of the inhabitants. In 90 years since 1732, 75 persons have died over 100 years of age, one of whom was 116, and another 130. In the month of November, the streams are generally frozen over; and snow commonly lies until April, and in the mountainous parts, until May.

Connecticut, the largest river, is made boatable to the fifteen mile falls in Bath, 250 m. above Hartford, Ct.; Merrimack river is boatable by means of locks and short canals to Concord. The Saco, Androscoggin and Piscataqua rise and run partly in this state. The other rivers are Upper and Lower Ammonoosuc, Sugar and Ashuelot, which are tributaries of the Connecticut, and Contoocook and Nashua which flow into the Merrimack. Among the beautiful lakes are Winnepesaukee, in the centre of the state, 93 m. long, and from 2 to 10 broad, Umbagog, which lies partly in Maine, Ossipee, Sunapee, Squam, and Newfound lakes.

Portsmouth is the largest and most commercial town in the state. Its harbour is unsurpassed in the world, being safe, easily defended, and having 40 feet of water at low tide. The other principal places are Dover, Concord, Na-

shua, Keene, Exeter, Manchester, Peterborough, Walpole, Claremont, Gilmanton, Meredith, Hanover, and Haverhill.

The recent geological survey of this state by Dr. Charles F. Jackson, has resulted in the discovery of extensive copper and iron mines. A copper mine in Coos co. yields an ore of 33 per cent. of pure copper, which can be transported to the Boston market for one cent per pound.

The exports for the year ending Sept. 30th, 1841, were \$10,384; and the imports were \$73,701. The tonnage entered was 11,129, and cleared was 3605. There were in 1840, 18 commercial and 33 commission houses in foreign trade, with a capital of \$1,330,600; 1075 retail dry goods and other stores, with a capital of \$3,662,422; 117 persons employed in internal transportation, who, with 28 butchers, packers &c., employed a capital of \$54,120; 636 persons employed in the lumber trade, with a capital of \$29,000; 399 persons employed in the fisheries, with a capital of \$59,680.

Home-made or family goods were manufactured to the amount of \$538,303. There were 66 woollen manufactories, and 153 fulling-mills, employing 8933 persons, producing goods to the amount of \$796,784, with a capital of \$740,345; 38 cotton factories, with 195,173 spindles, employed 6991 persons, producing goods to the amount of \$4,142,304, with a capital of \$5,523,200; 15 furnaces produced 1320 tons of cast iron, and two forges produced 125 tons of bar iron, together employing 191 persons, and a capital of \$963,300; one smelting house, employing two persons, produced 1000 pounds of lead; 13 paper-mills produced articles to the amount of \$150,600, and other manufactories of paper to the amount of \$1500, the whole employing 11 persons, and a capital of \$104,300; hats and caps were manufactured, to the amount of \$190,326, and straw bonnets to the amount of \$6379, together employing 2048 persons, and a capital of \$48,852; 17 persons manufactured tobacco to the amount of \$10,500, with a capital of \$2100; 251 tanneries employed 776 persons, and a capital of \$386,402; 2131 other manufactories of leather, as saddles, boots and shoes, &c., produced articles to the amount of \$712,151, with a capital of \$230,649; five distilleries produced 51,244 gallons of distilled spirits, and one brewery 3090 gallons of beer, together employing seven persons, and a capital of \$13,998; three glass houses employed 85 persons, producing to the amount of \$47,000 with a capital of \$44,000; 14 potteries employed 29 persons, producing \$19,100, with a capital of \$6840; 20 persons manufactured 10,900 pounds of soap, 38,845 pounds of tallow candles, and 50,000 pounds of spermaceti or wax candles, with a capital of \$13,550; 191 persons produced machinery to the value of \$106,814; 47 persons produced musical instruments to the amount of \$36,750, with a capital of \$14,050; 197 persons manufactured hardware and cutlery to the amount of \$124,460; 35 persons produced granite and marble to the amount of \$31,918; 226 persons produced bricks and lime to the amount of \$63,166; 450 persons produced carriages and wagons to the amount of \$232,940, employing a capital of \$114,702; seven powder-mills, employing 11 persons, produced 135,000 pounds of gunpowder, with a capital of \$53,000; mills of various kinds, employed 1996 persons, and produced articles to the value of \$759,360, with a capital of \$1,149,193; ships were built to the amount of \$78,000; 233 persons manufactured furniture to the amount of \$105,897, with a capital of \$59,984; 90 brick and 434 wooden houses were built by 935 persons, and cost \$470,715; 36 printing offices, 29 binderies, 37 weekly newspapers, and six periodicals, employed 350 persons, and a capital of \$110,850. The total capital employed in manufactures was \$2,252,448.

The principal literary institution of the state is Dartmouth college in Hanover, founded in 1770, to which is attached a flourishing medical department. The Gilmanton Theological seminary, at Gilmanton was founded in 1835, under the direction of the Congregationalists. In these institutions there were in 1840, 433 students. There were in the state, 68 academies, with 5799 students; 9157 common and primary schools, with 88,639 scholars. There were 949 white persons over 90 years of age, who could neither read nor write.

The principal religious denominations are the Congregationalists, Baptists, and Methodists. In 1836 the Congregationalists had 159 churches, 142 ministers, and 18,969 communicants; the Baptists had 90 churches, 64 ordained ministers, and 6305 communicants; the Free-will Baptists had 100 congregations, and 81 ministers; the Methodists had 73 ministers. Besides these there are Presbyterians, Unitarians, Episcopalians, Universalists, and some Roman Catholics, and two societies of Shakers.

In June 1839 there were in the state 98 banks, with an aggregate capital of \$2,930,506, having a circulation of \$1,430,519. The state has no public debt. There is an asylum for the Insane at Concord, which went into operation in October 1842. There is also a state prison at Concord.

The constitution was formed in 1784, and in 1792, was altered to its present form. The governor is elected annually by the people on the second Tuesday in March. He must have resided in the state for seven years next preced-

NEW-HOPE.

ing his election, be 35 years of age, and possess property to the amount of 500 pounds, one half of which must be a freehold within the state. The council consists of five members, chosen by the people, who must have resided in the state for seven years, and possess property to the amount of £500, and be 30 years of age. The legislature consisting of the senate and house of representatives, is denominated the general court of New-Hampshire. The senate consists of 18 members, elected annually by the people, who must be at least 30 years of age, have resided in the state for seven years preceding the election, and possess property within the state, to the amount of £300. The house of representatives consists of 850 members, elected annually by the people. A member must have resided two years in the state, next preceding his election, be 30 years of age, and possess property to the amount of £100, within the district which he represents, one half of which must be a freehold. All judicial officers are nominated and appointed by the governor and council, and hold their offices during good behaviour; but are removable by the governor, with the consent of the council, at the representation of both houses of the legislature. No judicial officer can hold office after he is 70 years of age. The secretary and treasurer are elected by the joint ballot of both houses of the legislature. Every male inhabitant of 21 years of age or over, excepting paupers, and persons excused from paying taxes at their own request, have the right of suffrage.

The navigation of Merrimac has been improved by dams, locks, and short canals. They are Bow falls, 3 m. below Concord three fourths of a mile long; Hookset falls, one eighth of a mile; Amoskeag falls, one mile; Union falls, nine miles; and Sewall's falls, one quarter of a mile. By means of the Middlesex canal, there is a boatable communication from Concord to Boston. The Eastern railroad extends from the Massachusetts line 15½ miles to Portsmouth, where it passes into Maine, and is continued to Portland. A railroad extends from Concord to Nashua, and connects with the Boston and Lowell railroad.

New-Hampshire was discovered by Capt. John Smith, an English navigator, in 1614. It was first granted to Ferdinand Gorges and John Mason in 1622. The first settlements were made at Dover and Portsmouth, in 1623. In 1639, Rev. John Wheelwright purchased of several sachems the country between Merrimac and Piscataqua rivers; and in 1638, with a small colony commenced the settlement of Exeter. In the same year Hampton was settled, and these were the first settled towns in the state. In 1641 all the settlements, by a voluntary act submitted to Massachusetts, but were made a separate province by an act of Charles II., in 1679. In 1689 it again united with Massachusetts, but revived and established a separate government, in 1693. It was several times afterward connected with Massachusetts, until 1741, since which it has remained a separate state. A temporary government was established in 1776 to continue during the war with Great Britain. The state constitution was established in 1784. In June 21st, 1788, the state in convention adopted the constitution of the United States, yeas, 57, nays, 46; majority 11.

NEW-HOPE, p. b. Solebury t., Bucks co., Pa., 110 m. E. by N. Harrisburg, 173 W. Situated on the W. side of Delaware r. It has six stores, two cotton factories with 7000 spindles, two flouring-mills, one saw-mill; one academy, 50 students; two schools, 100 scholars. Pop. 890. A covered bridge here crosses Delaware river, supported on nine piers, which cost \$160,000, built by a company who possess, by charter, banking privileges.

NEW-HUDSON, t., Alleghany co., N. Y., 14 m. W. Angelos, 970 W.S.W. Albany. Drained by Black cr. It has three stores, eight saw-mills; two schools, 44 scholars. Pop. 1502.

NEW-SPWICH, p. t., Hillsborough co., N. H., 47 m. S. S.W. Concord, 447 W. Chartered in 1762. Watered by Souhegan river and its branches. It contains three churches, a Congregational, Methodist and Baptist, four stores, three cotton factories with 3600 spindles, two grist-mills, six saw-mills; one academy, 186 students; 11 schools, 433 scholars. Pop. 1578.

NEW-JERSEY, one of the middle United States, is bounded N. by New-York; E. by Hudson river, separating it from New York, and by the Atlantic; S. by the Atlantic; and W. by Delaware bay and river, separating it from Delaware and Pennsylvania. It is between 38° 58' and 41° 21' N. lat., and between 73° 58' and 75° 39' W. lon., and between 19° 32' and 30° 3' E. lon. from W., containing 7,976 sq. m., or 4,656,330 ares. It is 164 m. long, and from 40 to 75 m. wide. The population in 1790 was 184,189; in 1800, 211,149; in 1810, 245,592; in 1820, 277,575; in 1830, 390,779; in 1840, 573,308. Of these 177,055 were white males; 174,532 were white females; 10,780 were free colored males; 10,964 were free coloured females. Employed in agriculture, 56,701; in commerce, 2,253; in manufactures and trades, 97,004; in mining, 366; in navigating the ocean, 450

NEW-JERSEY.

1,143; do. rivers and canals, 1,685; in the learned professions, 1,637.

The state is divided into 18 counties, which with this population in 1840, were as follows:

Counties.	Pop. 1840.	Counties.	Pop. 1840.
Atlantic,	8,736	Mercer,	21,267
Bergen,	13,225	Middlesex,	21,989
Burlington,	28,531	Monmouth,	26,979
Cape May,	6,234	Morris,	25,214
Cumberland,	14,574	Passaic,	16,734
Essex,	44,631	Salem,	15,621
Gloucester,	25,438	Somerset,	17,446
Hudson,	9,438	Sussex,	11,770
Hunterdon,	94,789	Warren,	20,308
			217,308

Trenton on the E. side of Delaware river, 30 m. above Philadelphia, is the seat of government.

The southern part of the state is level and sandy, and naturally barren, excepting where it is fertilized by the use of marl, which is extensively found. The natural growth is shrub oaks and yellow pine; and the extensive use of the latter for steam boats and glass houses, has contributed to raise the value of this land, formerly considered of little value. In the swamps the white cedar is found, which is valuable for fencing. The central portion of the state has an undulating surface and a fertile soil, which produces wheat, rye, Indian corn, barley, oats and potatoes, and excellent fruit, as apples, pears, peaches, plums and cherries. The northern parts of the state are hilly, and even mountainous; the Blue ridge, and other ranges crossing it. It is well adapted to grazing, and has a fertile soil. The mountainous region abounds with iron ore. The cities of New-York and Philadelphia on its eastern and western borders, furnish an extensive market for its agricultural productions, and its fruits. The state exports wheat, flour, horses, cattle, hams, cider, lumber, flax-seed, leather and iron. There were in the state in 1840, 70,509 horses or mules, 328,282 neat cattle, 219,285 sheep, 361,443 swine, and poultry was produced to the value of \$336,953. There were produced 774,903 bushels of wheat, 1,665,690 of rye, 4,261,975 of Indian corn, 3,083,594 of oats, 12,501 of barley, 856,117 of buck-wheat, 2,073,069 of potatoes, 397,907 pounds of wool, 433 of hops, 10,061 of wax, 1,966 of silk cocoons, 334,261 tons of hay, 2,165 of flax or hemp. The products of the dairy amounted to \$1,398,033; of the orchard to \$464,006; of lumber to \$371,501; 9,416 gallons of wine were made, and 2,309 barrels of tar, pitch, turpentine and rosin, were produced.

A large part of the state is open to the influence of the sea, and has a mild climate; but in the mountainous region in the N. part, the cold in the winter is severe. The extreme range of the thermometer at Trenton in 1843 was from 12° to 87° above zero of Fahrenheit.

Hudson river flows on the E. side of the state, and Delaware river on the W. side. Besides these, the Raritan enters Raritan bay at Perth Amboy, and is navigable 15 miles to New-Brunswick; the Passaic enters Newark bay, and is navigable 15 miles to the port of Acquackanock. It has several important falls, affording great water-power particularly at Paterson. The Hackensack river is from 35 to 40 miles long, affords good water power, and is navigable 15 miles from its mouth in Newark bay to Hackensack, where it meets the tide water. Great Egg Harbor river enters the Atlantic, and is navigable 90 miles for small vessels. The principal bays in this state are Newark bay, N. of Staten Island, 7 miles long and 9 wide; and Raritan bay, between Staten Island and Sandy Hook, 14 miles long and 9 miles wide at Amboy Point, but increases in width below. The principal entrance has from 34 to 28 feet of water. Perth Amboy, at the head of this bay, is the principal seaport in the state. Delaware bay lies partly in this state. The principal capes are Cape May, at the N. entrance of Delaware bay, and Sandy Hook, which is a low sandy island, about 3 miles long, S. of the outer harbor of New-York. The principal towns are Newark, New-Brunswick, Paterson, Trenton, Burlington, Bordentown, Elizabethtown, and Perth Amboy.

The commerce of the state is principally carried on through the two great cities on its borders. Its exports in 1841 were \$19,166, and its imports were \$2,315. The tonnage entered was 132; and cleared 9739. But this gives an imperfect view of the commerce of the state. It had in 1840 two commercial and eight commission houses in foreign trade, with a capital of \$99,000; 1,504 retail dry goods and other stores, with a capital of \$4,113,947; 1389 persons engaged in the lumber trade, with a capital of \$490,770; 423 persons employed in internal transportation, who, with 30 butchers, packers, &c., employed a capital of \$99,490; 179 persons were engaged in the fisheries, with a capital of \$93,375.

The home-made, or family manufactures amounted to \$301,625; 31 woollen manufactures, and 49 falling-mills,

NEW-JERSEY.

employed 27 persons, produced goods to the amount of \$449,710, with a capital of \$314,650; 43 cotton factories, with 63,744 spindles, employed 2,408 persons, manufactured articles to the amount of \$2,066,104, with a capital of \$1,722,810; 36 furnaces produced 11,114 tons of cast iron, and 80 forges produced 7,171 tons of bar iron, the whole employing 2,056 persons, and a capital of \$1,721,890; 41 paper-mills produced articles to the amount of \$562,900, and other manufactures of paper produced \$7,000, the whole employing 400 persons, and a capital of \$460,100. Hats and caps were manufactured to the amount of \$1,181,562, and straw bonnets to the amount of \$23,990, the whole employing 957 persons, and a capital of \$322,039; 150 tanneries employed 1080 persons, and a capital of \$415,738; 478 other manufactures of leather, as saddles, boots and shoes, &c., produced articles to the amount of \$1,362,746; 93 glass-houses and four glass cutting works, employed 1,075 persons, produced articles to the amount of \$604,700, with a capital of \$689,800; 23 potteries employed 192 persons, produced articles to the amount of \$256,807, with a capital of \$135,890; 932 persons produced machinery to the amount of \$755,050; 919 distilleries produced 334,017 gallons of distilled spirits, and six breweries produced 206,375 gallons of beer, the whole employing 204 persons, and a capital of \$20,870; 193 persons produced hardware and cutlery to the amount of \$33,575; 71 persons manufactured 2,010 small arms; 70 persons manufactured drugs, medicines and paints to the amount of \$137,400, and turpentine and varnish to the amount of \$43,000, with a capital of \$140,800; 1,834 persons produced carriages and wagons to the amount of \$1,307,149, with a capital of \$644,966; 64 flouring-mills manufactured 108,797 barrels of flour, and with other mills, employed 1,288 persons, and a capital of \$2,641,390; eight rope-walks, employed 60 persons, and produced cordage to the amount of \$23,075, with a capital of \$37,305; ships were built to the amount of \$334,340; 517 persons manufactured furniture to the amount of \$176,566, with a capital of \$130,525; 573 persons produced bricks and lime to the amount of \$376,805; 905 brick or stone, and 861 wooden houses were built, employing 2,068 persons, and cost \$1,092,059; 46 printing offices, 30 binderies, four daily, one semi-weekly and 31 weekly newspapers, and four periodicals, employed 1,303 persons, and a capital of \$479,030. The total amount of capital employed in manufactures, was \$11,517,582.

The college of New-Jersey, or Nassau Hall, at Princeton, is one of the oldest and most distinguished in the country, and has educated many eminent men. At the same place is the Theological seminary of the Presbyterian church, more recently founded, but equally distinguished. Rutgers college, (formerly Queens college,) in New-Brunswick, was founded in 1770, and latterly has been flourishing. Connected with it is the Theological seminary of the Reformed Dutch church, founded in 1784, which is respectable. In these institutions there were in 1840, 433 students; there were in the state 66 academies, with 3,027 students, and 1,207 common and primary schools, with 58,583 scholars. There were 6,365 white persons over 90 years of age, who could neither read nor write.

In 1835 the Presbyterians had 100 churches, and 105 ministers; the Dutch Reformed had 48 churches, and 43 ministers; the Episcopalians had 35 churches, one bishop and 29 ministers; the Methodists had 64 ministers, and about twice as many congregations; the Baptists in 1832, had 61 churches and 54 ordained ministers; the Friends had 67 meetings; the Roman Catholics had four ministers. There are also some Congregationalists, Universalists, and others. There is a state prison at Lambertton, whose income exceeds the expenses.

There are several important works of internal improvement. The Morris canal proceeds from Jersey city opposite New-York westwardly 101½ miles to Easton, Pa., and at \$3,100,000. The Delaware and Hudson canal commences at Bordentown, proceeds N.W. to Trenton, and once N.E. and E. to New-Brunswick, to the Raritan river. It cost \$2,500,000. The Camden and Amboy railroad commences at Camden, opposite to Philadelphia, and proceeds N.E. to Amboy 61 miles. It has a branch from Bordentown eight miles to Trenton, and another from Amboy Creek, 13 miles to Jobstown. The Paterson and Hudson railroad proceeds from Jersey city 164 miles to Paterson. The New-Jersey railroad proceeds from Jersey city through Newark, 34 miles to New-Brunswick, and at \$2,000,000. Here it joins the New-Brunswick and Paterson railroad, which connects the two places, 97 miles tant. The Morris and Essex railroad extends from Newark 22 miles to Morristown. A railroad extends from Elizabeth Port 25 miles to Somerville. The Camden and Amboy railroad had in 1841 a net income of \$379,682, and the Raritan canal a net income of \$39,034, equal to about 7½ cent. interest on the capital stock.

The government consists of a governor, council, and

NEW-LIBSON.

house of assembly. The governor is elected annually, by the joint ballot of the council and the assembly. The council consists of 18 members, elected annually by the people. A councillor must have resided one year in the state, and possess personal and real estate of £1000 in the county for which he is chosen. The council elects from its body a president, who performs the duty of a lieutenant governor in the other states. The assembly is composed of 58 members, elected annually by the people. A member must have resided one year in the state, and possess property to the amount of £500, within the county for which he is elected. The judges of the supreme court are elected for seven years, and of the inferior courts for five years, by the joint ballot of the council and assembly. All persons of the age of 21 years, who are worth £50 proclamation money, and have resided in the state one year, immediately preceding an election, enjoy the right of suffrage.

The settlement of New-Jersey was commenced by the Dutch from New-York between 1617 and 1620, in Bergen county. In 1638, a colony of Swedes and Finns settled on the Delaware, and purchased of the Indians the land on both sides of the river to the falls. In 1664 Charles II. granted to his brother the Duke of York, all the territory between Connecticut and Delaware rivers, which included New-Jersey; and the same year sent a squadron, which conquered it from the Dutch, and the duke conveyed the territory of New-Jersey to Lord Berkeley and Sir George Carteret. The two proprietors formed a constitution of government, and appointed Philip Carteret, Esq., governor, who came over in 1665, and fixed the seat of his government at Elizabethtown. In 1673 the people assumed the government, and appointed James Carteret, son of Philip, their governor. In 1675 Lord Berkeley disposed of his property, and shortly after the territory was divided by the proprietors into East and West Jersey, and the eastern portion was assigned to Carteret. In 1681 the governor of West Jersey summoned a general assembly, and several laws were established, securing the rights of the people, and defining the power of rulers. In 1682 East Jersey passed from Carteret to William Penn and 23 associates, mostly Friends; and Robert Barclay, author of the "Apology for the Quakers" was appointed governor. Active measures were taken to promote emigration, and many people came over, particularly from Scotland. Many disputes arose between the settlers and the proprietaries, and in 1702, the government was surrendered to the crown, and East and West Jersey were united; and the governor of New-York was appointed governor of New-York and New-Jersey. In 1708 the inhabitants, by petition, requested of the English government that they might have a separate government, which was granted, and a governor was soon after appointed. The constitution of this state was formed in 1776. The state for several years, during the Revolutionary war, was occupied by the American and British armies, and several important battles were fought in its territory, particularly those of Trenton, of Princeton, and of Monmouth, and the inhabitants bore their full share of toil and suffering during that memorable period. On the 19th of December, 1787 this state in convention adopted the constitution of the United States by a unanimous vote.

NEW-KENT, county, Va. Situated toward the E. part of the state, and contains 925 sq. m. Bounded N.E. by Pamunkey r., S.W. by Chickahominy r. It contained in 1840, 4129 neat cattle, 9518 sheep, 9379 swine; and produced 32,311 bushels of wheat, 139,734 of Indian corn, 51,907 of oats, 8496 of potatoes, 4139 pounds of cotton. It had 10 stores, 19 grist-mills, one tannery, 16 distilleries; 12 schools, 287 scholars. Pop.: whites, 2473; slaves, 3365; free coloured, 373; total, 6230. Capital, New-Kent, C. H.

New-Kent, C. H., capital of New-Kent co., Va., 30 m. E. Richmond, 147 W. It contains a courthouse, jail, six stores, and about 15 dwellings.

NEW-LEBANON, p. t., Columbia co., N. Y., 23 m. S.E. Albany, 368 W. It contains the village of New-Lebanon Springs and a large Shaker settlement, and has 11 stores, three falling-mills, five woolen factories, two grist-mills, six saw-mills, three tanneries; one academy 75 students, 16 schools, 819 scholars. Pop. 2538. The springs are warm, having a temperature of 72° Fahrenheit, and are useful for rheumatism, salt-rheum, and cutaneous affections. The spring emits nitrogen gas. The country around is beautiful and picturesque, and the springs are much frequented. The Shaker settlement contains 600 inhabitants, in a state of celibacy, inhabiting 10 large dwellings, occupied by the society in common. They have also 3000 acres of land, held in common, and highly cultivated. They have a large church 30 by 61 feet, with a portico, and a domical roof covered with tin, and shops for many manufactures of things useful, in which they are distinguished for peculiar neatness.

NEW-LIBSON, p. t., Otsego co., N. Y., 90 m. W. Albany, 345 W. Drained by Butternut and Otsego creeks. It contains four stores, two falling-mills, one woolen factory, 451

NEW-LONDON.

one cotton factory with 110 spindles, three grist-mills, six saw-mills; 14 schools, 515 scholars. Pop. 1908.

New-Lisbon, p. v., Centre t., capital of Columbiana co., O., 150 m. E.N.E. Columbus, 35 m. S.W. Warren, 280 W. Situated on the Middle fork of Little Beaver river, and on the Sandy and Beaver canal. It contains a courthouse, jail, a bank, six churches, 10 stores, three printing offices, 300 dwellings, mostly of brick and about 2000 inhabitants. A number of the streets are paved or Macadamized, and the side walks are laid with brick. In the immediate vicinity are one furnace, four flouring-mills, four saw-mills, one paper-mill, one fulling-mill, and one carding machine, and an abundance of bituminous coal. It is a flourishing and growing village.

NEW-LONDON, county, Ct. Situated in the S.E. part of the state, and contains 600 sq. m. Bounded S. by Long Island sound. Watered by Thames river, formed by the junction of Shetucket and Yantic rivers, which afford extensive water-power in Norwich. The Shetucket receives the Quinebag, as large as itself, in the N. part of the co. Hewatuck r. bounds it on the E., and separates it from the state of R. Island. It contained in 1840, 27,441 neat cattle, 62,395 sheep, 14,356 swine; and produced 10,138 bushels of wheat, 37,633 of rye, 186,587 of Indian corn, 16,966 of buckwheat, 21,875 of barley, 122,355 of oats, 394,301 of potatoes. It had one commission house in foreign trade, with a capital of \$30,000, 247 retail stores, capital, \$770,450, 11 lumber-yards, capital, \$76,500, capital invested in the fisheries \$1,190,000, 24 fulling-mills, 23 woollen factories, 16 cotton factories with 29,013 spindles, 57 grist-mills, 64 saw-mills, three oil-mills, five paper-mills, seven rope-walks, 90 tanneries, two potteries, four printing-offices, three binderies, three weekly newspapers; 17 academies, 747 students; 231 schools, 10,790 scholars. Pop. 44,463. Capitals, New-London and Norwich.

New-London, city, port of entry, and semi-capital of New-London co., Ct., is situated in 41° 29' N. lat., and 73° 9' W. long. from Greenwich, and 4° 58' E. long. from W.; 44 m. S.E. Hartford, 52 m. E. New-Haven, 55 m. S.W. Providence R. 1, 353 W. The population in 1810, was 3238; in 1830, 3330; in 1850, 4356; in 1840, 5519.

It stands on the W. bank of Thames river, 3 m. from its mouth, and is built on a declivity, which descends to the S. and E. Back of the city the ground rises to a considerable height, presenting, from its more elevated parts, a delightful view of the harbour, of Long Island sound, of the Atlantic, and of the surrounding country. The site of the city is uneven and rough, and overspread with granite rocks. The difficulty of laying it out with much regularity prevented the attempt, but it affords many commanding sites for dwellings, and is generally well built. Some of the houses recently erected are neat and elegant.

The county courts are held alternately in this city and in Norwich. It contains a courthouse, jail, a custom-house, three banks, an almshouse, two markets, nine churches, two Congregational, two Methodist, two Baptist, one Episcopal, one Universalist, and one Roman Catholic, 83 stores, one grist-mill, three manufactories of hardware, three sperm candle and oil manufactories, two tanneries, three printing-offices, two binderies, 750 dwellings, and about 7000 inhabitants, in the year 1844.

The harbour of New-London is the best in the state, and one of the best in the United States, easy of access, spacious and safe, having a depth of water of 30 feet, entirely sufficient for the largest ships of war. It is rarely obstructed by ice, and serves as the port of Connecticut river, which is not navigable for vessels of a large class, and for some months of the year, not at all. This in some measure compensates for the limited back country which naturally flows to New-London for a market.

New-London became a place of considerable importance even before the Revolutionary war, when a large amount of shipping was employed in the European and West India trade, consisting of 130 vessels. The commerce, however, dwindled away, and was entirely extinguished by the last war with Great Britain. A few years after the peace, the merchants of this place turned their attention to the whale fisheries, which are now very extensively carried on. There are belonging to this place 50 ships, besides some smaller vessels, employed in this business, employing over 1800 seamen, and a capital of \$1,500,000. Besides these, there is a considerable number of vessels employed in the shore fisheries, which supply the market of New-York, and most of the neighbouring cities, with fish. There are also a few vessels employed in the coasting trade, some of which visit the southern states. The tonnage of the port in 1840, registered, licensed and enrolled, was 44,822, which is more than that of any other port in the state. The harbour is defended by two forts. Fort Trumbull is situated on a point projecting from the W. side of the harbour, about a mile below the city, and is generally garrisoned by soldiers of the United States. The other fortification is fort Griswold, on

NEWMARKET.

an eminence on the opposite side of the river, in Groton. The lighthouse is on a projecting point of land, which divides the harbour from Long Island sound, 3 m. below the city.

There were in the city according to the census of 1840, 40 retail stores, with a capital of \$320,000; three lumber-yards, with a capital of \$30,000; capital employed in the fisheries \$830,000; machinery was produced to the amount of \$30,000; hardware and cutlery, to the amount of \$61,000; one tannery employed a capital of \$3000; three rope-walks employed a capital of \$10,000; one printing office, one bindery, one weekly newspaper. Total capital employed in manufactures \$91,300. It had four academies, 121 students; 14 schools, 787 scholars.

The first settlement of New-London was made in 1646, and the township was laid out in lots in 1648. The Indian name of the place was Nameang. It was the seat of Sasacus, grand sachem of Long Island, a part of Connecticut and Narragansett, and belonging to the Pequot tribe of Indians. It is the smallest town in the state, being only 4 m. long, and at an average three fourths of a mile wide. On the 16th of September, 1781 a large portion of the place was burned by the British, under the traitor Benedict Arnold, and fort Griswold on the Groton side was captured, and the greater part of the garrison, consisting of militia hardly collected, was barbarously put to the sword, mostly after they had surrendered. A granite obelisk, 125 ft. high erected near the spot, commemorates the event; and on a tablet are inscribed the names of those who fell on that occasion. The loss of property by the burning of New-London was ascertained by commissioners appointed by the general assembly of the state in 1783, to be \$483,980; as a compensation for which, the sufferers received a grant of land in the Connecticut Western Reserve, in the state of Ohio. During the last war, a British squadron, under the command of Commodore Hardy, chased two American frigates into the harbour of New-London, which they blockaded for a considerable time. But the fortifications were strengthened and well garrisoned, and the British never ventured to attack the place, but made an assault upon Stonington, a much weaker place in the vicinity, and were repulsed.

New-London, L., Chester co., Pa., 36 m. W. Philadelphia. Bounded W. by Elk cr. Watered by Clay cr. It contains two churches, seven stores, two woollen factories, one forge, six grist-mills, seven saw-mills; one academy, 80 students, five schools, 131 scholars. Pop. 1533.

NEW-MADRID, county, Mo. Situated in the S.E. part of the state, and contains 1025 sq. m. The surface is level, and in some parts liable to be overflooded. Bounded E. by Mississippi r. It contained in 1840, 6635 neat cattle, 1603 sheep, 21,408 swine; and produced 9503 bushels of wheat, 461,110 of Indian corn, 11,055 of oats, 9227 of potatoes, 1164 pounds of cotton. It had 15 stores, four grist-mills, four saw-mills; two academies, 25 students, four schools, 90 scholars. Pop.: Whites, 3748; slaves, 801; free coloured, 5; total, 4554. Capital, New-Madrid.

New-Madrid, p. v., capital of New-Madrid co., Mo., 271 m. S.E. Jefferson city, 911 W. Situated on the W. bank of Mississippi river, which here has a bend, placing it on the N.W. side. The bank of the river, somewhat elevated, has been undermined by the current of the river. The place was visited by earthquakes in 1811-12. It contains a court-house, jail, Roman Catholic church, a nunnery, a female seminary, 10 stores, and about 500 inhabitants. It has extensive exports of corn and lumber. About 75,000 bushels of corn are shipped annually. It is well situated for shipping produce, at all seasons of the year.

NEWMARKET, a market town of England, celebrated for its races, partly in hand. Chevely, co. Cambridge, and partly in hand. Lackford, co. Suffolk, 13 m. E.N.E. Cambridge, and 55 m. N. by E. London. Area of its two parishes, 570 acres. Pop. in 1831, 2948. It comprises one large and wide street, lined with respectable shops, handsome private residences, numerous hotels and inns for the accommodation of the nobility and others who flock thither during the races. It has some handsome public buildings, among which may be specified the new rooms belonging to the Jockey Club. The stables are most extensive, and are fitted up with every convenience. Of the two parish churches, that of St. Mary's is by far the most handsome, and has a tower and steeple that form a prominent feature when seen from a distance. The Wesleyan Methodists and Baptists have also their places of worship, with attached Sunday schools. A subscription charity school is attended by 75 boys and 53 girls, the number on Sunday amounting to 176 children of both sexes. There are numerous other small charities.

Horse-racing, though now so favourite a diversion, is of rather late origin in England, and does not appear to have been much practised till the latter part of the reign of Queen Elizabeth. In the following reign, however, James I. was a distinguished patron of the turf, and imported Arabian horses for the improvement of the native breeds. In the

NEW-MARKET.

early part of the reign of Charles I. Newmarket became celebrated for its races; and Charles II., who was still more warmly attached to this new resort of the sporting world, regularly attended its races, and repaired and enlarged the house in the town that had been occasionally occupied by his father and grandfather. From this epoch Newmarket has been the racing metropolis of the empire, and has always had to boast of the most distinguished patronage. "Newmarket fame and judgment in a bet" being an object of the highest ambition with many nobles and wealthy commoners of our own day, as well as with those of the days of Pope. The racecourse, on the heath to the W. of the town, is probably the finest in England. It is apportioned into different distances, corresponding with the ages and supposed powers of the horses, the longest course being 4 m. 1 furlong and 198 yards, and the shortest 2 furlongs and 47 yds. The grand stand has every accommodation for spectators, with a betting-room, coffee-room, &c. There are seven race meetings during the year, instituted at different periods, each lasting three days: the earliest is the Craven meeting, on Easter-Monday; then follow the two spring meetings, a fourth takes place in July; and there are three others in October, the last being called "the Houghton meeting." The sovereign gives three plates annually; one is provided from a fund left for the purpose, and others are given by the nobility or subscribed for by the members of the turf. The training-ground, on a slope S. of the town, is considered superior even to the course for trying the mettle, wind, and speed of the horses. About two thirds of the adult male population are trainers, stable-keepers, grooms, &c.; and, in fact, the town is wholly dependent for support on the races, and the training of horses. Markets on Tuesday: fairs, Whit-Tuesday and Nov. 8, chiefly for horses and sheep. Newmarket was nearly burnt down in 1683, and again at the commencement of last century. (*Blaine's Encyclopedia of Rural Sports*, p. 336, 373.)

NEW-MARKET, p. t., Rockingham co., N. H., 38 m. S.E. Concord, 488 W. Bounded N.E. by Lamprey river, S.W. by Exeter r. Incorporated in 1737. It contains four churches, two Methodist, a Free-will Baptist, and a Universalist, 30 stores, three cotton factories, with 14,000 spindles, one furnace, two grist-mills, two saw-mills, two tanneries; one academy, 46 students; 13 schools, 764 scholars. Pop. 2730. Vessels of 80 or 100 tons come up to the village on Lamprey r.

NEW-MARKET, p. v., Shenandoah co., Va., 139 m. N.W. Richmond, 113 W. Situated a mile E. of the N. fork of Shenandoah r. It contains three churches, a Lutheran, Methodist and Baptist, an academy, five stores, a variety of manufacturing establishments, 190 dwellings, and about 800 inhabitants.

NEW-MARLBOROUGH, p. t., Berkshire county, Mass., 131 m. S.W. by W. Boston, 90 m. S. by E. Lenox, 364 W. Granted in 1736, incorporated in 1739. Watered by Kookapox river and its branches. It contains a Congregational church, and some Methodist, four stores, one fulling-mill, one forge, four grist-mills, 15 saw-mills, one powder-mill, three paper-mills; 11 schools, 430 scholars. Pop. 1669.

NEW-MILFORD, p. t., Litchfield co., Ct., 51 m. W.S.W. Hartford, 306 W. Watered by Housatonic river and its tributaries. It contains nine churches, two Congregational, two Episcopal, two Methodist, two Baptist and one Friends, seven stores, one cotton factory with 1500 spindles, two grist-mills, two saw-mills, five tanneries; 23 schools, 679 scholars. Pop. 3974. Marble is found here. Two bridges cross Housatonic r.

NEW-MILFORD, p. t., Susquehanna co., Pa., 185 m. N. Harrisburg, 299 W. Drained by Mitchell's and Salt Lick creeks. It contains an Episcopal church, three stores, one fulling-mill, one grist-mill, four saw-mills, one oil-mill, two tanneries; eight schools, 940 scholars. Pop. 1148.

NEW-ORLEANS, city, port of entry, and capital of Louisiana, in the parish of Orleans, is the fourth in population, and the third in commerce in the United States; and is in 29° 57' 30" N. lat., and 90° 8' W. long. from Greenwich, and about 13° 7' W. long. from W. It is 100 miles from the mouth of the river, following its course, by not more than 90 in a direct line, 953 below the mouth of the Ohio, 1149 below the mouth of the Missouri, 1397 S.W. New-York, 1612 S.W. Boston, 1172 by post-road from Washington. The population in 1810 was 17,942; in 1820, 27,178; in 1830, 46,310; in 1840, 102,193; of whom 23,448 were slaves. Employed in agriculture, 1,430; in commerce, 7,392; in manufactures and trades, 4,593; in navigating the ocean, 1,315; do. rivers, lakes, &c., 985; in the learned professions, 438.

It is situated on the left bank of the Mississippi river, which by a singular bend causes the city to be on its N.W. side, facing the S.E. The city is built on an inclined plane, descending gently from the river towards the swamp in the rear; so that when the Mississippi is full, the streets are three or four feet below the surface of the river. To pre-

NEW-ORLEANS.

vent inundation an artificial embankment called the *Levee*, has been raised at a great expense, extending from fort Plaquemine, 43 miles below the city, to 120 miles above it, which is 15 feet wide and 4 feet high. Directly in front of the city, it affords a very pleasant walk. The position of New-Orleans as a vast commercial emporium is unrivalled; for the Mississippi, with its numerous tributaries, brings to it for a market, the products of 20,000 miles of navigation, and the immense resources of the great valley are yet but partially developed. The city proper is in the form of a parallelogram, running along the river 1320 yards, and extending back 700 yards. This portion of the city is traversed by 22 streets, forming 84 principal and 14 minor squares. The whole extent of the city, including its incorporated faubourgs, is not less than five miles parallel with the river, and it extends perpendicularly to it, from a quarter to three quarters of a mile; and to the Bayou St. John, two miles. The houses are principally of brick, except some of the ancient and dilapidated dwellings in the heart of the city, and some new ones in the outskirts. The modern buildings, particularly in the upper parts of the city, or Second Municipality, are generally three and four stories high, with elegant and substantial granite fronts. Many of the houses in the outer parts, are surrounded with gardens, and ornamented with orange trees. The view of the city from the river, in ascending or descending, is beautiful, and on entering it, the stranger finds it difficult to believe that he has arrived at an American city. This remark applies especially to the central and lower parts, where the older buildings are ancient and of foreign construction, where the manners, customs and language are so various; the population being very nearly equally made up of Americans, French, Creoles and Spaniards, with a mixture of almost every nation on the globe. During the business season, extending from the first of November until July, the *Levee*, in its whole extent, is crowded with vessels of all sizes, from all quarters of the world; with hundreds of large and splendid steamboats, and numerous barges and flat boats, &c. Nothing can present a more busy, bustling scene than the levee at this time, the loading and unloading of vessels and steamboats, with 1500 drays transporting tobacco, cotton, sugar, and the various and immense produce of the far west. In 1836 the legislature passed an act dividing the city into three municipalities, ranking them according to their population. The first includes the city proper, extending, with that width, from the river back to lake Pontchartrain, and occupying the centre; the second adjoining it above, and the third below, both extending from the river to the lake. Each municipality has a distinct council for the management of its internal affairs, which do not encroach on the general government.

Among the public buildings, the Cathedral or Church of St. Louis on the Place d'Armes or Parade-square, strikes the stranger forcibly by its venerable and antique air. It was founded in 1792, and to a certain extent completed in 1794. The lower story is of the rustic order, flanked at each of the front angles by hexagonal towers, projecting one half of their diameter, crowned by low spires. The second story is of the Roman Doric order. Above, on the apex of the pediment of this story, rises the principal turret, square below, about 20 feet high, and hexagonal above, with a belfry with apertures on each side to let out the sound, with an elevated pinnace above. Every Saturday evening, by the conditions of its erection, masses are offered for the soul of its founder, Don André, and at sunset on that day, the tolling of its bell recalls his memory to the citizens. On the right of it, looking from the square, is a large building of the Tuscan and Ionic orders, two stories high, occupied by various offices in the lower stories, and in the second story by the court-rooms of the parish, district and criminal courts, with the offices for their clerks. On the left of the cathedral is a building, corresponding to the one last described, the lower story containing the city guard room and the police prison, and above the offices of the mayor, the city treasurer, the comptroller, and the common council room. The second Presbyterian church is finely located, fronting on La Fayette-square, the handsomest public place in the city. It is of the Grecian Doric order, with a fine portico. The basement is of granite, the remainder of brick, plastered to imitate stone. It was completed in July, 1835, and cost \$55,000. In the court in front, is a neat obelisk, erected to the memory of Rev. Sylvester Larned, the first Presbyterian pastor in the city, who died in 1820, at the early age of 34, deservedly lamented. The new Methodist Episcopal church, corner of Poydras and Carondelet streets, is of the Grecian Doric order, copied from the temple of Theseus at Athens. It has a fine portico, and a steeple rising from an octangular obelisk, resting on a lofty pedestal of Egyptian architecture combining novelty, grandeur and beauty. The steeple is 170 feet high from the side-walk, and the building was completed in 1837, at an expense of \$50,000. The first Congregational church is a plain brick

NEW-ORLEANS.

edifice in the Gothic style of architecture, finished in 1819, at an expense, including the cost of the ground, of \$70,000. Rev. Sylvester Larned, its first pastor, died of the epidemic in 1830. St. Antoine's or the Mortuary chapel, at the corner of Conti and Rampart streets, was erected as a place for the exhibition of the bodies of the dead, and the performance of the funeral ceremonies according to the Roman Catholic ritual. It is a neat edifice of the Gothic composite order, and cost \$16,000. All the funeral ceremonies of the Roman Catholics are performed here. The Ursuline chapel, is a building in the quaint old style of architecture, erected, according to a Spanish inscription on a marble tablet, in 1787, and is an interesting monument of former times. The State-house, formerly the Charity hospital, was purchased by the state in 1834. It consists of a centre building and two detached wings. It occupies a whole square between Canal and other streets. The entrance from Canal-street is through ground laid out and ornamented as a pleasure-ground, and neatly kept. The principal building is occupied by the chambers for the senate and house of representatives, and offices for the clerks and others. The wings are occupied with offices for the governor, the secretary of state, the treasurer, and other public officers. The new Charity hospital is a large building, completed in 1834, at an expense, including ground, of \$149,571. The old Charity hospital (now the State-house) was purchased by the state for \$125,000, for bonds payable in 50 years at five per cent interest. The new Charity hospital is 290 feet long and three stories high, and is entered from Common-street under a Doric portico. The cupola presents a magnificent view of the city and its environs. The lower story is occupied by the library, the physicians' and surgeons' rooms, a lecture room for the Medical college, &c., and the second and third stories are divided into wards for the patients, and rooms for the accommodation of the Sisters of Charity, who devote themselves to an attendance on the indigent sick. It is calculated to contain 540 patients. The grounds around it are handsomely improved and neatly kept. It is a noble charity, rendered peculiarly necessary by the sickness, which often prevails at certain seasons in New-Orleans, particularly among strangers, who are often cured in this place, while others are carried from it to their long home. The Franklin Infirmary is a private hospital, fronting on the Pontchartrain railroad. It is a beautiful building, 65 by 55 feet, and two stories high, with an imposing portico in front, surrounded by handsome shrubbery, having attached to it a variety of buildings, and can accommodate 100 patients. Several of the markets are large and commodious structures. Poydras-street market is 402 feet long and 42 feet wide. The vegetable market is 175 feet long, and cost \$25,800. The meat market is built of brick, on the levee, and extends from Ann to Main streets, is a striking object as the city is approached by water, and cost about \$30,000. St. Mary's market is in the rusticated Doric style, in the second municipality, built of brick and plastered to imitate granite, 430 feet long and 43 wide, and cost \$47,000. It was rented in 1838 for \$64,650. Washington market, in the third municipality, is designed to be a fine structure, and is but partially completed. The theatres are among the prominent buildings of New Orleans. The most magnificent of these is St. Charles theatre, completed in Nov. 1833, 132 feet long by 175 deep. In the centre of the dome is suspended a magnificent chandelier, 12 feet high and 36 in circumference, weighing 4900 pounds, lighted by 176 gas lights. It contains 23,300 cut glass drops, which weigh about 900 pounds. The interior and exterior of this building have a corresponding magnificence. It cost \$330,000, and stands on the E. side of Charles-street. It is said to be now converted to other uses. The Orleans theatre is a spacious edifice, of the Roman Doric, and a mixture of the Corinthian and Composite orders, and cost \$180,000. The performances are in the French language. The Camp-street, or American theatre is 60 feet wide and 160 deep, and cost, with its ground and furniture \$120,000. It is in the second municipality, and can accommodate 1100 persons. Several cotton presses are among the imposing structures of the city. The Orleans Cotton Press is on ground 632 feet long and 308 wide, which is nearly covered with buildings. It contains a centre building three stories high, surmounted by a cupola, which affords a fine view of the city. The wings are two stories high, and very extensive. It presses on an average 150,000 bales of cotton annually, but its capacity is much greater. There are other cotton presses. Several of the banks have fine buildings, and some of the hotels are magnificent. Two of these hotels, one of which contains the exchange, cost \$600,000 each. The United States Branch Mint has an edifice 282 feet long and 108 feet deep, with two wings 32 by 81 feet, the whole three stories high, which cost \$182,000. The city is supplied with water raised by a steam engine from the Mississippi river, into a reservoir, constructed on an artificial mound, 21 feet high at its base. The reservoir is 250 feet

square, built of bricks, and plastered with hydraulic cement. It is divided into four compartments, to allow the water to settle before it is distributed over the city in cast iron pipes, which are laid to the aggregate length of 18 miles. The Water-works belong to the Commercial bank, and cost \$732,004. The City Water-works have a pipe a mile long, to furnish running water in hot weather, through the gutters of the city, and cost \$110,000. A draining company, with a capital of \$640,000 has two steam engines for draining the marshes of 35 square miles in extent between the city and lake Pontchartrain. There are in the city a custom house, a U. S. branch mint, a U. S. land-office, 16 banks with an aggregate capital of over \$40,000,000, some of which are not in good credit, and 12 insurance companies, with an aggregate capital of \$3,600,000. There are fewer churches than in most large American cities. There are three Roman Catholic, two Episcopal, and a Congregational, Presbyterian, Methodist and Baptist, one each, and a Mariner's church. There are packet lines to several large cities; to New-York of nine ships, one sailing weekly; to Boston of five ships, sailing twice a month; to Philadelphia, seven vessels, sailing once a week; to Baltimore, four vessels, sailing twice a month; to Charleston, four vessels, twice a month; and one steam-packet to Texas, twice a month.

New-Orleans is often familiarly called the Crescent city, from its form; for though the streets are straight, those which follow the river have two turns at large angles, giving it something of this form. The river opposite to the city is half a mile wide, and from 100 to 160 feet deep, and it preserves the same width to near its entrance into the gulf of Mexico. On the bar at its mouth it has a depth of from 134 to 16 feet of water, with a soft muddy bottom. Large and powerful steam tow-boats, some of which will tow six large vessels, are constantly employed to facilitate the passage of vessels to and from the gulf. A canal 44 miles long leads from a basin within the city to lake Pontchartrain, through the bayou St. John. Through this canal the trade of the country bordering on lake Pontchartrain and Borgne, and all the coast of the N. part of the gulf of Mexico as far as Florida, comes to the city, and a considerable fleet of sloops is often seen in the basin. A railroad also, 44 miles long, connects the city with lake Pontchartrain, which will probably supersede the use of the canal. A harbour is formed in the lake at the termination of the railroad, and a considerable village is there springing up. The facilities for trade are great, and well improved. The exports, including the foreign and coasting trade, are not less than \$40,000,000, which are greater than those of any other American city, except New-York; but its imports are vastly less. Much of the western country, which exports its produce by the way of New-Orleans, imports its goods from New-York. In 1842, 740,367 bales of cotton were exported to foreign ports, and coastwise. New-Orleans is growing rapidly, but will never probably equal New-York; though it is very likely to become the second city in the Union. The licensed and enrolled tonnage in 1840, was 126,613. Its unhealthiness is against it, though this has often been exaggerated; and the same is true of its morals. It is said to be an orderly and peaceable city, and its inhabitants are distinguished for their politeness, hospitality, and kindness to the distressed.

According to the census of 1840, there were eight commercial and 375 commission houses in foreign trade, with a capital of \$16,400,000; 1881 retail stores, with a capital of \$11,018,225; 32 lumber yards, with a capital of \$67,800; six furnaces, with a capital of \$355,000; hardware was manufactured to the amount of \$30,000; one cotton factory with 700 spindles employed a capital of 20,000; tobacco manufactures employed a capital of \$60,000; one tannery had a capital of \$50,000; two distilleries employed a capital of \$58,000; three sugar refineries produced to the amount of \$700,000; three steam saw-mills had a capital of \$175,000; 18 printing offices, 5 binderies, 9 daily, 6 weekly, and 2 semi-weekly newspapers employed a capital of \$162,200; 301 brick or stone houses, and 210 wooden houses were built, at a cost of \$2,334,300. The total capital employed in manufactures was \$1,774,900. There were two colleges with 105 students; 10 academies, with 440 students; 25 schools with 975 scholars.

In 1778, Bienville, then governor of Louisiana, selected a spot for the chief settlement of the province, which had hitherto been at Biloxi, and fixed on the present site of New-Orleans, and left 50 men to clear the ground, and erect the necessary buildings. In 1719 the Mississippi rose to an extraordinary height; and as the company were not able to erect dykes the spot was overflowed, and it was for a time abandoned. In 1721, De Pauget completed a survey of the passes of the Mississippi. He found a bar at its mouth consisting of a deposit of mud, 300 feet wide, and twice that in length, having about 11 feet of water. In Nov. 1722, Delorme removed the principal deposits to New Or-

NEW-ORLEANS.

leaves, pursuant to orders. The next year, Charlevoix reached New-Orleans from Canada by the way of the river, and found at New-Orleans 100 cabins without much order, a large wooden warehouse, two or three dwelling houses, a miserable store-house, which had been used as a chapel, a shed being converted into a house of prayer, and a population not to exceed 300. A negro was at this period sold for \$196; rice at \$3 the barrel; and brandy at \$30 the quarter cask. A company of Germans, disappointed by the failure of the financier Law, descended the river to New-Orleans, with a view to return to France, but were induced to remain on small allotments of land made to them at what is now called the German coast, and supplied the city with vegetables. Their descendants still cultivate the land on a larger scale. In September of this year a terrible hurricane leveled the church, hospital, and 30 houses, drove three vessels which were in the harbour, ashore, destroyed the crops and gardens, and produced a scarcity of provisions, and several of the inhabitants thought of abandoning the colony. In 1727 the Jesuits and Ursuline nuns arrived, and were accommodated on a tract of land in the lowest part of the faubourg St. Mary. The nuns removed to a house erected for them, in 1730. This property became in time very valuable, and was sold, and the nuns removed to a new convent in 1824, two miles below the city. In 1763, Clement XIII. expelled the Jesuits from the dominions of the kings of France, Spain and Naples, and they were obliged to leave Louisiana, and their property was seized and sold for about \$180,000. The same property, with its improvements, is now worth 15,000,000. In 1764 British vessels began to visit the Mississippi. They would sail past the city, make fast to a tree opposite the present city of Lafayette, and trade with the citizens. The exports during the last year of its subjection to France was \$250,000, and the population of the city was 3190. The commerce suffered by the restrictions of the Spanish. In 1765 the population of the city, exclusive of the settlements in the vicinity, was 4980. A more liberal course of the Spanish government revived the trade of New-Orleans, and French, British and American vessels began to visit New-Orleans. In 1768 a fire consumed 900 houses. In 1791 the first company of French comedians arrived from Cape Francois, having fled from the massacre at St. Domingo; other emigrants opened academies, the education of youth having been previously in the hands of priests and nuns. In 1793 Baron Carondelet arrived. He divided the city into four wards, and recommended lighting it, and employing watchmen. The revenue of the city did not amount to \$7000, and the lighting it required a tax of 1.124 cents on every chimney. He erected new fortifications, and had the militia trained. In 1794, the first newspaper was published in Louisiana. In 1795, permission was granted by the king to the citizens of the United States to deposit their merchandise at New Orleans, during a period of ten years. In 1796 the canal Carondelet was completed. In March 21st, 1801, Louisiana was ceded by Spain to the French republic, and in April 30th, 1803, Bonaparte, as first consul, sold it to the United States, for about \$15,000,000, and it was taken possession of on the 30th of November. The population of the city did not then exceed 8,056, and of the province but 49,473; 42,000 of whom were within the present bounds of Louisiana. The duties of the custom-house the year preceding the cession, amounted to \$117,515, which would have been greater, but for the corruption of the officers. The Roman Catholic religion was the only one publicly allowed. The revenues of the city in 1802, were \$19,978. There entered the Mississippi this year 256 vessels, of which 18 were public armed vessels; of American, 48 ships, 63 brigs, 50 schooners, and nine sloops; of Spanish, 14 ships, 17 brigs, 4 polacres, 64 schooners, and 1 sloop; of French 1 brig. In 1804 New-Orleans was made a port of entry and delivery, and the bayou St. John, a port of delivery. A city charter was granted New-Orleans in 1805. Jan. 10th, 1812, the first steamboat arrived at the city from Pittsburgh, having descended in 259 hours. In August, a hurricane did great damage to the houses and shipping, which has not been an unfrequent occurrence.

Early in December 1814, the British approached New-Orleans with about 8000 men by the way of lakes Borgne and Pontchartrain. Their passage into the lake was opposed by a squadron of gun-boats, under Lieut. Jones. After a spirited conflict, in which the killed and wounded of the enemy exceeded the whole American force, he was compelled to surrender to superior numbers. Dec. 21st, 4000 militia arrived from Tennessee. On the 22nd, the enemy, having previously landed, took a position near the main channel of the river, eight miles below the city. On the evening of the 23rd, Gen. Jackson made a furious attack upon their camp; they were thrown into disorder, and rallied; and Gen. Jackson withdrew his troops, and fortified a strong position four miles below the city, supported by batteries on the W. side of the river. These fortifications

NEWPORT.

were unsuccessfully assailed on the 28th of Dec. and the 1st of Jan. In the meantime both armies received reinforcements; and on the 8th of Jan. the British prepared to storm the works. In the night, a regiment was transported across the river to storm the works on the western bank. Early in the morning, the main body of the British, consisting of 7 or 8000 men, marched from their camp to assault the American works. Many were killed by grapeshot as they approached. When they came within musket shot, a stream of fire burst forth from the American lines. Gen. Jackson had placed his troops in two lines, where those in the rear loaded for those in front, which caused the fire to be incessant, which from Kentucky and Tennessee marksmen, must have been deadly. While leading to the walls the regiment which bore the ladders, Gen. Packenham, the chief in command, was killed; Gen. Gibbs, the second in command, was mortally wounded; and Gen. Keene, severely. Without officers to direct them, the troops halted, fell back, and soon fled in disorder to their camp. In a little more than an hour, 2000 of the British lay prostrate on the field, while only seven Americans were killed and six wounded; a disproportion unparalleled in the history of warfare. The men on the west side of the river fled before an inferior force, but the events on the east side caused the British to cross the river and retire to their entrenchments. Gen. Lambert, upon whom the command devolved, despairing of success, retired with his troops on board the fleet; and Gen. Jackson, being resolved to hazard nothing, suffered him to retreat unmolested. Immediately after the event, news arrived of peace having been concluded between the United States and Great Britain, which had in fact taken place a short time before the battle, though the news of it did not arrive till after.

In May 1816, the levee, nine miles above New-Orleans, broke through, and inundated the back part of the city, from three to five feet deep, and destroyed several plantations. The levee was finally closed, principally by the exertions of Gov. Claiborne, by sinking a vessel in the breach.

NEW-PALTZ, p. t., Ulster co., N. Y., 74 m. S. by W. Albany, 306 W. Watered by Walkkill r. Bounded E. by Hudson r. It contains two Dutch Reformed churches, seven stores, three fulling-mills, one woollen factory, three grist-mills, four saw-mills, two tanneries; one academy, 35 students; 26 schools, 1109 scholars. Pop. 5408. The inhabitants are mostly Dutch descent.

NEW-PHILADELPHIA, p. v., Goshen t., capital of Tuscarawas co., O., 115 m. E.N.E. Columbus, 313 W. Situated on the E. bank of Tuscarawas river opposite the mouth of Sugar creek. It is on a beautiful plain, and contains a court-house, jail, several stores, a printing office, and various mechanic shops, 80 dwellings, and about 500 inhabitants.

NEWPORT, a pari. bor., market-town, and par. of England, in the centre of the Isle of Wight, of which it is the cap., on the Medina (crossed here by an old stone bridge), 14 m. S.E.E. Southampton, and 75 m. S.W. London. Pop. of pari. bor., which comprises, with the old bor., a portion of the par. of Carisbrooke, in 1831, 6700. The town has one principal street, with two or three others meeting it at right angles, and forming spacious market-places. The best streets are well built, paved, and lighted with gas; but there are several inferior houses on the N. side of the town and along the river. The market-house is an old building, open in the lower part, the upper story being formed into apartments for the corporation business, &c. The church is a large edifice, having three aisles, divided from each other by pointed arches, and an embattled tower at its W. end: the living is a vicarage, subordinate to Carisbrooke. The Roman Catholics, Wesleyan Methodists, Baptists, Unitarians, and the Society of Friends have their respective places of worship; and there are three Sunday-schools. A grammar-school was founded in 1619, by James I. In its school-room, a venerable-looking structure of gray stone, Charles I. and the parliamentary commissioners carried on the negotiation which ended so fatally for the former. There is also a girls' charity school. The Literary institution, assembly-rooms, and theatre are the other principal public establishments. Within the borough is a jail, built at the joint expense of the borough and the island generally: it has rooms for the separate confinement of male and female tried and untried prisoners; but there is little further classification. The old castle of CARISBROOKE (which see), occupies an eminence, about 14 m. S.W. the town. About 1 m. N. is a workhouse for the poor of the entire island, and near it is Parkhurst military depot and hospital, erected in 1780, and furnishing accommodation for upwards of 3000 troops. "The town formerly derived much benefit from the presence of a large military force; but the barracks have been all but deserted since 1825, and the withdrawal of the stimulus has been seriously felt. There is a lace manufactory close to the town, employing from 600 to 700 hands, and another of less consequence at the distance of about 2 m. The present importance of New-

NEWPORT.

port depends principally on its being a market-town in the centre of the island, which is an active agricultural and grazing district. The markets are said to be somewhat injured by the existence of the tolls; but the general prosperity of the town seems to be neither increasing nor diminishing to any material extent." (*Mun. Corp. Rep.*)

The bor. of Newport is supposed to have been incorporated in the reign of Henry II., but its principal charter was granted by James I. Under the Mun. Reform Act it is divided into two wards, and is governed by a mayor, five aldermen, and 18 councillors: it enjoys, also, a commission of the peace, under a recorder. Corporation revenue, in 1830, £552. An ancient court, the *Curia militum*, consisting of freeholders, is held once in three weeks at the town-hall, and exercises jurisdiction over all the island, except the borough. Newport has sent two members to the House of Commons, since the 23 Edward I. A portion of the parish of Carlebrooke was added to the old borough, by the Boundary Act: registered electors in 1839-40, 660. Newport is also the election-town for the Isle of White, which, under the Reform Act, sends one member to the House of Commons. Markets on Wednesday and Saturday; fairs on Whit-Monday and two following days. (*Parl. Papers; Corp. Rep., &c.*)

NEWPORT (Welsh, *Castell-newydd*) a parl. bor., market town, and river port of England, hund. Wentloog, co. Monmouth, on the W. bank of the Uak, crossed here by a stone bridge of five arches, and about 4 m. from its mouth, 90 m. S.S.W. Monmouth, and 124 m. W. by N. London. Pop. of parl. bor., in 1831, 7097. The town comprises a narrow and crooked main street, bifurcating at its S. extremity, and crossed by others still meaner and more irregular. On an eminence S. from the town is the old parish church of St. Woollos, with a square tower, apparently of Norman architecture, though much altered at different periods; the living is a vicarage, in the gift of the bishop of Gloucester. There are places of worship for Wesleyan Methodists, Calvinists, Baptists, and Roman Catholics. National and Lancasterian schools are established here, and the Sunday-schools are attended by about 900 children. Near the bridge are some interesting remains of a baronial castle, said to have been erected by Robert Fitzroy, son of Henry I.; and not far off are the ruins of an old monastery. "Newport is extensively engaged in the iron and tin trade, and in the export of coals. It is connected with Pontypool and Crumlin by the Monmouthshire canal. Iron and coal are brought from the former, coals only from the latter. Tram-roads also connect Newport with the Romney, Tredgar, Sirhowy, Ebbwvale, and Beaufort iron-works. It may, indeed, be considered a very thriving place: new docks and wharfs are building, or in contemplation, and the town is rapidly increasing." (*Mun. Bound. Rep.*) In 1839, 463,855 tons of coal were shipped from this port, of which, 13,053 tons were sent to foreign countries. The gross customs' revenue in 1839 amounted to £18,250, but in 1840 it fell off to £10,530. The river is navigable for sea-going ships close up to the town, and ship-building is carried on to a considerable extent. Between 60 and 70 ships belong to the port. The iron-foundries are on a large scale, and there are nail factories, roperies, breweries, and a pretty extensive pottery.

Newport, which received its earliest charter in the reign of Edward III., was divided by the Municipal Reform Act into two wards; its municipal officers being a mayor, and five other aldermen, with 18 councillors. It has also a commission of the peace, under a recorder. Corporation revenue in 1839, £217. In conjunction with Monmouth and Usk, Newport has sent one member to the House of Commons since the 27th Henry VIII., the right of election down to the Reform Act being vested in the resident burgesses. The electoral limits were enlarged by the Boundary Act, so as to include, with the old borough, additional portions of the parishes of St. Woollos and Christ-church. Registered electors for the united boroughs, in 1839-40, 1304. It is also one of the polling-places at elections for the county, and the principal town of a poor-law union, comprising 30 parishes and townships. Markets on Saturday; cattle markets the 3d Monday in each month; fairs, Holy Thursday, Whit-Thursdays, 15th Aug., and 6th Nov. (*Parl. Mun. Bound. Rep., &c.*)

NEWPORT, a market town and par. of England, S. Bradford, hund. co. Salop, near its E. limit, 164 m. W.N.W. Shrewsbury, and 128 m. N.W. London. Area of parishes 800 acres. Pop., in 1831, 3745. It consists principally of a main street, on the road between Shrewsbury and Stafford, in the centre of which stands the parish church: the living is a perpetual curacy, in the gift of the lord-chancellor. A grammar-school, founded in 1565, is endowed with lands producing about £1000 a year, and funded property to the amount of £19,450: it has eight exhibitions at Oxford and Cambridge, and is conducted by two masters. An English school is supported out of the funds of the same charity, and there are two sets of almshouses. The town com-

prises also an old, but well-built market-hall. The chief business of Newport is its retail trade for the supply of the neighbourhood. Malting is carried on pretty extensively; and it derives some advantages from its situation on a branch canal connecting the Shrewsbury canal with the Liverpool and Birmingham Junction canal. A private bank and savings' bank are established here. Markets on Saturday; cattle and sheep fairs, first Tuesday in February, Saturday before Palm Sunday, May 28, July 27, Sept. 25, and Dec. 10.

NEWPORT, a decayed bor. and market town of England, co. Cornwall, N. div. hund. East, separated from Launceston, of which it is a suburb, by a small rivulet. Though it had for many years been quite insignificant, this borough sent, from the reign of Edward VI., two members to the House of Commons (nephews of the Duke of Northumberland) down to the passing of the Reform Act, by which it was disfranchised.

NEWPORT, county, E. I. Situated in the S.E. part of the state, and contains, exclusive of water, 136 sq. m. It consists of several islands in Narraganset bay, and a portion of the main land. The principal island is Rhode Island, from which the state takes its name, which is 15 m. long, and 2½ broad. It also contains Conanicut, and Providence islands in Narraganset bay, Block Island in the Atlantic, and the townships of Tiverton and Little Compton on the main land. It possesses great facilities for navigation, and especially for the fisheries. It contained in 1840, 6633 neat cattle, 29,230 sheep, 5679 swine; and produced 408 bushels of wheat, 3500 of rye, 96,059 of Indian corn, 38,005 of barley, 62,607 of oats, 142,318 of potatoes. It had seven houses in foreign trade, 133 retail stores, five lumber yards, capital invested in the fisheries \$301,537, two filling-mills, five woolen factories, 10 cotton factories with 21,290 spindles, one dyeing and printing works, 24 grist-mills four saw-mills, three rope-walks, four tanneries, one distillery, one brewery, three printing-offices, two kinderies, three weekly newspapers; three academies, 100 students; 62 schools, 2471 scholars. Pop. 16,874. Capital, Newport.

NEWPORT, p. t., Penobscot co., Me., 54 m. N.E. Agassiz, 649 W. It has four stores, one grist-mill, one saw-mill; eight schools, 471 scholars. Pop. 1136.

NEWPORT, p. t., capital of Sullivan co., N. H., 30 m. W. by N. Concord, 474 W. Chartered in 1781. Watered by Sugar river and its branches, with artificial water-power. It contains four churches, a Congregational, Baptist, Free-will Baptist, and Universalist, seven stores, two filling-mills, one woolen factory, two grist-mills, 10 saw-mills, two tanneries, one printing-office, one weekly newspaper; 19 schools, 650 scholars. Pop. 1958. It has a courthouse, jail, and an academy.

NEWPORT, p. t., capital of Newport co., and seat capital of the state of Rhode Island. Situated on the S.W. side of Rhode Island, 30 m. S. by E. Providence, 75 m. S.W. Boston, 55 m. E. by N. New-London, 408 W. It is in 41° 29' N. lat., and 71° 19' 13" W. lon. The harbour is enclosed by Brenton's point on the S.W., and Goat Island in front, and is spacious, safe, and well defended, having a depth of water sufficient for the largest ships. The harbour is defended by three forts. Fort Green is on the N.W. side of the town; fort Adams is on Brenton's point, 2 m. S.E. of the town; and fort Woolcott is on Goat Island, in front of the town. On this island there is a military hospital belonging to the United States. Newport is finely situated for commerce. It has some trade with the East Indies, and the north of Europe, and considerable with the West Indies, particularly the island of Cuba. The coasting trade, particularly with the middle and southern states, is considerably extensive; and the fisheries have been successfully prosecuted. In the whaling business seven ships, and three brigs are employed. Of merchant vessels, there are two ships, two barques, 19 brigs, 16 schooners, and 19 sloops. Packet lines ply to New-York, and to other places on the coast. The site of the town is beautiful. The ground rises by a gentle acclivity from the shore, causing the place to appear finely from the water. The principal street is over a mile in length, and there is a public square called Washington square, on which the state house stands. The houses are neatly built, and those which are old are kept in good repair. The beauty of its situation, and the salubrity of its climate, have made it a favourite place of summer resort, particularly from the southern states. Its fish market is unrivalled, having nearly 60 different kinds of scale and shell fish, and in great abundance. It contains a state house, a jail, seven banks, with an aggregate capital of \$715,000, 12 churches, three Baptist, a Congregational, Methodist, Friends, Moravian, two Episcopal, two Unitarian, and a coloured, besides a Jews' synagogue, 1200 dwellings, and 8333 inhabitants. The Redwood library was founded in 1747, has a neat edifice, and contains 4000 volumes, many of them rare old folios. There is also a Mechanics' library, and a Marine society. The place has

NEW-PORTLAND.

several cotton manufactories. The Coddington mills have 10,300 spindles, 244 looms, and employ 170 hands; the Newport manufacturing company have 5000 spindles, 116 looms, and employ 140 hands; the Perry manufacturing company have 8000 spindles, 230 looms, and employ 217 hands. According to the census of 1840, Newport had five commercial and two commission houses in foreign trade, with a capital of \$126,700; 104 retail stores, with a capital of \$346,515; three lumber yards, capital \$26,800; one fulling-mill, two woollen factories, four cotton factories, with 20,290 spindles, seven grist-mills, three tanneries, one distillery, one brewery, three printing-offices, two binderies, three weekly newspapers. Total capital in manufactures \$736,983; two academies, 100 students; eight schools, 265 scholars. The registered, and licensed and enrolled tonnage of the district in 1840, was 10,924.

NEWPORT, p. t., Herkimer co., N. Y., 86 m. N.W. Albany, 405 W. Watered by West Canada creek. It contains one Episcopal and Baptist church, seven stores, two fulling-mills, two cotton factories with 1636 spindles, two grist-mills, six saw-mills, two tanneries, two distilleries; 10 schools, 493 scholars. Pop. 2030.

NEWPORT, t., Luzerne co., Pa., 8 m. S.W. Wilkesbarre. Watered by Nanticoke river. Anthracite coal and bog iron ore abound. It has two stores, three flouring-mills, four saw-mills; five schools, 235 scholars. Pop. 1099.

NEWPORT, p. v., capital of Campbell co., Ky., 66 m. N.N.E. Frankfort, 493 W. Situated on the S. side of Ohio river, immediately above the mouth of Licking river, directly opposite to Cincinnati. It contains a courthouse, jail, a market-house, an academy endowed by the state with 6000 acres of land, and a United States arsenal. It occupies an elevated plain, which commands a fine view of Cincinnati.

NEWPORT, p. v., capital of Cocke co., Tenn., 233 m. E. by S. Nashville, 465 W. Situated on the S.W. side of French Broad river. It contains two churches, a Methodist and Presbyterian, an academy, and 150 inhabitants.

NEWPORT, p. t., Washington co., O., 118 m. E.S.E. Columbus, 293 W. Bounded S.E. by Ohio river. It has a church, two stores, 10 schools, 464 scholars. Population 1238.

NEWPORT, p. v., capital of Vermillion co., Ia., 78 m. W. Indianapolis, 650 W. Situated on the S. side of Vermillion river, 2 m. above its junction with Wabash river. It contains a courthouse of brick, a jail, four stores, two tanneries; one school, 30 scholars. Pop. 192.

NEW-PORTLAND, p. t., Somerset co., Me., 56 m. N.N.W. Augusta, 650 W. It has seven stores, one fulling-mill, three grist-mills, three saw-mills; 17 schools, 597 scholars. Pop. 1620.

NEWPORT-PAGNELL, a market-town and par. of England, at the N. extremity co. Buckingham, hund. of its own name, near the junction of the Ouse and Ousel (crossed here by two stone bridges, and one of iron), 13 m. E.N.E. Buckingham, and 48½ m. N.W. London. Area of par., 3290 acres. Pop. in 1841, 3569. The town is straggling, ill-built, and only occasionally lighted with gas. The church, which has lately been thoroughly repaired, is a large building of considerable antiquity, occupying an eminence which commands an extensive view of the surrounding rich country: the living is a vicarage, valued at £330 a year, and in crown patronage. The Roman Catholics, Wesleyan Methodists, and Independents have also their respective places of worship, with attached Sunday schools. National, Lancastrian, and infant schools are supported by subscription; and there are two endowed charity schools for girls. A mechanics' institute was established here a few years since; and there is a theological academy for training Independent ministers. Revie's almshouse provides lodging, clothes, fuel, and a stipend of £10 a year to seven aged persons, and Queen Anne's hospital (founded by Anne, consort of James I.) is appropriated to the maintenance of six poor men and women, an allowance, also, of £10 a year being made to the vicar as its master. There are several other minor charities and bequests belonging to the parish, and in trust of the vicar and churchwardens. Newport-Pagnell had formerly a very extensive manufacture of bone-lace, which, though greatly injured by the competition of the machine-lace of Nottingham, still forms the staple trade of the town. The petty sessions for the hund. are held here. Markets well supplied with corn on Saturday: cattle and lace fairs, April 22, June 22, and October 22.

NEW-RICHMOND, p. v., Ohio t., Clermont co., O., 116 m. S.W. Columbus, 487 W. Situated on the N. bank of Ohio river. It contains two churches, a Methodist and Presbyterian, 10 stores, a large steam grist and steam saw-mill, 130 dwellings, and about 900 inhabitants.

NEW-ROCHELLE, p. t., Westchester co., N. Y., 18 m. N. E. New-York, 145 m. S. Albany, 244 W. Bounded S. by Long Island sound, on which is a pleasant village. It was early settled by the Huguenots, from Rochelle in

NEWRY.

France. It has two academies, 38 students; one school, 50 scholars. Pop. 1816.

NEW ROSS, a parl. bor. and river port of Ireland, co. Wexford, prov. Leinster, on the declivity of a steep hill, on the E. side the Barrow, 13 m. N.E. Waterford. Pop. in 1831, 6284. It is in general pretty well built, but its appearance does not indicate prosperity: this, however, is said to be owing to the difficulty that has existed of late years in obtaining land from the proprietor, Mr. Tottenham, on leases of sufficient length to encourage building. (*Boundary Report*.) Its public buildings are the parish church, a chapel of ease, a Roman Catholic chapel, a friary, and a nunnery, with a chapel to each; meeting-houses for Quakers, Methodists, and the Christian brethren; several endowed schools, an infirmary, a fever hospital, and dispensary, a lying-in hospital, the Trinity hospital, and other almshouses, with several minor charitable institutions; a market-house, and corn-market; a barrack, the borough courthouse, sessions-house, and bridewell. A wooden bridge, 500 feet in length, with a drawbridge for the passage of vessels, leads across the river to the suburb of Rossercon, in the county Kilkenny. The corporation, which received its first charter in the reign of Edward I., consisted of a sovereign, burgesses, and commonalty. It returned two members to the Irish House of Commons till the union, since which it has sent one member to the Imperial House of Commons. The electoral limits, as fixed by the Boundary Act, comprise about 336 acres. Registered electors, in 1839-40, 339. General sessions are held at Easter and Michaelmas; petty sessions every fortnight. The town is a constabulary station, and it has three breweries and distilleries. Markets on Wednesdays and Saturdays; fairs, 10th Jan., 10th Feb., 17th March, Easter Monday, 3d May, Whit-Monday, 10th June, 10th July, 10th Aug., 10th Sept., 18th Oct., 10th Nov., and 8th Dec.

New Ross is extremely well situated for trade: vessels of 900 tons reach it at all times of the tide, and those of 600 tons at high springs: the river is also navigable for barges to Athy, where it unites with the Grand canal, communicating with Dublin on the one hand, and the Shannon on the other. In 1835, its exports, consisting principally of grain, provisions, and live stock, were valued at £59,074. It imports fish from Newfoundland, and timber from N. America and the Baltic. Postoffice revenue in 1830, £265; 1836, £1035. Branches of the Agricultural and National banks were opened in 1835. (*Boundary Rep.; Railway Rep.*)

Though called New, Ross is really an old town. A sanguinary conflict took place here on the 4th of June, 1798, between the insurgent Irishmen and the military. The former repeatedly forced their way into the town; but were in the end repulsed with great loss.

NEWRY, a parl. bor., river-port, and town of Ireland, prov. Ulster, on the Newry Water, about 6 m. above where it falls into Carlingford bay, and on the line of the Newry canal, which gives it a navigable communication with the bay on the one hand, and with Lough Neagh on the other, 34 m. S.W. Belfast, and 56 m. N. Dublin. Area of parl. bor., 2500 acres. Pop. in 1831, 13,369. It is divided by the river into two unequal portions, the largest of which, on its W. side, is in the county Down, and the other in Armagh; the communication between them being kept up by four bridges, two of which are handsome structures.

It is a well-built thriving town. (*New Bound. Rep.*) Its more ancient part, on the declivity of a hill, has narrow and ill-arranged streets; but the modern portion, on the low ground along the river and canal, has wide airy streets, with good houses, mostly of granite. The principal public buildings are two Protestant Episcopal churches; St. Patrick's, originally built in 1578, and rebuilt after the revolution, and St. Mary's, a handsome structure, erected in 1819, with a spire 190 feet in height. It has also two Roman Catholic chapels, one of which, of large dimensions, in the Gothic style of architecture, is regarded as the cathedral of the see of Down. A convent of the order of St. Clare has also a chapel attached to it. The Presbyterians have three places of worship, the Methodists two, and the Independents and Kellyites one each. The institutions for education comprise a preparatory seminary for Maynooth college, a school attached to the convent of St. Clare, and three schools connected with the board of national education, in which and in other minor schools, about 1700 pupils are instructed. Some of the apartments of a suite of assembly-rooms, erected in 1794, are now used as public offices and for a savings' bank. It has also a mendicant association, and some almshouses; a hospital, with accommodation for 40 patients; a good custom-house; and barracks for 700 men.

The environs, which are very beautiful, are studded with numerous seats, surrounded by well-wooded demesnes. The town is paved, cleaned, lighted with gas, and watched, under the management of a board of commissioners: the

NEW-SALEM.

assessment for these purposes amounts to about £1100 a year. The supply of water is wholly derived from numerous private springs.

The *Lordship of Newry*, of which the town forms part, extends over about 21,000 acres. It formerly was attached to a monastery, and enjoyed very extensive privileges, which, after the dissolution of religious houses in the reign of Henry VIII., were vested in the Bagnal family, of which the Earl of Kilmorey is the present representative; his lordship being lay rector and improprisor of the tithes. The borough was incorporated by James I. in 1613; but the corporation under this charter having, from some cause or other, been extinguished, the senechal, appointed by Lord Kilmorey, became the ruling officer in the town, holding a manor-court every third Wednesday for sums not exceeding £10, and a weekly court of record on Mondays for pleas to the amount of £3 6s. 8d. Irish. The general sessions for the county of Down are held here twice a year, as are those for the W. division of Armagh, in which the town is partly situated. Here is a bridewell, in which prisoners are confined until transmitted to the county prisons at Downpatrick or Armagh. The borough returned two members to the Irish House of Commons; and since the union it has returned one member to the Imperial House of Commons. The charter restricted the right of voting to the provost and 12 burgesses; but on its extinction the franchise came to be enjoyed by the inhabitants at large. It was, however, confined by the act 35 G. 3, cap. 99, to the occupiers of houses rated at the annual value of £5. The Boundary Act did not change the limits of the borough. Registered electors, in 1830-40, 1690.

Though not distinguished by its manufactures, it has two foundries, a flint-glass factory, a distillery, three breweries, and some large corn-mills; and in its vicinity are two large flax-mills and a cotton-mill. The opening of the Newry canal connecting Carlingford bay with Lough Neagh, has been of great advantage to the town, having made it the entrepôt of a very considerable district, and the seat of an extensive commerce: it is the principal port in the kingdom for the shipment of butter. Vessels of small burden come up to its quays, but those of larger burden load and unload at Warren's point, about 4 m. lower down. Subjoined is

An Account of the Quantity and Value of the Principal Articles shipped from Newry in 1835.

Exclusive of its cross-channel trade with Great Britain, especially that with Liverpool and Glasgow, which is by far the most extensive, it has some trade with North America, the ports on the Baltic, and other foreign countries. The gross customs' duty received at the port amounted, in 1840, to £44,040; and it has about 180 ships of the aggregate burden of about 9000 tons, exclusive of two or three steamers. A general market, and a market for linens, which are extensively produced in the neighbourhood, are held every Thursday; and a market for grain on Tuesdays, and for meat on Saturdays. Postoffice revenue, in 1830, £2841; do., in 1836, £2739.

Newry was early of considerable importance, and had a castle. It suffered in the war of 1641; and was nearly destroyed by the Duke of Berwick in 1690. It is now one of the most thriving towns in the N. of Ireland.

NEW-SALEM, p. t., Franklin co., Mass. 73 m. W. N. W. Boston, 403 W. Bounded N. by Miller's river, by a branch of which it is watered. Incorporated in 1753. It contains three churches, two Congregational, and a Baptist, four stores, one fulling-mill, two grist-mills, eight saw-mills, two tanneries; one academy, 103 students; 12 schools, 380 scholars. Pop. 1306.

NEW-SCOTLAND, p. t., Albany co., N. Y., 9 m. W. Albany, 379 W. Drained by Coyeman's creek, and a branch of Normankill river. It contains a Presbyterian church, three stores, two grist-mills, four saw-mills. Population 2012.

NEW-SEWICKLY, t., Beaver co., Pa., 5 m. E. Beaver. Watered by Beaver river, which affords extensive water-power. It has one store, two grist-mills, two saw-mills, 459

NEWTON.

one tannery, one distillery, one pottery; four schools, 123 scholars. Pop. 1740.

NEW-SHARON, p. t., Franklin co., Me., 96 m. N. W. Augusta, 681 W. Watered by Sandy river, which flows into Kennebec river. Incorporated in 1794. It contains four stores, one fulling-mill, two grist-mills, two saw-mills; 17 schools, 729 scholars. Pop. 1869.

NEW-SHOREHAM, p. t., Newport co., R. I., 15 m. S. S. W. Point Judith, 13 m. N. E. Montauk-point, Long Island. It comprises Block Island in the Atlantic, 8 m. long, and from 2 to 4 broad. About one seventh part of the surface is covered with ponds. The only fuel is peat, as there are no forests. The inhabitants are chiefly employed in the cod and mackerel fisheries. It has no ship harbour, and the boats are hauled ashore in bad weather. It contains a Baptist church, four stores, one grist-mill; four schools, 574 scholars. Pop. 1069.

NEWSTEAD, a village of England, co. Nottingham, being a liberty of the par. of Papewick, in the N. div. wap. Broxtow, 8 m. N. by W. Nottingham. Pop. in 1831, 159. This village would be wholly unworthy of notice were it not for its proximity to Newstead Abbey; a structure, the fame of which will be as immortal as the English language. The abbey was formerly a priory of Black Canons, founded by Henry II., and granted at the dissolution to Sir John Byron, the ancestor of the illustrious poet, to whom it is wholly indebted for its celebrity. The part now inhabited consists principally of the rooms and offices of the priory, the church, except the S. aisle, having fallen entirely into decay. The front has a noble and majestic appearance, being built in the form of the W. end of a cathedral, adorned with rich carving and lofty pinnacles. The cloisters exactly resemble those of Westminster Abbey, only on a smaller scale, but possessing, if possible, a more venerable appearance. The cloister-court has a basin in the centre; and many of the ancient occupants of this noble pile lie under its flagged pavement. The chapel is still entire. The abbey stands

"— embosomed in a happy valley,
Crowned by high woodlands —."

And the ivy-covered ruins of the Gothic church, with its "mighty window" and tower, strikingly contrast with the castellated mansion and its offices.

"Before the mansion lies a verdid lake,
Broad as transparent, deep, and freshly fed
By a river," —

with woods sloping down to its banks. The apartments are spacious and superbly furnished in the old style; and the venerable fabric, with its remnants of monastic and baronial magnificence, its sombre appearance and sequestered situation, seems to have harmonized well with the moody mind of the "noble Child." An antique cross of red sandstone stands in the courtyard, and a Gothic greenhouse leads into a beautiful garden, formerly the cemetery of the priory, where is a pedestal of white marble erected by the poet over a Newfoundland dog that had saved his life. The remains of Lord Byron are interred in Hucknall churchyard, a few miles from the abbey, which has passed from the family.

NEWSTEAD, p. t., Erie co., N. Y., 30 m. N. E. Buffalo, 396 m. W. Albany, 396 W. Bounded N. by Tonawanda creek. It has four stores, two fulling-mills, one grist-mill, six saw-mills, two tanneries; 15 schools, 702 scholars. Pop. 2653.

NEWTON, county, Ga. Situated N. W. of the central part of the state, and contains 460 sq. m. Drained by branches of Ocmulgee river. It contained in 1840, 6031 neat cattle, 4212 sheep, 17,983 swine; and produced 46,322 bushels of wheat, 901 of rice, 465,339 of Indian corn, 26,373 of oats, 13,990 of potatoes, 747 pounds of tobacco, 4,115,635 of cotton. It had 36 stores, one cotton factory, with 308 spindles, four flouring-mills, 13 grist-mills, eight saw-mills, two tanneries, three distilleries; one academy, 85 students; one school, 30 scholars. Pop.: whites, 7890; slaves, 3739; free coloured, 18; total, 11,693. Capital, Coveinton.

Newton, county, Miss. Situated a little S. E. of the centre of the state, and contains 540 sq. m. Drained by head branches of Chickasawha river. It contained in 1840, 9376 neat cattle, 1387 sheep, 14,130 swine; and produced 1994 bushels of wheat, 95,751 of Indian corn, 10,312 of potatoes, 1670 pounds of rice, 273,892 of cotton. It had six grist-mills, six saw-mills; one college; two schools, 48 scholars. Pop.: whites, 1980; slaves, 546; free coloured, 1; total, 2527. Capital, Decatur.

Newton, county, Mo. Situated in the S. W. corner of the state, and contains 1150 sq. m. Drained by branches of Neosho river. It contained in 1840, 6924 neat cattle, 3721 sheep, 17,390 swine; and produced 6151 bushels of wheat, 264,116 of Indian corn, 5918 of oats, 9561 of potatoes, 9179 pounds of tobacco, 1589 of cotton, 1752 of sugar. It had 12 stores, six grist-mills, four saw-mills, four tanneries, four distilleries; six schools, 114 scholars. Population: whites,

NEWTON FALLS.

2616; slaves, 169; free coloured, 5; total, 3790. Capital, Newbo.

Newton, p. t., Middlesex co., Mass., 7 m. W. Boston, 433 W. It is bounded on three sides by Charles river, which, by two considerable falls, affords extensive water-power. The Boston and Worcester railroad passes through it. It contains the Newton Theological seminary, under the direction of the Baptists, founded in 1825, has three professors, 33 students, 137 who have completed the course, and 4000 vols. in its library. It has a brick edifice 85 feet long, 49 wide, and three stories high above the basement, which cost \$10,000. There are also houses for the professors, and a mansion house for boarding the students. The township contains five churches, two Congregational, two Baptist, and an Episcopal, 15 stores, one cotton factory, with 5712 spindles, two grist-mills, three paper-mills; four academies, 114 students; 11 schools, 509 scholars. Pop. 3351.

Newton, p. t., capital of Sussex co., N. J., 70 m. N. Trenton, 338 W. The borough is on Paulinskill river, has several streets, and a large public square in the centre, on which stands the courthouse, jail, and county offices. It contains three churches, a Presbyterian, Episcopal, and Methodist, an academy, a high school, a bank, a lyceum, a public library, eight stores, two printing-offices, each issuing a weekly newspaper, 150 dwellings, and 900 inhabitants. The township contains 15 stores, one furnace, one fulling-mill, two woolen factories, five grist-mills, seven saw-mills; three academies, 91 students; 15 schools, 537 scholars. Pop. 3857.

Newton, t., Gloucester co., N. J., 6 m. N.E. Woodbury. Watered by Cooper's and Newton creeks. It contains nine stores, one fulling-mill, one woolen factory, three grist-mills, one tannery, one pottery; three academies, 155 students, five schools, 345 scholars. Pop. 1663.

Newton, t., Cumberland co., Pa., 16 m. W. Carlisle. Watered by Yellow Breeches creek. It has two commission houses in foreign trade, two stores, one furnace, two fulling-mills, two woolen factories, three flouring-mills, six saw-mills, two distilleries; seven schools, 317 scholars. Pop. 1469.

Newton, p. t., Muskingum co., O., 60 m. E. Columbus, 345 W. It contains three churches, and has several salt works. It has 15 schools, 593 scholars. Pop. 2568.

NEWTON FALLS, p. v., Newton t., Trumbull co., O., 163 m. N.E. Columbus, 311 W. Situated at the junction of two branches of Mahoning river, and on the Pennsylvania and Ohio canal. It possesses a good water-power, and contains two churches, four stores, three warehouses, two woolen factories, two grist-mills, three saw-mills, one paper-mill, and about 450 inhabitants. Iron ore is found in the vicinity.

NEWTON-IN-THE-WILLOWS, otherwise called *Newton-in-Marefield*, a bor., market-town, and township of England, W. Derby, hund. co. Lancaster, 15 m. W. by S. Manchester, and 168 m. N.W. London. Area of township, 3101 acres. Pop., in 1831, 2130; but probably much increased, owing to the recent erection of iron-foundries, engine-manufactories, and glass-works. It comprises one main and rather long street, conveniently situated near the point where the Manchester and Liverpool railway unites with the Grand Junction and Union railways: it has also a large depot and station. Two episcopal chapels have been built here within the last seven years, and there are two or three Sunday schools. A free school, founded in 1609, is endowed with £35 a year. Horse-races take place annually on the common N. of the town. Its market, long disused, was re-established in 1836, and is held on Saturday. Fairs, May 17 and 18, August 11 and 12. Newton returned two members to the House of Commons, nominees of the lord of the manor, from 1st Eliz. down to the Reform Act, by which it was disfranchised. (*Butterworth's Stat. of Lancashire*.)

NEWTON-LIMAVADY, an inland town of Ireland, co. Londonderry, prov. Ulster, near the Roe, about 14 m. E. from Lough Foyle, and 15 m. N.E. Londonderry. Pop., in 1831, 2428. "It is agreeably situated on the E. bank of the river Roe, in a fertile and well-cultivated district. The town is rapidly increasing and improving, arising from the impulse which of late years has been given to husbandry in its vicinity. Wheat is now raised in considerable quantities, though not many years ago it was imported for home consumption. But the great increase in the culture of flax is the principal cause of its prosperity; and such has been the extent of this produce, that it was found expedient to open a market in the town for its disposal within the last twelve months, where the average weekly sales now amount to from 15 to 17 tons, and to the value of £1000 sterling; and it is now considered that this amount will rather increase than diminish. Since the municipal commissioners visited the town, two banks, or branches of banks, have been established, with a fair proportion of business." (*Municipal Bound. Rep.*) The public buildings

NEWTOWN.

comprises the parish church, three Presbyterian meeting-houses, and one Methodist do.; a dispensary sessions-house, a market-house, and a bridewell.

The corporation, under a charter of James I., in 1613, consisted of a provost, 12 burgesses, and a commonalty, and returned two members to the Irish House of Commons till the union, when it was disfranchised. General sessions are held in June and December; petty sessions on alternate Tuesdays. The town is a constabulary station.

Markets for corn are held on Tuesdays and Fridays, and for general sales on Mondays. Fairs on the second Monday in February, 29th March, 13th June, 12th July, and 29th October. Postoffice revenue, in 1830, £478; in 1836, £469. The banks referred to above were the Belfast and Northern banks opened in 1835.

NEWTOWN-STEWART, a market-town of Scotland, co. Wigtown, beautifully situated in the vale of the Cree, mostly on level ground, on the banks of that river, and on the high road from Dumfries to Portpatrick, 36 m. W. the former, and 25 m. E. by N. the latter, direct distance. Pop. of town, 2341; or, including the parish, 3461. It chiefly consists of one main street along the road. A suburb, called Cree Bridge, on the opposite side of the river, and in the stewarty of Kirkcubright, is connected with the town by a handsome granite bridge.

A large cotton-mill was erected here about 45 years ago, but the speculation not succeeding, the premises were sold in 1836, for a fifth part of the original cost, and have since been pulled down. A few hand-loom weavers are employed by the Glasgow manufacturers; and it has a brewery and tan-work. But the inhabitants are chiefly dependent for support on its retail trade with the surrounding country and its markets. Pork, of the value of about £6000 a year, is cured here, chiefly for the English market. Vessels of 70 or 80 tons come up the Cree (which falls into Wigtown bay) to Carty, within 1 m. of the town.

The parish church, designed by Mr. Burn, architect, Edinburgh, and now (1841) about being finished, is the handsome Gothic edifice for religious purposes in the S. of Scotland. It occupies an elevated situation on the outskirts of the town, has a fine light spire, and is altogether extremely elegant, and in the best taste. It cost nearly £7000. Here are also chapels belonging respectively to the Associate Synod, the Relief, and the Roman Catholics. There are nine schools in the parish, of which the most important is the Douglas school, founded and endowed by a gentleman of that name, a native of the parish, who died in Jamaica in 1799. The teacher has a salary of £80 a year, and is allowed to charge school fees. Dr. Alexander Murray, the celebrated orientalist, was born (1775) in the neighbourhood, where a granite monument, 89 ft. in height, has recently been erected to his memory. Adjoining the town is Kircubright, the seat of the Heron family. (*New Stat. Account of Scotland, & Wigtownshire*, 167-195.)

NEWTOWNARDES, a town and seaport of Ireland, co. Down, at the N. extremity of Lough Strangford, 10 m. E. Belfast. Pop., in 1831, 4442. It has a large square and several good streets, in which are the parish church, a small Roman Catholic chapel, three Presbyterian meeting-houses, two for Methodists, and one each for Seceders and Covenanters, a large school on the foundation of Erasmus Smith, a spacious town-hall, a courthouse, and a house of industry. "It is increasing very much in extent; many houses have been built within the five years ending with 1835; and others are building, but they are generally of a small description." (*Mun. Bound. Report*.) The corporation, which, under a charter of James I., in 1613, consisted of a provost, 12 burgesses, and a commonalty, returned two members to the Irish House of Commons till the union, when it was disfranchised. A manor court sits every third Saturday for the recovery of debts to the amount of £10. General sessions are held in June and December, and petty sessions on the first and third Saturday of every month. A constabulary force is stationed here. The weaving and embroidery of damask muslins are carried on to a considerable extent for the Glasgow manufacturers; and there is a large brewery. Markets on Saturdays; fairs on the second Saturday of every month, and on the 23d January, 14th May, and 23d September. Postoffice revenue, in 1830, £320; in 1836, £532. A branch of the Belfast bank was opened here in 1836.

NEWTOWN, a pari. bor., manufacturing and market-town, and par. of N. Wales, hund. of Newton, co. Montgomery, on the Severn, crossed here by a handsome stone bridge, close to the upper end of the Montgomery canal, 264 m. S.W. Shrewsbury, and 152 m. N.W. London. Pop. of par., in 1831, 4530; in 1841, 3990. The town consists of a number of small streets, lined with mean-looking houses of lath and plaster. The town-hall is of brick, and there is a handsome modern cloth-hall. The church, an ancient structure in the English style, has a low square tower, surmounted by a wooden belfry; and another church is at present in the course of

NEW-UTRECHT.

being erected. There are also several places of worship for dissenters, and numerous Sunday-schools. "There is not a single day-school, however, in which the rising poor can receive gratuitous instruction." (*Hand-loom Weavers' Report*, v. 359.) "Newtown is one of the most considerable towns in Montgomeryshire; and appears, indeed, to be more flourishing, and rising into greater importance, than any other town in N. Wales, owing to the number of flannel manufactures carried on in the town and its neighbourhood. The greater quantity of the Welsh flannel is made here; and the peculiar quality of the water is one of the causes assigned for the excellence of its woollen articles. Land in the neighbourhood lets at a high rent." (*Bowd. Rep.*) "The flannel markets (removed thither from Welshpool in 1832) are held on alternate Thursdays, and the quantity in the mart averages 400 pieces, valued at £10 each, every market-day. The supply comes from every part of the country, except Llanidloes; and from many districts the flannel is sent in the rough, and finished or dressed at Newtown, where there are greater facilities of machinery and water. There are about 700 hand-loom in the town. The labour is performed principally by male weavers, but also by women and children, the average net wages amounting to 9s. 6d. per week. The best weavers are never out of employ; but a great number of the middling hands are thrown out of work by the slightest depression of the trade. Considerable distress prevailed a few years ago among the weavers, owing to the failure of numerous small manufacturers, but the trade has now returned to a wholesome channel." (*Hand-loom Weavers' Report*.)

In 1839, Newtown had four woollen-mills, employing 91 hands. Machinery is made on a considerable scale, and there are foundries, potteries, tanyards, and malthouses, besides two joint-stock banks. From the extent of its trade, it is designated "the Leeds of Wales." Its communications are facilitated by the Montgomery canal, which comes close up to the town, and connects it with the internal navigation of the central and northern districts. The Reform Act made Newtown a parliamentary borough, contributory with Llanidloes, Welshpool, Machynlleth, and Llanfyllin, to Montgomery. The Boundary Act included with the parish the townships of Hendidley and Gwestydd. Registered electors of Newtown, in 1839-40, 394; and of the united boroughs, 1031. Provision markets on Tuesday and Saturday; fairs, first Tuesday in February, last Tuesdays in March and August, June 24, October 24, and December 10. (*Hand-loom Weavers' and Bowd. Reports; Nicholson's Camb. Guide*, &c.)

Newtown, a decayed bor. and town of England, in the Isle of Wight, on the river of the same name, 3 m. W. by N. Newport, and 100 m. W.S.W. London. Pop. in 1831, 86. It was anciently called Frankville, and is supposed to have been of some importance previously to its being burnt down by the French in the reign of Richard II. Notwithstanding its decayed condition, it sent two members to the House of Commons from the 27th Elizabeth down to the Reform Act, by which it was disfranchised.

Newtown, p. t., Fairfield co., Ct., 62 m. S.E. Hartford, 293 W. Incorporated in 1708. Bounded N.E. by Housatonic river. Watered by Powatuck river, a tributary of the Housatonic. It contains five churches, two Episcopal, a Congregational, Methodist, and Baptist; 16 stores, three woollen factories, one cotton factory with 300 spindles, six grist-mills, three saw-mills, three tanneries; two academies, 45 students; 18 schools, 583 scholars. Pop. 3169. The Housatonic railroad passes through it.

Newtown, p. t., Queens co., N.Y., 8 m. E. New-York, 152 m. S. Albany, 339 W. Bounded W. by East river, N.E. by Flushing bay, S.W. by Newtown creek, which receives several branches from the township. Peat is considerably used for fuel, taken from an extensive bog near the village. The village contains four churches; a Presbyterian, an Episcopal, Methodist, and Dutch Reformed; a town-house, 80 dwellings, and about 500 inhabitants. The township contains 10 stores, one woollen factory, two grist-mills; one academy, 55 students, 10 schools, 466 scholars. Pop. 5054.

Newtown, p. t., Bucks co., Pa., 20 m. N.E. Philadelphia, 118 m. E. Harrisburg, 160 W. Newtown creek, a branch of Neshaminy creek, affords water-power. It contains a Presbyterian and a Friends' church; one store, two grist-mills, one saw-mill; one academy, 50 students; six schools, 436 scholars. Pop. 1414.

NEW-UTRECHT, p. t., Kings co., N.Y., 7 m. S. New-York, 151 S. Albany, 231 W. It occupies the extreme W. end of Long Island. The "Narrows" bound it on the W. It contains the "Bath house," a celebrated watering-place. It has one Dutch Reformed church, four stores; one academy, 35 students; two schools, 107 scholars. Pop. 1233.

NEW-WINDSOR, p. t., Orange co., N.Y., 86 m. S. by W. Albany, 288 W. Bounded E. by Hudson river. It contains nine churches, 641 scholars. Pop. 2493.

NEW-YORK.

NEW-YORK, the most northern of the middle United States, and the most populous in the union, is bounded N. by lake Ontario, the river St. Lawrence and Lower Canada; E. by Vermont, Massachusetts and Connecticut; S. by the Atlantic, New-Jersey and Pennsylvania; W. and N.W. by Pennsylvania, lake Erie and Niagara river. It is between 40° 30' and 45° N. lat., and between 71° 58' and 79° 38' W. long.; and between 39° 05' E., and 2° 55' W. long. from W. Exclusive of Long Island, it is 340 miles long and 210 broad, containing, in the whole state, 46,000 square miles, or 11,040,000 acres. The population in 1790, was 340,120; in 1800, 586,050; in 1810, 959,049; in 1820, 1,372,810; in 1830, 1,913,508; in 1840, 2,428,921. Of these 853,999 were white males; 816,276 were white females; 6435 were coloured males; 6428 were coloured females. Employed in agriculture, 455,954; in commerce, 23,468; in manufactures and trades, 173,193; in mining, 1898; in navigating the ocean, 5511; do. rivers lakes and canals, 10,167; in the learned professions, 14,111.

The state is divided into 59 counties, which, with their population in 1840, were as follows:

Counties.	Pop. 1840.	Counties.	Pop. 1840.
Northern District.		Rensselaer,	6,355
Albany,	66,583	Saratoga,	46,645
Albany,	40,375	Schenectady,	1,267
Cattaraugus,	22,539	Schoharie,	2,336
Chemung,	28,972	Seneca,	6,079
Cayuga,	64,826	St. Lawrence,	66,795
Chautauque,	47,975	Steuben,	46,000
Chemung,	20,782	Tioga,	25,251
Clinton,	46,725	Tompkins,	37,048
Columbia,	29,167	Warren,	15,428
Cortland,	24,807	Washington,	44,880
Delaware,	35,266	Wayne,	26,827
Erie,	62,465	Yates,	29,441
Essex,	68,034	Total,	1,808,261
Franklin,	16,518		
Fulton,	19,049	Southern District.	
Genesee,	56,947	Columbia,	61,890
Hamilton,	1,907	Dutchess,	22,890
Herkimer,	37,477	Greene,	29,640
Jefferson,	60,894	King's,	7,043
Lewis,	17,830	Long,	262,779
Livingston,	35,140	Madison,	61,720
Madison,	40,008	Putnam,	12,800
Monroe,	61,922	Queens,	14,835
Montgomery,	26,919	Rensselaer,	22,000
Niagara,	31,132	Richmond,	11,976
Oswego,	55,310	Saratoga,	22,000
Oneida,	67,511	Schoharie,	14,800
Ontario,	48,501	Sullivan,	14,800
Orleans,	85,137	Ulster,	6,000
Oswego,	48,619	Westchester,	14,800
Otsego,	49,026	Total,	745,500

Wyoming county has been formed since the taking of the census and is not included in the above. The counties are divided into 635 townships, nine cities, and include 145 incorporated villages.

Albany, on the W. bank of Hudson river, 145 m. N. of New-York, is the capital. The surface is various. Two principal chains of high lands, rising to mountains, cross the eastern part of the state. One of these comes from New Jersey and crosses the Hudson at West Point, where it crosses the water's edge, and rising to the height of from 1800 to 1680 feet, constitute some of the grandest and most interesting scenery in the country, known as the "Highlands." These mountains are from 15 to 30 miles wide, and after crossing Hudson river proceed in a northerly direction, but not in a continuous range, form in the N. part, the Tug-kannic mountains, which divide the waters which fall into Hudson river from those which flow into Housatonic river, and thence into Long Island sound. Another range comes from the N.W. part of New Jersey and constitutes the Shawangunk mountains. A third range comes from Pennsylvania, and proceeding N. through Sullivan, Ulster and Greene counties, constitutes the Catskill or Katskill mountains, having in their highest parts an elevation of 3300 feet, and proceeding N. at a less and varied elevation, crosses the Mohawk river at Little Falls. The Adirondack mountains in the N.E. part, and S.W. of lake Champlain, are the loftiest mountains in the state, mount Marcy, the highest peak, being 6460 feet high, and little inferior to the White mountains in N. H. These mountains are exceedingly rich in iron ore of the best quality. The country in the eastern part of the state is generally hilly, where it is not mountainous. In the western part of the state it is generally level, excepting on the S. towards Pennsylvania, where it is uneven and rough. The soil is generally good, and in some parts exceedingly fertile. The eastern part is best adapted to grazing, and the western part to grain. It produces wheat, Indian corn, grass, rye, oats, buckwheat, barley and potatoes. Beef and pork, butter and cheese, horses and cattle, pot and pearl ashes, fur, flaxseed, peas, beans and lumber, are extensively exported. Apples, pears, plums and peaches, are the most common fruits. The produce

NEW-YORK.

of the state will be best understood by the following statistics. There were in the state, according to the census of 1840, 475,543 horses or mules, 1,911,944 neat cattle, 5,118,777 sheep, 1,900,065 swine; poultry to the value of \$1,153,413. There were produced 19,366,418 bushels of wheat, 2,979,323 of rye, 10,972,286 of Indian corn, 3,330,060 of barley, 2,387,885 of buckwheat, 30,193,614 of potatoes; 9,845,305 pounds of wool, 447,250 of hops, 1735 of silk cocoons, 10,048,109 of sugar, 3,127,047 tons of hay, 1130 of hemp or flax. The products of the dairy amounted to \$10,496,031. of the orchard to \$1,701,935, of lumber to \$3,601,302. There were produced 6799 gallons of wine, 7613 tons of pot and pearl ashes, 469 barrels of tar, pitch or turpentine.

The climate of New-York is various. In the S. part the winters are mild, but changeable. In the N.E. part they are severe, but more uniform. In the level country W. of the mountains, the climate is more mild than in the same latitude in the E. part. The extremes of temperature at Albany, are 18° below and 93° above zero of Fahrenheit; at Flatbush, Long Island, 4° below and 87° above zero; at Canandaigua 8° below and 87° above zero. These may be regarded as representing the northern, southern and western divisions of the state, with some exceptions.

The principal rivers are the Hudson, 324 miles long, which enters New-York bay, and is navigable for sloops 151 miles to Troy; the Mohawk, 135 miles long, which enters the Hudson a little above Troy; the Genesee, 125 miles long, which enters lake Ontario, with falls at Rochester of 236 feet in three miles, having three perpendicular falls of 96, 76, and 20 feet, affording a vast water-power; Black river, 120 miles long, which flows into lake Ontario; Saratoga, 65 miles long, which enters lake Champlain at Plattsburg; the Ausable, which after a course of 75 miles, enters lake Champlain; the Oswegatchie which flows 100 miles, and enters the St. Lawrence; the Oswego which proceeds from Oneida lake, 40 miles to lake Ontario. The St. Lawrence forms a part of its N.W. boundary.

Lakes Erie, Ontario and Champlain lie partly within the state. Of the lakes which lie wholly within it, are lake George, 33 miles long, with an average breadth of two miles, having its outlet into lake Champlain, and surrounded by much picturesque scenery; Oneida lake, 30 miles long and 34 wide; Skaneateles lake, 15 miles long, and from 1 to 1½ m. broad; Oswego lake, 11 m. long, and from one to two m. in width; Cayuga lake, 38 m. long, and from one to four broad; Seneca lake, 35 m. in length, and from two to four broad; Crooked lake, 18 m. long, and from 1 to 1½ m. broad; Canandaigua lake, 14 miles long, and one broad. Excepting lake George, all these small lakes discharge their waters into lake Ontario. In the extreme W. part of the state is Chamtaugus lake, 18 miles long, and from one to three broad, situated within a few miles of lake Erie, but discharging its waters S. into Allegany river.

There are several important islands in New-York. Long Island is 190 miles from E. to W., with an average breadth of 10 miles, and contains the counties of Kings, Queens and Suffolk; Staten Island, S.W. of New-York harbour, is 18 miles long and eight wide, and contains the county of Richmond; Manhattan or New-York island is 15 miles long, with an average breadth of 1½ miles, and contains the city and county of New-York. At the E. end of Long Island are Fisher's island, Shelter island, and Robbins' island, all, excepting the first, small. Grand Island in Niagara river is 12 miles long, and from two to seven wide, and extends within 14 miles of Niagara falls.

The harbours are New-York, one of the finest in the United States, which extends eight miles above the Narrows, and is 25 miles in circumference, which is safe, spacious, well defended, and accessible at all seasons of the year, and has from 91 to 97 feet of water on the bar at its entrance. The Hudson river which enters this harbour, is navigable for large ships, about 130 miles to Hudson. Brooklyn on the W. end of Long Island has a good harbour, as has Sag Harbour, at its E. end. Sacketts harbour on lake Ontario is a good natural harbour, and Oswego harbour has been made good by artificial means. Buffalo and Dunkirk have good harbours on lake Erie.

New-York is the chief commercial city in the state, and in the United States, its facilities for commerce are unrivalled, and next to London, it is the greatest commercial city in the world. Brooklyn, opposite to New-York on Long Island, is an appendage of the larger city, and the second place in population in the state. Albany, Rochester, Troy, Buffalo and Utica are large and flourishing cities. Foughkeepsie, Newburgh, Hudson, Catskill and Lansingburgh on the Hudson; Schenectady on the Mohawk; Geneva, Syracuse, Auburn, Lockport, and Ithaca in the W., and Pittsburg in the N. part of the state, are flourishing places.

The commerce of the state of New-York greatly surpasses that of any other state in the union. The exports of 1841 were \$23,139,632, and the imports were \$75,713,486; the

tonnage entered was 1,111,680; the tonnage cleared was 965,548.

In 1840, there were 460 commercial, and 1044 commission houses in foreign trade, with a capital of \$49,583,001; 13,907 retail dry goods and other stores, employing a capital of \$42,130,793; 9592 persons engaged in the lumber trade, with a capital of \$2,604,170; 7593 persons engaged in internal transportation, and 804 butchers, packers, &c., the whole employing a capital of \$2,833,916; 1298 persons employed in the fisheries, with a capital of \$949,250.

The manufactures of the state of New-York are also extensive. Home-made or family manufactures amounted to \$4,636,547; 323 woollen manufactures, with 800 fulling-mills, employed 4636 persons, produced articles to the amount of \$3,537,337, with a capital of \$3,469,349; 117 cotton-factories, with 211,659 spindles, employed 7407 persons, and a capital of \$4,900,772; 332 persons produced 2,867,884 bushels of salt, with a capital of \$5,601,000; 186 furnaces produced 29,068 tons of cast iron, and 190 forges, produced 53,693 tons of bar iron, consumed 123,677 tons of fuel, employed 3456 persons, and a capital of \$2,103,418; nine smelting houses produced 670,000 pounds of lead, employing 333 persons, and a capital of \$221,000; 77 paper-mills produced articles to the amount of \$673,121, and other manufactures of paper produced \$96,637, the whole employing 749 persons, and a capital of \$703,550; hats and caps were manufactured to the amount of \$2,914,117, and straw bonnets to the amount of \$180,948, the whole employing 3680 persons, and a capital of \$1,676,559; 1216 tanneries employed 5579 persons, and a capital of \$3,907,348; other manufactures of leather, as saddles, boots and shoes, &c., produced articles to the amount of \$6,328,924, with a capital of \$2,743,765; 13 glass houses, and 11 glass cutting works employed 498 persons, produced articles to the amount of \$411,371, and employed a capital of \$804,700; 47 potteries employed 197 persons, producing articles to the amount of \$159,393, with a capital of \$58,450; machinery was produced to the amount of \$2,895,517, employing 3631 persons; 692 persons produced hardware and cutlery, to the value of \$1,566,974; 113 cannon and 5308 small arms were made by 303 persons; 1713 persons manufactured the precious metals to the amount of \$1,106,309; 1447 persons manufactured granite and marble to the amount of \$606,320; 459 persons made 11,939,534 pounds of soap, 4,039,763 pounds of tallow candles, and 353,000 pounds of spermaceti or wax candles, with a capital of \$618,573; 669 persons manufactured tobacco to the amount of \$651,870, with a capital of \$365,530; 919 distilleries produced 11,973,815 gallons of spirits, and 53 breweries produced 4,059,123 gallons of beer, the whole employing 1496 persons, and a capital of \$3,167,066; 4710 persons manufactured carriages and wagons to the amount of \$3,264,461, with a capital of \$1,465,623; 328 flouring-mills produced 1,861,385 barrel of flour, and with other mills, produced articles to the amount of \$14,953,280, employing 10,807 persons, and a capital of \$14,648,814; vessels were built to the amount of \$797,317; 3690 persons manufactured furniture to the amount of \$1,971,776, with a capital of \$1,610,810; 3190 persons produced bricks and lime to the amount of \$1,198,597; 1232 brick or stone houses, and 5198 wooden houses were built by 16,768 persons, and cost \$7,955,844; 331 printing-offices, 107 binderies, 34 daily, 13 semi-weekly or tri-weekly, and 196 weekly newspapers, and 57 periodicals, employed 3231 persons, and a capital of \$1,876,540. The total amount of capital employed in manufactures was \$55,252,779.

This state has several important literary institutions. Columbia college, formerly King's college, was founded in New-York city in 1754, and is under the direction, though not exclusively, of the Episcopalians; Union college at Schenectady was founded in 1795; Hamilton college in Clinton, was founded in 1819; Geneva college, conducted by the Episcopalians, was founded in Geneva in 1823; the University of the city of New-York was founded in 1831. The Hamilton literary and theological seminary was founded by the Baptists in 1819; the Theological Institute of the Episcopal church was founded in 1819, in the city of New-York, by the Episcopalians. The New-York theological seminary, connected with the University, was founded in 1836; the theological seminary at Auburn was founded by the Presbyterians in 1831; the Hartwick seminary was founded at Hartwick, in Otsego county, by the Lutherans, in 1816; the theological seminary of the Associate Reformed Church was founded at Newburgh, in 1836; the college of physicians and surgeons in the city of New-York was founded in 1807; the Albany medical college was founded in 1839. In the above named institutions, there were in 1840, 1985 students. There were in the state 505 academies, with 34,715 students, and 10,539 common and primary schools, with 508,367 scholars. There were 44,452 white persons over 90 years of age, who could neither read nor write.

In 1838, the Presbyterians, with a few Congregationalists,

NEW-YORK.

had 564 ministers, and 86,000 communicants; the Dutch Reformed had 142 ministers, and 15,800 communicants; the Methodists had 561 ministers, and 30,700 communicants; the Baptists had 483 ministers and 67,183 communicants; the Episcopalians had 307 ministers, and about 10,000 communicants; the Associate Reformed had 30 ministers; the Lutherans had 37 ministers; the Roman Catholic had 33 ministers; the Universalists had 25 ministers; the Unitarians had eight ministers; and there were a few others.

There were in the state, Jan. 1st, 1843, 85 chartered and 46 free banks, with an aggregate capital of \$43,950,137, and a circulation of \$14,530,843. The state debt, over available funds in hand for its redemption, was, in Sept. 30th, 1843, \$33,330,063. The valuation of real estate in 1842, was \$504,254,029, and of personal estate was \$116,595,233, making a total of both of \$620,849,262.

There are two penitentiaries in the state, one at Auburn, 77 m. W. of Utica, which is considered as a model for all similar institutions; the other at Sing Sing on Hudson river, 35 m. above the city of New-York, on a similar plan.

New-York has taken the lead in the United States in works of internal improvement. The Erie canal extends from Albany 363 miles to Buffalo. It was commenced in July, 1817, and completed in 1825, and cost \$7,143,700. The widening of the Erie canal has progressed considerably, but is at present suspended. If completed, it would more than double the expense. The Champlain canal, extending from its junction with the Erie canal at Waterford, 64 m. to Whitehall, on lake Champlain, cost \$1,257,804. The Oswego canal extends from its junction with the Erie canal at Syracuse, 36 m. to Oswego on Lake Ontario, and cost \$565,437. The Cayuga and Seneca canal extends from Geneva, at the outlet of Seneca lake, 21 m. to Montezuma, part the way by Seneca river, and cost \$236,805. The Chemung canal connects the head of Seneca lake with Elmira on Chemung river, is 39 m. long, and cost \$331,694. Crooked lake canal connects Crooked lake, near Penn Yan, with Seneca lake at Dresden, is 8 m. long, and cost \$156,777. Chenango canal extends from the Erie canal at Utica to Binghamton on Susquehanna river, is 97 m. long, and cost \$2,270,605. These canals are all completed. The Genesee Valley canal is to extend from Rochester 106½ m. to Olean on Allegany river, below which it is navigable to Ohio river. It is finished 53 m. to Danville, and has cost \$1,300,392. Most of it is under contract, and the whole, it is estimated, will cost not far from \$5,000,000. Black river canal is to extend from the Erie canal at Rome, to the High falls on Black river, 35 m., whence the navigation of the river is to be improved for 42½ m. A navigable feeder of 10 m. extends from Black river to the canal at Boonville. The canal, with the feeder, is completed to the summit level, 14 m., and cost \$446,841. The whole expense of the canal, aside from the river navigation, is estimated at \$1,760,046, a small part of which is under contract. The Delaware and Hudson canal is the work of a private company, but the state loaned \$800,000 to the company, for which it took stock. It extends from Rondout on Rondout creek in Ulster county, to Delaware river, 84 m., and thence extends 25 m. to Honesdale, and 16½ m. by railroad, to the coal mines at Carbondale. The whole length is 125½ m., part of which lies in Pennsylvania. The cost of the whole work was \$1,875,000.

A line of railroads, under different names and companies, extends from Albany to Buffalo. A railroad extends from Buffalo to Niagara falls, and is extended to Lewiston, where it connects with a steamboat line to Oswego. A branch of this railroad extends to Lockport. A railroad extends from Schenectady to Ballston spa. Another extends from Troy to Saratoga, and another from Troy to Schenectady. A railroad of 16 m. is in New-York and of 24 m. in Pennsylvania, extends from Corning in Steuben county, N. Y., to the Blossburg coal mines in Pa., with a total length of 40 m.; and more than 40,000 tons of bituminous coal are transported on this railroad annually, which, according to the demand, may be indefinitely increased. The New-York and Erie railroad is designed to extend 446 m. from Piermont on Hudson river, to Dunkirk on lake Erie. It is finished 46 m. to Goshen; and though something has been done on other parts, it is, at present, suspended for want of funds. The Harlem railroad extends from the city hall, New-York, to Bronx river, 14½ m.; and it is designed to extend it to the Honesatonic railroad in Connecticut, unless it can be continued directly to Albany. Unless a railroad can be extended from the city of New-York to Albany, much of the trade of the west will be diverted to Boston, which is connected by a railroad with Albany.

The governor is elected biennially by the people. He must be 30 years of age, be a native-born citizen of the United States, and have resided five years in the state. The lieutenant is elected in like manner, and must possess similar qualifications. He is president of the senate; and in case of the impeachment, removal, death, or absence, of

the governor, discharges the duties of the office. The senate consists of 32 members, who are chosen for five years, one fourth of whom are elected every year. The assembly consists of 128 members, elected annually by the people. The governor nominates all judicial officers, except justices of the peace, and has the power of appointment, with the consent of the senate; and the judges hold their offices during good behaviour, or until they are 60 years of age. Every male white citizen of full 21 years of age, who has resided for one year in the state, and for six months preceding the election, in the county where he offers his vote, enjoys the right of suffrage. Persons of colour are allowed to vote, who have resided five years in the state, and who possess a freehold of £250, and have held it for one year previous to the election, and paid a tax upon it.

Henry Hudson, an Englishman in the service of the Dutch East India company, discovered Hudson river, and Manhattan island, in 1609. He entered the river, and sailed with his ship above the highlands, and sent a party of men in a boat to explore the river farther, who ascended above Albany. The Dutch merchants sent a company to trade with the natives, who in 1614 built a fort on Manhattan island, and another called fort Orange, on an island, just below Albany. These establishments were made for the purpose of trade with the Indians. In 1621 the Dutch West India company was incorporated, and directed their attention to forming settlements for the purpose of trade, and they laid claim to the country from Delaware to Connecticut river, on both of which they built forts, which involved them in controversy with the Swedes and the English. They also had severe contests with the Indians. Peter Stuyvesant, the most intelligent of the Dutch governors, established, in 1650, with commissioners of the New-England colonies, the boundaries between the Dutch and English colonies. The former relinquished all claim to Connecticut, excepting the lands which they actually occupied, and the latter retained the eastern part of Long Island. In 1664, Charles II. granted the country to his brother, the Duke of York, and the English, under Col. Robert Nicolls, took possession of the country. Manhattan assumed the name of New-York, and fort Orange that of Albany, in honor of James, Duke of York and Albany. In 1673, an expedition from Holland captured the country from the English, but it was restored in 1674, by the treaty of Westphalia. From this time to the American Revolution, it was under governors appointed by the crown of Great Britain, with whom the people were often in controversy, and whose measures, when arbitrary, they were prepared to resist. The inhabitants bore an important part in the French and revolutionary wars. In September, 1776, after the disastrous battle of Flatbush on Long Island, the city fell into the hands of the British, who held it until the peace of 1783, when Washington marched the American army into it, in triumph. On the 36th of July, 1783, this state in convention adopted the constitution of the United States,—yeas 30, nays 25, majority 5.

NEW-YORK, city, the principal city of the state of New-York, and in population, wealth, and commerce, the largest city in the United States, deserves to be designated the London of America. The City-hall is in 40° 42' 49" N. lat. and 74° 1' 8" W. long. from Greenwich, and 30° 0' 16" E. long. from W. It is 36 m. N.E. Philadelphia, 210 m. S.W. Boston, 285 m. N.E. Washington, 670 m. N.E. Charleston, 145 m. S. Albany, 372 m. S. Montreal, 1370 m. N.E. New-Orleans. The population in 1790, was 33,131; in 1800, 60,489; in 1810, 94,373; in 1820, 123,706; in 1830, 222,529; in 1840, 312,710. Employed in commerce, 11,365; in manufactures and trades, 43,360; in navigating the ocean, 276; do. rivers and canals, 716; in the learned professions, 2227. The compact part of the city is situated on the S. end of New-York or Manhattan island, at the confluence of Hudson or North river, with a strait called East river, which connects Long Island sound with the harbour of New-York. The chartered limits of the city embrace the whole island, which is of the same extent with the county. The island extends from the Battery, on the S. point of the island, 1½ m. to Kingsbridge, in its N. part; and has an average breadth of 1 m. and three-fifths. The greatest breadth is on the line of 98th street, where its breadth is about 2½ m. and it contains about 14,000 acres. It is bounded on the N. by Harlem river or strait, the western part of which, from Kingsbridge to the Hudson, was named by the Dutch Spuyten Duyvel creek; on the E. by East river or strait, which separates it from Long Island; on the S. by the harbour; and on the W. by Hudson river, which separates it from New-Jersey. It is connected with the main land on the N. by three bridges, Harlem bridge, Macomb's bridge, and King's bridge. It is connected with Long Island by six ferries, four of which proceed to Brooklyn, and three to Williamsburg. Of the ferries to Brooklyn, the South ferry from Whitehall, New-York, to Atlantic-street, Brooklyn, is 1300 yards wide; the Fulton ferry, from Fulton-street, New-York,

NEW-YORK.

to Fulton-street, Brooklyn, is 731 yards wide; the Catherine ferry, from Catherine-street, New-York, to Main-street, Brooklyn, is 736 yards wide; the Navy Yard ferry connects Walnut-street, New-York, with Jackson-street, Brooklyn, and is 707 yards wide. Of the three ferries to Williamsburg, one is about 950 yards wide, and another, crossing East river obliquely, is about a mile and a half in length. Three ferries connect the city with New-Jersey, one to Jersey city, which is about a mile wide, and two to Hoboken, which are wider. On two ferries, boats are continually plying to Staten Island. Thus the insular situation of New-York proves no serious disadvantage. The ferries to Brooklyn are by far the most important, as many persons who do business in New-York reside in that city. These ferries are crossed in from four to six minutes, and at the charge of two cents, which most persons would prefer paying, to walking over a bridge.

The harbour is spacious and safe, the inner harbour extending 8 m. from the Narrows to the city, and several miles farther up both the North and East rivers, but particularly the latter. It is about 25 m. in circumference, and the largest vessels come to its wharves. Besides this, it has an outer harbour, extending from the Narrows to Sandy Hook, consisting of Raritan bay. Sandy Hook, on which is a light house, is 18 m. from the city; and at this point, there are 27 feet of water on the bar at high tide, and 21 feet at low tide. Within Sandy Hook, there is a good anchorage. The harbour is entered not only from the ocean at Sandy Hook and through the Narrows, but on the N.E. from Long Island sound, and on the S.W. through the Kills and Staten Island sound. By an accurate enumeration made March 16th, 1844, there were found to be 1011 vessels in the harbour of New-York, viz., 121 ships, 43 barques, 101 brigs, two gallies, 206 schooners, and 536 ordinary sloops and schooners, all of which are licensed at the custom-house, lying at a total extent of about 7 m. of wharves. To these should be added, when the Hudson river opens, about 80 steamboats, 75 low boats of from 100 to 400 tons burden, and 150 canal boats; making a grand total of 1316 vessels of different descriptions, which will be increased as the season opens. Several islands within the inner harbour are attached to the city, which are Governor's, Bedlows, and Ellis's islands, on all of which are strong fortifications; and Blackwell's, Great Barn, and Randall's islands, in the East river. Governor's island is 3900 feet distant from the city at the Battery, and includes 70 acres of ground. It contains fort Columbus, in the form of a star on the S. side of the island, and castle Williams on the N.W. point, which is a round tower, 600 feet in circumference and 60 feet high, with three tiers of guns. There is also a battery on the S.W. side, commanding the entrance through Buttermilk channel. At the Narrows, on the eastern shore of Long Island, are fort Hamilton and fort Lafayette, the latter of which (formerly called fort Diamond) is built on a reef of rocks, 300 yards from the shore. The Narrows, here about one third of a mile wide, has on Staten Island, on its W. side, fort Tompkins and fort Richmond, which are strong fortifications. The entrance from the sound on East river is defended by fort Schuyler, on Throg's neck. On Governor's island are houses for the officers, and barracks, which are occupied by a considerable garrison. On the whole, the harbour of New-York must be considered as well defended, and in a very different state from what it was during the last war with Great Britain. If even then they did not venture to approach New-York, much less would they do it now, in case of war, which it is hoped may not occur. After passing the bar at Sandy Hook, the channel to the city has a depth of water of from 35 to 60 feet. The average tide at the wharves is from 6 to 7 feet. Steamboats are constantly employed in towing vessels to and from the ocean. The safest and best portion of the harbour, and where the vessels chiefly lie, is along East river, where there is rarely any obstruction from ice. The tide sweeps through this part with a strong and rapid current; and in the winter of 1844, when the harbour of Boston, and the W. part of Long Island sound were much obstructed by ice, no inconvenience was felt at New-York. The excellence of its harbour, and other great natural advantages, have contributed to make it the second commercial city on the globe.

The surface of the island was originally uneven and rough, as is now the case in the northern parts, with occasional low valleys and marshy swamps; but the hills in the southern part of the island have been leveled, and the swamps and marshes filled up. Many creeks and inlets on the margins of the river have also disappeared, and the large ledge of rocks which occupied the site of the Battery, has long since been buried beneath the made ground which constitutes that beautiful promenade. The water line has been materially altered from what it originally was. A large part of Water, Front, and South streets on the East river, and of Greenwich, Washington, and West streets on the Hudson river in the S. part of the city, occupy ground

which has been made by filling in these rivers. The most elevated ground on the island is 238 feet above tide water. The city which is built, extends over 3 m. on each river, and the compact part has a circumference of over 9 m. But its limits are continually extending, and will soon greatly surpass these boundaries. The streets were originally laid out according to the make of the ground, and some of them were crooked; and in imitation of European cities, many of them were narrow. But in later times, they have been widened and improved, at a great expense. It seems a little barbarous at the time, to cut off 20 feet from valuable houses by the row; but when these improvements have been effected, the proprietors themselves find occasion to be well satisfied with the change. By these improvements, many fine streets have been made of those which before were unsightly and inconvenient. As instances of this among others, John-street and West Broadway may be particularly mentioned, as well as many others. Had the forecast of William Penn been concerned in originally laying out the city of New-York, millions of dollars might have been saved. But it should be recollected that he had a more smooth and even surface to work upon. He expected that he was laying out a great city for posterity; but the first inhabitants of New-York never expected that it would be what it now is, and is likely to become. In latter times care has been taken to lay out the streets straight, and of an ample width. This is particularly true of all the N. part of the city, which was laid out under the direction of Governor Morris, De Witt Clinton, and others, commissioners appointed by the legislature for this purpose, and surveyed by Mr. John Randall, Jr., completed in 1821, after having occupied ten years. No city can exhibit a more beautiful plan than this portion of the city of New-York, which extends to 154th street, about 10 m. N. of the battery.

Broadway extends from the Battery nearly 3 m. to Union-square, where it joins the fourth-avenue. It is 80 feet wide, perfectly straight, occupies the height of land between the two rivers, and has generally, particularly in its S. part, an excellent drainage. It is well built, with many fine houses and large retail stores. It is the great promenade of the city, and much resorted to in pleasant weather by the gay and fashionable. Pearl-street, between Broadway and the East river, is in a crescent form, over a mile long, and is the principal seat of the wholesale dry goods and hardware business, which has also extended into Cedar, Pine, and other adjacent streets. Water and Front streets, between Pearl-street and the East river, is occupied chiefly by wholesale grocers, commission merchants, and mechanics connected with the shipping business. South-street, extending along the margin of East river contains the warehouses and offices of the principal shipping merchants. In front of it is, at all times, a dense forest of masts. Wall-street extends from Broadway to the East river, and is occupied by banks, insurance offices, newspaper and broker's offices; has Trinity church at its head, the Custom-house and Merchant's exchange, and many fine granite buildings, which has caused it to be sometimes denominated the granite street; and is the centre of the heaviest money transactions in the United States. The Bowery is a wide and extensive street E. of Broadway, running N. and S., connected with the third avenue, which is Macadamized to Harlem, and forms the principal entrance to the city from the N.E. East Broadway, and parallel to it Madison, Henry, and Monroe streets, running a little N. of E. and S. of W., are broad and straight streets, and handsomely built. Bleeker, Bond, and other streets in the N. part of the city are beautifully built, and have become a fashionable place for residences. Canal-street, half a mile N. of the City-hall, and now much below the centre of the population, is a wide street with a large covered canal under it, is occupied extensively by stores, and is the seat of an extensive retail business. It crosses Broadway, nearly at right angles, and extends to Hudson river. In the year 1800, the site of this street was extensively occupied by a large pond, called Fresh Water, or the Collect, which received the drainage of 400 acres of ground. This was the northern limit of Broadway in 1801, and much beyond the thickly settled part of the city. There are other streets which deserve a particular notice, especially Greenwich-street, a long, wide, and nearly straight street, extending N. from the battery nearly two miles and a half, parallel to Hudson river, which has many stores and fine buildings; and Hudson-street, W. of it, and parallel to it, which is wide and straight, extending from Chambers-street to the ninth avenue, over a mile and three quarters long, and well built in many of its parts. Chatham-street, named in honour of the Earl of Chatham, extending from Broadway to Chatham-square, at the commencement of the Bowery, is a great thoroughfare, and particularly distinguished for its numerous clothing stores. Grand, Broome, and Houston streets are extensive and important streets, N. of the centre of the city. But it is impossible to notice all the important streets. In the harbour of New-York may be found vessels not

only from all parts of the United States, but from the principal commercial nations on the globe. Although it has a great extent of harbour, the vessels usually lie at the wharves along South-street, several tiers deep. The tonnage for the port entered in 1853, was 494,493; cleared 396,426. The imports in 1841 were \$75,968,015; the exports were \$30,731,519; and the duties paid at the port were \$10,502,119. The imports and exports in 1843 were less, and the duties were more. In 1843 the imports were \$50,308,520; the exports were \$23,440,336; and the duties collected were \$11,300,407. There is a line of steam-packets to Liverpool, consisting of the Great Western, to which will be added the Great Britain, a large iron steamer, in the spring of 1844. There are besides these, in several lines, 24 ships of the largest class, with a great capacity for freight, and elegant accommodations for passengers, one vessel of which sails for Liverpool every five days. Two lines of 13 large ships sail for London, one vessel every ten days. Two lines, one of 19 and the other of four large ships, making 16 in the whole, sail for Havre, France, every eight days. Lines are also established to all the principal ports of the United States, the West Indies and South America. There are also steam-boat lines to Hartford, New-Haven, Bridgeport, Norwich, and New-London, Stonington, and Providence, besides the numerous steamboats to Albany, Troy, and the various places on Hudson river. The arrivals from foreign ports in 1843 were 1832. Of these 408 were American ships, 153 barques, 515 brigs, and 389 schooners; eight were British ships, 18 barques, 184 brigs, and 56 schooners; 16 were Bremen ships, 25 barques, nine brigs, and three schooners. The remainder were from Sweden, Hamburg, France, and various other countries, making in the whole six steamers, 439 ships, 233 barques, 739 brigs, eight galliots, 355 schooners, and three sloops. The number of passengers in 1843 was 46,309, of whom 341 were Americans returning to their own country. In addition, there were in 1843, 4737 arrivals of coasters, which, added to 1832 arrivals from foreign countries, makes the whole number of arrivals in the year to be 6566; which is 801 more than in the year 1842.

The city must be considered somewhat deficient in public grounds or places, but it has several important ones. In addition to several triangular areas, as Hanover-square, Franklin-square, and Chatham-square, as they are denominated, with some others of a like description, there are several more important public places. *The Battery*, at the south-eastern end of the island, is situated at the junction of Hudson and East rivers. It is in the form of a crescent, and contains about 11 acres of ground, beautifully laid out with grass-plats and gravelled walks, and shaded with trees. On the side next to the city, is an iron-railing, and from this ground is a fine view of the bay, with its islands, and the adjacent shores of New-Jersey, and Long and Staten islands; and this view is generally enlivened by shipping under sail. *Castle Garden* is built on a mole, and connected with the battery by a bridge. It was originally erected as a fortification, and having become unnecessary for this purpose, was ceded by the United States to the corporation of the city, in 1823. Within its walls, 10,000 people can be accommodated in a great amphitheatre; and it is used for public meetings and exhibitions.

The Bowling Green, at the southern termination of Broadway, is an elliptical area, 220 feet long and 140 broad, enclosed by an iron fence. It was established before the American Revolution, and formerly contained a leaden statue of George III., which was converted into bullets at that period. It contains in its centre a public fountain, supplied by the Croton Waterworks. In the centre of a large basin, a rude pile of huge flat stones, in a somewhat circular form, about 15 feet in diameter, and as many feet high, has a jet from its centre, and small jets around it; and when it is in action, presents, by the water pouring down its sides, a wild and picturesque appearance.

The Park, called in early times the *Commons*, is a triangular area of about 10½ acres, lying between Broadway, Chatham, and Chamber streets, is laid out with walks, and planted with trees, and surrounded by an iron fence, which cost over \$15,653. It contains the City-hall, the New City-hall or old Almshouse, and the Postoffice. It has also toward its S. part, a public fountain, within a basin about 100 feet in diameter, which has a variety of jets, which are occasionally changed. When the water is thrown in a single stream, it ascends to the height of about 70 feet, presenting a majestic and interesting appearance. It is designed to be made yet more ornamental.

Hudson-square, or *St. John's Park*, is private property, belonging to Trinity church, which, however, has been reserved as a permanent public square. It is between Beach, Laight, Varick, and Hudson streets, is encompassed by elegant buildings, beautifully laid out with walks, and shaded with trees, and surrounded by an iron fence, which cost \$26,000. It contains about four acres of ground, and has on its E. side St. John's Episcopal church, of beautiful propor-

tions, with a lofty spire. It has a public fountain, and is, perhaps, the most ornamental spot in the city.

Washington-square, a mile and a half N. of the City-hall, between Wooster and McDougal streets, contains about ½ acre of ground. Two thirds of this area was the Potter's field until 1827, and the remainder was purchased by the city for about \$78,000, and the whole was enclosed by a wooden fence, which cost nearly \$3000, laid out in walks, and planted with trees. On the E. side it has the fine building of the New-York university, and an elegant Dutch church, both handsome specimens of Gothic architecture. On the N. and S. sides it has blocks of fine buildings, and is destined, when the trees shall be fully grown, to be a highly ornamental ground.

Union-place, at the northern termination of Broadway, is in an elliptical form, enclosed with a fine iron fence, having a public fountain in the centre, with ornamental jets; and when the vicinity shall be more densely settled, will be a delightful breathing place to the inhabitants. All these public grounds are much frequented in the summer season. Farther up the city are other public squares, as Madison-square, Hamilton-square, and others, not yet regulated. On the E. are Tompkin's-square and Bellevue, the latter the seat of the new almshouse.

The city of New-York has some superb public buildings. The most splendid of these is the *Merchant's Exchange*, which covers the whole space between Wall, William, Exchange, and South William streets. It has a somewhat confined situation, and shows to less advantage than if it were surrounded by open grounds. It is built in the most substantial form of blue Quincy granite, and is 300 feet long by 171 to 144 feet wide, 77 feet high to the top of the cornice, and 194 to the top of the dome. The front on Wall-street has a recessed portico of 18 massive Grecian-Ionic columns, 38 feet high and 4 feet 4 inches in diameter, each formed from a solid block of stone, and weighing 43 tons. It required the best application of the mechanical powers, aided by horses, to raise these enormous masses. Besides numerous other rooms for various purposes, the Exchange in the centre is in a circular form, 80 feet in diameter, with four recesses, making the length and breadth each 100 feet, the whole 80 feet high, surmounted with a dome, resting in part on eight Corinthian columns of Italian marble, 41 feet high, and lighted by a skylight, 35 feet in diameter. On the S. side of the roof is a telegraph, which communicates with another on Staten Island; and an hourly report is sent down from the telegraph to the newroom, for public inspection. When it is recollected that this fine building has been erected in the place of an elegant exchange building burned in the great fire in 1833, it is a matter of congratulation that this building is absolutely incombustible, having no wood but the doors and window frames used in its construction. The cost of this building, including the ground, is estimated at \$1,800,000.

The Custom-house is a splendid building, constructed in the Doric order of Grecian architecture. It is built in the most substantial manner of white marble, something after the model of the Parthenon at Athens, at the head of Broad-street, on the corner of Nassau and Wall streets. It occupies the site of the old Federal Hall, in the open gallery of which General Washington was inaugurated; and nearly over the front door is the place where he stood, when the oath of office, as first president of the United States, was administered to him by Chancellor Livingston, April 30, 1789. Would not this be a fine spot in which to place a group of statuary, representing this interesting transaction? The building is 300 feet long, 90 feet wide, and 80 feet high. At the S. end on Wall-street, is a portico of eight purely Grecian-Doric columns, 5 feet 8 inches in diameter and 23 feet high; and on the N. end on Pine-street, is a corresponding portico of similar columns. The front portico is ascended by 18 marble steps, and the rear portico on Pine-street by only three or four marble steps. It is two lofty stories high above the basement story. The great business hall is a splendid circular room, 60 feet in diameter, with recesses and galleries, making it 80 feet in diameter, surmounted by a dome, supported by 16 beautiful Corinthian columns, 30 feet high, ornamented in the dome with stucco, and at top with a skylight. On each side, on the outside, are 13 pilasters, in perfect keeping with the pillars on the two floors. The cost of the building and its furniture was \$950,000; and including the ground, \$1,175,000. It has other large apartments than those specified, for various purposes connected with the business of the Custom-house. It is absolutely incombustible, and may be expected to stand to a late posterity, an honour to the commercial capital of the nation.

The City-hall, heretofore regarded as much the finest building in the city, and one of the finest in the United States, has a commanding situation in the middle of the Park, though somewhat in the rear, and shows to greater advantage than either of the fine buildings already described. It has more ornament than either the Exchange or

The Custom-house, but less simple grandeur; though with its furniture, it is, perhaps, the most interesting building in the city. It is 216 feet long and 105 wide. The front and ends are constructed of white marble, and the rear of brown freestone. It is two stories high above the basement, with a third or attic story in the centre building; and there rises from the centre a lofty cupola, containing a city clock, of fine workmanship, and on the top, a colossal statue of Justice. In the upper part of this cupola is a room occupied by a man whose business it is to give alarm in cases of fires; and from this elevated position, he is able to overlook the whole city. Behind this is another less elevated cupola, with eight beautiful ionic columns, which contains the City-hall bell, weighing 6910 pounds, whose deep and solemn tones often sound the knell of property, and by the different number of strokes, indicate the district of the city in which a fire occurs. The front of the City-hall is ornamented with columns and pilasters of the Ionic, Corinthian, and Composite orders, rising above each other in regular gradation. The building is entered in front by a flight of 13 marble steps. In the centre is a double staircase, ascended by marble steps, at the top of which is a circular gallery, floored with marble, from which 10 marble columns of the Corinthian order ascend to the ceiling, where is a handsome paneled dome ornamented with stucco, and a skylight, which gives light to the interior of the building. There are halls which lead from the centre to each end of the building in each story. In the basement and the stories there are 28 offices and other public rooms, the most conspicuous of which are the Governor's room, and the chambers of the common council and assistant aldermen. The Governor's room is appropriated to the use of the governor of the state when he visits the city, and has been used as a reception room for other distinguished men who have occasionally been here. It is 52 by 30 feet. The walls of the room are hung with a fine collection of portraits, including the governors of the state, the mayors of the city since the Revolution, some of the Dutch governors, and the principal military and naval heroes of the late war, all of which are regarded as excellent likenesses, and many of them are full-length portraits. The Common Council room is 43 by 30 feet, and the president occupies the identical chair occupied by General Washington when he presided over the first American Congress, which assembled in New-York. It is surmounted, as it meets, by a canopy. The seats of the aldermen are ranged in a semicircular form, in the centre of which is a table for the clerk. The room contains several fine full-length portraits painted by Trumbull, of which that of Washington is thought to be the best in existence, when he was in the prime of life. The room of the assistant aldermen is handsomely fitted up. The Superior Court room is very neat and convenient, 43 by 30 feet, and neatly fitted up for its purpose. But he who looks over the several apartments of this building will obtain a higher idea of it, than he can from any concise description. The building was commenced in 1803, and completed in 1812, and cost \$538,734. To the E. of the City-hall, in the park, is the Hall of Records, two stories high, with a lofty portico of four ionic pillars on each front; and in the rear of it is the New City-hall, which was the old almshouse, and contains 15 offices, besides the Marine Court-room, and the rooms of the American Institute, the latter containing a valuable library and various interesting models of machines.

The Hall of Justice occupies the whole space between Centre, Elm, Leonard, and Franklin streets, and is a unique and beautiful building of the Egyptian architecture. It is 253 feet long and 200 feet wide, the front of which is occupied by the main building, and other outer portions of which consist of lofty walls, with apartments in some of their parts. Within this enclosure, and toward its back part, is the house of detention or prison, 143 feet long and 45 feet wide, which is entirely separate from the outer wall and building, and consists of 148 cells for different classes of prisoners. The court of sessions occupies a part projecting back from the front building, the roof of which is supported by lofty Egyptian columns, and it has a gallery. The front of the building is entered by eight steps, leading to a portico of four massive Egyptian columns. From this there is an ascent by twelve steps, between two massive columns, to an open area of 50 feet square, which has eight large columns supporting the ceiling above. From this area there is an entrance to the various offices and apartments of the building. The windows, which extend to the height of two stories, have massive frames, and cornices ornamented with the winged globe and serpents. The two fronts on Franklin and Leonard streets have each two entrances, with two massive columns each; and the back entrance forms a carriage way, for taking prisoners to and from the house of detention. This building, though handsome of its kind, has a heavy and gloomy aspect, which has acquired for it the name of the *Egyptian Tomb*. It is constructed of a light coloured granite, from Hallowell, Me.

Among the churches, some deserve to be particularly noticed, on account of their architecture. The new Trinity Episcopal church will, when completed, be one of the finest buildings of the city, and the most complete Gothic structure in the United States. It stands at the head of Wall-street, which it fronts. It is in the finest style of English church architecture, built of a light-brown freestone, with much beautifully ornamented sculpture in its various parts; is 192 feet long upon the outside, 84 feet wide, and the steeple, when completed, will be 264 feet high, built of stone to the top. Above the first story is a roof which considerably narrows the building in the second story, as is common in the old churches of England. The inside will be even more imposing than the outside. The situation is fine, and it is only to be regretted that it could not have stood farther back from the street. St. Paul's Episcopal chapel is situated on Broadway, between Fulton and Vesey streets, and the burying ground extends W. to Church-street, and thus includes the whole block, 400 by 180 feet, surrounded by a handsome iron railing. The body of the church is 90 by 70 feet, with a beautiful spire, 200 feet high, painted and overcast with sand to resemble brown freestone. The church was erected in 1765, and the steeple in 1794. It has a beautiful portico of four Roman ionic fluted columns of brown stone, supporting a pediment with a niche in the centre, containing a statue of St. Paul, painted white. St. John's Episcopal church is situated on Varick street, directly opposite the centre of St. John's-square, is a building of fine proportions and beautiful appearance, was finished in 1810, and cost over \$200,000. It is 111 feet long and 73 wide, built of stone, and has an admirably proportioned steeple, 230 feet high, at present the finest in the city. It has in front a splendid portico of four Corinthian columns. St. Thomas's Episcopal church in Broadway, corner of Houston-street, is a large and imposing building, 63 feet wide by 113 feet deep, built of stone. It is in the Gothic style, and has two octagon towers, one on each of the front corners, 80 feet high, with pointed turrets, and an immense Gothic window in front between them. One or two other Episcopal churches, recently erected in the upper part of the city, deserve particular notice. Of the Presbyterian church, though many of them are peculiarly neat and convenient, few of them have anything imposing in their external appearance. The Scotch Presbyterian church, corner of Grand and Crosby streets, is a stone building, 95 feet long and 67 broad, with a fine ionic portico of six stone columns, and cost \$114,000. The venerable brick church, corner of Nassau and Beekman streets, built in 1767, has been recently and thoroughly repaired, at a great expense, and has a lofty and well-proportioned steeple. The Rutgers-street church is a fine stone edifice, with a lofty square tower. The Duane-street church has an imposing ionic portico. The first Baptist-church in Broome-street, corner of Elizabeth-street, is a fine stone edifice of Gothic architecture, is from 88 to 110 feet long, and from 75 to 87 feet wide, with two octagon towers on the front corners, and a pointed window between them, 22 ft. wide and 41 ft. high. The interior is more imposing than the exterior. St. Peter's Roman Catholic church in Barclay-street, corner of Church, is a large and substantial granite structure, with a very imposing ionic portico of six granite columns, and a statue of St. Peter in a niche in the pediment. The French Protestant Episcopal church, corner of Franklin and Church streets, is built of white marble, and has a portico with a double row of fine marble columns of the ionic order. The Reformed Dutch church on Washington-square is a large and imposing structure of Gothic architecture, and appears well, even by the side of the splendid New-York university. St. Patrick's Roman Catholic cathedral is of stone, 190 feet long and 80 feet wide, but is more distinguished for its magnitude than for its elegance, though it is an imposing structure. Some churches recently built in the upper part of the city have a fine appearance, and are expensive and commodious buildings. Perhaps there is no circumstance that more strikingly shows the progress of the population toward the N. part of the city than the removal of churches. Murray-street church was built in 1812, was 92 by 77 feet, with a lofty and beautiful cupola, and was an ornament to the lower part of the city. It was in good repair, and would have stood, without alteration, well for 100 years. Yet this building was taken down in 1842, and removed a mile and a half N. of its former site; and with such care, that it presents a front and cupola which is at once recognised, and with pleasure, by those who have formerly admired its beautiful proportions, while the inside has been much improved. A new and splendid Episcopal church has been commenced to supply the place of Grace church in Broadway, near Trinity, two miles and a half N. of its present site; and the present church will be taken down, though a good building, when the new one is completed. And it is said that Wall-street church, and perhaps others, in the lower part of the city, will, before long, share the same fate. But in all

NEW-YORK.

cases, the new structures will greatly exceed the old, in convenience and magnificence.

New-York contains several important literary institutions. The oldest is Columbia college, chartered by George II. in 1754, by the name of King's college, and confirmed, with the necessary alterations, by the legislature of New-York, in 1787. It has a president and 10 professors, 1170 alumni, 100 students, and 14,000 volumes in its libraries. The commencement is on the day after the first Monday in October. The building is situated on a beautiful square between Chapel, Church, and Murray streets, is 900 feet long and 50 feet wide, with two projecting wings, one at each end, in which are accommodations for the families of the professors. It contains a chapel, lecture rooms, hall, museum, and an extensive philosophical and chemical apparatus. The students do not reside in the building, as is common in many other colleges. They are considered safer under the immediate eye of their parents or guardians. The funds amount to about \$300,000; and the annual income to \$7000 or \$8000. There is a flourishing grammar school attached to the institution, over which one of the professors presides, as rector. The university of the city of New-York stands on Washington-square, between Washington-place and Waverly-place, has a fine edifice of white marble in the Gothic style of English collegiate architecture, and is an ornament to the upper part of the city. It is 180 feet long and 100 wide, with a centre building and wings, and an octagonal turret on each of the four corners. The chapel, a highly finished room, receives its light from a window of stained glass in the W. front, 24 feet wide and 50 feet high. The principal entrance is through a richly moulded and deeply recessed portal, with doors of oak richly panelled and ornamented. The wings are four stories high, and the corner towers five stories high. The whole building is a fine specimen of architecture, and presents a beautiful appearance, especially from the large square which spreads out before it, and shows it to great advantage. This institution was founded in 1831, has a president and 11 professors, has in the collegiate department 145 students, and a valuable library and philosophical apparatus. Connected with it, is an extensive grammar school, superintended by a professor, and a flourishing medical department, the whole of which contain 680 students, viz., undergraduates, 145; medical, 323; grammar school, 312. The general theological seminary of the Episcopal church, corner of ninth avenue and 21st street, contains two handsome buildings of stone, was founded in 1819, has five professors, 74 students, and 7900 volumes in its library. The New-York Theological seminary was organized in 1836, has six professors, 104 students, and 12,000 volumes in its library. The Public School society had on May 1st, 1843, 16 schools, with male, female, and primary departments, besides two schools for coloured children; and 48 primary schools, besides five for coloured children. The number of scholars in all these schools was 20,186. Besides these, under the late law of the state, there are established public district schools, in different parts of the city, in which are numerous children, and these schools are spoken of by the superintendent of schools, as well taught and flourishing. What the final result of these two separate organizations will be, remains yet to be seen. The Rutgers Female Institute in Madison-street, has a fine granite building, a valuable library and philosophical apparatus, and 450 students, ranged in a number of distinct apartments, under separate teachers. The Mechanics' school in Crosby-street has a number of teachers, and 350 pupils. The Protestant Episcopal school has several teachers, and a large number of scholars.

The College of physicians and surgeons of the city of New-York has a handsome edifice in Crosby-street, near Spring-street, and was founded in 1807, has eight professors and about 100 students. The lectures commence on the first Monday in November, and continue four months. Degrees are conferred by the regents of the university, at the recommendation of the board of trustees. The whole expense of the course is about \$100. The New-York Hospital has a collection of extensive buildings in a handsome situation, with a fine yard, on Broadway, at the junction of Pearl-street, has a large number of physicians and surgeons attached to it, and over 900 patients. The Eye Infirmary has four surgeons attached to it, relieves a large number of applicants, and is a useful institution. The New-York Lunatic Asylum, connected with the New-York Hospital, is located at Bloomingdale, near Hudson river, has a large and fine building, attached to which are 40 acres of ground, tastefully laid out in gardens, pleasure grounds, and gravelled walks, and is one of the most elevated sites on the island, from which is a fine view of Hudson river and the surrounding country. The principal edifice is of stone, 310 feet long and 60 feet wide, cost, with its grounds, over \$900,000, and contains about 150 patients. The Deaf and Dumb Asylum is on 50th street, near the fourth avenue or Harlem railroad, and has a building 110 feet long and 60

feet wide, which will accommodate a large number of pupils, with the teachers and family of the principal. It has, January 1st, 1844, 173 pupils. It is under a principal and eight professors. The Institution for the Blind is on the eighth avenue, and has about 70 pupils.

The New-York Society Library is an old institution, founded in 1754, has a handsome and substantial edifice of brown freestone on Broadway, corner of Leonard-street, with six Ionic columns resting on the basement story. It is among the interesting buildings of the city, and besides spacious accommodations for the library, has a handsome and commodious lecture room, and the rooms of the Academy of Design. The library is open on every week day with a few exceptions, and contains nearly 40,000 volumes. The Historical Society, located at the university, has a valuable library of 19,000 volumes, besides a collection of coins and medals. It has published several volumes of historical collections. The National Academy of Design, instituted in 1836, has purchased the statutory of the Academy of Fine Arts, and exhibits annually a large collection of paintings by living artists, which are visited by great numbers of persons. The same painting is not allowed to be exhibited twice, so that the collection is always new. Clinton-hall Association was founded in 1830, for the promotion of literature, science, and the arts, and is the proprietor of Clinton-hall, in which the Mercantile Library is located. The Mercantile Library Association was formed for the special benefit of merchants' clerks, and is one of the most useful institutions of its kind in the city. It has a library, after deducting for volumes lost, of 30,587 volumes. About 4500 volumes have been lost since its establishment in 1830. It has a beautiful reading room, open on week days, well warmed and lighted, and much frequented. It sustains in the winter season an interesting course of literary and scientific lectures, for which some of the best talents in the country are put in requisition. The Apprentices Library in Crosby-street has a library of 12,000 volumes, read by 1800 apprentices, and exceedingly useful to young mechanics. The American Institute, incorporated in 1829, for the encouragement of agriculture, commerce, manufactures, and the arts, occupies rooms at the W. end of the second story of the New City-hall, where it has a valuable library and reading room, and interesting models of machinery. It holds an annual fair at Niblo's garden, where is exhibited a splendid array of the fruits of American ingenuity and industry. It is one of the most interesting exhibitions in the city, and is visited by not fewer than 30,000 persons yearly. By the distribution of premiums, it gives great encouragement to agriculture and the mechanic arts. The New-York Lyceum, founded in 1833, sustains, in the winter season, an able course of lectures.

There are many religious charitable institutions which have their centre in New-York. The American Bible Society, founded in 1816, received for the year ending May 24, 1843, \$136,448, and has a large edifice in Nassau-street; the American Tract Society, founded in 1816, received for the year ending April 15th, 1843, \$96,940. This society has a large brick building in Nassau-street. The American Board of Commissioners for Foreign Missions, received \$344,594; the American and Foreign Bible Society (Baptist), received \$33,638; the Baptist Home Missionary Society, received \$40,583. Most of these societies hold an anniversary in the city in May.

There are 185 churches in New-York, viz., 31 Presbyterian, 29 Episcopal, 31 Baptist, 30 Methodist Episcopal, 30 Dutch Reformed, three Lutheran, five Congregational, two Protestant Methodist, four Friends, three Welsh, two Unitarian, four Universalist, 13 Roman Catholic, nine African, six Jews' synagogues, and 13 various.

There are 25 banks in the city of New-York, with an aggregate capital of \$27,303,300; several marine insurance companies, with a total capital of about \$3,000,000; 23 fire insurance companies, with an aggregate capital of about \$5,000,000, besides several mutual insurance companies. There are four savings banks. There are 15 markets, of which Fulton, Washington, Catherine, Essex, Clinton, Tompkins, and Franklin, are the principal. There are six theatres, of which the Park, Bowery, and Chatham are the principal, and two museums, the American and Peale's. There is also a circus, and there are occasionally performances at Niblo's garden, somewhat resembling a theatre.

There are in New-York several splendid hotels, of which the Astor House is the most remarkable, a mammoth granite building, said to be superior to anything of the kind in London or Paris; Howard's Hotel, little less extensive; the City Hotel, a very extensive brick building; the Franklin House; the United States Hotel, of white marble, six stories high; the American Hotel; and many others equally commodious and extensive, some of them elegant hotels and boarding houses united.

The number of buildings erected in the city in 1843, was 1373.

In 1842, the aggregate of the city expenses was \$1,645,779;

NEW-YORK.

of which there were for the public schools, \$96,671; for the poor, \$328,000; for the watch, \$935,567; for the fire department, \$51,887. The city debt was \$14,790,494. The amount collected by taxation for city purposes, was \$1,470,876.

A large number of the streets, stores, and other buildings are lighted with gas. The works of the New-York Gas Light Company are situated at the corner of Canal and Centre streets, and nearly 30 m. of iron pipes are laid down. The expense of gas for a store with four lights is about \$69 a year. But the most splendid and expensive public work undertaken by the city is the Croton Waterworks. It was at first estimated that it would cost five or six millions of dollars; and at the city charter election of 1835, the citizens were required to vote for or against supplying the city in this way. The whole number of votes given was 17,330, of whom 5963 were against it, and 11,367 in favour of it. It is probably happy that they did not then know how much it would ultimately cost; but after having experienced its great advantages, no one now regrets its construction. The aqueduct commences at the Croton river, 5 m. from Hudson river, in Westchester county. The dam is 250 feet long, 70 feet wide at bottom, and 7 feet at top, and 40 feet high, built of stone and cement. It creates a pond 5 m. long, covering a surface of 400 acres, and contains 500,000 gallons of water. From the dam the aqueduct proceeds, sometimes tunnelling through solid rocks, crossing valleys by embankments, and brooks by culverts, until it reaches Harlem river, a distance of 33 m. It is built of stone, brick, and cement, arched over and under, 6 feet 3 inches wide at bottom, 7 feet 8 inches at the top of the side walls, and 8 feet 5 inches high, has a descent of 13½ inches per mile, and will discharge 80 millions of gallons in 24 hours. It will cross Harlem river on a magnificent bridge of stone, 1450 feet long, with 14 piers, eight of them 80 feet span, and seven of 50 feet span, 114 feet above tide-water to the top, and will cost \$300,000. This bridge is in progress; and for the present the water is brought across the river in an iron pipe, laid as an inverted syphon. The receiving reservoir is at 86th street, 38 m. from the Croton dam, and covers 35 acres, and contains 150 millions of gallons. The water is conveyed to the distributing reservoir on Murray's hill, in 40th street, in iron pipes. The distributing reservoir covers 4 acres, and is constructed with stone and cement, 43 feet high above the street, and holds 20 millions of gallons. Thence the water is distributed over the city in iron pipes, laid so deep underground as to be secure from frost. The whole cost of the work will be about \$12,000,000. The water is of the purest kind of river water. There are laid below the distributing reservoir in 40th street, 150 m. and 3665 feet of pipe, from 6 to 36 inches in diameter, the majority of which is from 6 to 12 inches in diameter; and free hydrants are opened in most of the streets, besides the fire hydrants. There are 1400 fire, and 600 free hydrants. But little inconvenience has been felt during the cold weather of the past winter to the hydrants, and that inconvenience can be easily remedied. No city in the world is now better supplied with pure and wholesome water than the city of New-York, and the supply would be abundant, if the population were five times its present number. The water can be freely expended for washing the streets, which will contribute to the health of the population, who are not now satisfied with the water from the pumps. You might as easily persuade the drunkard from his cups, as to choke the citizens off from the Croton water.

The Harlem railroad extends from the City-hall through Centre-street to Broome-street, where it turns at right angles to the Bowery, and there it again turns nearly at right angles, and follows the Bowery to the fourth avenue, on which it proceeds to Harlem, 8 m., and crossing Harlem r., it is extended into Westchester county as far as where the line crosses Bronx river. A part of this course is a deep cut through solid rock, with a tunnel 595 feet long, 31 feet wide, and 21 high to the crown of the arch, and a high embankment. It has a double track the whole length; and to Harlem, cost \$137,500 per mile, being by far the most expensive railroad for its length now in the United States. Within the thickly settled parts of the city the cars are moved by horses, and beyond that, by locomotives. The cars start from the City-hall once in 15 minutes, and it affords a pleasant ride, as through a considerable part of its course it presents a fine view of the East river, and of the surrounding country.

There are not more than five or six cities in Europe more populous than New-York, viz. London, Paris, Constantinople, St. Petersburg, Naples, and perhaps Vienna.

According to the census of 1840, there were in the city 417 commercial and 918 commission houses engaged in foreign trade, with a capital of \$45,941,300; 3690 retail dry goods and other stores, with a capital of \$14,648,595; four furnaces employed 56 persons, consumed 4500 tons of fuel, produced 3000 tons of cast iron, with a capital of \$23,000; the pro-

ducts of the dairy were \$22,400, of the garden for market, \$66,640, of the nursery and florists, \$24,650; 61 lumber-yards employed 2606 persons, and a capital of \$731,500; 329 persons employed in Internal transportation, with 43 butchers, packers, &c., employed a capital of \$648,780; 1419 persons produced machinery to the amount of \$1,150,000; 145 persons produced hardware and cutlery to the amount of \$135,300; 30 persons produced 1462 small arms; 542 persons manufactured the precious metals to the amount of \$632,760; 798 persons manufactured various metals to the amount of \$1,067,800; 473 persons manufactured granite and marble to the amount of \$403,850; 18 persons produced bricks and lime to the amount of \$27,000; 248 persons engaged in the manufacture of wool employed a capital of \$30,000; 18 cotton manufactories, and two dyeing and printing works, employed 290 persons, produced to the amount of \$154,700, with a capital of \$61,300; mixed manufactures employed 1633 persons, produced to the amount of \$1,201,700, with a capital of \$507,050; 209 persons manufactured tobacco, producing to the amount of \$187,700, with a capital of \$55,055; hats and caps were manufactured to the amount of \$1,031,346, and straw bonnets to the amount of \$198,200, the whole employing 1361 persons, and a capital of \$444,300; one tannery produced 2000 sides of sole leather, and 3500 sides of upper leather, employing 507 persons, and a capital of \$30,000; 217 other manufactories of leather, as saddlery, &c., produced to the amount of \$1,509,156, with a capital of \$545,730; 329 persons produced 7,813,700 pounds of soap, 3,003,400 pounds of tallow candles, and 250,000 pounds of wax or spermaceti candles, with a capital of \$277,600; 11 distilleries produced 3,973,278 gallons of distilled spirits, and 15 breweries, 1,205,490 gallons of beer, the whole employing 274 persons, and a capital of \$575,076; 393 persons produced paints and drugs to the amount of \$225,050, and turpentine and varnish to the amount of \$161,260, with a capital of \$648,650; three glass houses, and six glass-cutting establishments, employed 104 persons, produced to the amount of \$137,131, with a capital of \$53,000; one pottery employed 13 persons, produced to the amount of \$4000, with a capital of \$3000; seven sugar refineries produced to the amount of \$385,000, and confectionaries produced to the amount of \$249,943, the whole employing 327 persons, and a capital of \$425,706; one paper mill produced to the amount of \$25,000, and other manufactories of paper, as playing cards, boxes, &c., produced to the amount of \$30,137, the whole employing 51 persons, and a capital of \$27,900; six rope-walks, employing 61 persons, produced cordage to the amount of \$24,000, with a capital of \$9800; 281 persons produced musical instruments to the amount of \$353,531, with a capital of \$307,874; 297 persons produced carriages and wagons to the amount of \$307,874, with a capital of \$90,950; two grist-mills and eight saw-mills, employed 63 persons, produced to the amount of \$331,800, with a capital of \$146,800; ships were built to the amount of \$354,000; 1319 persons manufactured furniture to the amount of \$916,675, with a capital of \$696,150; 542 brick or stone houses, and 59 wooden houses were built, employing 4033 persons, and cost \$1,889,100; 113 printing-offices, 43 binderies, 18 daily, 45 weekly, and five semi-weekly or tri-weekly newspapers, and 38 periodicals, employing 2029 persons, and a capital of \$1,285,390. The total amount of capital employed in manufactures was \$11,228,894.

There were four colleges, with 430 students, 148 academies or grammar schools, with 7907 students, and 900 common or primary schools, with 32,867 scholars.

Hudson river, and Manhattan or New-York island, were discovered by Henry Hudson, an intrepid English navigator, September 3d, 1609. He had previously explored the North sea, in the fruitless attempt to discover a north-west passage, and Hudson's bay received its name from him. Although Sebastian Cabot had previously discovered the coast, he knew nothing of Hudson river. Henry Hudson set sail from the Texel in a vessel called the Half Moon, navigated by a crew of 30 men, English and Dutch; and, after doubling the cape of Norway, proceeded toward Nova Zembla, until, being impeded by ice, he determined to proceed E. toward Virginia, in doing which he discovered and explored the harbour of New-York, and the river which bears his name, which he penetrated with his ship as far as he thought prudent, and thence in a boat above Albany. He returned to Dartmouth, in England, November 7th, 1609, whence he sent an account of his discoveries to the Dutch West India company, in whose employ he sailed. The point of the island where New-York now stands, he found possessed by the Manhattanas, a brave and savage tribe: the Indians on the E., or Jersey shore, were more friendly; but were the deadly enemies of the Manhattanas. The Dutch West India company sent a second vessel to Hudson river for trade in 1610: and, finding the Indians more friendly in that quarter, they obtained permission of the natives to build a small fort on an island lying a little below Albany, on the W. side of the river. In 1612 the Dutch had a fort on York island,

which consisted of a redoubt near the corner of Garden-street and Broadway, overlooking Hudson river. In 1614 an expedition from Virginia, under Captain Argal, took possession of New-Amsterdam, as New-York was then called: there were then but four houses outside of the fort. An arrangement was soon after made with the English government, by which the Dutch remained in the peaceable possession of the place for 50 years. The establishment was made for the purpose of trade, which they successfully prosecuted with the Indians, receiving furs in exchange for beads, trinkets, blankets, and hatchets. The Dutch had frequent quarrels with the New-England colonies on Connecticut river, and the Swedes on Delaware river; the former claiming all the country between these two rivers. The Dutch were not able to obtain permission of the Manhattans to build a fort on the island for some time; but in 1623 they obtained leave to build a better one than that which previously existed, and made a purchase of the present site of the E. portion of New-York, and erected a fort. Most of the settlers resided in the fort; but, the colony increasing, some houses were built on the outside near it, which formed the commencement of Pearl-street. The fort was in a square form, with four bastions, at the junction of Hudson and East rivers, near the present site of the Bowling-green and the N. part of the Battery. It was from time to time strengthened, by building additional walls on the outside of the first wall. It contained the houses of the Dutch director-general, the commandant, and other officers.

The Dutch resolving to establish a permanent colony at New-Amsterdam, in 1629 appointed Wouter Van Twiller governor, who held the office for nine years. In 1635 he erected a more substantial fort, with four bastions, which mounted 43 cannons, mostly brass, 12 and 18 pounders. In 1643 a church was built in the S.E. corner of the fort. This church was 72 feet long, 32 wide, and 16 feet high. The governor's house, also within the fort, was 100 feet long, 50 feet wide, and 34 feet high. These buildings were burned in 1741, and not afterward rebuilt. It appears that, in 1638, tobacco was produced to a considerable extent on the island, and negro slavery had been introduced. In 1644 the City-hall, or Stadt-house, or tavern, was built, on the corner of Pearl-street and Coenties-slip, and was a very important house in those days, being the place where the courts and the public meetings of the citizens were held. May 11th, 1647, Governor Stuyvesant, the last of the Dutch governors, arrived, and held the office for 17 years, until the colony was captured in 1664. He was a military character, and had lost a leg in the capture of Tobago. In 1652 the first public school was established in the city. In 1653 a wall of earth and stones was built from Hudson river to the East river, running between Wall and Pine streets, with a gate near the present corner of Wall and Pearl streets, called the water-gate, and another in Broadway, called the land-gate. The walls and palisades were designed as a defence against the Indians. In 1663 Governor Stuyvesant captured fort Cassinow, now Newcastle, from the Swedes on Delaware river, then called South river, whence probably Hudson river received the name of North river. In 1656 a market house was built at the present corner of Pearl and Broad streets, then called by other names. The city had 130 houses and 1000 inhabitants, including the garrison. In 1658 the first public wharf was built by the burgomasters of the city, where Whitehall-street now is. The governor's house stood opposite, at the beginning of Water-street. In 1660 the first map of the city was sent to Holland by Governor Stuyvesant. In 1663 a wind-mill was erected near the site of the present City Hotel. In 1664 a patent conveying the colony to the duke of York, was issued, and Colonel Nichols, with four frigates and 300 soldiers, arrived from England, where he had been appointed governor of New-York and New-Jersey, and the city surrendered to him without resistance, though it was done with great reluctance on the part of Governor Stuyvesant. The property of the Dutch West India trading company was all confiscated. The style of the government of New-York was altered from scout, burgomaster, and schepen, to mayor, aldermen, and sheriff. Twelve hundred guilders were raised for the support of the ministry in New-York. In 1669 the governor permitted the Lutherans to settle Jacobus Fabricius as their minister. In 1668 a carriage-road was ordered to be made to Harlem, there being none before. A race-course was established at Hempstead, for the purpose of improving the breed of horses; and subscriptions were taken for those who were willing to run for a crown in silver, or a bushel of good wheat. In 1673 the first Friend or Quaker preached in New-York. In 1673 the post-rider began his trips between New-York and Boston, once in three weeks. In July, 1673, the Dutch retook the city, and the fort was surrendered by its commander, Captain Manning, without firing a gun: but in the next year it was restored to the English, and Manning was tried by a court martial for treachery and cowardice, and sentenced to have

his sword broken over his head. All the inhabitants were required to take the oath of allegiance to the English government. In 1675 it was ordered that the land in the city convenient to be built on, if the owners did not choose to do it, might be valued, and sold to those who were willing to build. The streets were ordered to be cleaned every Saturday, or oftener if necessary, and the cartmen obliged, under the penalty of forfeiting their license, to carry away the dirt. In 1676 a law was passed to pave streets; also to fill up level, and pave Heeren Gracht or Broad-street on each side of the canal which occupied its centre. At this time the water came up to Garden-street, where the ferry-boats landed. It was not lawful to sell liquor to the Indians; and if any were found in the street drunk, without knowing at whose tavern they obtained the liquor, the whole street was liable to a fine. No grain was allowed to be distilled, except that which was unfit for other purposes. In 1677 there were found by the assessments to be 12 streets and 384 houses in the city. In 1683 there belonged to the city three barques, three brigantines, 25 sloops, and 48 open boats. Twenty cartmen were allowed. At this time New-York had, by law, the exclusive right of bolting and packing flour and meal, which formed the main business of two thirds of its inhabitants. This was regarded as a grievance by the country people. In 1684 the first watch was appointed, consisting of 8 persons, at 12 pence each per night. In 1685 the assessed valuation of property in the several wards amounted to £73,694, and a tax of three furlings on the pound was laid. In 1686 James II. of England established the representative system; likewise the use of printing presses. The city paid the governor £300 for the charter, and £24 to the secretary, which had to be borrowed at 10 per cent: this charter, with some alterations, has been continued to the present time. Chimney-sweepers were appointed, and ordered to "cry and make a noise." Houses with two chimneys were to have one fire-bucket; with more, three buckets. In 1688 the inlet in Broad-street was limited by a frame-work to the width of 16 feet, with a cart-way on each side of 26 feet, making in the whole 72 feet, the present average width of the street.

The assessors' valuation of property in the several wards denominated West, North, South, East, and Dock ward, with Harlem and the Bowery, was £78,331; of this £38,354 were in South ward.

In 1690 a meeting of commissioners (called a congress) of the several colonies took place at New-York. In 1694 there belonged to the city 60 ships, 35 sloops, and 49 boats. Out of 983 houses, the inhabitants of 600 of them depended on bolting flour or meal for subsistence. In 1696 Trinity church was built, afterward enlarged, and burned in 1776. Orders that a city-hall be built, valued at £3000. In 1697 a city watch of four sober men was ordered. It was also ordered, November 23d, that lights be put in the windows of the houses fronting on the streets, under a penalty of six pence for each night of default; and, on December next following, that every seventh house hang a lighted lantern on a pole, and that the seven houses bear an equal portion of the expense. In 1699 the old City-hall was sold to John Rodman, merchant, by "public outcry," for £290, situated in what is now Pearl-street, at the head of Coenties-slip. In 1701 the docks and slip of the city were raised for £25 per annum. In 1703 Wall-street was paved from Smith (now William-street) to the English church. In 1704 Governor Cornbury prohibited Presbyterians from preaching, and two ministers were arrested and tried, but acquitted, on paying \$330 costs. In 1710 several hundred Primitives arrived from Germany by the way of England, fleeing from persecution; they built a Lutheran church, on the present site of Grace church. In 1711 a slave-market was established in Wall-street, near the East river. In 1713 an insurrection of the negroes took place, who fired the city in several places, and killed some of its inhabitants. Nineteen of them were executed. In 1718 a rope-walk was established in Broadway, opposite to the Park (then called the Commons, and covered with brush and underwood). In 1719 a Presbyterian church was built in Wall-street. In 1730 a duty of two per cent. was laid on European goods imported, the first regular tariff mentioned in the early history of the city. In 1725 the New-York Gazette, a weekly newspaper, was established. In 1739 the society in London for propagating the gospel in foreign parts gave notice of a present to the city of 1642 volumes, belonging to the library of the late Dr. Millington; the books arrived, and were arranged in a room in the City-hall, appropriated to their keeping; and the thanks of the corporation were returned for the munificent gift. Three pence per foot given for land on the west side of Broadway, near the Battery. The Middle Dutch church built. In 1731 the boundaries of the colony were finally adjusted with Connecticut. In 1736 the first stage began to run between New-York and Boston once a month, being 14 days on the journey. In 1733 a law was passed to preserve the fish in Fresh Water pond, now

NEW-YORK.

Canal-street, and contiguous streets. House of correction or bridewell instituted. In 1736 Water-street first mentioned as extending from Maiden-lane to Countess' Key and Rodman's wharf. In 1737 the town of Brooklyn disputed the right of the corporation of New-York to the ferry, and the city retained two counsel in the case, at a doublebloon each. A market-house was erected in Broadway, opposite Crown-street, now Liberty-street. The city contained 1416 houses, only 16 having been built in seven years. In 1740 the New-York Society Library was founded. In 1741 a severe fire broke out in the fort, which destroyed the secretary's office and the old Dutch church. In this and the following year the yellow fever prevailed to an alarming extent. In 1741 occurred the celebrated "negro plot," when the city contained 12,000 inhabitants, one sixth of whom were slaves. A plot no doubt existed, but the account of it was greatly exaggerated, and the fears of the inhabitants excited by repeated fires and robberies. Some Irish-Catholics were implicated with the negroes: 154 negroes and 90 white persons were committed to prison, of whom 55 were convicted and 78 confessed; 13 negroes were burned at the stake, at the present intersection of Pearl and Chatham streets, then out of town; 90 were hung, one in chains, on an island in Fresh Water pond, where the arsenal now is in Elm-street; 78 were transported to foreign parts, and 50 discharged. Thirty-six watchmen were appointed, and divided into three divisions, to watch alternately. In 1742 wheat was quoted at 3s. 6d. a bushel. The yellow fever prevailed near the tan-vats and docks. Coal was imported from England, as cheaper fuel than wood. In 1745 Lady Murray owned the only coach in New-York. In 1746 the city contained 1834 houses, having increased 418 in 11 years. In 1750 a theatre was established. Dry-street opened, regulated, and paved from Broadway to high-water mark in Hudson river, having a descent of 96 feet 9 inches. Beekman-street laid out and paved. In 1751 the Moravian church in Fulton-street built. In 1752 St. George's church in Beekman-street built. Also an exchange at the lower end of Broad-street, on the W. side, by private subscription, to which the corporation gave £100. In the winters of 1753-4-5 sloops passed from Albany to New-York in the months of January and February. In 1755 the exchange was let for one year, for £30. One thousand stand of arms were imported from England by the corporation for £3000, and deposited in the City-hall; the corporation petitioned for a lottery, to discharge this "excessive and alarming" debt. In 1759 Chatham-street began to be laid out, and a few houses erected. Thirty pounds per acre paid for land in the outer ward. In 1761 Vesey-street regulated and paved. Lamps and lamp-posts were purchased. The city contained 60 firemen. In 1763 the first Methodist chapel was erected, by the successful preaching of Lieutenant Webb of the army, assisted by some friends of the cause. In 1765 St. Paul's church was built. A Congress met at New-York, composed of delegates from the colonies. Great excitement existed on account of the Stamp Act. The governor and the devil, holding the Stamp Act, were burned in effigy, after having been paraded through the streets. In 1767 the Brick church in Beekman-street was built, on a triangular piece of ground granted by the corporation for a rent of £50 per annum. In 1768 the first Methodist church in America was built, in John-street. In 1769 the North Dutch in William-street built. Five church buildings erected before the revolution are now standing—the South and North Dutch churches in William-street, the Lutheran, now Coloured, church corner of William and Frankfort streets, the Brick church in Beekman-street, and St. Paul's church in Broadway. Most of these are now in fine repair. The New-York hospital was founded by subscription. In 1770 the expense of lighting the city was £760 per annum. In 1771 an iron railing was made round the Bowling-green, which cost £800. Warren-street laid out and regulated. In 1776, August 26th, by the disastrous battle of Long Island, the city fell into the hands of the British. On the 21st of September a great fire consumed 493 houses, nearly one eighth part of the city. Before the fire it contained 4200 houses and 30,000 inhabitants. In 1780 the winter was intensely cold, and two cakes of ice completely blocked up the ferry from Powles Hook to Courtland-street; hundreds of citizens and loaded teams and artillery passed on the bridge of ice, which continued for a considerable time. Hudson river, measured on the ice at this place, was found to be 2000 yards wide. On the 25th of November, 1783, the British evacuated New-York, after having held it since 1776, and General Washington, at the head of the American army, entered it. The British left their flag flying at the Battery, and had greased the flag-staff, so that it was with difficulty hauled down, and the American flag was raised in its place. A large number of loyalists and Tories left with the retreating army. The British had erected works across the island near Duane-street. All the churches, excepting the Episcopal, had been destroyed, or used

for hospitals, barracks, or riding-schools. The schools and colleges had been shut up. The city did not then extend N. of Murray-street. The books and accounts of the corporation during the revolutionary war were taken away by Mr. Cruger, treasurer, who joined the British army and left the country. In 1784 the Exchange in Broad-street was converted into a market-place. Much difficulty was found in tracing out and securing the public property, of every description. At different dates La Fayette, John Jay, lately arrived from Europe, Baron Steuben, and especially a General Washington, received the freedom of the city, and the latter an address of congratulation and thanks. The streets were cleaned for £150 per annum, and wells and pumps repaired for £140 per annum. Lot 116 Chatham-street was leased for 31 years for £6 per annum, and lot No. 18 of the same street, for the same term, for £4 per annum. The corporation offered any accommodation in their power to the Federal Congress. In 1785 the first Congress of the United States after the war, was organized in the City-hall, corner of Wall and Nassau streets. The Bank of New-York went into operation. In 1786 St. Peter's, the first Roman Catholic church, was built in Barclay-street. The state, until the present year, presented no instance of divorce in any case whatever. In 1788 the New-York city library was kept in a room in the City-hall. The adoption of the new constitution of the United States was celebrated by a grand federal procession. In 1789, April 30th, Gen. Washington was inaugurated in the open gallery of the old City-hall, facing Broad-street; and at the conclusion of the ceremony the collected thousands shouted with one heart, "long live George Washington." Broadway opened through the fort to the Battery. The City-hall was repaired and enlarged for the accommodation of Congress, at a great expense for that day, the whole done under the direction of Major L'Enfant, who received the thanks of the corporation, the freedom of the city, and an offer of 10 acres of land of the public property, which last he politely declined. The salary of the mayor commuted for £600 per annum. In 1790 the salary of the mayor was £700 per annum. The population of the city, December 11th, was 29,906. In 1791 the city was divided into seven wards. One hundred lots of ground in Broadway and adjacent streets in the vicinity of the New-York hospital, 95 by 100 feet, were offered for sale at £25 per lot. In 1792 the General Society of Mechanics and Tradesmen was incorporated, and Mechanic-hall built. Mayor's salary £800 per annum. A museum was allowed in the City-hall. In 1795 the new almshouse on Chambers-street was built, and contained 623 paupers, who were supported at an expense of £2319 15s. 7d. per annum. South-street laid out 70 feet wide, and ordered that no water lots be farther laid out, and no more buildings be erected in that direction. The Park theatre erected. Powles Hook ferry leased for £250 per annum. Water-street was laid out, which limited the city on the East river. In 1796 a lot on the S.W. corner of Broad and Wall streets was purchased by the corporation for £800. All the printing of the corporation done for £35 per annum. In 1797 the Brooklyn ferry leased for £3000 per annum. Free schools were established. In 1798 the Park theatre was completed, and the proprietors petitioned for the erection of a portico over the side-walk, which was not granted. A street commissioner was appointed. The chamber of commerce and citizens petitioned the corporation to fortify the city, and \$50,000 were appropriated and expended for the purpose. The yellow fever prevailed from July to November, and 3086 persons died.

The Manhattan company in 1799 received an unlimited charter for supplying the city with pure and wholesome water, with a capital for the purpose, with the privilege of using their surplus funds in *banking operations*, and an exclusive use of the springs on the island for a supply. What this company have never been able to do, has been effectually done by the Croton water works of the city. The old Exchange in Broad-street was ordered to be taken down. December 20th the news of the death of General Washington was received, the bells of the churches were ordered to be muffled and tolled from 12 to 1 o'clock, until the 24th, the citizens were recommended to wear crapes for six weeks, and a funeral oration was delivered by Governor Morris in St. Paul's church. In 1800, eight lots of ground, a part of the present Washington-square, purchased by the Corporation for \$1000. In 1801 the United States Navy Yard at the Wallabout, Brooklyn, was established. The Brooklyn ferry at Fulton-street was leased for \$2000 per annum. Broadway ordered to be continued and opened through Thomas Randall's land, called the Sailors Snug harbour, to meet the Bowery, and the hills levelled and carted into Fresh Water pond, (now Canal-street,) which to this time was the northern limit of this street, and far beyond the settled parts of the city. The total valuation of real estate in the city was \$21,964,037. A City-hall was voted to be erected, and after much doubt and hesitation,

NIAGARA RIVER AND FALLS.

the sum of \$250,000 was devoted to the object, and contracts were entered into, and the foundation stone was laid September 30th, 1803, with due ceremony by Edward Livingston, Mayor, and by the corporation, though the prevalence of an epidemic, in some measure damped the ardor of the citizens. In 1804, July 11, the duel between Colonel Burr and General Hamilton occurred, in which the latter was mortally wounded, and died the next day, to the great grief of the citizens. Colonel Burr after this event fled as a fugitive to France, and after many years returned to the United States, to be neglected. December 18th a great fire destroyed 40 stores and dwellings, 15 on Wall-street, 17 on Front-street, and eight on Water-street, with a loss of between one and two millions of dollars. It was supposed to be the work of incendiaries. In 1805 the New-York Free school was incorporated. The upper part of Broadway was regulated and paved. The yellow fever prevailed, in the summer, and 280 persons died. The inhabitants of the city numbered 75,770, one third of whom left their dwellings. In 1806 the first successful attempt at navigation by steamboats by Fulton and Livingston took place on Hudson river. In 1809 the Historical society was established. In 1811 a great fire in Chatham-street consumed from 80 to 100 houses. The brick church and the jail, narrowly escaped. July 4th the Corporation met in the new City-hall, in the Mayor's room. In 1812 the old City-hall in Wall-street was ordered to be sold, and the new City-hall was finished. June 30th war was declared with Great Britain. November 12, the Brooklyn Fulton ferry was leased to Robert Fulton for \$4000 per annum for seven years, on condition of establishing new steamboats upon it. In August an experiment was made with gas lights in the Park. In 1814 there were 3912 free holders; owners of personal estate over \$150, 5619; tenants, 13,804; jurors, 4138; aliens, 3495; slaves, 978. The population was 92,448, which was less by 2312 than in 1810. The Literary and Philosophical society was instituted. October 30, the steam frigate launched. The interments this year amounted to 1794. In 1815 the news of peace with Great Britain was celebrated with great rejoicings. In 1816 the duties on merchandise imported amounted to \$16,000,000. In July 1817 the Erie canal was begun near Utica. In 1818 the public wharves, piers, docks and slips sold for one year for \$42,750. In 1821 Mr. John Randall, Jr., finished his maps and surveys of the N. part of the city and island, having been engaged in it, under the direction of the commissioners, for ten years, at a cost of \$32,485. In January the harbour was closed by ice for the first time since 1780. The citizens crossed on the ice to Powles Hook, and some to Staten Island. The distance from Courtland-street to the Jersey shore, was found to be a few feet over a mile. In 1822, July, the yellow fever appeared, and most of the city S. of the City-hall was vacated, and the infected district fenced in; 386 died of the fever. November 25, burials in Trinity churchyard discontinued. In 1823 interments were forbidden S. of Canal-street. Washington square formed and regulated. The New-York Gas-light company incorporated. In 1824 1600 houses were erected. In 1825 the Merchants' Exchange commenced in Wall-street. The city was divided into 19 wards. May 11th gas pipes were laid in Broadway, from Canal-street to the Battery, on both sides. October 26th the completion of the Erie canal was announced by the firing of cannon through the whole line, from Buffalo and back in 12 hours. November 4th the first canal boat arrived, and was greeted with great rejoicing. In 1827 the Merchants' Exchange was completed. In 1829 the American Institute in the city of New-York was instituted. In 1832 the cholera swept off a great number of the inhabitants. The whole number of deaths in July was 2467, in August, 2906; during the year, 10,359. In 1833 the number of pupils taught in the public schools was 6140 boys, 4320 girls, total, 10,460. In 1834 the number of inmates at the Almshouse at Bellevue in January was 9011, of whom 1051 were natives, and 980 foreigners. On the night of the 16th of December, 1835, occurred the great fire, which swept over between 30 and 40 acres, of the most valuable part of the city, covered with stores and filled with rich merchandise. The number of buildings burned was 648, and the amount of property destroyed was estimated by a committee appointed for the purpose at nearly \$18,000,000. The Merchants' Exchange, and the South Dutch church were burned. It is proof of the great wealth of New-York that they were able to bear such a loss, without feeling it more. Few failures resulted from it. The burnt district was immediately rebuilt, with additional convenience and beauty. With this great event the Editor concludes this hasty glance at the annals of the commercial metropolis of the nation.

NIAGARA RIVER AND FALLS. The river commences at the N.E. part of Lake Erie, and discharges the waters of the great upper lakes Superior, 330 miles long and 130 broad, Huron, 340 miles long and 150 broad, Michigan, 330

miles long and 60 broad, and Erie, 240 miles long and 30 broad, besides smaller lakes and numerous rivers which enter them. These great inland seas as they may be called, contain nearly half the fresh water on the surface of the globe. Niagara river, as it flows from Lake Erie, is about three fourths of a mile wide, and from 20 to 40 feet deep; and has, for three miles a rapid current, and then becomes smooth and placid, till within one mile of the falls. Five miles from Lake Erie, the river begins to expand, till it becomes more than eight miles in width, measured across Grand Island, and embraces, before it reaches the falls, about 40 islands. Grand Island is 9 miles long, and in its widest part, 6 miles wide, contains 17,381 acres, and belongs to the state of New York, the channel being on its W. side. Navy Island contains 304 acres, belongs to Canada, and was famous during the Canadian rebellion, in 1837-8, having been for a time occupied by the insurgents, headed by William L. Mackenzie. Grand Island commences five miles from Lake Erie, and extends to within three miles of the falls. Among the other islands are Bird Island, between Buffalo and Fort Erie; Squaw Island opposite to Black Rock, containing 131 acres; Strawberry Island, containing 180 acres; Beaver Island of 30 acres; Batlleons Island, containing 48 acres; Tonawanda Island, of 69 acres; Cayuga Island, 4 miles above the falls, containing 100 acres; Buckhorn Island, containing 146 acres; besides a number of smaller islands; and Goat Island which belongs to a description of the falls. Below the termination of Grand and Navy Islands, the river is compressed to the breadth of two and a half miles, and proceeds with an accelerated motion. Three fourths of a mile above the falls commence the rapids, which have a descent of from 52 to 57 feet, the greatest descent being on the British side, more than a mile in width, with white crested breakers, and a dashing and foaming torrent, tossing from 10 to 30 feet above the main current, until they come to the tremendous cataract of Niagara falls. Woe will be to the man or animal who falls into these rapids, by which numbers have been hurried to destruction; while a few almost by a miracle, have escaped. *The falls of Niagara*, are about 81 miles below Lake Erie, and 14 miles above Lake Ontario, and are generally regarded as the greatest natural curiosity in the world. The river, which constitutes the great outlet of the upper lakes, is here precipitated over a precipice 160 feet high, with a solemn and tremendous roar, which is ordinarily heard from 5 to 30 miles; but has in some instances been heard at Toronto, 45 m. distant. And yet, at the village on the American shore, near the cataract, there is little to give notice of its awful proximity. In consequence of a bend in the river, the principal weight of the water, supposed to be seven eighths of the whole, is thrown on the Canadian side, down what is called the Horse-shoe fall, which name has become inappropriate, as the edge of the precipice has ceased to be a curve, and forms a moderately acute angle. Near the middle of the fall, Goat Island, containing 75 acres, extends to the brow and the bottom of the precipice, dividing the river into two parts; and Luna Island, at a little distance from Goat Island, again divides the cataract on the American side. Goat Island at its lower extremity, presents a mass of perpendicular rock, reaching from the bottom to the top of the precipice, and creating two distinct falls. A bridge has been constructed to Bath Island. This island is 24 rods in length, and contains about two acres. The bridge to Bath Island is 28 rods long from the shore, and another bridge of 16 rods long extends to Goat Island. The view of the rapids, foaming and tossing among the rocks, is fearfully beautiful, as seen from these bridges. On Bath Island is a toll-house, where travellers enter their names, paying a small fee, can see curiosities, and frequently obtain walking canes, cut on the island, which they often retain as memorials of their visit to the falls. On this island is also a large paper mill. From the W. part of Goat Island, a bridge has been constructed, 300 feet long, projecting ten feet over the great Horse-shoe or principal fall; and near the termination of this bridge, in the water and on the rocks, at the very verge of the precipice, a stone tower has been erected, 45 feet high, ascended by winding steps on the inside, and an iron balustrade around its open gallery at the top. It requires some strength of nerve, and a little reflection, to feel safe in looking down into this awful abyss, and to survey the tumbling confusion and tremendous roar of the mass of waters, from a situation so near the brow of the precipice. But the unnumbered initials of names, inscribed on every part of the building will evince to the spectator, that thousands have been there before him. The distance across the fall, from the American shore to Goat Island is 65 rods; across the front of Goat Island, is 78 rods; around the Horse-shoe fall, on the Canada side, 144 rods; directly across the Horse-shoe fall, 74 rods. The height of the fall near the American shore is 163 feet; near Goat Island on the same side, 158 feet; near Goat Island on the Canada side, 154 feet. Table rock, a shelving projection on the Canadian side, at the edge of the precipice, is 150 feet high. This last place

NICARAGUA.

As thought to present the finest view of the fall; and taken as a whole, this is doubtless true. But if the spectator wishes to view the crecent or Horse-shoe fall, in all its grandeur, and will visit the stone tower on Goat island, a little after sunrise, when the whole cavity is illuminated by the full strength of the solar rays poured into it, discovering it nearly to the bottom, and spanning it with a perfect rainbow, it will leave him nothing further to desire, in regard to this part of the fall. At the lower end of Goat island, about one third across it, is the Biddle-stair-case, named from the gentleman who erected it in 1839, to afford visitors an opportunity of descending to the bottom of the fall, and passing for a considerable distance behind the two main sheets of water. The descent from the top of the island to the margin of the river is 185 feet. A flight of common steps leads down 40 ft., to the perpendicular spiral steps, 90 in number, enclosed in a hexagon, resting on a firm foundation at the bottom. There is another staircase, about six rods below the falls, leading down the bank on the American side, to the ferry, where is a fine view of the American fall, and a safe passage by the ferry boat to the Canada side, where many fine views of the falls are obtained. The American fall, though sublime, inclines to the beautiful; while the Canadian fall, though beautiful, is characterized by an overpowering sublimity. There are good hotels on both sides of the river, and small villages are laid out. On the American side, the water power is immense, and easily available; and but for its expoeedness in case of a war, would probably be soon, and extensively occupied. It is computed that 100 millions of tons of water are discharged over the precipice every hour. The river at the falls is a little over three fourths of a mile wide, but below, it is immediately compressed to less than one fourth of a mile wide, and, as ascertained by sounding is about 250 feet deep. One of the best general views of the falls is from a projecting rock, 300 feet high above the river, about a mile below the village. About two miles below the falls the river is comparatively smooth, and thence to Lewiston it flows with amazing velocity. While the river makes a constant descent, the banks have a gradual ascent for six miles: and some have supposed that the falls have receded from Queenston to their present situation; but they are known now to occupy the same situation that they did 200 years since. About two miles below the falls on the American side, is a mineral spring, containing sulphuric and muriatic acids, lime and magnesia, useful in scrofulous, rheumatic, and cutaneous complaints. One mile further down is a terrific whirlpool, almost as tremendous as the Maelstrom of Norway, where logs and trees are whirled round for days in its outer circles, and finally drawn down perpendicularly with great force, and shot out again at the distance of many rods. A mile below the whirlpool is an excavation from the side of the bank, containing about two acres, and 150 feet deep, called the Devil's hole. The high banks of the river extend nearly to Lewiston, 7 miles below the falls, when they become level as above the falls. From Lewiston, a steam boat proceeds to lake Ontario, and through it to Oswego. The Welland canal affords a passage for sloops and schooners of 125 tons burden around the falls of Niagara, and connects lake Erie with lake Ontario. It is 43 miles long, 56 feet wide and from 84 to 16 feet deep. The whole descent from one lake to the other is 334 feet, which is accomplished by 37 locks. It has a deep cut through the mountain ridge, 45 feet deep, where an immense amount of earth and rocks were removed. This canal was completed in 1829, at cost of \$1,000,000. A canal has also been projected on the American side, but it is doubtful if it will ever be undertaken.

The number of visitors at the falls is from 19 to 15 thousand annually, and the number is increasing. While curiosity constitutes an attribute of the human character, these falls will be frequented by admiring and delighted visitors, as one of the grandest exhibitions in nature. The fashionable, the opulent, and the learned here congregate, in the summer season, from the principal cities of the country; from the southern and western states, South America, the West Indies, the Canadas, and various parts of Europe, and indeed from all parts of the civilized world. An American poetess has well said of Niagara.

"Flow on forever, in thy glorious robe
Of terror and of beauty! God hath set
His rainbow on thy forehead, and the cloud
Maniles around thy feet. And be doth give
The voice of thunder, power to speak of Him
Eternally—bidding the tip of man
Keep silence, and upon the rocky altar pour
Incense of awe-stricken praise."

NICARAGUA (LAKE OF), the most considerable lake of central America, comprised within the state of Nicaragua, and extending principally between the 11th and 12th degs. of N. lat., and the 84th and 86th of W. long., about 13 m. in a direct line from the Pacific, and 90 m. from the Caribbean sea. It is of an oval shape: length, N.W. to S.E., about 130 m.; average breadth, perhaps, about 40 m. It

NICE.

has numerous creeks and harbours, and several islands. It receives a good many rivers, especially along its N., N.E., and W. sides; its surplus waters are carried to the Caribbean sea by the Rio San Juan, which issues from its E. extremity, and is said to be navigable, during the rains, throughout its whole extent.

The project for uniting the Atlantic and Pacific oceans, by means of the river San Juan and of a canal from the lake of Nicaragua to the Pacific, has been often mooted; and the country certainly presents greater facilities for effecting this great work than any other part of Central America, or than the isthmus of Panama. The river San Juan, notwithstanding it is in one part impeded by cataracts, is said, by Thompson, to be available for craft drawing 3 or 4 ft. water, at all times of the year, and for vessels drawing from 10 to 12 ft. water to from 30 to 35 leagues from the sea. The lake itself is adapted for ships of the largest burden, being 15 fathoms deep. The distance between its S.W. shore and the gulf of Popayam, in the Pacific, is only 39,880 yards, or 154 m.; and though the intervening country be laid down in many maps as mountainous, the greatest actual height of any part of it above the level of the lake is only 19 ft.; as was proved by a series of 347 levels, about 100 yards apart, taken in 1781. (See *Thompson's Guatemala, Append.*, p. 519-590.) The surface of the lake is about 134 ft., and its bottom 42½ ft. (Engl.) above the level of the Pacific; but the ascent might probably be overcome by a succession of locks. The difference in the level of the two oceans, formerly supposed to be so serious an obstacle to the undertaking, was ascertained by Humboldt not to exceed 20, or, at most, 22 ft. (*Pol. Essay.* i., 31.) At its W. extremity, the lake of Nicaragua is connected by a small river with the lake of Leon. The latter, 50 m. in length by nearly 30 in breadth, is said to be also of sufficient depth for the largest ships. It is but 13 m. from the Pacific, and 5 from the river Tosta, which enters that ocean; and the height of the intervening ground between it and the Pacific is not more than 51 ft. above its own surface, which last is only 3 ft. higher than that of the Tosta. In this direction, also, a communication has been contemplated. At one period, a British company proposed connecting the two oceans, and it was afterward said that the Dutch government had undertaken it; we believe, however, that no active steps have been yet taken to carry either of the above plans into execution. (*Thompson's Guatemala; Geog. Journ.*, vi., &c.)

NICASTRO, a town of the Neapolitan dom., prov. Calabria Ultra II., on the W. side of the Apennines, 19 m. S. by W. Cosenza. "It is a straggling town of 5000 inhabitants, and the seat of a bishop and a sub-intendant. Its houses are mean, and all roofed with red tiles. A ruined castle, on a conical hill, rising from amid all these modern buildings, is that in which Henry, the eldest son of the emperor Frederic II., was confined for some time." (*Cressen. Tour.* p. 33.) It has some trade in oil, and there are many mineral baths in its vicinity.

NICE (Ital. *Nizza*, an. *Nicea*), a city and seaport of the Sardinian dom. in Italy, cap. div. and prov. of its own name; on the Mediterranean, about 5 m. E. from the bar, the boundary of the French territory, 95 m. S.W. Genoa, and 98 m. S. by W. Turin; lat. 43° 41' 16" N., long. 7° 16' 37" E. Pop., in 1838, of the town and canton (ex. garrison), 33,811. It is beautifully situated in a small plain at the foot of the maritime Alps, by which it is protected from the N. and E. winds; while the cool sea-breeze, which prevails every day with a regularity almost equal to that of a tropical climate, moderates the summer heat. The principal disadvantage of its situation is that, being open on the W., it is exposed, with but little protection, to the influence of the *mistral*, or *vent de Bise*, which is often keen and piercing. It is encircled by bastioned walls; and has on the E. the steep rocky hill of Monte Albano, surmounted by the ruins of an old castle. The view from this hill is very fine, and at sunrise and sunset the island of Corsica is sometimes clearly distinguished, though it be some 70 or 80 m. distant. The port, which is small and protected by a pier, admits vessels of 300 tons burden, and is visited by the steamers from Marseilles to Genoa. Nice is divided into two parts by the river Paglione, here crossed by a good stone bridge. The old town has narrow and crooked streets, which, however, are kept very clean. The new town to the W. of the river is well laid out and handsome: it has a square surrounded by open arcades, and some of the houses near the sea, and in the vicinity, are very superior. The cathedral, several convents, three hospitals, the governor's residence, college, public library, theatre, and a fine arch erected in honour of Victor Amadeus III., are the principal public buildings: it has several bath-establishments, and some good hotels; and Dr. Farr states that the rents of houses and apartments are lower here than in any other place of general resort on the continent. It has manufactures of silk twist, stuff, soap, essences, perfumery, and paper, a

NICHOLAS.

fishery of anchovies, and a considerable trade in the export of oil, wine, oranges, hemp, &c., and in the importation of corn from the Black sea, salt fish, manufactured goods, and colonial produce. In 1830, the value of the imports amounted to 12,343,450 fr., and that of the exports to nearly as much. It is a bishop's see, and the seat of a royal council, and of the head court of justice for its division.

Nice, in common with Montpellier, enjoys the reputation of having a peculiarly genial climate, and is accordingly resorted to by numerous invalids, especially from England, during the months of November, December, and January. Mr. Forsyth says, that when he arrived at Nice on Christmas day, "a soft and balmy air, oranges growing in every garden, lodgings without a chimney, and beds with mosquito-curtains, presented the first signs of Italy." But at other seasons it is less suitable for invalids. In February, the *vent de Bise* begins to blow; and it is very trying to persons with delicate constitutions. This explains the singular discrepancies in the accounts of different travellers as to the climate of Nice. Dr. Farr and Sir James Clark, especially the former, give full and satisfactory information as to the climate of Nice, and its surrounding localities, and the classes of invalids most likely to be benefited by a residence in it. A noble road, constructed at a vast expense, leads over the Maritime Alps from Nice to Turin. Another road, begun by Napoleon, but not completed till 1857, leads along the sea coast from Nice to Genoa; and a third road is now about being opened from Lyons to Nice, which will be a shorter and better way of entering Italy than by Mount Cenis.

Nice is said to have been founded by colonists from Marseilles. Under the Romans, it was originally the seat of a naval arsenal; but, under Augustus, the latter was transferred to Frejus. Under the French, it was the capital of the department *Alpes-Maritimes*. Among the celebrated individuals to whom it has given birth, are the painter, Vanloo, the astronomer, Cassini, and marshal Mészáros, one of Napoleon's ablest generals. (See Dr. Farr's *Admirable Guide to Nice*, passim; Clark on *Climate*, third ed. p. 202.)

NICHOLAS, county, Va. Centrally situated toward the W. part of the state, and contains 1430 sq. m. Bounded S.W. by New river. Watered by Gauley river and its branches. It contained in 1840, 4095 neat cattle, 4863 sheep, 5339 swine; and produced 4454 bushels of wheat, 3939 of rye, 56,397 of Indian corn, 37,733 of oats, 11,354 of potatoes, 3913 pounds of tobacco. It had three stores, 90 grist-mills, five saw-mills, two tanneries; three schools, 77 scholars. Pop.: whites, 2440; slaves, 79; free coloured, 3; total, 2515. Capital, Summersville.

NICHOLAS, county, Ky. Situated in the N.E. part of the state, and contains 350 sq. m. Watered by Licking river and its branches. It contained in 1840, 8191 neat cattle, 19,067 sheep, 29,427 swine; and produced 60,765 bushels of wheat, 35,315 of rye, 613,804 of Indian corn, 77,098 of oats, 6049 of potatoes, 47,638 pounds of tobacco, 57,920 of sugar. It had 16 stores, one woollen factory, 19 grist-mills, 10 saw-mills, five tanneries, three distilleries; 28 schools, 501 scholars. Pop.: whites, 7310; slaves, 1253; free coloured, 182; total, 8745. Capital, Carlisle.

NICHOLAS, C. H., capital of Nicholas county, Va., 310 m. W. by N. Richmond, 393 W. It contains a courthouse, jail, and several stores and dwellings. Nett proceeds of the postoffice, \$78.

NICHOLS, p. t., Tioga co., N. Y., 8 m. S.W. Oswego, 170 m. W.S.W. Albany, 268 W. Bounded N. by Susquehanna river, and drained by its small tributaries. It contains a Methodist and a Baptist church, five stores, three fulling-mills, eight grist-mills, 28 saw-mills; 848 scholars in schools. Pop. 1986.

NICOBAR ISLANDS, a group in the Indian Ocean, between the 3rd and 10th degrees of N. lat., and the 93rd and 94th of E. long., about midway between the N.W. point of Sumatra and the Andaman Islands, and from 100 to 130 m. from each. Bezelelong and Carlebar, the former at the S. and the latter at the N. extremity of the group, are the principal; there are, however, about half a dozen other islands of some consequence, and a number of small islets. Most of these islands are hilly, and all are covered more or less with dense woods of cocoa-nut, areca-palm, and various timber trees. The climate is extremely unhealthy to Europeans, and is supposed to owe this quality, in great part, to the extensive spontaneous decomposition of vegetable matter. These islands are inhabited by a race of natives of the Indo-Chinese stock, whose indolent character contrasts strongly with the wild ferocity of their neighbours of the Andaman Islands. Their chief occupations are fishing, rearing hogs and poultry, a little agriculture, and trafficking among themselves, and with foreigners who touch at the Nicobars. Cocoa and beet-nuts are met with in immense quantities, and most of the Indian ships bound eastward, call here to take in a cargo of the former, which they obtain at the rate of 4 nuts for a leaf of tobacco, and 100 for a yard

NICOPOLIS.

of blue cloth. The natives also exchange fowls, hogs, *Melospiza*, *ambergis*, tortoise-shell, wild cinnamon, *camellia*, &c., for iron, tobacco, cloth, silver coin, and other European goods. They live under a number of petty chiefs; but little is known of their internal economy, customs, &c., the great insalubrity of the climate having successively broken up all the establishments formed on the Nicobars by the Danes, the British missionaries, &c., in the latter half of the last century. (*Hamilton's E. I. Gaz.*, &c.)

NICOLAEFF, a town and river port of European Russia, gov. Kherson, at the confluence of the Ingul with the Bug, about 90 m. above where the latter falls into the estuary or liman of the Dniepr, lat. 46° 58' 21" N., long. 33° 0' 21" E. Pop. 8500. Nicolaeff was founded in 1790; and was intended to be a great naval depot, and the station of the Russian fleet in the Black sea. It stands in an elevated, healthy situation, covers a large extent of ground, and is extremely well built. The streets are wide, and regularly laid out, and the private houses, which are mostly of brick, have a handsome appearance. Among the numerous public buildings may be specified the new church or cathedral, the admiralty, the town-house, the marine barracks, the naval hospital, &c. In the vicinity is an observatory. The admiral commanding the fleet in the Black sea resides here; and here, also, are the various offices connected with this department of the service, with schools for the instruction of pilots, ship-builders, naval artillery, &c.

Nicolaeff owes its existence to its river, which has its entrance without the bar of the Dniepr, and water sufficient to float large ships up to the town. There are extensive docks and yards for the building of ships; but the latter are, notwithstanding, mostly constructed at Kherson, being sent thither to be laid up, or, when necessary, repaired. Still, however, Nicolaeff has not, as its founders anticipated, become a large, thriving town, and, latterly, indeed, it has been either stationary or has retrograded. This is ascribable partly to the want of good water, and the scarcity and high price of fuel caused by there being no timber in its vicinity; partly to its harbour being, though very superior to that of Kherson, decidedly inferior to that of Sevastopol in the Crimea, at which a part of the fleet is now always stationed; and partly, and principally perhaps, to the great advantages enjoyed by Odessa as a commercial emporium. Nicolaeff is, in fact, nearly deserted by all the mercantile class, and depends entirely on the employment afforded by government. (*Clarke's Travels*, II. 350, 8vo. ed.; *Lyall*, I. 201; *Schmidtler, La Russie*, &c., p. 723; *Pinkerton's Russia*, p. 160.)

NICOLAS (ST.), a town of Belgium, prov. E. Flanders, cap. canton, on the high road between Ghent and Antwerp, 19 m. E.N.E. the former and 12 m. W.S.W. the latter. Pop. in 1836, 16,153. It is well built, and handsome, and its inhabitants generally opulent. It has a fine town-hall, a parish church, in which are some good Flemish paintings, a hospital, two orphan asylums, a convent, a prison, and a large market-place, partially planted with trees. It is one of the most flourishing towns of Belgium, and has manufactures of woollen, cotton, and silk fabrics, hats, paper, soap, tobacco, chocolate, &c.; with salt-refineries, tanneries, breweries, dye-houses, and potteries. It has, perhaps, the largest market for flax in Europe, and large annual fairs for cattle and horses. It is the seat of a tribunal of commerce; has academies of music, drawing, &c., and sends one deputy to the states of the province. (*Vandermaelen, Fland. Orient.*)

NICOPOLIS, a town of Turkey in Europe, prov. Bulgaria, cap. sanjak, on the Danube, 100 m. E. by S. Widin. Pop. estimated at 10,000. It has an imposing appearance, being situated on a range of hills above a bay of the river, and surrounded by strong ramparts mounded with cannon. It is further defended by an ancient castle, and has several suburbs, in which the Greek and Bulgarian inhabitants principally reside. Generally it is ill-built, but has some large houses, and several handsome mosques and public baths. It is the seat of a Greek archbishop and a Roman Catholic bishop: its position on the Danube gives it some commercial importance; it is, however, said to be in a state of decay. (*Elliott's Trav.* I. 175.) Nicopolis was founded by Trajan, and some portions of its ancient walls are said still to exist. But it is chiefly memorable, at least in modern times, for the great battle fought in its vicinity, on the 25th of September, 1396, between the Ottoman army under Bajazet, and that of the Hungarians and their allies under their king Sigismund. The latter sustained a complete defeat, ascribable as much to the rashness and presumption of the count de Nevers and other French leaders, as to the bravery and superior discipline of the Turks. (*Gibbon*, cap. 64.)

* Dr. Lyall says that this deficiency has been supplied by the construction of a reservoir, the existence of which has, however, been doubted, from its not having been mentioned by the accurate Dr. Finlayson. But it may have been overlooked by the latter, or may not have sufficiently answered the purpose for which it was intended.

NICOSIA.

NICOSIA (an. *Trémisus*?), the principal city of the island of Cyprus, near its centre, on the small river Pedias; lat. 35° 13' 11" N., long. 33° 26' 45" E. Pop. according to Turner, about 17,500, of whom about two thirds are Turks. It stands in a low fertile plain, near the S. foot of a range of high mountains, and is surrounded by walls in the shape of a hexagon, flanked by 13 bastions. The ground of the enclosure is very unequal, being in some parts elevated to the height of the walls, and in others forming a deep valley. The streets are in general not more than 10 and 15 ft. in breadth; and, being unpaved, are always filthy, and, in winter, almost impassable. Having been the residence of the principal Venetian families during the period that the island was subject to Venice, it has many fine houses, which are now, however, mostly in ruins; and at present it consists principally of brick and mud huts. The bazaar, though tolerably well supplied, is not even arched, but roofed with reeds and mats, which admit the rain in all directions. Most houses have gardens, which abound with olive, lemon, and pomegranate trees; and hence the first view of the city is very pleasing, from the contrast between the foliage and the dark mountains to the N. There are eight mosques, all of which were once churches; the principal having been the cathedral church of St. Sophia, built by the Venetians; it is in the Gothic style, of an oblong shape, with a pentagonal projection at the end opposite the entrance, for the reception of the altar. The interior is laid out in three aisles, divided by clumsy white-washed Corinthian columns. On the two belfries the Turks have erected two high and handsome minarets. There are still six Greek churches, one Roman Catholic, and several Greek convents. The city has also four public baths, and a large, but ruined caravanserai. It has some manufactures of carpets, printed cottons, and red morocco leather, and exports wine and cotton.

Nicosia is supposed to occupy the site of the ancient *Trémisus*, or *Trémisus*, mentioned as a place of some note by the Byzantine historians. When Richard I. of England took Cyprus in 1191, and conferred it on Guy de Lusignan, it was made the capital of the new kingdom, and greatly enlarged. It fell, in 1480, to the Venetians, who built the present walls, and several churches and handsome palaces; and who held it, with the island, till 1571, when it was taken from them by the Turks, under whose brutal and destructive sway it has since continued. (*Turner's Levant*, ii. 544-547; *Kinnaird's Asia Minor*, 172, 189; *Drummond's Travels*, &c.)

Nicosia, a city of Sicily, intend. Catania, district of its own name, on two hills, 14 m. N.E. Castrogiovanni. Pop., in 1831, 13,151. Like other towns in the interior of the island, it is remarkable for nothing but the number of its churches and convents. It has few manufactures, and hardly any export trade, but a considerable traffic in the corn and cattle of the surrounding country, which is very fertile. Its situation is such as to afford a strong military position; and it is supposed to be the ancient *Herbita*, founded in the earliest period of Sicilian history.

NIEVRE, a dep. of France, reg. centre, nearly co-extensive with the old prov. of Nivernais, between lat. 46° 40' and 47° 35' N., and the 3rd and 4th degrees of E. long.; having N. Yonne, E. Côte d'Or and Saône-et-Loire, S. the latter and Allier, and W. Cher. Area, 681,083 hectares. Pop. (1836), 282,521. A mountain chain runs from S.E. to N.W. through its centre, dividing the basin of the Loire from that of the Seine; the culminating point of the chain in this department being 3900 ft. above the sea. The Loire and Allier bound Nievre on the W.; the other principal river is the Yonne. The Loire and Yonne are united by the canal du Nivernais, which, commencing at Decize on the former river is continued through the departments Nievre and Yonne, for a distance of above 100 m.; but the work is not yet completed. The Nievre, whence the department has its name, flows through its W. part, and, after a course of about 25 m., generally southward, joins the Loire at Nevers. It turns many mills, but it is navigable only for rafts or small boats. The soil is not, in general, very fertile. In 1834, 295,361 hectares were estimated to be in cultivation, 67,396 in meadows, 9900 in vineyards, 3607 in orchards and gardens, and 239,561 in woods. In 1835, of 83,681 properties subject to the *contribution foncière*, 43,659 were assessed at less than 5 fr., and 13,936 at from 5 to 10 fr. The fertile portions of the surface are comparatively well cultivated, and sufficient corn is produced for home consumption. The annual produce, in wine, is estimated at about 200,000 hectolitres; of which the white wines of Pouilly are the best. *Ils ont du corps du spiritueux, un léger parfum de pierre à fusil, et un goût fort agréable; ils ne sont pas sujets à jaunir, et conservent assez long-temps leur douceur.* (Jullien, p. 156.) In 1830 there were supposed to be about 132,000 oxen and cows, and 315,000 sheep in the department; but the breeds are not particularly good. The chief resources of Nievre are in its forests and mines.

NIGER.

Most of the small rivers, which are not navigable, have been adapted to floating down rafts of timber and fire-wood, a good deal of the latter being sent down the Yonne and Seine to Paris. The coal wrought near Decize is principally destined for the supply of Paris and Orleans. Lead, copper, and some other metals are found, but iron is by far the most important metallic product, and its yearly value in the shape of pig iron, iron plates, anchors, files, &c., is estimated at 8,726,000 fr. Hardware and cutlery, at Cosne and La Charité, glass, and earthenware, especially at Nevers, linen and woollen cloths, and musical strings, are among the principal goods manufactured. Nievre is divided into four arronds.: chief towns, Nevers the cap., Château Chillon, Clamecy, and Cosne. It sends four members to the chamber of deputies. Number of electors (1838-39), 1379. Total public revenue (1831), 6,256,756 fr. (*Hugo, art. Nievre; French Official Tables*.)

NIGER, JOLIBA, or QUORRA, a celebrated river of central Africa, having its remote sources near the extreme W. coast of the continent, in the country of the Mandingoes, in about 8° N. lat. and 6° W. long. It thence pursues a course N.W. and N. to the 10th deg. of lat., and then follows a general N.E. course to Timbuctoo, below which it turns S.E., and afterwards S. and S.W., to its mouth, in the gulf of Benin. Supposed length about 2300 m. The upper part of the Niger, called by the natives the Joliba, was first discovered in modern times by Mungo Park, who was sent out in 1795 by the African association: he describes it at Sego, the cap. of Bambarra, as "glittering in the morning sun, broad as the Thames at Westminster, and flowing slowly to the eastward." (*Travels*, p. 220.) He succeeded in ascending it as far as Bammakoo, 250 m. above Sego, the cap. of Bambarra. From Cabra he sailed down the stream to Bousa, where, unfortunately, he was killed by the natives. Major Laing concluded, from information obtained in the neighbourhood, that the sources of the river were on the N. side of the mountains of Kong, at a height of 1600 ft. above the sea, in lat. 8° 30' N., and long. 9° 10' W.; but Mr. Macqueen conjectures that the Allmar, its principal source, rises farther to the E. than Laing supposed. Lander, the servant of captain Clapperton (who was murdered near Saccatoo), sailed from Bousa, with the stream, to the mouth of the river, previously called the Nun, in the height of Benin; and thus finally identified the Niger and the Quorra, and put an end to all the doubts and theories that previously existed as to the course and termination of the former. It hence appears that the length of the Niger, measured along its banks, exceeds 2300 m.; and it is probable that its basin is nearly, if not quite, as extensive as that of the Nile. According to Caillie, it is navigable for large canoes within 100 m. of its source: for 300 m. below that point it has not been navigated by Europeans; but from Bammakoo to Timbuctoo it has been pretty accurately laid down, both by Mungo Park and Caillie. The river valley is here of considerable width, fertile, and comprising numerous towns and villages on either bank. The current of the river is not strong; and both travellers saw flotillas of canoes of 60 tons and upwards, frequently passing up and down the river, which in the rainy season is flooded on both banks to a considerable distance. (*Caillie*, ii. 34.) In about lat. 16° N., the stream expands, forming a lake, called Debo, which measures about 10 m. from N. to S., is from 12 to 15 ft. deep, calm, transparent, and surrounded by extensive marshes. (*Caillie*, ii. 20.) Hence to Timbuctoo the valley becomes still wider; the pasturage of cattle, the tillage of rice, millet, maize, &c., is extensively pursued, and along the banks are numerous villages, which export rural produce. In lat. 17° 30' N. and long. 3° 10' W., the river bifurcates, and on the N. and narrower branch is Cabra, the port of Timbuctoo: these branches, however, seem to unite a few miles lower down. It has already been observed that the course of the river below Timbuctoo was traversed by Mungo Park as far down as Bousa; but, as that traveller was killed there, and his papers were lost, we know nothing of this portion of the river, except that it is navigable for vessels of considerable size.

The highest point of what may be called the lower Niger hitherto visited by Europeans is the neighbourhood of Yauri (lat. 11° 30' N. and 5° E.), which point Lander reached in 1830. Here the river leaves the great plain of Soudan, and enters the defiles of a mountain range crossing this part of Africa from E. to W., and probably connected, on one side, with the Djebel-el-Kumri, and on the other with the mountains of Kong. The direction of the stream from Yauri, for about 150 m., is nearly due S.; but it is full of rocks, sand-banks, &c., and wholly unnavigable, except at the time of the rains, and immediately after. Below Bousa, the banks on both sides are generally high and rocky; cultivated plains intervene in many places between the river and the mountains, but in others the offsets come close down to the water's edge. From Bousa down-

wards, the Niger is navigable for moderate-sized vessels; and in lat. 6° N., a little below Atta, it leaves the hilly country, and enters an alluvial plain, the lower part of which is an unhealthy swamp, covered with jungle: many branches here diverge from the main stream, and at the mouth is an extensive delta, which, however, is, as yet, very imperfectly known. At Atta, the river is about 2 m. wide, and near Babbu, in lat. 8° 45', it attains a width of 5 m.; but its breadth, close to the mouth, is somewhat less than a mile. The tide is said to extend within about 30 m. of Atta, or about 120 m. from the sea. The only branch of the Niger hitherto explored is the Chadda, which joins it on the left bank in lat. 7° 52' N., 33 m. above Atta. Captain Allen and Mr. Laird sailed about 100 m. up this tributary, and inform us that it is quite equal in width, though not in depth, to the parent river. It has many shoals and sandbanks. It has been conjectured that this river has its source in the great lake of Tchad, discovered by Messrs. Clapperton and Denham; but the more probable opinion seems to be, that it has its sources on the N. declivity of the Gebel el Kumri, not far, perhaps, from the sources of the Bahr-el-Abiad, or W. arm of the Nile. The only other known tributaries of the lower Niger are the Saccato, Mayarow, and Coodonia, all joining it on the left or E. bank: the former of these was discovered by Clapperton, and from the course which it pursues, it may possibly be the same river that joins the Niger near Yauri. (See *Arrowsmith's new map of Negroland*.) Both rivers flow from a range of mountains, running N.W. through Housa, and forming the watershed between the tributaries of lake Tchad and the Niger.

In the article *AFRICA*, (vol. i. 41), we have given a succinct account of the successive modern expeditions that have been fitted out for the purpose of exploring the course of this river, so long involved in doubt and obscurity; and though much still remains to be accomplished, its general course and leading features have been pretty well ascertained. This, however, has not been done without a great sacrifice of human life. The inhabitants of the countries in the lower part of its course are among the most degraded in the scale of human beings: the slave trade is extensively carried on; and was being continually waged between the different tribes, travellers are exposed to the greatest dangers. (Ritter's *Africa*, ii. 110, and *Buxton on the Slave Trade*, pp. 41, 42.) The climate, also, is extremely unhealthy, so much so, that out of 40 persons who sailed in 1833, on a commercial expedition up the Niger, only 11 survived. Three steamers, well fitted up for the purpose, were despatched (June 1841) to this river, by the British government, with full powers to form commercial treaties with the natives, and to concert measures for the extinction of the slave trade. But did our limits permit, it might be easily shown that there are no rational grounds on which to anticipate any considerable success from this expedition, and that the barbarism of Africa seems to depend on natural and irremediable causes. (Cailliet's *Travels in Central Africa*, li, with *M. Jomard's Remarks*; Ritter's *Africa*, ii. 47-173; Lander's *Exped.* 3 vols.; *Geog. Journal*, vols. li, and viii.; *Laird and Oldfield's Exped. into Africa*, &c.)

The history of the Niger is involved in extreme obscurity. Herodotus was informed by the Greeks of Cyrene, that in the interior of the African continent, a city had been reached by some Nasamon travellers, which was inhabited by negroes, and stood on the banks of a river containing crocodiles, and flowing from the W. eastward (*δὲ ἰστέρος πρὸς ἄλιον ἀνατὴν ἄρτα*, ii. 32), which he conjectured to be the Nile. Now, as the Bahr-el-Abiad, or W. arm of the Nile flows from W. to E., and is certainly more likely to have been reached by the Nasamons than the Niger, the conjecture of the venerable father of history, that the river which they encountered, was in fact the Nile, seems to be more consistent with probability than that of D'Anville, Bannell, and other learned moderns, who suppose that the city visited by the Nasamons was Timbuctoo, and the river the Joliba of Mungo Park. The latter theory has, however, so far prevailed, that the name Niger is that which is now usually given to the river discovered and explored by Park and Lander. The word *Niger*, or *Nigris*, is first used by Pliny (*Nat. Hist.* v. l. 1-9), from whose somewhat confused account it would appear that there were supposed to be two rivers of that name, one in Mauritania, S. of the great chain of the Atlas, and the other in Ethiopia, thus briefly described:—"Nigri fluvio eadem natura que Nilus: calidum et papyrus ad eundem gignit animales, itidemque temporibus augescit." He seems, also, to have conceived that the Niger and Nile were united, and that there was a large water-system, having many branches in the interior of Africa. The poet Claudian also entertained the idea of a similar connexion:—

Gir notissimus annis
Ethiopum, similis montibus gurgite Nilius.

Ptolemy furnishes a somewhat more detailed account of the

river, and assumes that there are two separate streams in the interior of Africa, both having many branches (*κρῶναι*), and connected with lakes; the river most easterly he terms the *Gir* (*Ταῖρ*), that to the W. being the *Nigris* (*Νίγρις*), communicating with the lake Libye, which may, perhaps, be identical with the lake Tchad, discovered by Denham and Clapperton. Ptolemy says nothing, however, respecting the course of the river, though he seems to have been of opinion that its waters were absorbed in lakes, or lost by evaporation. Edrisi, Abulfeda, and other Arabian geographers, conceived that the Niger (by them called *Nil-el-Abiad*, "Nigris Nileo") flowed westward, discharging its waters either into the Atlantic or some lake of the interior; and they represented it as rising from the same source as the Nile, and identified with it in the upper part of its course; this, indeed, is the opinion still maintained by the natives; and it is far from improbable that some of the affluents of the W. Nile may be connected, during the period of the inundation, with some of the affluents of the Niger. Such, in a few words, seem to be the leading statements of the more celebrated of the old geographers respecting the Niger. It is doubtful, perhaps, whether the Greek and Roman writers really possessed any authentic information as to the rivers and lakes S. of the Great Desert; and, at all events, the statements now referred to, if they really apply to that part of the continent, are at once extremely limited and extremely vague. That the caravans, which appear from a very remote period to have maintained an intercourse between the countries to the N. and those to the S. of the Great Desert, should have fallen in with and had some knowledge of the Joliba, is far from improbable; and perhaps, had any remains of the literature of Carthage come down to our times, they might have thrown considerable light on the question as to its identity with the Niger: but, with our existing means of information, it would appear, notwithstanding the learning and ingenuity that have been brought to its investigation, to be all but insoluble. The notices of the ancients are too obscure to admit of any certain inferences being deduced from them; and supposing (against the opinion of the learned Baron Valcknaer, *Recherches sur l'Afrique*, 409.) that the Niger is to be looked for to the S. of the Great Desert, the Bahr-el-Abiad, or western arm of the Nile, the Yeo, and other considerable rivers falling into the lake Tchad, correspond quite as well with their statements as the Joliba.

NIJAR, a town of Spain, in Andalusia, prov. Granada, 15 m. E.N.E. Almeria, and 78 m. E.S.E. Granada. Pop. according to Mifano, 5,792. It has two parish churches: its chief branch of industry is the manufacture of horse-dolls.

NIJIR-EGYHAZA, a large market town of Hungary, co. Szabolcs, 98 m. N. Debreczin. Pop. 15,640, principally Protestants. It has a saltpetre refinery; but by far the greater part of its inhabitants are agriculturists.

NIJNII-NOVGOROD, vulgarly *Nyegorod*, that is Lower Novgorod, a government in the central part of European Russia, on both sides the Volga, between lat. 54° 38' and 57° 6' N., long. 41° 40' and 48° 38' E., having N. the government of Kostroma, E. Kasan and Simbirsk, S. Penza and Tambov, and W. Vladimir; area, 18,740 sq. m. Pop. (1836), 1,071,000. Surface flat or gently undulating; the soil, which consists principally of sand and black friable mould, is exceedingly fertile; and being (for Russia) well cultivated, this is one of the most productive provinces of the empire. Exclusive of the Volga, several of its affluents, including the Oka, Betlougha, Piana, &c., traverse different parts of the government, which is well watered, at the same time that it is not marshy. There are some very large forests, those of the crown amounting to about 1,300,000 decetines. The produce of the corn crops considerably exceeds the consumption. Hemp and flax are very extensively cultivated. Great numbers of cattle and horses are bred; and government is taking the most effectual measures to improve the latter. This is a considerable manufacturing as well as a rich agricultural district. Coarse linen, canvas, and cordage, are the principal manufactured products; there are, also, some iron-works, with numerous distilleries and tanneries, soap-works, glass-works, &c. Commerce extensive and growing. The exports consist of corn and flour, cattle, horses, leather and tallow; the manufactured articles specified above, with iron, timber, potash, mats, glass, &c.

NIJNU NOVGOROD, NIJROGOROD, or NIJINI, the cap. of the above government, in the angle formed by the confluence of the Oka with the Volga; lat. 56° 19' 40" N., long. 44° 25' 30" E. Stationary pop. 35,000. It stands partly on a steep hill, about 400 ft. in height, the summit of which is occupied by the Kremlin or citadel, and partly on the low ground along the sides of the rivers. The citadel, from the ramparts of which there is a noble view of the Volga, Oka, and surrounding country, contains the government offices, two cathedrals, built after the model of that of Moscow; an obelisk 75 ft. in height, erected in honour of the deliverance of their country, the patriotic citizen, Minin, and Prince

Pojarski; and other public buildings. The upper part of the town has several good streets; and being ornamented by numerous churches, placed in conspicuous situations, has an imposing appearance. The lower town consists principally of a very long street, bordering the Volga. With the exception of the principal public buildings, and a few private houses, the rest of the city is constructed of wood. Among the establishments are three convents, a bazaar, a gymnasium, and four primary schools, an ecclesiastical seminary, and a large military school. The town is ancient, having been founded in 1232. The Kremlin was surrounded by strong walls and towers in 1509.

A bridge of pontoons leads across the Oka to the splendid new bazaars erected on the left bank of that river for the exhibition and sale of merchandise brought to the fair. These, which are divided into parallel rows or streets, are constructed of stone, roofed with iron, having covered galleries in front, supported by 8,000 iron pillars. They are built on piles, and to guard against the danger of inundation, the ground on which they stand was raised about 30 ft. Being enclosed on three sides by canals, and on the fourth by a navigable inlet of the Oka, there is every facility for the delivery and shipment of merchandise. The establishment is of very great extent, comprising about 2,500 booths; and is admitted on all hands to be at once the largest and most perfect of its kind that is any where to be met with. Including the church, dedicated to St. Macarius, the patron of the fair, it is said to have cost in all about 11,000,000 roubles.

Nijni Novgorod has various manufactures, but it owes its great importance almost entirely to its commerce. It is the grand entrepôt for the trade of the interior of the empire, and has, in fact, a greater command of internavigation than any other city of the old world. Besides the corn, cattle, and other products of the surrounding country, the Kama, the principal affluent of the Volga, conveys to Nijni the salt of Perm; the gold, silver, copper, and other metallic treasures of the Oural mountains; the furs &c., of Siberia; and even the teas of China. The silks, shawls, and other merchandise of central Asia, and the fish, caviar, &c., of southern Russia come up the river from Astrakhan; while the manufactured goods of England and western Europe, the wines of France, the cotton of America and the sugar of Brazil, are conveyed to her from Petersburg and Archangel, with both of which, as well as Moscow, she is connected by navigable rivers and canals. These advantages, joined to her situation in a fertile country in the centre of the monarchy, were so highly appreciated by Peter the Great, that it is said he at one time intended to have made Nijni the capital of his empire; and it is, perhaps, to be regretted that he did not carry this project into effect.

Formerly the commercial importance of Nijni has been vastly increased. Previously to 1817, the great fair, now held here, was held in a less convenient situation at Makareff, lower down the Volga. But the buildings for the accommodation of the merchants at Makareff having been accidentally burnt down in 1816, government took advantage of the circumstance to remove the fair to Nijni. It begins on the 1st of July, and continues for a month or six weeks, and is well known, not only over all Russia, but over most other countries of Europe and Asia. It is carried on within the bazaars already noticed, which were constructed by government for the accommodation of the traders, to whom they are let at moderate rents. The produce disposed of is classified as follows, viz. 1st, Russian produce, raw and manufactured; 2nd, merchandise from the rest of Europe, consisting principally of manufactured and colonial products; and 3d, products of China, Bokhara, the Kirghis, and other Asiatic nations. The estimated value of the produce belonging to each of these classes, exposed to sale in 1827, 1832, and 1836, has been as under:—

	First Class.	Second Class.	Third Class.	Totals.
1827	Roubles.	Roubles.	Roubles.	Roubles.
1832	67,000,000	16,000,000	22,000,000	105,000,000
1836	88,500,000	17,000,000	16,700,000	122,200,000
1839	122,557,000	15,000,000	28,000,000	165,557,000

In 1830, Russia sent to the fair silk goods valued at 8,500,000 roubles; hides, tanned and raw, 3,000,000 rouble; dry and salted fish, 1,600,000 rouble; cotton stuffs and yarn, 19,000,000 rouble; woollen stuffs, 500,000 rouble; furs and peltries, 8,000,000 rouble; and 2,000,000 pounds iron. During the same year there were sent to the fair by foreigners, woolsens of the value of 3,900,000 rouble; 32,368 boxes of tea; 306,570 lbs. of silk, &c. Every sort of article is to be found in one or other of the different bazaars. In 1839, the cottons exposed to sale were valued at 23,544,000 rouble; and the metals and metallic goods at 22,390,000 rouble. The concourse of strangers during the fair is quite immense; so much so, that the population is then increased, according to the lowest estimates by from 150,000 to 200,000 individuals. Here are seen dealers from India, China, Tartary, Bo-

khara, Persia, Circassia, Armenia, and Turkey; and from Italy, Poland, Germany, France, England, and even America. Amusement, as well as business is attended to: theatrical representations, shows of wild beasts, and other Bartholomew-fair diversions, being got up for the entertainment of the multitude. (Schützler, *La Russie, &c.*, 114-190; Lyall, ii. 329-335; Pousart, &c., *Das Europäische Russland*, 582, &c.)

NIKOLSBURG, a town of Moravia, circ. Brünn, from which city it is 26 m. S. Pop. about 8,500, a third part of whom are Jews. It has a fine castle and grounds belonging to Prince Dietrichstein, a philosophical academy, a gymnasium, and several other superior schools; and in the castle is an extensive library, comprising many valuable MSS. The town is dirty and wretched; it has however, manufactures of woollen cloth and other stuffs, and some trade in wine and marble, both produced in its vicinity. (*Osterr. Nat. Encycl.*; *Berghaus*.)

NILE (Lat. *Nîlus*, Gr. *Νῆλος*, from *νῆα* ἵδν, "new mud," because it brings down vast quantities of silt or mud"), a large and famous river of N.E. Africa, flowing N. through Abyssinia, Nubia, and Egypt, to the Mediterranean sea, celebrated alike for its magnitude, the inexhaustible fertility which it confers on the "land of Egypt," the uncertainty of its origin, its connection with some of the most interesting events in remotest periods of authentic history, the great cities that were early built on its banks, and the stupendous monuments that still attest the wealth and power of their founders. The discovery of its real source was an object of intense curiosity to the ancients, as it still remains to the travellers and geographers of modern days; the words of Thibulius,

Nile pater, quantum potessem dicere causam
Aut quibus in terris occubuisse caput,

being nearly as applicable now as in his time.

The Nile is formed by the junction, at 15° 34' N. lat. and 32° 30' 58" E. long., of two great arms, the *Bahr-el-Azrek*, (the *Atapus* of the ancients), or Blue river, from the S. E., and the *Bahr-el-Abiad*, or White river, from the S.W. The sources of the former, which derives its name from the dark colour of its water, were discovered and described by Paez, in 1618, and were subsequently visited by Bruce, who ridiculously pretended to have, for the first time, ascertained the true sources of the Nile, and thus solved a problem that had for ages occupied the attention of the learned world! This E. branch rises from two fountains near Gesh in Gojam, in Abyssinia, at an elevation of about 10,000 ft. above the level of the sea, in lat. 10° 59' 25" N., long. 36° 53' 30" E. It thence flows N. to the lake of Dembea, or Trana, a large sheet of water which receives many other streams; but the Nile is said to preserve its waters with little intermixture with those of the lake, across which its current is always visible. Escaping from this lake, it sweeps in a southerly direction round the E. frontier of the provinces of Gojam and Damot, till, between the 9th and 10th deg. N. lat., it takes a N.W. direction, which it preserves till, at Khartoum, it unites with the other great arm, the *Bahr-el-Abiad*, flowing from the S.W. The *Bahr-el-Azrek* receives in its course several important tributaries, and is in several parts interrupted by cataracts, one series of which has a fall of 280 ft. At the point of junction with the other great arm, it is about ½ m. in breadth, and has a rapid current; but, during half the year, its waters are low.

The W. arm, *Bahr-el-Abiad*, or White river, derives its name from the fine whitish clay usually suspended in, and colouring its waters. It is broader and deeper than the E. arm, brings down a larger volume of water, and appears to have been regarded in antiquity as the true Nile. (*Herod. ii. caps. 30, 31.*; *Mémoires de D'Anville*; *Mémoires de l'Académie des Inscriptions, &c.*, xvi. 46.) If, however, the derivation of the name previously given be correct, the *Bahr-el-Azrek* would seem to have the best right to be considered the genuine Nile, inasmuch as it carries down the greater portion of that mud whence its name has been derived, and the deposits of which have, in the lapse of ages, formed the land of Egypt. But without insisting further on this point, though the sources of the *Bahr-el-Abiad* have not hitherto been explored,

Nec licet populis parvum te, Nile, videre,

its course was traced in 1837, by Linant, for about 160 m. from its confluence with the *Bahr-el-Azrek*. (*Geog. Journal*, ii. 171-187.) And a party sent by the pacha of Egypt on a slaving expedition have since traced it to a much greater distance, or to a point supposed by Col. Leake to be in about the 10th deg. of N. lat. and 29th deg. of E. long.; and at this point no mountains were in sight, the river being also

This is the derivation given by Servius in his notes to *Georg.* lib. iv. v. 291; to which many other derivations have been proposed, and perhaps the Nile may, like the Hebrew *Nahhal*, merely mean the river, or river per eandem lenam. (See *Dictionnaire de Trévoux*, art. *NIL*.)

NILE.

of great breadth, full of islands, and shallow. Perhaps, however, we shall not be far wrong in fixing its source on the N. slope of the Gebel-el-Kumri, or Mountains of the Moon, in about the 6th deg. of N. lat. and between the 32d and 30th deg. of E. long. But whether its confluent form themselves into lakes, as was conjectured by Ptolemy, or fall successively into the main stream, are questions as to which no information can be given. The course of the Bahr-el-Abiad, so far as it has been explored, to its junction with the Bahr-el-Azrek, is pretty uniformly N.N.E.; it receives many tributaries, and forms numerous islands. "At the point of confluence, the Bahr-el-Abiad is only about 1,500 ft. across; but a little above it enlarges much, its banks being frequently 3 or 4 m. apart, and in some places during the inundations the waters extend 21 m. from side to side. In its ordinary state, and in mid channel, it has here from 3 to 4 fathoms water." (*Geog. Journal*, ii. 187.)

After the junction of its two great arms, the united river, or Nile, takes a generally N. direction, but with almost innumerable windings. Not far below the point of confluence is a low range of mountains, through which the river rushes in a narrow gorge, forming what is called the sixth cataract; and thence deflecting eastward, through extensive and verdant plains, it passes the capital of Shendy and the ruins of the ancient Meroë. It receives, close to the town of Addamer (lat. 17° 45' N.), the waters of its important tributary the Tacazzé (the *Atabaras* of the ancients), which has its sources in the high lands of Lasta, in Abyssinia, in lat. 11° 40' N. long. 39° 40' E., about 24 deg. E. of lake Dambea, pursuing thence a pretty uniform course N.N.W. to its junction with the Nile. From this point to its embouchure, a distance of about 1350 m., the Nile receives no affluent whatever, either on its E. or the W. bank, a solitary instance, as Humboldt has remarked, in the hydrographic history of the globe. (*Per. Narr.*, v. 744.)

At Abu Hamed, in about 194 deg. N. lat., and 33 deg. E. long., the river, which had previously been following a northerly course, turns suddenly to the W., and thence pursues a south-westerly course to Edab, in the province of Dongola, in the 18th deg. of lat., where it again curves round to the N. This deflection is called the great bend of the Nile. In this course through Dongola, the valley on each side is very circumscribed. The river enters Lower Nubia in about 19° 40' N., where it is precipitated over a ledge of granite rocks, forming what is commonly called the 3d cataract. Under the 32d parallel occurs the 2d cataract, of Wady-Halfa. The first, or lowest cataract, is that of Assuan (an. *Syene*), near the island of Elephantine, where the river has cut its way through a ridge of granite rocks. (See vol. i. 810.) It must be observed, however, that the term "cataract," as applied to the broken course of the Nile, bears no analogy to the great cataracts of Niagara, the Pisse-Vache, &c.; for most of them scarcely exceed a few feet in height, and are, in fact, rather rapid than cataracts. In a portion of Lower Nubia the river-valley is very much contracted: the rocks on both sides approach the shore so closely as to allow little space for the deposit of alluvium; and in other places on the Libyan side, the sand covers the whole level space between the hill and the bank. At Kalababeh, the an. *Talmis* (which has a temple bearing a close resemblance to the temples of Tentyrá, Edfou, and Philæ), the river rises from 30 ft. to 40 ft. during the floods; and after their subsidence in Feb., the stream flows at a rate of two or three nautical miles an hour. (*Geog. Journ.*, vol. ix., part 3.) The Nile after entering the boundaries of Egypt at Philæ, six miles from Assuan, runs in a quiet and very tortuous stream, though generally northward, through the whole length of the country, enriching it by its waters, and its deposits, which, indeed, not only give to Egypt its fertility, but make it habitable. But, with the exception of the district of Fayoum (vol. i. 901), the valley of the Nile in upper and central Egypt is of very contracted dimensions, the mountains, and the burning sands of the desert encroaching so closely upon it, that it seldom exceeds 10 m. in width, and is frequently not half so much. But how limited soever, this narrow stripe is of extraordinary beauty and fertility, and contains the magnificent remains of some of the noblest and most populous cities of the ancient world. But we beg to refer the reader to the article *Egyr* for further particulars as to the past and present state of the bed of the river, its inundations, and its delta. In antiquity, the Nile seems to have poured its waters into the sea by seven mouths; but it has now only two mouths, those of Rosetta and Damietta. The former, or most westerly, has a breadth of 1800 ft., with a depth of about 5 ft. in the dry season. The Damietta mouth is only 900 ft. wide; but its depth averages between 7 ft. and 8 ft. when the river is lowest. The greatest breadth of the Delta is about 85 m. from E. to W.; the distance of its apex from the sea being rather more than 90 m. Great changes have, however, taken

NIMES.

place in it during the lapse of ages; the soil has not only been elevated many feet by alluvial deposits, but its shape and the position of its apex have greatly altered even within the period of modern history. The river begins to swell in its higher parts in April, and even earlier in the Bahr-el-Abiad; but at Cairo no increase occurs till the beginning of June, its greatest height at that city being in September, when the Delta is almost entirely under water. The waters subside in November, leaving a rich alluvium, which is the great source of the fertility of Lower Egypt. *Quotannis cortis diebus, precipis circo solstitium autum, aucto magno per totam spatiosus Ægyptum, terram pluvius omnibus destitutam aquis suis irrigat, limo legit, et fecundissimam efficit. Unde unica spes Ægyptis in Nilo posita est, quia fertilis aut sterilis annus est, prout ille magnus aut parvus fuit.* (Cicero, *De Nat. Deor.*, l. cap. 32.) We need not, under such circumstances, feel surprised that the ancient Egyptians regarded the Nile as a god to whom they paid divine honours. The greatest breadth of the river may be estimated at 3000 ft., or about twice the width of the Thames at London bridge. Its average current does not exceed 3 m. an hour: the water is always muddy; and even in April and May, when it is clearest, it has a cloudy hue. When it overflows, the colour is of a dirty red, consisting chiefly, we believe, of the red-clay deposit of the Bahr-el-Azrek; for, as already stated, the Bahr-el-Abiad brings down only a fine whitish clay. The Nile abounds with a great variety of fish, such as the *Labeus Niloticus*, or white trout, the *Muræna anguilla*, and a large species of salmon. The *Oxyrynchos* of this river, so famed in the antiquities of Egypt is, according to D'Anville, the fish now called *Keshes*. None of the fish, however, except eels, have any very close resemblance to those of Europe. Among the waterfowl of the Nile, the most characteristic is the Turkey-goose, or *Anas Nilotica*, the flesh of which is both palatable and salubrious. From Assuan down to Cairo, about 300 m., the banks, except in the rocky parts, present no native plant, but abound with all sorts of recent vegetation, raised by the industry of the inhabitants on this peculiarly fertile soil. Cultivation, however, is now common on the E. than on the W. bank of the river. Hippopotami are found in Nubia, but not in Egypt; the crocodiles, also, are greatly reduced in number, and are now confined to the district above Assuit.

NILES, p. t., Cayuga co. N. Y., 10 m. S.E. Auburn, 100 m. W. Albany, 320 W. Bounded E. by Skaneateles lake, W. by Owaseo lake. It has a Presbyterian church, four stores, one fulling-mill, two grist-mills, 10 saw-mills, two tanneries, one distillery; 11 schools, 629 scholars. Population 2234.

NILES, p. t., Berrien co. Mich., 182 m. W.S.W. Detroit, 637 W. Watered by St. Joseph's river. It contains two churches, a Presbyterian and Episcopal, three commission houses in foreign trade, 11 stores, two flouring-mills, two grist-mills, four saw-mills, two tanneries, two distilleries, two printing-offices, two weekly newspapers; one college, 38 students; four schools, 94 scholars. Pop. 1430.

NIMEGUEN, or NYMEGËN (probably the an. *Nemogænan*), a town of Holland, prov. Guelderland, cap. around, on the Waal, here crossed by a flying bridge, 84 m. S. by W. Arnheim, and 53 m. S.E. Amsterdam. Population about 14,000. It stands on several small but steep hills, and is pretty strongly fortified. Though not ill built, it has an irregular appearance, the streets being narrow; and, on account of the abrupt elevation from the river, the windows of one range of houses overlook the chimneys of another. Among the public buildings worth notice, are an old edifice, said to have been raised by the Romans, and now forming part of the fortifications; the old castle of Valkenot, believed to have been built by Charlemagne; and the town-house, an edifice of considerable beauty. Several of the churches are likewise entitled to attention; and a high tower, called the Belvidere, is much resorted to by visitors, on account of the extensive view which it commands of the course of the river and the surrounding country. Nimeguen is the seat of tribunals of primary jurisdiction and commerce, and the residence of a military commandant and a receiver of taxes. It has a branch of the Society of Public Good, a commission of agriculture, and a Latin school. It produces Prussian blue, glue, &c., and has some tanneries; but the only article for which it is celebrated is its pale beer, sent to almost every part of the Netherlands. Nimeguen is known in history from the treaty concluded here, in 1678, by Spain, France, and Holland. It was taken by the French on the 8th September, 1794, after a severe action, in which the allies were defeated. Various Roman antiquities have been discovered in and about the town. (*De Clect*; *Dict. Geog.*; *Burrow's Tour in Holland*.)

NIMES, or NISMES (an. *Nemausus*), a city of the S. of France, dep. Gard, of which it is the cap., in an extensive and fertile plain, near the Vistre, 23 m. W.S.W. Avignon,

NIMES.

and 30 m. N.E. Montpellier : lat. 43° 50' 8" N., long. 4° 31' 45" E. Pop. in 1836, ex. com., 41,194. The distant view of Nîmes is not imposing. Notwithstanding its numerous fine edifices, it has only the *Thermæ* to render it conspicuous at a distance. The city-proper, which is surrounded by boulevards, on the site of the ancient fortifications, is confused and irregular with narrow streets and ill-built houses. But the boulevards and suburbs, which comprise three fourths of the houses, are regularly laid out, clean, and have numerous handsome modern buildings and fine public promenades.

Nîmes is principally interesting on account of its remains of antiquity, of which it probably possesses more than any other city of Europe, Rome excepted. The most classical, though not the most extensive, of these is the oblong temple, absurdly called the *Maison-carée*, nearly in the centre of the city. This edifice was supposed, from an inscription discovered on its frieze, to have been built in honour of Caius and Lucius Cæsar, grandsons of Augustus; but, from subsequent discoveries, it would appear to have been erected to the adopted sons of Antoninus Pius. At any rate, it dates from the finest period of Roman art, and is one of its most perfect remains. It is raised on a platform ascended by 15 steps, and has 30 Corinthian columns, six in the front and at the back, and nine on each side, exclusive of those at the angles. The portico, which is of ample dimensions, is supported by six detached columns in front, and two on either side: the other columns on the sides and back of the building are sunk half way into the walls. The capitals of the columns, and the frieze, cornice, and other parts of the building, are profusely adorned, in the most exquisite taste. The measurements of this edifice are as follow: length, 824 ft.; breadth and height, 404 ft. each; height of the platform on which it stands, 184 ft.; height of the stylobate, 94 ft.; height of the doorway, 324 ft.; breadth of do., 104 ft. The columns, which are about 30 ft. in height, have a height equal to 10½ diameters. (*Frossard, Tableau Pittoresc. de Nîmes*, II., 171.)

The *maison-carée* was considerably injured in the middle ages; but it is protected from future spoliation by being inclosed within an iron palisade, and since 1853 it has been employed as a museum of paintings and antiques. But it would have been more consistent with good taste to have preserved it untouched and unoccupied, in its ancient simplicity.

The amphitheatre of Nîmes is admitted to be the most perfect structure of its kind extant, after that of Verona. It stands on one of the boulevards, surrounded by a large open space, on which no buildings are allowed to be erected. It is said to have been founded by Antoninus Pius. Its longest external diameter is 437 ft.; its shortest 332½ ft.: it has 32, or, according to some authorities, 35 ranges of seats, and is variously estimated as having sufficient accommodation for from 17,000 to 25,000 spectators; the height of the building outside is from 68 to 104 ft., and its total external circumference is 1174½ ft. (*Frossard*, I., 135.) Though it was occupied by the Visigoths, and afterwards the Saracens, as a fortress for their defence against the Franks, the outer wall is still nearly entire. It consists of two stories, each having 60 arches, and an attic story, and is entered by four gates, one at each of the cardinal points, the principal being on the N. side. The arcades of the ground story are separated by pilasters, those of the upper by columns, in an irregular Tuscan or Doric style. The interior is in many parts dilapidated and overgrown with vegetation; but it still serves for bull-bait, jousts, and dramatic entertainments, to which the modern inhabitants of Nîmes are as much addicted as their ancestors were to the more barbarous exhibitions of gladiators.

A few portions of the ancient walls still remain, principally in the *Portes d'Auguste* and *Dé France*: the first, which, in the time of the Romans, was the principal gate of the city, consists of two large and two smaller arches: the former, which are in the middle, have between them a small Ionic column, respecting which there has been much controversy, all the other decorations of this gate being of the Corinthian order. The *Porte d'Auguste* is elaborately ornamented with sculptures, which constitute one of the principal points in which it differs from the *Porte de France*. In the N.W. part of Nîmes is a ruined *symplema*, or Roman bath, of considerable size, improperly termed the Temple of Diana. Near this, on a height overlooking the city, is the *Tour mague* (*turris magna*), a tower supposed to have been built by the Greek colonists of the city before the Roman invasion; but the original purpose of which has not been correctly ascertained. It is in the Doric style; its lower part being heptagonal, its upper, octagonal. It is in great part ruined: but being still 100 ft. in height, and in a conspicuous position, it is used to support a telegraph. The above are the principal objects of architectural interest in the city. The Vandals,

and other barbarians, are said to have destroyed the basilica of Plotinus, the temples of Apollo, Ceres, Augustus, &c.; but the still existing memorials of antiquity are more than sufficient to evince the almost unequalled magnificence of the ancient city.

Nîmes does not, however, owe its sole interest to its antiquities. It has several large, and some good modern, edifices. The cathedral, begun in the 11th, but principally constructed in the 16th and 17th centuries, has little to recommend it, except its occupying the site of the temple of Augustus, but the *Palais de Justice* on the esplanade, the *Hôtel-Dieu*, principally rebuilt in 1830, the general hospital, the new theatre, several of the churches, and the public library, are handsome, well-contrived buildings. A large fortress to the N. of the city was constructed by Vauban, on the site previously occupied by the basins that received the water brought thither by the aqueduct, of which the *Pont du Gard* forms a part. It is now the central prison for the 8. departments of France, and has usually about 1200 inmates. The bishop's palace, Episcopal seminary, college, and large barracks, are the other principal public buildings. The esplanade contiguous to the amphitheatre, and the *Cours Neuf*, are among the finest promenades. The last named extends quite through the W. part of Nîmes from N. to S.; and leads to the fine and extensive *Jardin de la Fontaine*. This garden derives its name from a large and handsome fountain, and has in it many statues and other Roman antiquities, besides the *symplema* mentioned above.

The *Pont du Gard*, above alluded to, formed part of a superb Roman aqueduct, 254 m. in length, which conveyed a supply of water from the neighbourhood of Uzès to Nîmes. We have no certain details as to the founders of this great work, the era of its construction, or the purpose for which the water brought by it was employed. Some antiquaries have ascribed its erection to Agrippa, son-in-law of Augustus, about *æras* 19 B.C., while others have ascribed it to Adrian, or his successor Antoninus, who derived his origin, by the father's side, from Nemausus. But, by whomsoever constructed, it was worthy the most brilliant era of Roman power. The *Pont du Gard* consists of that part of the aqueduct which was thrown across the river Gardon, in a wild defile, 11 m. N.E. Nîmes. It consists of three rows of arches, or, as it were, three different bridges, raised the one above the other, the whole being constructed of large stones, without cement. The first, or lower tier or bridge, has a length of 330 English ft., and a height of 63½ ft.; and consists of six arches of unequal size, the breadth of the largest, through which the Gardon usually flows, being 62½ ft. The second, or middle tier, is 846 ft. in length, and 62½ ft. in height: it consists of 11 arches, generally smaller than those of the first tier, but like them of unequal size. The third or upper tier, 870 ft. in length, and 32½ ft. in height, has 35 arches, which of course are much smaller than those of the other tiers, being respectively only 13½ ft. in width. The entire height of the structure is 168 ft.; its width or thickness, which is 19½ ft. at its base, diminishes as it ascends; on its summit is the watercourse, 4½ ft. in depth and 4 ft. in breadth, and through it a person may now pass with ease from one end of the structure to the other. About the middle of last century, a carriage road was built up against the bridge as high as the base of the second tier of arches. The *Pont du Gard* is in the Tuscan style; it is very little ornamented, but is a highly picturesque object. With singular good fortune, it escaped dilapidation during the dark ages; and the greatest injury it experienced was in 1600, from the Duke de Rohan, who broke away a portion of the second tier of arches to facilitate the passage of his artillery; but the breach was afterwards repaired at the expense of the states of Languedoc.

Nîmes is a bishop's see, the seat of a royal court for the departments Gard, Lozère, and Vaucluse, courts of primary jurisdiction and commerce, a chamber of commerce, *conseil de prud'hommes*, a university academy, the royal academy of Gard, a royal college, &c. It has schools of drawing and chemistry, as applied to the arts, societies of agriculture, medicine, &c., a Bible society, a commission of antiquities, an atheneum, an extensive public library, and a cabinet of natural history.

Nîmes is further distinguished by its manufacturing industry. It is one of the principal seats of the silk manufacture of France; ranking, in this respect, immediately after Lyons and (perhaps) St. Etienne. Its manufactures are principally silk bowery and shawls; and silk stuffs mixed with cotton, linen, and woollen. There are, altogether, between 7000 and 8000 looms at work in Nîmes, many of which are Jacquard looms. All the weavers work with their families at their own homes, there being no large factories except for dyeing, or for printing silk stuffs; which latter branch of industry has greatly aug-

mented since 1836, when it employed from 600 to 700 hands, exclusive of children. But, though the silk manufactures of Nîmes be extensive, the goods produced are not much esteemed by the upper and middle classes, being mostly mere imitations of those of Lyons, and of inferior quality. From this and other causes the export trade of Nîmes is small; its industry is not progressive, and its population often experience distressing crises. The weavers employ about 11 hours a day at the loom; the wages of a man being estimated by Villermé at an average of 30 sous, those of a woman at 12 sous, and of children from 5 to 12 sous. These low wages being barely sufficient to provide current necessities, the weavers are almost all wretchedly clothed, dirty, and ill provided with fuel in winter. According to Villermé, they are intelligent and laborious, but not addicted to drunkenness or other kinds of profligacy; but they have neither economy nor foresight, with the exception of the silk stocking weavers, who being employed on articles less subject to the caprices of fashion, are less affected by crises than the rest. These form, in fact, a separate class, distinguished for economy and prosperity, notwithstanding that their wages are smaller than that of most other artisans. The besetting fault of the working population of Nîmes is a want of perseverance. Few are able to write and read; and many spend a considerable part of the week in idling. Besides silks, Nîmes has manufactures of cotton goods, gloves, leather, brandy and vinegar, and a good deal of trade in wine, essences, drugs, colonial produce, &c. It is also the principal entrepôt for the raw silk produced in the S. of France, of which material almost all its own silk manufactures are made. Of the population of Nîmes and its suburbs, about 32,000 are Roman Catholics, and 12,000 Protestants; and in few towns is there so much acrimonious party-spirit and violence displayed on account of religion. This violence broke out, soon after the downfall of Napoleon, into the most atrocious acts on the part of the Catholics, which might easily have been suppressed by a vigorous government, but which were, in fact, rather encouraged by the imbecile bigots then at the head of affairs in France.

Nemausus is supposed to have been founded by a colony of Phocians; it was subjugated by the Romans, anno 121 B.C. In the middle ages it belonged successively to its own viscounts, the counts of Thoulouse, and the kings of Aragon, by one of whom it was ceded to Louis IX., in 1258. Nîmes has given birth to many distinguished persons, among whom may be specified Court de Gebelin, author of the *Monde Primitif*, and M. Guizot, now (1841) minister for foreign affairs, and author of the able and original works on the progress of civilization in France and Europe, &c. (*Histoire de la Civilisation en France*, and *Histoire Générale de la Civilisation en Europe*, &c.) This illustrious individual, to whose enlightened and rational patriotism, integrity, and good sense, France and Europe are under the greatest obligations, first saw the light on the 4th of October, 1787: he is a Protestant; and the simplicity of his character, and perfect freedom from all sorts of pretension, give additional lustre to his talents and eloquence. (*Hugo*, art. *Gard*; *Tableau de Nîmes*; *Villermé*, *Tableau des Ouvriers*, &c., i. 406-417; *Bouring's Report*, *Anglis*, &c.)

NEMISHILLEN, t., Stark co., O. Watered by Nemishillen creek. It has one school, 30 scholars. Pop. 1927.

NINEVEH, a great and famous city of the ancient world, the cap. of the Assyrian empire, is supposed to have stood on the E. bank of the Tigris, opposite to the modern city of Mosul (which see). There is every reason to think that its site was identical with that of the village of Nunia, and the "tomb of Jonah," about 3 m. from the river, which stand upon and are surrounded by vast heaps of ruins; lat. 36° 20' 17" N., long. 43° 10' 17" E. Herodotus (i. 185,) and other profane writers ascribe its foundation to Ninus, son of Belus, and first monarch of the Assyrian empire; but, according to the Bible (Gen. x. 11), "Asshur (the grandson of Cush) went forth out of the land of Shinar, and builded Nineveh." Its history is lost in the obscurity of succeeding ages; but it was, no doubt, a very large city nine centuries before the Christian era, for at that period Jonah described it as "an exceeding great city of three days' journey." (iii. 3.) Strabo says (i. xvi.) that it was larger even than Babylon; the circuit of which he estimated at 365 stadia; and, according to Diodorus Siculus (i. ii.), it was of an oblong shape, 150 stadia in length, and 90 in breadth; that is, above 54 m. in circuit. Very little dependence can, however, be placed on these statements; and it is, at the same time, admitted that the walls included a large extent of well cultivated gardens, and pasture grounds. The description of its walls, given by Diodorus, is too obviously exaggerated to require any notice. The prophet Jonah says that Nineveh "had more than six score thousand persons that could not distinguish between their right hand and their left." (Jonah, iv. 11.) This expression, the import of which is by no means clear, has been

generally understood to refer to the children; and, taking it in this sense, and including under the term children the younger persons under nine years of age, they might be taken at about one fourth part of the population, which, consequently, would be 480,000. But if we suppose, as some critics have done, that the children referred to by the prophet could not well exceed five years of age, they might be taken at between one sixth and one seventh part of the population, which would, consequently, amount to from 720,000 to 840,000. It is plain, however, that these statements are far too vague to be entitled to any considerable weight.*

Nineveh was the residence of the Assyrian kings, and a city of such commercial importance, that Nahum apostrophises her: "Thou hast multiplied thy merchants above the stars of heaven." (iii. 16.) She was besieged and taken by Arbaces the Mede in the 8th century B.C., but appears to have been regarded as the capital of the Assyrian empire down to anno 612 B.C., nearly three centuries after Jonah's prophecy of her destruction, when she fell, after a protracted siege, into the hands of Ashurbaner, or Cyaxares, king of Media, who took "spoils of silver and gold, and none end of the store and glory out of all the pleasant furniture," making her "empty, and void, and waste." (Nahum, ii. 9, 10.) The spoils were taken to Ecbatana, the citizens were dispersed in villages, and the Assyrian empire, which for four centuries had been the glory of the eastern world, gave way to that of the Medes and Persians. It seems certain, however, either that the city had not been wholly destroyed, or, which is most probable, that a new and inferior city had, at a subsequent period, grown out of the ruins of the more ancient city; and the latter, no doubt, is that referred to by Tacitus, *Annal.* xii. 13, and Ammianus Marcellinus, *xviii.* 30. Kinnaird supposes that the present remains, comprising an oblong rampart and foss, about 4 m. in circuit, with a moss-covered wall about 90 feet in height, are those of the more recent city. The ruins at first sight present a range of hills, from which large stones are constantly dug out; and the bridge over the Tigris seems to have been entirely built of stones from the ruins, which have, no doubt, furnished as large a supply for modern buildings as the quarries near Mosul. The tomb of Jonah occupies one of the hills above mentioned, and is covered by a mosque, held in high veneration all over the East. Bricks, entire as well as in fragments, and pieces of gypsum, with inscriptions in the wedge-formed character, are found here, closely resembling those of Babylon (*Kinnaird's Persia*, p. 256-259; *Ottier, Voy. en Turquie*, iv. 365-378; *Sinclair's Assyria*, &c., p. 256-258; *Calmet, Dict. de la Bible*, ad voc. *Niniveh*.)

NINGPO, a city of China of the first rank, prov. Che-Keang, at the confluence of the rivers Kin and Yaou, near their mouth in the harbour of Chusan, 46 m. E. by S. Hang-tcheou, and about 180 m. S.E. Nankin; lat. 29° 53' N., long. 121° 17' E. Pop. estimated at from 200,000 to 400,000. It is surrounded by walls and bastions, now in ruins, and is entered by five gates; the streets are broad and long, and the shops surpass those of Canton in elegance and splendour. It is intersected by numerous canals; a floating bridge crosses the inlet; and there are several pagodas, government warehouses, and other public buildings. The suburbs are flat, presenting rich fields and rice-gardens; but at the back, skirting the sea-shore, are dark-looking barren hills. Ning-po may be considered the third or fourth emporium of the Chinese empire; and its trade to the N. and S. districts of China, as well as to Siam, is of the highest importance. In the neighbourhood are very extensive salt works, and salt is exported in considerable quantities. The town is accessible by vessels of 300 tons; but large ships unload at Chinhsa, a fortified town at the entrance of the inlet.

The English formerly traded to Ning-po, and the ruins of the British factory are still perceptible near the harbour of Chusan. They were compelled, however, by the Chinese, in the 17th century, to confine themselves to Macao, at the same time that similar restrictions were imposed on the Portuguese. (*China Opened*, i. 115.)

NIORT, a town of France, dep. Deux-Sèvres, of which it is the cap., on the Sèvre-Niortaise, 34 m. E.N.E. La Rochelle, and 43 m. W.S.W. Poitiers; lat. 46° 50' 8" N., long. 0° 19' 12" W. Pop., in 1836, ex com., 18,015. It is pleasantly situated on the declivities of two hills, and is surrounded by planted promenades. It was formerly ill-built, but has been greatly improved since the Revolution, many new and good streets having been constructed on the site of the ancient fortifications. The castle of Niort, which has been long converted into a prison, was the birth-

* The well-informed authors of the learned and valuable work, *L'Art de Perdre*, by Diderot, have made a singular blunder in noticing this subject. They say that the children of six years of age and under do not exceed the 1/20th part of the pop. of a city; and that, consequently, the number of Nineveh must have amounted to about 2,400,000. (Tom. ii. 343, Sup. ed.)

NIPHON.

place of M^{ad}. de Maintenon. The town has two good parish churches, one of which was built by the English, two hospitals, some good barracks, public baths and public halls, a handsome arcade (*galeries vitrées*), a theatre, a public library with 30,000 vols., including some rare MSS.; and a botanic garden, having attached to it a large horticultural school. It is the seat of tribunals of primary jurisdiction and commerce, a royal atheneum, a council *des prud'hommes*, a society of agriculture, and a communal college. It has manufactures of leather, gloves, shoes, woolen stuffs, wooden and horn articles, &c.; and is an entrepôt for the wines of the Gironde, and for timber, wool, hides, and cattle. It is also celebrated for its confectionery (*confitures d'angelique*). (*Hugo, art. Deux-Sèvres.*)

NIPHON. See JAPAN.

NISHAPOOR, a town of Persia, in Khorassan, cap. district of its own name, 46 m. W. by S. Meshed, lat. 38° 45' N., long. 26° 8' E. Pop., according to Captain Conolly, 8000. The town has a poor appearance, being confined within a mud wall and ditch without either minarets or domes; the only building that appears above the wall being a shapeless mosque. The circuit of the present wall does not exceed 4000 paces, and the greater part of the enclosed area is covered with ruins. The houses now inhabited, of which there are about 19,000, are meanly built, chiefly of mud. A tolerably large bazaar is well filled with goods for the consumption of the town, and provisions are alleged to be cheap and of good quality.

Nishapoor has few manufactures, and cannot boast of a single branch of foreign trade, except that of turquoises, from which, owing to the exactions of the government, and clumsy mode of working, it derives little benefit. The turquoise mines (from which exclusively are derived our supplies of this valuable gem), are about eight or nine in number, principally situated in a hill about 40 m. W.S.W. Nishapoor; of these, however, some have been abandoned, and others are so imperfectly wrought, as scarcely to pay the miners' expenses. The gems are usually found in a reddish brown rock, but occasionally also in a firm quartzose rock of a whitish grey colour, abounding with veins of specular iron. The produce of the mines would be very great under proper management; but nothing can be more injurious than the process now adopted by the peasant-farmers, no skill or ingenuity being exerted, and no sort of contrivance used to lessen labour, or economise time and material. This defective management is mainly attributable to the wretched government, and the consequent insecurity of property from the oppressions of the local authorities. The mines are rented from the crown for about 3000 toman annually, and wrought almost exclusively by the inhabitants of the surrounding villages. The produce is either sold to merchants resorting thither, or sent for sale to Meshed; but the miners practise every possible deception on purchasers; and the gems cannot, according to Mr. Fraser, be procured at a rate which would yield any considerable profit on a sale in Europe. Iron and rock-salt are also wrought within the district. Agriculture is little understood; the soil is tilled only once in three or four years, the ground being left fallow during the intervening time; one fifth of the produce is claimed as the property of the shah.

Nishapoor lays claim to high antiquity. It is said to have been destroyed by Alexander the Great, and rebuilt by Shapoor: afterward, during the Seljuk dynasty, it was one of the four royal cities of Khorassan; but in 1600 it was destroyed by the Tartars, who massacred most of its inhabitants. It was again pillaged by Jhengiz-khan; and more recently, in 1749, by Nadir Shah, from whose ravages it has never recovered. (*J. B. Fraser's Khorassan, p. 365-423; Conolly's Travels to the N. India, i. 211-214; Kinnear's Persia, p. 185.*)

NIVELLES (Flem. *Nyvel*), a town of Belgium, prov. S. Brabant, cap. arrond., on the Thienne, 17 m. S. Brussels. Pop., in 1836, 7814. It is said to have had, in the 16th century, a pop. of 30,000; and it is still half a league in circuit, exclusive of its suburbs. It is not well built; but it has a remarkable church, in which are two finely carved pulpits, and on the tower is a colossal statue, called Jean de Nivelles, which strikes the hours. It is the seat of a court of primary jurisdiction, and the residence of a receiver of taxes; with manufactures of woollen stuffs, coarse lace, cotton, and linen cloths, hats, paper, and oil; and sends two deputies to the states of the province. It originated from a remarkable Benedictine convent, founded by St. Gertrude in 645, the abbesses of which enjoyed the title of princesses of Nivelles. (*Dict. Géog.*)

NOANAGUR (*Naganagura*, "The New City"), a town of Hindostan, prov. Gujrat, dom. of the Gulcoor, and cap. of the most considerable subordinate chieftain in the Gujrat peninsula; on the Nagni, near its mouth, in the gulf of Cutch, 63 m. N.W. Joonagur. It is 4 m. in circuit, and is defended by a stone wall, of no great strength, and a ditch.

NOLA.

Many of its inhabitants are weavers, and manufacture large quantities of coarse and fine cloths, which are sent to Surat, and various other commercial towns. The water of the river is supposed to be peculiarly adapted to dyeing cloth, for which branch of industry this town is also celebrated.

NOBLE, county, Ia. Situated in the N.E. part of the state, and contains 432 sq. m. Watered by Elkhardt and Tippecanoe rivers. It contained in 1840, 3602 neat cattle, 1355 sheep, 6864 swine; and produced 18,319 bushels of wheat, 66,716 of Indian corn, 20,551 of oats, 22,327 of potatoes. It had seven stores, four grist-mills, eight saw-mills, one pottery; eight schools, 111 scholars. Pop. 2702. Capital, Augusta.

NOBLEBOROUGH, p. t., Lincoln co., Me., 32 m. S.E. Augusta, 900 W. Bounded W. by Damariscotta pond and river. At the bridge, at the head of navigation on the river, is a considerable village. Ship building is extensively carried on. It contains 23 stores, nine lumber yards, 11 saw-mills, two tanneries; nine schools, 873 scholars. Pop. 2310.

NOBLESVILLE, p. v., capital of Hamilton co., Ia., 20 m. N.E. Indianapolis, 574 W. Situated on the E. bank of the W. fork of White river, and contains a courthouse, jail, a Methodist church, three stores, and about 900 inhabitants. Net proceeds of the postoffice, \$904.

NOGERA DEI PAGANI (an. *Nuceria Alfaterna*), a town of the Neapolitan dom., prov. Principato Citra, on thearno, 8 m. N.W. Salerno, Pop. 7000. The walls and citadel of the ancient city are on a hill above the present town, which consists of detached groups of houses, interspersed with trees and gardens. Nocera is the see of a bishop; it has some fine cavalry barracks, several public schools, and manufactures of linen and other fabrics. Nuceria was of great antiquity, and is said to have been founded by the Pelasgic inhabitants of Italy. (*Cramer's Anc. Italy, ii., 312.*) It was sacked and burned by Hannibal in the 2d Punic war. It is supposed to have derived its surname of Pagani, from a colony of Saracens, settled in it by the Emperor Frederick II. (*Swinkens's Tour, ii., 109; Orasen, p. 46; Ranspelt, ii., 930, &c.*)

NOCKAMIXON, p. t., Bucks co., Pa., 14 m. N. Doylestown, 40 m. N. Philadelphia. Bounded E. by Delaware river. It has four stores, two grist-mills, one saw-mill, seven potteries; two schools, 71 scholars. Pop. 3035.

NOGENT-LE-ROU, a town of France, dep. Eure-et-Loir, cap. arrond., on the Huisme, 39 m. W.S.W. Chartres. Pop., in 1836, 5813. It stands at the foot of a mount, on which is the chateau, formerly the residence of the virtuous minister of Henry IV., the famous Maximilian de Bethune, duc de Sully; to whose memory a monument has been erected in the town.

Nogent is well built, and has manufactures of woollen fabrics and cotton thread, with dyeing houses and tanneries. **NOIRMOUTIERS**, an island off the W. coast of France, dep. Vendée, of which it forms a canton; in about lat. 47° N., long. 2° 13' 45' W.; separated from the main land by a channel about 1 m. in breadth, but which at ebb tide may be passed by horses and vehicles. Area of the island about 70 sq. m. Pop., in 1836, 7027. It is in no part much above, and in many parts below high water mark; being protected against inundations on the W. by a range of natural sand-hills or dunes, and on the S. by artificial embankments. A portion of the surface is very fertile; and corn, beans, &c., are grown for exportation: a little wine is also grown, but the chief product of the island is salt, from extensive marshes and salt-pans. In 1837, 16,259,000 kilogr. of salt, 12,313 hect. of wheat, and 4691 hect. of beans, were sent from the island, mostly to other parts of France. The town of Noirmoutiers, with about 2900 inhabitants, is on the E. side of the island. It is tolerably well built and paved; defended by an old castle founded in 830, and several adjacent batteries; and has a harbour capable of receiving vessels of from 50 to 60 tons. (*Hugo, &c.*)

NOLA, a town of the Neapolitan dom., prov. Neapolitano, in a wide and fertile plain, the *Campania Felix* of the ancients, 14 m. E.N.E. Naples. Pop. 9000. Though ill built and dirty, it has numerous churches and convents, a hospital, a college, and public seminary, large cavalry barracks, an old palace of the counts of Nola, and a good market-place.

In antiquity Nola was one of the most considerable cities of Magna Græcia. It is said by Pliny (lib. iii., cap. 5), and by Strabo (lib. vi.), to have been founded by a colony of Chalcidians:

Flux ad Chalcidicam transit citus agrum Nolanum.

Campano Nola sedes, crebris circumdata arboribus

Terris, et cetero facilius telluris aditus

Phasianibus valles — Pausan., lib. xii., v. 161.

But Velletius Paterculus (lib. i., cap. 7) states that Nola was founded, along with Capua, by the Tuscan; and that many fine Etruscan vases that have been found here seem

NOLACHUCKY.

to corroborate this statement. It was besieged by Hannibal soon after the battle of Cannæ; but Marcellus, who had thrown himself into the town, having made an unexpected assault upon the Carthaginian army, Hannibal withdrew from the siege. It is, however, principally celebrated in ancient history from its having been the place where Marcus Agrippa, the faithful friend and successful general of Augustus, breathed his last, *anno* 12 B.C.; and where Augustus himself expired, A.D. 14, in the 75th year of his age. But, with the exception of its vases, it has now but few remains of antiquity. In the days of its prosperity it had two marble amphitheatres; of which, however, nothing now remains but the brick walls, the marble having been taken away to be employed in the construction of modern edifices. (*Swinburne*, i., 97; *Ancient Universal History*, xiv., 39, 8vo. ed., &c.)

The famous Giordano Bruno was a native of Nola, where he was born about the middle of the 16th century. He appears, at a very early period, to have become dissatisfied alike with the prevailing systems of philosophy and religion, and attempted to innovate in both. In 1583 he came to London, where he published, in 1584, his most celebrated work, *Spaccio della Bestia Trionfante*, dedicated to Sir Philip Sydney, of which there is a very flimsy notice in the 339th number of the *Spectator*. Having returned to the continent, he resided some time in Germany; but, being anxious to revisit his native country, he arrived at Venice in 1598. Here he was arrested and thrown into prison, on the convenient charge of heresy and atheism. From Venice he was transferred to Rome; where, sentence having been pronounced against him, he was committed to the flames on the 17th of Feb., 1600! An elaborate estimate of the philosophy of this victim of the implacable hatred of the Inquisition may be found in the *Historia Critica Philosophiæ* of Brucker (vol. v., cap. 9), and in Enfield's compendium of the same work. (See, also, *Biographia Universalis*, art. Bruno; and *Tiraboschi*, tomo vii., p. 476-483.)

NOLACHUCKY, r., N. C. and Tenn., rises in Buncombe Co., N. C., on the W. side of the Blue ridge, and enters French Broad river in Tenn., 40 m. above its junction with Holston river.

NORCIA, a town of Central Italy, Papal states, *deleg.* Spoleto, in a high valley near the source of the Nar, and 17½ m. E.N.E. Spoleto. Pop. 4000. It has a brisk trade in wine, oil, truffles, turnips, and other rural produce. It is identical with the ancient *Naresis*, noted for the coldness of its climate:

"Qui Tibrim, Fabarique bibunt, quos frigida misti,
Narcia." *Æneid*, vii., 716.

NORD (DEP. DU), or Department of the North, so called from its being the most N. dep. of France, lying principally between the 50th and 51st degs. of N. lat., and the 9d and 4th of E. long., having N. and E. the North sea and Belgium, and S. and W. the depts. Aisne and Pas-de-Calais. Shape very irregular; length N.W. to S.E. 115 m., by a breadth varying from 4 to nearly 40 m. Area 567,863 hct. Pop., in 1836, 989,938, it being the most populous of all the French depts. Surface almost an uninterrupted plain; the highest hill being no more than 360 feet above the sea. The shore is bordered with sandy dunes (*dunes*), as in Belgium and Holland. The Aa and Yser water the N. the Lys and Scheldt the central, and the Sanabre the S. parts of the dep. The arround of Dunkirk (*Dunkerque*), has a good deal of marsh land, called the *Wateringues*, and the *Matres*; but it has been mostly drained, and rendered cultivable. The soil, except along the coast, is generally very fertile. In 1834, the arable lands were estimated to comprise 358,570 hectares, meadow lands 95,832 hectares, orchards 16,334 hectares, and woods &c., 35,887 hectares. This dep. is among the best cultivated in France. The properties, as elsewhere throughout that country, are, in general, small, since of 221,532, subject to the *contrib. foncière*, in 1835, 102,776 were assessed at less than 5 francs; but it has, notwithstanding, more large properties than most other depts. The largest farms are round Douai; the smallest generally about Lille. In the wooded tracts they run mostly from 13 to 23 hectares; but in the marshy region called the *Wateringues*, they vary up to between 60 and 70 hectares. Leases are seldom for more than nine years, except in the arround of Avesnes, where they are frequently from 18 to 37 years, or even longer. (*Hugo*.) On the large farms horses are used for the plough; but spade husbandry is common on all the smaller holdings, and nearly universal on the lands appropriated to flax, hops, tobacco, or potatoes. Fallows are rare, and the cultivators are not here, as in most parts of France, so addicted to routine practices as to reject all new and improved methods of culture. All kinds of corn are cultivated, but principally wheat and oats. In 1835, nearly 6,000,000 hectolitres of grain were harvested, besides about 1,960,000

NORDLINGEN.

hectolitres of potatoes; but from the density of the population but little more corn is usually grown than is required for the home demand. Kitchen vegetables are good and plentiful; and beet root, oleaginous grains, hops, chicory, flax, hemp, wood, and fruits, are also extensively raised. Hugo states that there are 500 oil mills in the dep., which annually produce 470,000 hectolitres of oil; and that the produce of flax is 3,385,000 kilogr. a year. Tobacco is variously estimated at from 3 to 4 millions kilogr. a year. The pastures are very good, especially on the Sambre and in the N. According to the official tables, there were, in 1836, about 214,000 black cattle, and 193,000 sheep in the dep. The cows are of the fine Flemish breed, and it is estimated that they supply 7,000,000 kilogr. butter, and 1,500,000 kilogr. cheese a year. The annual produce of wool is about 745,000 kilogr.; a good deal is of very fair quality, the sheep being partly merinos, and partly of the long and fine woolled Flanders breed. The inhabitants of the coast are actively employed in the herring fishery, and at Dunkirk and Gravelines many vessels are fitted out for the cod and whale fisheries.

Dunkirk is the centre of the maritime trade; but every week three or four vessels leave Gravelines with a cargo for the English market of from 500,000 to 600,000 eggs, produced in this and the neighbouring departments. Lace, marble, building stone, &c., are found here; but the principal mineral products coal, of which about 6,000,000 quintals a year are raised. Manufactures highly important. Nearly half the beet-root sugar produced in France is raised in this department: the quantity made in it being estimated, in 1836, at 21,173,000 kilogr. Lille is one of the chief seats of the French cotton trade; and it also occupies the population of Roubaix and Turocot.

Lace and linen fabrics at Valenciennes; carpets, stuffs of hemp, cordage, arms, at Maubeuge, Cambrai, &c.; hardware, cutlery, glass, and earthenware, hats, paper, soap, chemical products, barrels, tiles, and bricks, are among the other chief manufactures. A great many distilleries, breweries, sugar and salt refineries, dyeing and bleaching establishments, and tanneries, are spread over the department. No portion of France has its commerce so much facilitated by navigable rivers, canals, and good roads. The department is divided into seven arronds.; chief towns, Lille (Lisle), the capital, Avesnes, Cambrai, Douai, Dunkirk, Hazebrouke, and Valenciennes. It sends 13 members to the chamber of deputies. Number of electors (1830-9), 6667. Total public revenue (1831), 38,810,294 fr. This department was annexed to the French crown by Louis XIV. (*Hugo*, art. *De Nord*; *French Official Tables*; *Dict. Comp. Univ.*)

NORDHAUSEN, a town of Prussian Saxony, gov. Erfurt, cap. circ., on the Zorge, 49 m. W. Halle. Pop., in 1836, 12,163. It is surrounded with old walls flanked with towers, and is generally built in an antiquated style. It has several churches, in one of which are two paintings by L. Cranach; three hospitals, a gymnasium, an orphan asylum, a theatre, &c., and is the seat of a circ. council, a board of taxation, and judicial courts for the town and circ. It is, for its extent, one of the most flourishing commercial towns in the Prussian dominions, having numerous distilleries, the refuse of which support great numbers of hags and cattle. Woollen cloth, peeling-wax, vitriol, soap, mineral waters, and cream of tartar, are made at Nordhausen, which is farther noted for its peculiar manufactures of fuming sulphuric acid. It has also numerous oil-mills, some marble-works, and a considerable trade in corn, produced in its vicinity. It was the native place of the celebrated philologist Wolf. (*Von Zedlitz*, *Der Preussische Staat*, ii. 943; *Bergkhusen*, &c.)

NORDKOPING (Swed. *Norköping*), a town and port of Sweden, in Linköping, on the Motala, near its mouth in the Baltic, 85 m. S.W. Stockholm. Pop., in 1836, 11,448. After Stockholm, it covers more ground than any other Swedish town, but it has no public building worthy of notice. It has straight and broad streets, and is well situated for trade, having a commodious quay, close to which vessels can lie. It has several churches, a synagogue, public school, house of correction, and savings' bank, and manufactures of brass and hardware goods, linen, cotton, and coarse woollen fabrics, gloves, starch, paper, leather, &c., and several sugar refineries. A profitable salmon fishery is also carried on here in the river. (*Forsell*; *Stein's Hand-book*.)

NORDLINGEN, a town of Bavaria, circ. Middle Franconia; on the Eger, 49 m. S.W. Nuremberg. Pop. 6300. It is surrounded with old bastioned ramparts. The cathedral, a handsome Gothic edifice, has some curious monuments and paintings, and a tower 345 ft. in height. The town-hall is ornamented with fresco paintings of the battle of Nordlingen, in 1634; in which, after an obstinate and doubtful conflict, the Austrians and Bavarians, under the Archduke Ferdinand, defeated the Swedes and their allies,

NORFOLK.

nder the famous Bernard, Duke of Weimar. The town is flourishing carpet factories, and a considerable trade in saffrons, geese, and hogs. (*Berghaus.*)

NORFOLK, a marit. co. of England on its E. coast, having N. and E. the German ocean, S. Suffolk, and W. Cambridgeshire, a point of Lincoln, and the inlet of the sea called the Wash. It is of a circular shape, and contains 1,295,360 acres, of which about 1,300,000 are supposed to be arable, meadow, and pasture. Surface generally flat, and, where most diversified, merely undulating. Soil very various: in the W. parts of the county, contiguous to Cambridge, and the bottom of the Wash, there is a considerable tract of marsh-land included within the great level of the Fens; and there is also some marsh-land in the S.E. corner of the county contiguous to Yarmouth. But with these exceptions, the rest of the county consists principally of a light sandy loam, especially suitable for the turnip and barley husbandry. Climate dry and early; but in spring, the E. winds are often very severe. Few counties in the empire have been so much improved as this. Little more than a century ago, the greater portion of it consisted of wastes, commons, sheep-walks, and warrens of little or no value. But, through the judicious application of marl, which is found in the greatest abundance in all parts of the county, and the extension of the turnip husbandry, introduced by Lord Viscount Townshend in the reign of George II., followed up by the introduction of the drill husbandry, and an improved rotation of crops, it is now, perhaps, the best farmed county in England, and is a striking example of what may be accomplished by intelligence, perseverance, and industry. The usual rotation in the turnip land is, 1st, turnips; 2d, barley; 3d, clover, or clover and rye grass; and 4th, wheat. Turnips form the basis of the system, and are sown, with marl, to "have made the county." On some estates no oats are allowed to be raised, and barley is, in all respects, the leading corn crop. Tenants are strictly prohibited from taking two white crops in succession, and the land is kept remarkably clean, and is not injured by overcropping. Ploughing is wholly executed, as in Scotland, by ploughs drawn by two horses or two oxen. The grazing husbandry of Norfolk is very inferior to the arable, though it has been lately a good deal improved. Great numbers of galloways, and other Scotch cattle, are purchased at the great fairs in the county to be turned fed, and otherwise fattened for the market of the metropolis. The stock of sheep is very large, amounting to between 700,000 and 800,000 head. Vast quantities of turkeys are raised in this county and Suffolk, which furnish the greater part of those supplied to London, especially at Christmas. Estates of all sizes, and, in fact, the great improvement of which Norfolk has been the theatre never could have been effected by small farmers. Leases vary from 7 to 14, and in a few instances to 21 years. Farm-buildings generally good; barns very large. Average rent of land, in 1810, 14s. 4d. an acre. Minerals, with the exception of marl, of no importance. The woolen manufacture, especially the worsted branch, has been long extensively carried on in this county, especially at Norwich, where various descriptions of shawls, crapes, silks, &c., are also manufactured. (See Norwich.) But owing to the superior facilities for the successful prosecution of manufacturing industry enjoyed by Bradford, Paisley, and other towns in the N. engaged in the same departments, the manufactures of Norfolk are rather on the decline. Principal rivers, Great and Little Ouse, Nen, Waveney, Yare, Wensum, &c. A navigable communication admitting vessels drawing 10 ft. water has recently been effected between Norwich and Lowestoft. (See Lowestoft.) Norfolk has no fewer than 33 hundreds and 713 parishes. Principal towns, Norwich, Yarmouth, and King's Lynn. It sends 19 members to the House of Commons; viz. four for the county, two for the city of Norwich, and two each for the boroughs of King's Lynn, Thetford, and Yarmouth. Registered electors for the county, in 1830-40, 16,033, being 8474 for the E. and 7559 for the W. division. In 1841, Norfolk had 65,999 inhabited houses, and 418,691 inhabitants, of whom 199,655 were males, and 218,936 females. Sum expended for the relief of the poor, in 1839-40, £177,567. Annual value of real property in 1815, £1,516,651; profits of trade and professions in do., £523,011.

NORFOLK, county, Mass., situated in the E. part of the state, and contains 400 sq. m. Watered by Neponset and Charles rivers. A fine blue granite is found in Quincy, and transported to Neponset river, by the first railroad built in the United States, 3 m. long. The Boston and Providence railroad passes through the county. It contained in 1840, 15,110 neat cattle, 2397 sheep, 18,411 swine; and produced 2341 bushels of wheat, 19,896 of rye, 99,123 of Indian corn, 2878 of buckwheat, 18,993 of barley, 17,063 of oats, 625,361 of potatoes. It had 15 commercial and 29 commission houses in foreign trade, capital \$996,000; 331 retail stores, capital \$1,727,650; 17 lumber-yards, capital

NORRIDGEWOCK.

\$135,400; value of hardware and cutlery manufactured, \$191,000; 9460 bushels of salt produced; four furnaces, five forges, four fulling-mills, 15 woolen manufactories, 38 cotton factories with 30,237 spindles, one flouring-mill, 44 grist-mills, 59 saw-mills, 13 paper-mills, 21 tanneries, one pottery, six rope-walks, seven printing-offices, three binderies, four weekly newspapers. Total capital in manufactures, \$2,534,180; 46 academies, 1473 students; 197 schools, 11,776 scholars. Pop. 53,140. Capital, Dedham.

NORFOLK, county, Virginia, situated in the S.E. part of the state, and contains 344 sq. m. Drained by Elizabeth and Pasquotank rivers. It contains a part of the Dismal Swamp. Hampton Roads lies on its N. border. It contained in 1840, 8248 neat cattle, 2943 sheep, 18,715 swine; and produced 3797 bushels of wheat, 960,315 of Indian corn, 34,745 of oats, 35,490 of potatoes, 1000 pounds of cotton. It had nine commercial and eight commission houses engaged in foreign trade, capital \$204,500; 116 retail stores, capital \$1,781,350; 10 grist-mills, two saw-mills, four printing-offices, one bindery, two daily, four weekly, and three semi-weekly newspapers; 19 academies, 345 students; 21 schools, 535 scholars. Pop.: whites, 11,980; slaves, 7845; free coloured, 1967; total, 21,062. Capital, Norfolk.

NORFOLK, p. t., Litchfield co., Ct. 36 m. W.N.W. Hartford, 344 W. Drained by Blackberry river, which has a fall of 30 ft., affording water-power. It contains a Congregational church, three stores, one fulling-mill, one woolen factory, one grist-mill, eight saw-mills, four tanneries; one academy, 132 students; 11 schools, 371 scholars. Pop. 1293.

NORFOLK, p. t., St. Lawrence co., N.Y., 234 m. N.N.W. Albany, 513 W. Watered by Rackett river and its tributaries. It contains two churches, a Presbyterian and Methodist; four stores, two furnaces, two fulling-mills, one woolen factory, two grist-mills, six saw-mills; 13 schools, 644 scholars. Pop. 1798.

NORFOLK, p. b., port of entry, capital of Norfolk co., Va., 110 m. by water below City point, 106 m. E.S.E. Richmond, 230 W. Situated on the N.E. bank of Elizabeth river, just below the confluence of its two branches, 8 m. above its entrance into Hampton Roads, and 32 m. from the ocean. It is in 36° 30' 50" N. lat., and in 76° 18' 47" W. long. Pop. in 1810, 9193; in 1820, 8478; in 1830, 9616; in 1840, 10,920. The site of the place is low, and there are marshes in the vicinity; the principal streets are well paved, lighted, and clean; but others are irregular, crooked, and less commodious; and most of the houses are not distinguished for elegance. It contains a courthouse, jail, a market-house, a theatre, two banks, two insurance offices, an academy, an orphan asylum, and an Athenaeum with a respectable library. There are eight churches, two Episcopal, two Methodist, a Presbyterian, Baptist, Roman Catholic, and an African. The harbour is deep, spacious, safe, and easy of access. The entrance, between Old Point Comfort and a sandbar called the Rip Rap, is over a mile wide, defended by fort Monroe and fort Calhoun. Port Monroe, on Old Point Comfort, exclusive of the ditch or moat, covers 56 acres; and including the ditch, 70 acres. The whole peninsula ceded by the state to the United States, contains 250 acres. The work, when completed, will mount 335 guns, generally 24's, 32's, and 42's, and about 130 of them are under bomb-proof covers. Fort Calhoun, 1 m. distant from fort Monroe, on the opposite side of the river, is on a flat near the channel, and covers about seven acres. The foundation has been made by throwing in stones, and suffering them to settle for several years, to render it sufficient to sustain the superstructure. It will mount 965 guns, 24's and 32's, and nearly all under cover. These fortifications will completely command the entrance from Hampton Roads. Opposite to Norfolk is Portsmouth, immediately above which is Gosport, the seat of one of the most important navy-yards in the United States, which has a splendid dry-dock, constructed of hewn granite, which cost \$974,356. On Washington point, between the E. and W. branches of Elizabeth river, about a mile from Norfolk, is the United States marine hospital, a handsome brick edifice. The tonnage of the port, in 1840, was 19,078. The Dismal Swamp canal connects the waters of Chesapeake bay with Albemarle sound, through Pasquotank river, and opens an extensive water communication from Norfolk to the south. It has more foreign commerce than any other place in Virginia. There were in 1840, eight commercial and eight commission houses in foreign trade, with a capital of \$202,000; 35 retail stores, capital \$1,560,500; 20 printing-offices, one bindery, two daily, and one semi-weekly newspapers. Total capital in manufactures, \$178,300; 18 academies, 515 students; 17 schools, 604 scholars.

NORMANDY, one of the provs. of France under the old regime, now distributed among the departments of Seine Inférieure, Eure, Orne, Calvados, and La Manche.

NORRIDGEWOCK, p. t., capital of Somerset co., Me., 33 m. N. Augusta, 687 W. It lies on both sides of Kenne-

NORRISTOWN.

bec river. The village is chiefly on the N. side, but connected by a bridge with a village on the S. side. It contains a courthouse, jail, and Congregational church on the N. side, and a female academy on the S. side. The streets are pleasantly shaded by trees. The town contains seven stores, one fulling-mill, one grist-mill, one saw-mill, one oil mill, two tanneries; one academy, 25 students; 30 schools, 835 scholars. Pop. 1865.

NORRISTOWN, p. b., Norriston t., capital of Montgomery Co., Pa., 91 m. E. by S. Harrisburg, 154 W. Situated on the N. side of Schuylkill river. It contains a courthouse, jail, county offices, an academy of brick, two churches, a Presbyterian and Episcopal, both of stone, a public library of 1900 volumes, a literary society with a cabinet of natural history, and about 400 dwellings. A bridge crosses Schuylkill river, 800 feet long, and with the abutments, 1050 feet, which cost \$41,900. The streets are handsomely graded, and the sidewalks extensively laid with bricks and flagging stones. A dam across the Schuylkill crosses great water-power. It has 14 stores, two lumber-yards, one forge, three cotton factories with 19,064 spindles, two flouring-mills, one saw-mill, two printing-offices, two semi-weekly newspapers; one academy, 33 students; six schools, 600 scholars. Pop. 2837.

NORTHALLERTON, a parl. bor., market-town, and par. of England, in the liberty of Allertonston, N. riding, Co. York, on a small tributary of the Wharfe, 134 m. S.E.E. Darlington, and 31 m. N.W. York. Area of parl. bor., which comprises the townships of Northallerton, Romanby, and Brompton, 9340 acres. Pop., in 1841, 5773. The town, which is on level ground, consists almost entirely of a main street along the great N. road from London to Edinburgh. It is wide, well paved, and lighted with gas: a market-house stands near the centre of the town, and at its N. extremity is a fine open space, in which are the church and churchyard. The former is a large cruciform structure, of considerable beauty, with a square tower at its W. end: the living is a vicarage, in the gift of the dean and chapter of Durham. A grammar-school has been founded here under the same patronage, and there is a large national school for children of both sexes. There is also a place of worship for Wesleyan Methodists, with an attached Sunday school. The register office for the N. riding of the county was built here in 1736; and there is a courthouse, in which the general county sessions of the peace are held. A jail has also been built, within the present century, on the plan of Howard, the discipline and arrangements of which are said to be, on the whole, very efficient: the number of prisoners averages about 60, and the cost of each is 1s. 5d. per diem. (*Jail Returns, and Prison Inspectors 4th and 5th Reports.*)

"Northallerton is not a corporate town, and is under the jurisdiction of the county magistrates. No manufactures are carried on, nor are there any local advantages likely to attract them. Linnen weaving, however, employs a portion of the population, both in Northallerton and the surrounding villages, its chief seat being at Brompton." (*Parl. Board. Rep.*) A branch of the Darlington Joint-Stock Banking company, a private bank, and a savings' bank are established here. The town has been a great thoroughfare; but it has lost this advantage from the recent opening of the Great N. of England railway, which passes at some distance westward. It has, however, very large weekly cattle and corn markets on Wednesdays, and large fairs for horses, cattle, sheep, and cheese, February 14, May 5, September 5, October 3, and second Wednesday in October. Northallerton sent two members to the House of Commons from the 15th Charles I. down to the passing of the Reform Act, which deprived it of one of its members. "The elective franchise was formerly attached to about 210 burgage-houses, mixed up and conjoined with the other buildings from one end of the town to the other." (*Board. Rep.*) The electoral limits were enlarged, as above mentioned, by the Boundary Act, and in 1838-40, there were 281 registered electors.

At a short distance from Northallerton is Standard hill, celebrated as having been the scene, in 1138, of a sanguinary conflict between the Scotch, under David I., and the English, under the Earls of Albemarle and Ferrers. It was called the battle of the Standard, from the circumstance of the victory of the English being attributed to their possessing a standard whence were displayed the banners of St. Peter of York, St. John of Beverley, and St. Wilfred of Rippon, the whole being surmounted by a consecrated host; but the true cause of the defeat of the Scotch was their consternation at the supposed death of their king. (*Parl. Papers: Priv. Inform., &c.*)

NORTHAMPTON, a central county of England, having at its N. extremity the county of Lincoln; on its E. and S.E. side, C. Cambridge, Huntingdon, Bedford, and Buckingham; S. Oxford; and W. and N.W. Warwick, Leicester, and Rutland. It stretches N.E. and S.W. from Banbury to near Crowland, a distance of 66 m. Area, 650,940 acres, of

NORTHAMPTON.

which about 580,000 are supposed to be arable, meadow, and pasture. Surface beautifully diversified with gently-rising hills, fine valleys, and extensive woods: it is traversed nearly in its whole extent by the Nen, which rises near Daventry. Though of various qualities, the soil is in general very fertile, and is, in many parts, strong and well adapted for the culture of wheat and beans, which are the principal crops. The climate is mild and salubrious, and there are more gentlemen's seats in this than in most other counties. Agriculture, though still capable of material improvement, is, on the whole, in a comparatively advanced state. About half the county is in grass; and great numbers of heavy horses, and of cattle, mostly short-horns, and sheep, are bred. Estates are generally large; but there are few large farms; and the circumstances of their being let only from year to year tends to perpetuate the routine practices that keep their ground in this and other counties. Farm-houses and offices are mostly inferior, and inconveniently placed; and this is also true of cottages. This is one of the counties in which there is a great waste of horse labour, five horses being usually employed to do the same work that might be as well done by two, or at most three. Average rent of land, in 1810, 21s. 5d. an acre. The woodlands are very extensive; and a good deal of wood is used as fuel. Except limestone, which is very abundant, and slate, dug up at Collyweston, minerals are of little importance. Boots and shoes are extensively produced in the town of Nottingham, and in Wellingborough, and other places; but the want of coal is an all but insurmountable difficulty to the progress of manufacturing industry. Exclusive of the Nen, the Ouse and Welland have their sources in Northamptonshire. Principal towns, Northampton, Peterborough, and Wellingborough. This county is divided into 90 hundreds and 306 parishes, and sends eight members to the House of Commons; viz. four for the county, two for Northampton, and two for Peterborough. Registered electors for the county in 1838-40, 8734, being 4187 for the N., and 4607 for the S. division. In 1841, Northampton had 40,903 inhabited houses, and 199,001 inhabitants, of whom 99,896 were males, and 100,175 females. Sum assessed for the relief of the poor in 1835-36, £23,183. Annual value of real property in 1815, £547,578; profits of trade and professions in 40., £185,204.

NORTHAMPTON, a parl. and mun. bor., market and manufacturing town of England, cap. of the above co., has Spaldhoe, on the great N. road, and on the N. bank of the Nen, crossed here by a stone bridge of three arches, and two others of inferior size, 30 m. S.E.E. Leicester, and 59 m. N.W. London. Area of parl. and mun. bor. (which comprises four par.) 1590 acres. Pop. in 1831, 10,944; ditto in 1841, 21,548. The town, which comprises four principal streets, meeting in a very large open market-place, is well built, paved, and lighted with gas: the houses in the principal street along the line of the great north-road are of stone, large, and substantial; but in the smaller streets are many inferior houses, almost entirely occupied by journeyman-shoemakers, and other workmen employed in shoe-making. The pars. of All Saints' and St. Giles's comprise the principal portion of the respectable classes of society. St. Peter's is a small par., inhabited principally by the inferior tradespeople and working classes. St. Sepulchre's is extensive, but chiefly occupied by artisans and labourers. (*Mun. Board. Rep.*) There were formerly seven parish churches, of which four still remain. That of All Saints' in the centre of the town, (rebuilt, in 1680, on the site of one destroyed by fire), is a large and handsome, though somewhat incongruous, building, with a central cupola supported by four Ionic columns, and a tower at its W. end, rising above an Ionic portico: a fine organ, and a full length statue of the late Spencer Perceval, are the principal ornaments in the interior. St. Giles's at the E. end of the town, is a large cruciform structure, partly of Norman, and partly of later English architecture, with a square tower rising from the intersection of the nave and transepts. St. Peter's at the W. end of the town near the castle, erected shortly after the Norman conquest, consists of a nave, with side aisles separated from it by piers and arches, with a square western tower, and is altogether "a remarkably fine and curious specimen of enriched Norman." (*Rickman, p. 914.*) St. Sepulchre's, an almost equally ancient edifice, built by the Knights-Templar, at the N. end of the town, comprises a circular part, forming the body of the church, a square chancel with side-aisles, and a square tower surmounted by a spire at its W. end. The remains of the old church of St. Gregory is a school-house but the two others have entirely disappeared, and of the numerous religious houses existing in Northampton before the Reformation, two only, St. Thomas's and St. John's, both in the later English style, now remain, having been converted into almshouses for the aged poor. The Wesleyan Methodists, Baptists, Presbyterians (now Unitarians), Rom. Catholics, and the Society of Friends, have their respective places of worship, the castle

NORTHAMPTON.

hill meeting-house was, for 23 years, the scene of Dr. Doddridge's ministrations, during which period he was also minister of the Presbyterian academy in this town. Attached to the various churches and chapels, are numerous Sunday schools, furnishing religious instruction to between 3000 and 3000 children of both sexes. A central national school, serving as a model-school for the co., is attended by about 400 boys and girls; a Lancasterian school, by upwards of 500 children; two infant schools (one of which is supported by the Wesleyan Methodists), have 250 children; besides which, the corporation charity-school, Dryden's charity school, and the girls' school in King's-weil-street, provide clothing and education for 190 children of both sexes. The free grammar-school, in Marefare, was founded in 1543. Among the other buildings of the town, by far the most handsome is the Shire-hall, on the S. side of the market-square: it is of Grecian architecture, and comprises two large courts, and other apartments well adapted for the business of the assizes. The town-hall is an ancient structure of brick, adjoining All Saints' church; and near it is the bor. jail, now disused. On the E. side of the town is a large co. jail, built in 1794 on the plan of Howard; but notwithstanding its size, the cells are not sufficiently numerous to allow of the entire seclusion of prisoners. The silent system, however, accompanied by hard labour, is strictly enjoined; and the management has been greatly improved within the last few years. The yearly expense of each prisoner to the co. amounts to £7. This jail is used also, by agreement, between the county and borough magistrates, as a place of confinement for prisoners belonging to the bor. (*Prison Inspector's 3d Report*, lib. 80.) The theatre in Marefare, built at the beginning of the present century, is a neat building, and, though small, is sufficiently large for a town in which dramatic entertainments are little relished. The barracks form a large enclosure on the W. side of the road leading to Leicester; and in the E. suburbs is the infirmary, a large and respectably-built edifice, completed in 1793, and furnishing excellent accommodation for patients. A race-course was formed N. of the town in 1778, and the races, which take place in autumn, are invariably well attended. About ½ m. S. on the London road is an ancient cross, one of those erected at the halting-places of the funeral of Queen Eleanor, and its passage from Hardeby, in Lincolnshire, to Westminster Abbey.

The bor. is evidently in a flourishing condition. Its fairs and markets are resorted to by the inhabs. of the agricultural districts; and the shops are numerous, respectable, and thriving. The principal manufacture is that of boots and shoes; and a large proportion of the lower orders, men, women, and children, are employed in this craft, which has thriven and increased during the last 30 years, without being affected by the various changes which have occurred within that period. In 1831, upwards of 1300 men (exclusive of women and children) were employed in this trade; and we are assured that the wages of the journeymen at present amount to the weekly sum of £3000. The fixed prosperity of this trade has been assigned as the cause why the pop. of the bor. was nearly doubled during the 20 years preceding 1831, and is stated to be still rapidly increasing" (*Mem. Board. Rep.*) These shoes are sent in large quantities to London, and furnish the chief supply of the shops that deal in cheap, ready-made shoes; they are, also, extensively exported. Leather currying and saddlery are extensively carried on; but the stocking and lace trades, once very considerable, have greatly declined since the introduction of machinery at Leicester and Nottingham. There are also three foundries, and the manufacture of light brass and iron work is prosecuted on rather an extensive scale. The Northampton Union Bank, Northampton banking Company, a private bank, and savings' bank, are established here; and the town has two weekly newspapers, one of which is among the oldest provincial papers in England. The prosperity of Northampton was materially promoted by its situation on the great mail-coach road between London, Leicester, Nottingham, &c., and its coach and posting establishments are very considerable. These, however, are now all but extinguished, in consequence of the opening of the Birmingham and other railways, leading to the great towns in the midland and N. counties. About 3 m. W. the town is the Birm. station of the Birmingham railway, 62½ m. from London, by which the metropolis may be reached from Northampton in about three hours; and it is supposed by many that the facility of communication thus afforded will go far to indemnify the town for the loss of its business as a posting station. The Nen, also, and the numerous canals uniting with that river, give to Northampton the advantage of a water communication with the German ocean, London, Liverpool, Manchester, and Bristol.

Northampton is a bor. by prescription, and has received several royal charters, the last being granted in the 36th Geo. III. By the Man. Reform Act it has been divided into three wards, and is governed by a mayor and five other

aldermen, with 18 councillors; having also a commission of the peace under a recorder, as well as a court of record for civil suits. Corporation revenue in 1839, £4805, exclusive of £83 accruing from the sale of property. The assizes take the co. are held here in spring and summer; and the quarter sessions take place in Jan., April, July, and Oct. The bor. has sent two mems. to the H. of C. since the reign of Edward I.; the right of voting, previously to the Reform Act, being in inhabitant-householders occupying a distinct dwelling for six months previously to the election, and not having received alms for 12 months. (*Board. Rep.*) The electoral limits were left untouched by the Boundary Act, and in 1839-40, it had 2057 reg. electors. Northampton is likewise the principal polling-place and election town for the S. div. of the county. A large cattle market is held every Saturday, and there are smaller markets on two other days. Extensive horse and cattle fairs attended by jobbers from all parts of England, Feb. 30th, April 6th, May 4th, and Aug. 5th: other fairs, August 26th, Septem. 19th, Novem. 28th, and Dec. 19th.

After the Norman conquest *North-Hamstun*, which according to the Domesday Survey, had then only 40 burgesses, was given by William I. to Simon St. Liz, who built a castle here (now marked only by an earth-mound, on the W. side of the present town). Numerous synods and parliaments met here during the succeeding reigns; and at the beginning of the 13th century, Northampton was considered of sufficient importance to have a mint. In the reign of Henry III. an attempt was made to establish a university here, consisting of emigrant students from Oxford and Cambridge; but though the scheme was at first sanctioned by the king, a mandate was afterwards issued to compel the students to return to their old seminaries, and to forbid the continuance of the establishment. In the wars of the Roses, its neighbourhood was the scene of a great battle, (fought 10th July, 1460), between Henry VI. and the Earl of March (afterwards Edward IV.), in which the former was defeated, and taken prisoner. In 1643, the town was seized by Lord Brooke, who fortified it for the parliament. In 1663, Northampton suffered greatly from the flood, and in 1675, was nearly destroyed by fire, the loss of property being estimated at £150,000. To this calamity, however, may be attributed the increased width and regular arrangement of the streets, for which it is remarkable above most other provincial towns. (*Parl. Reports; Private Information.*)

NORTHAMPTON, county, Pa. Situated in the E. part of the state, and contains 600 sq. m. Bounded E. by Delaware river. Watered by Lehigh river. It contained in 1840, 19,471 neat cattle, 19,307 sheep, 36,163 swine; and produced 289,665 bushels of wheat, 526,137 of rye, 276,773 of Indian corn, 92,191 of buckwheat, 13,650 of barley, 244,760 of oats, 203,000 of potatoes. It had 163 stores, 30 lumber yards, six furnaces, four forges, eight fulling-mills, one woollen factory, 65 grist-mills, 69 saw-mills, five oil-mills, one paper-mill, three powder-mills, 24 tanneries, 16 distilleries, four breweries, four printing-offices, two blinderies, five weekly newspapers; two colleges, 68 students; nine academies, 601 students; 76 schools, 3445 scholars. Pop. 40,996. Capital, Easton.

NORTHAMPTON, county, Va. Situated on the S. part of the Eastern shore, and contains 390 sq. m. Bounded E. by the Atlantic, W. by Chesapeake bay. It contained in 1840, 4574 neat cattle, 5453 sheep, 12,269 swine; and produced 379 bushels of wheat, 396,718 of Indian corn, 197,058 of oats, 51,456 of potatoes, 6003 pounds of cotton, 665 of sugar. It had 16 stores, 96 grist-mills, one saw-mill, eight oil-mills, seven schools, 186 scholars. Pop. whites, 3341; slaves, 3029; free coloured, 754; total, 7715. Capital, Eastville.

NORTHAMPTON, county, N. C. Situated towards the N. E. part of the state, and contains 546 sq. m. Bounded S.W. by Roanoke river. Watered by Meherrin river. It contained in 1840, 13,457 neat cattle, 5065 sheep, 40,545 swine; and produced 20,308 bushels of wheat, 3125 of rye, 714,059 of Indian corn, 78,650 of oats, 36,000 of potatoes, 66,967 pounds of tobacco, 5210,734 of cotton. It had 10 stores, 15 grist-mills, three saw-mills, one oil-mill; one academy, 32 students; 10 schools, 147 scholars. Pop.: whites, 5818; slaves, 6759; free coloured, 792; total, 13,369. Capital, Jackson.

NORTHAMPTON, p. t., capital of Hampshire co., Mass., 17 m. N. by Springfield, 93 m. W. Boston, 67 m. E. Albany, 39 m. N. Hartford, 380 W. It is in 42° 19' 8" N. lat., and 72° 36' 21" W. long. Pop. in 1810, 2631; in 1820, 9954; in 1830, 3613; in 1840, 3750. The Indian name was *Nonsuck*; incorporated in 1654. It was the third town settled on the river, in this state. A body of fine meadow land, of between 3000 and 4000 acres lies on Connecticut river, near the village. A bridge, 1060 feet long, 25 feet wide, resting on six stone piers, and two abutments, which in the deepest water are 40 feet high from the bottom, was rebuilt in 1826. The floor of the bridge is 31 feet above low water mark, and it connects the town with Hadley. The village

NORTH BEAVER.

is regarded as one of the most pleasant for an elegant residence in New-England. It is irregularly but handsomely laid out, about a mile W. of Connecticut river, a little elevated above the adjoining meadows, presents many pleasant sites for dwellings, and is well built. In the W. part of the village, Round Hill, a considerable elevation, in a very regular form, is the seat of the celebrated Round Hill seminary, on the plan of a German gymnasium, and a number of elegant residences. The village contains an elegant brick courthouse, a brick county house and jail, a handsome townhall, two banks, six churches, two Congregational, a Methodist, Baptist, Unitarian, and an Episcopal, a female seminary, two high schools, one for boys and one for girls, over 10 years of age, numerous well conducted district schools, for children under 10 years of age, 600 dwellings and about 4000 inhabitants. The first Congregational church is a handsome edifice, 100 feet long and 76 feet wide, so constructed that the voice of the speaker easily fills its large dimensions. The female seminary is a handsome Gothic edifice, and is patronized from all parts of the United States; and the Round Hill seminary is of the highest order. The scenery around this place is highly picturesque, including the beautiful valley of Connecticut river and Mount Holyoke, 830 feet high, on the opposite side of the river, whose top commands one of the finest views in this part of the United States. A stream passes through the centre of the town which affords good water-power. A canal, which here joins Connecticut river, connects Northampton with New-Haven, Connecticut. According to the census of 1840, there were in the town 34 stores, with a capital of \$125,700; two persons produced machinery to the amount of \$1900; one person manufactured the precious metals to the amount of \$7500; two persons produced granite and marble to the amount of \$1300; eight persons produced bricks and lime to the amount of \$1700; two falling-mills, and two woollen factories, employed 136 persons, produced to the amount of \$300,000, with a capital of \$110,000; 12 males and 38 females produced 3007 pounds of reeled silk, valued at \$24,056, with a capital of \$50,000; five persons manufactured hats and caps to the amount of 4000, with a capital of \$2000; one tannery, employing four persons, produced 1000 sides of sole leather and 300 sides of upper leather, with a capital of \$5000; eight other various manufactures of leather, as saddlery, boots, shoes, &c., produced \$13,500, with a capital of \$3800; one person produced 6000 pounds of tallow candles, with a capital of \$800; one paper-mill employed 10 persons, produced to the amount of \$30,000, with a capital of \$40,000; nine persons produced carriages and wagons to the amount of \$1500, with a capital of \$2500; one flouring, three grist, and 11 saw-mills, employed 15 persons, produced to the amount of \$19,500, with a capital of \$18,600; nine persons produced furniture to the amount of \$4500, with a capital of \$3000; three printing-offices, two binderies, and three weekly newspapers, employed 25 persons, and a capital of \$7700; six wooden houses built, employed 18 men, and cost \$12,000. The total capital employed in manufactures was \$254,800. There was one academy, with 56 students; 21 schools, with 937 scholars.

NORTHAMPTON, p. t., Fulton co., N. Y., 18 m. N.E. Johnstown, 47 m. N.W. Albany, 415 W. Watered by Sacandaga river and its branches. It contains 10 stores, one fulling-mill, one woollen factory, two grist-mills, 12 saw-mills; eight schools, 278 scholars. Pop. 1535.

NORTHAMPTON, t., Burlington co., N.J. Drained by Rancocas creek and tributaries of Little Egg harbour river. It has 29 stores, two fulling-mills, one woollen factory, one cotton factory with 9500 spindles, seven grist-mills, 11 saw-mills, two paper-mills, two tanneries, five distilleries, one pottery, two printing-offices, two binderies, two weekly newspapers; four academies, 91 students; six schools, 356 scholars. Pop. 6813.

NORTHAMPTON, t., Bucks co., Pa., 10 m. S.E. Doylestown, 20 m. N. Philadelphia. Drained by branches of Nesquehanna creek. It has three stores, four grist-mills; three schools, 114 scholars. Pop. 1004.

NORTH BEAVER, t., Beaver co., Pa. It has two stores, one flouring-mill, six grist-mills, seven saw-mills, four tanneries, five distilleries; 14 schools, 431 scholars. Pop. 2333.

NORTH BERWICK, p. t., York co., Me., 89 m. S.W. Augusta, 506 W. It has four stores, four fulling-mills, one woollen factory, two grist-mills, five saw-mills, three tanneries; 17 schools, 568 scholars. Pop. 1461.

NORTHBOROUGH, p. t., Worcester co., Mass., 33 m. W. Boston, 408 W. Watered by Assabet river. Incorporated in 1766. It contains three churches, two Congregational, and a Baptist; three stores, two cotton factories with 3032 spindles, six grist-mills, five saw-mills; two academies, 45 students, six schools, 368 scholars. Pop. 1348.

NORTHBRIDGE, p. t., Worcester co., Mass., 30 m. S.W. by W. Boston, 406 W. Watered by Blackstone and Mumford

NORTH CAROLINA.

ivers. The Blackstone canal passes through it. It contains four churches, two Congregational, a Methodist and Friends, three stores, six cotton factories with 10,100 spindles, one grist-mill, three saw-mills; eight schools, 330 scholars. Pop. 1449.

NORTH BRIDGEWATER, p. t., Plymouth co., Mass., 22 m. S. by E. Boston, 438 W. It contains four churches, a Congregational, Unitarian, a Methodist, and a New Jerusalem, 16 stores, three grist-mills, two saw-mills, two academies, 66 students, nine schools, 468 scholars. Pop. 2616.

NORTH BROOKFIELD, p. t., Worcester co., Mass., 60 m. W. Boston, 392 W. It contains a Congregational and a Methodist church, four stores, one fulling-mill, one woollen factory, two grist-mills, four saw-mills; 11 schools, 523 scholars. Pop. 1485.

NORTH BRUNSWICK, t., Middlesex co., N. J. Bounded N. by Raritan river, N.E. by South river. Drained by Lawrence's brook. It contains most of the city of New-Brunswick, and has 79 stores, one flouring-mill, two grist-mills, one saw-mill, three tanneries, one distillery, two potteries, three printing-offices, two binderies, two weekly newspapers; one academy, 45 students, 18 schools, 698 scholars. Pop. 3686.

NORTH CAROLINA, one of the southern United States, is bounded N. by Virginia, E. and S.E. by the Atlantic, S. by South Carolina and Georgia, and W. by Tennessee. It lies between 35° 30' and 36° 30' N. lat., and between 75° 45' and 84° W. long., and between 6° 30' W. and 10° 17' E. long. from W. It is 430 m. long, with a breadth varying from 90 to 180 miles, containing about 50,000 square miles, or 32,000,000 acres. The population, in 1790, was 393,754: in 1800, 478,103; in 1810, 555,500; in 1820, 638,929; in 1830, 738,470; in 1840, 753,419, of whom 245,817 were slaves. Of the free population, 240,047 were white males; 24,223 were white females; 11,236 were coloured males; 10,505 were coloured females. Employed in agriculture, 217,095; in commerce, 1734; in manufactures and trades, 14,322; in navigating the ocean, 327; do. canals, rivers, &c., 379; in the learned professions, 1086.

The state is divided into 68 counties, which, with their population in 1840, were as follows:

Counties.	Pop. 1840.	Counties.	Pop. 1840.
Ashe,	15,077	Jones,	4,345
Ash,	7,467	Lincoln,	7,666
Beaufort,	12,228	Madison,	23,409
Bertie,	12,175	Macon,	4,000
Bladen,	8,926	Martin,	7,007
Brunswick,	5,266	Mecklenburg,	18,723
Buncombe,	10,564	Montgomery,	10,790
Burke,	15,700	Morris,	7,268
Cabarrus,	9,239	Nash,	9,047
Camden,	5,063	New Hanover,	13,312
Carteret,	6,591	Northampton,	12,309
Caswell,	14,663	Onslow,	7,547
Chatham,	16,243	Orange,	12,308
Cherokee,	5,237	Perquimans,	5,344
Chowan,	6,680	Person,	7,045
Columbus,	5,941	Pitt,	9,799
Craven,	13,238	Polk,	11,004
Cumberland,	15,294	Randolph,	12,015
Currituck,	6,708	Richmond,	5,309
Davidson,	14,005	Robeson,	10,370
Davis,	7,574	Rockingham,	12,443
Duplin,	11,182	Rowan,	12,109
Edgemore,	15,708	Rutherford,	10,023

Haywood,	4,978	Washington,	4,065
Henderson,	5,129	Wayne,	10,581
Hertford,	7,084	Yancey,	12,577
Hyde,	6,428		5,203
Iredell,	15,825	Total,	753,419
Johnston,	10,586		

Raleigh, near the centre of the state, 6 m. W. of Newes river, is the seat of government.

The whole eastern coast of North Carolina consists of a ridge of sand and low islands, separated from the main land in some parts by narrow, and in other parts by broad sounds and bays, entered by various inlets, generally shallow and of dangerous navigation. Ocracoke inlet is the only one N. of Cape Fear, through which vessels pass. For the distance of from 60 to 80 m. from the shore, the country is a dead level, the streams are sluggish and muddy, and there are many swamps and marshes. The soil is generally sandy and poor, excepting on the margins of the streams, where it is fertile. The natural growth of this region is almost universally the pitch-pine, which grows much larger than the same tree in the northern states, and yields extensively tar, pitch, turpentine, and lumber, which constitute an important portion of the exports of the state. Turpentine is merely the resinous sap of the pine tree, obtained by incisions, and flows from the middle of March to the end of Oc-

NORTH-CAROLINA.

tober. It is received in boxes, which are emptied five or six times during the season, and 40 trees will yield about a barrel of turpentine. Oil or spirits of turpentine are produced by distillation, and the residuum is rosin. Large quantities are manufactured in Brooklyn and New-York, from pitch imported from North Carolina. Tar is produced from billets of pitch-pine wood, burned in pits covered with sods or earth, and the tar is caused, by a slow combustion, to flow out in a trench dug in the earth. Its value depends much upon the cleanness with which it is manufactured, and that from the north of Europe is said, in this respect, to be superior to that made in the United States. Pitch is made by boiling tar down to dryness. In the swamps of this region fine rice is produced. Back of the lower country, and extending to the lower falls of the rivers, is a tract of country, 40 miles wide, which has a moderately uneven surface, of a sandy soil, in which the pitch-pine is the prevailing natural growth. Above the falls the country is uneven, the streams have a more rapid current, and the soil is more fertile, producing wheat, rye, oats, barley, flax, tobacco, and Indian corn. The western part of the state is an elevated table land, and in some places rises into elevated mountains. In Yancey county is the highest land in the United States E. of the Rocky mountains. Black mountain is 6476 feet above the level of the sea, which is 242 feet higher than the highest peak of the celebrated White mountains in N. H. Roan mountain is 6038 feet high, and Grand-flutter mountain is 5556 feet high. It is but recently that the elevation of these mountains has been correctly ascertained. The Blue Ridge constitutes the main range through the western part of the state, and on the extreme western part is a chain called by different names—*as*, Smoky mountain, Unks mountain, Bald mountain, Iron mountain, and Stone mountain. In this range Roan mountain is situated. Between these mountain ranges the soil is fertile. Throughout the state Indian corn is raised, and in some parts considerable cotton. In the low country, grapes, plums, blackberries, and strawberries, grow spontaneously; and on the intervals, canes grow luxuriantly—and, continuing green through the winter, furnish food for cattle. In the low country the climate is somewhat unhealthy, but in the elevated parts it is salubrious. In the elevated parts, the natural growth is oak, walnut, lime, and cherry, which are often large. In the northern part, extending into Virginia, is the Great Dismal swamp, 30 m. long and 10 broad, containing 150,000 acres; and on the Virginia line is lake Drummond, 15 m. in circumference. This swamp is thickly wooded with pine, juniper, cypress, and, in its drier parts, with white and red oak. Between Albemarle and Pamlico sounds is the Alligator or Little Dismal swamp, which also has a lake in the centre. It is computed that there are 2,500,000 acres of swamp within the state, which is capable of being drained, at a moderate expense, and made to produce cotton, tobacco, rice, and Indian corn.

This state contained, according to the census of 1840, 166,608 horses and mules, 617,371 neat cattle, 538,979 sheep, 1,649,716 swine, and produces poultry to the value of \$544,125. There were produced 1,980,885 bushels of wheat, 15,391 of buckwheat, 313,971 of rye, 23,803,763 of Indian corn, 3574 of barley, 3,193,941 of oats, 2,600,339 of potatoes, 625,044 pounds of wool, 16,773,350 of tobacco, 2,890,368 of rice, 51,926,190 of cotton, 7163 of sugar, 3014 of silk cocoons, 101,369 tons of hay, 9679 of hemp or flax. The products of the dairy were valued at \$674,349; of the orchard, at \$366,006; of lumber, at \$506,768. There were made 98,752 gallons of wine.

Gold and iron are found in this state. The gold region lies on both sides of the Blue Ridge, and extends to the east of the Yadkin river. It exists in grains, in small masses and lumps, and in veins. Many persons have commenced digging for gold, and a considerable amount is sent annually to the mint of the United States.

Cape Hatteras, cape Fear, and cape Lookout, on the coast of this state, are a terror to navigators, and have caused many shipwrecks. The principal rivers are the Chowan and Roanoke, both of which rise in Virginia and flow into Albemarle sound; Neuse, which also enters Albemarle sound; Cape Fear river, the longest which runs wholly in the state, 260 miles long, which is navigable with 11 feet of water to Wilmington, and has from 10 to 14 feet of water on the bar at its mouth; the Yadkin, which forms the Great Pedee in South Carolina. The sluggishness of the rivers as they approach the sea, and the sandy character of the coast, cause them to be obstructed by sand-bars at their mouths, and the state has few good harbours. Much of its commerce is carried on through the neighbouring states. Wilmington, on Cape Fear river, 40 m. from the sea, is the most commercial place in the state. Newbern, on Neuse river, 30 m. from its mouth in Pamlico sound, has some commerce, and Fayetteville, at the head of boat navigation on Cape Fear river, has considerable trade.

The exports of the state, in 1840, amounted to \$387,484;

and the imports to \$252,532. There were four commercial and 46 commission houses engaged in foreign trade, with a capital of \$151,300; 1068 retail stores, with a capital of \$5,092,635; 432 persons employed in the lumber trade, with a capital of \$46,000; 213 persons employed in internal transportation, who, with 94 butchers, packers, &c., employed a capital of \$6000; 1784 persons were employed in the fisheries, with a capital of \$213,502.

The amount of home-made or family manufactures was \$1,413,942; three woollen manufactories, with one fulling-mill, produced articles to the amount of \$3600, with a capital of \$6900; 25 cotton manufactories, with 47,934 spindles, employed 1219 persons, and produced articles to the amount of \$438,900, with a capital of \$695,300; eight furnaces produced 968 tons of cast iron, and 43 forges produced 963 tons of bar iron, the whole employing 468 persons, and a capital of \$64,961; two smelting houses, employing 30 persons, produced 10,000 pounds of lead; 10 smelting houses, employing 369 persons, produced gold to the amount of \$255,618, with a capital of \$6832; two paper-mills produced articles to the amount of \$6785, with a capital of \$3000; hats and caps were manufactured to the amount of \$38,167, and straw bonnets to the amount of \$1700, the whole employing 142 persons, and a capital of \$13,141; 353 tanneries employed 645 persons, with a capital of \$771,979; 938 other manufactories of leather, as saddleries, &c., produced articles to the amount of \$185,387, with a capital of \$76,163; 16 potteries employed 21 persons, and produced articles to the amount of \$6360, with a capital of \$1531; 69 persons produced machinery to the amount of \$43,285; 43 persons manufactured hardware and cutlery to the amount of \$1290; 668 persons manufactured carriages and wagons to the amount of \$301,601, with a capital of \$173,318; 323 flouring-mills produced 87,641 barrels of flour, and, with other mills, employed 1830 persons, producing articles to the amount of \$1,552,006, with a capital of \$1,670,299; vessels were built to the amount of \$28,800; 223 persons manufactured furniture to the amount of \$35,002, with a capital of \$57,980; 40 persons manufactured 1085 small arms; 15 persons manufactured granite and marble to the amount of \$1063; 976 persons produced bricks and lime to the amount of \$58,336; 367 persons manufactured 1,612,895 pounds of soap, 148,546 pounds of tallow candles, and 335 pounds of wax or spermaceti candles, with a capital of \$4754; 2902 distilleries produced 1,651,979 gallons of distilled spirits, and breweries 17,431 gallons of beer, employing 1423 persons, and a capital of \$180,900; 38 brick or stone houses, and 1693 wooden houses were built, employing 1707 persons, and cost \$410,384; 96 printing-offices, four binderies, 26 weekly and one semi-weekly newspapers, and two periodicals, employed 103 persons, and a capital of \$55,400. The total amount of capital employed in manufactures was \$3,838,900.

The University of North Carolina, at Chapel Hill, 37 m. W.N.W. Raleigh, was founded in 1791; Davidson college, in Mecklenburgh, was founded in 1837. In these institutions there were, in 1840, 158 students. There were in the state 141 academies, with 4396 students; and 632 common and primary schools, with 14,937 scholars. There were in the state 56,609 white persons, over 20 years of age, who could neither read nor write.

There were in the state, near January 1st, 1840, one bank and five branches, with a capital of \$1,500,000, and a circulation of \$1,165,857. The state has no public debt.

The Methodists and Baptists are the most numerous religious denominations in the low country. In the elevated country, in the W. part of the state, are many Presbyterians. The Methodists and Baptists have each about 20,000 communicants; the Presbyterians about 11,000 communicants. The Episcopalians have a Bishop, and about 90 ministers; the Lutherans have 18 ministers, 38 congregations, and 1686 communicants. Besides these, there are some Moravians, Friends, and Roman Catholics. The above numbers are increased at the present time.

A railroad extends from Wilmington, 161 m., to Weldon, on Roanoke river. A railroad extends from Raleigh, 85 m., to Gaston, on Roanoke river. These railroads unite with railroads from Virginia. The Dismal Swamp canal of Virginia extends into N. Carolina. (See Virginia.) The Weldon canal extends 5 m. round the falls in the Roanoke.

The governor is elected by the qualified voters for the house of commons, once in two years, but cannot hold the office more than four years in six. He must be 35 years of age, possess a freehold estate to the value of £1000, and have resided in the state for five years. The council consists of seven persons, elected for two years by the general assembly. The senate is composed of 50 members, elected once in two years by the people. A senator must have a residence, and possession for one year previous to the election, of 300 acres of land, in the county for which he is chosen. The house of commons consists of 120 members, chosen once in two years by the people. A member must have a residence, and possession for one year previ-

NORTH CASTLE.

came to the election, of land to the amount of 100 acres, in the county for which he is chosen. The general assembly, by joint ballot, appoint the judges of the supreme courts of law and equity, judges of admiralty, and the attorney general. The judges hold their offices during good behaviour, and the attorney general for four years. Every person of 21 years of age or upwards, who has resided in one county one year previously to an election, and paid taxes, is entitled to vote for members of the house of commons. In addition to this, to be entitled to vote for senator, he must possess 50 acres of land. Free negroes, and persons of a mixed blood from negro ancestors, to the fourth generation, are excluded from the right of suffrage. The legislature meets once in two years at Raleigh, on the second Monday of November.

The first permanent settlement in North Carolina was made on the eastern bank of Chowan river, N. of Albemarle sound, and called Albemarle, by a company of emigrants who fled from religious persecution in Virginia. After several other attempts at settlement, the province was granted, in 1733, to Lord Clarendon and others, who caused a constitution of government to be prepared for it by the celebrated John Locke. The chief magistrate was called "the Palatine," and there was a hereditary nobility. The legislature was called a parliament. This constitution was found to be so defective in practice, that it was abolished in 1743. In 1759, the crown purchased the whole of the Carolinas, for £17,500; and the king divided it into the two provinces of North and South Carolina, which have ever since continued separate.

In 1769, this province successfully resisted the oppression of the British ministry. Two years after, 1500 of the inhabitants, assuming the name of *Regulators*, rose in rebellion, but were defeated by Gov. Tryon. Three hundred were killed in battle; and of those who were taken, 12 were condemned for high treason, and six were executed. During the war of the revolution, the inhabitants were the devoted friends of American freedom. A kind of congress, composed of militia officers, assembled at Charlotte, county of Mecklenburgh, of which county they were inhabitants. May 19th, 1775, and put forth a public declaration breathing the spirit, and to some extent using the language, of the subsequent Declaration of Independence by the American Congress. It is equally bold and uncompromising in its character. (See American Almanac for 1835, p. 286.) Several battles of the revolution were fought in this state, particularly the severe one of Guilford courthouse, on the 25th of March, 1781. In 1776, early in the revolutionary war, this state formed a constitution, which, with some recent modifications, continues to the present time. In convention, November 27th, 1789, the state adopted the constitution of the United States: yeas 193, nays 75; majority 118.

NORTH CASTLE, p. t., Westchester co., N. Y., 6 m. N. White Plains, 133 m. S. Albany, 363 W. Drained by Byram river. It has four schools, 110 scholars. Pop. 3058.

NORTH EAST, p. t., Dutchess co., N. Y., 53 m. S.E. Albany, 332 W. The Taghkanic range of mountains passes through it. It contains some lead ore, and has five stores, one fulling-mill, one woollen factory, three grist-mills, two saw-mills; six schools, 144 scholars. Pop. 1385.

NORTH EAST, p. t., Erie co., Pa., 10 m. N.E. Erie, 291 m. N.W. by W. Harrisburg, 368 W. Bounded N. by lake Erie, E. by the state of New-York. The borough contains two fulling-mills, four grist-mills, nine saw-mills, one paper-mill; two schools, 66 scholars. Pop. 339. The town, exclusive of the borough, has three stores, 17 schools, 468 scholars. Pop. 1793.

NORTHFIELD, p. t., Merrimac co., N. H., 15 m. N. by W. Concord, 406 W. Incorporated in 1780. Bounded W. by Merrimac river. It contains a Methodist church, two stores, one fulling-mill, one cotton factory with 1000 spindles, one grist-mill, three saw-mills, three tanneries, 11 schools, 407 scholars. Pop. 1413.

NORTHFIELD, p. t., Franklin co., Mass., 92 m. W.N.W. Boston, 412 W. Situated on both sides of Connecticut river. It contains two Congregational churches, three stores, one fulling-mill, four grist-mills, six saw-mills; one academy, 85 students; 13 schools, 538 scholars. Pop. 1673.

NORTHFIELD, p. t., Washington co., Vt., 10 m. S.S.W. Montpelier, 506 W. Watered by Dog river, which affords water-power. It contains five churches, three Methodist, a Congregational, and Free-will Baptist; three stores, 16 fulling-mills, two woollen factories, six grist-mills, 12 saw-mills; one academy, 30 students; 17 schools, 599 scholars. Pop. 2013.

NORTHFIELD, t., Richmond co., N. Y., 30 N. Richmond, 156 S. Albany. Bounded N. and W. by Staten Island sound, and the Kills, along which are broad marshes. It has 17 stores, eight fulling-mills, four grist-mills, one saw-mill; six schools, 228 scholars. Pop. 2745.

NORTHFIELD, p. t., Summit co., O., 143 m. N.E. Columbus, 342 W. The Cuyahoga river and the Ohio canal cross

NORTHUMBERLAND.

the S.W. part. A small tributary of Cuyahoga river affords water-power, on which is a woollen factory and saw-mill. It contains six schools, 217 scholars. Pop. 1031.

NORTHFLEET. See GRAVESEND.

NORTH HAVEN, p. t., New-Haven co., Ct., 30 m. S.E. W. Hartford, 306 W. Watered by Quinnipiac river, on which are extensive salt marshes. It contains a Congregational and an Episcopal church, three stores, two grist-mills, three saw-mills, eight schools, 303 scholars. Pop. 1349.

NORTH HEMPSTEAD, p. t., capital of Queens co., N. Y., 168 m. S. Albany, 30 m. E. New-York, 948 W. Bounded N. by Long Island sound. It contains Harbour hill, 219 feet above the ocean, the highest land on Long Island. The village contains the courthouse and jail in the same building, and a few stores and dwellings. The town contains 10 stores, one fulling-mill, two woollen factories, one paper-mill, one glass house, two flouring-mills, four grist-mills, three saw-mills; one academy, 25 students; nine schools, 353 scholars. Pop. 3691.

NORTH HERO, p. t., capital of Grand Isle co., Vt., 71 m. N.W. Montpelier, 26 m. N. Burlington, 544 W. It comprises the smaller of the two largest islands on lake Champlain, and contains 6272 acres. A narrow strait separates it from the S. island. It contains a stone courthouse and jail, a store, and a few dwellings.

NORTH KINGSTON, t., Washington co., R. I., 30 m. E. by W. Providence. Bounded E. by Narragansett bay. It contains the village of Wickford on a branch of Narragansett bay, which has a good harbour, and considerable navigation, employed in the coasting trade, and the fisheries. It contains a Baptist and an Episcopal church. The town has 94 stores, four woollen factories, five cotton factories with 5756 spindles, four grist-mills; one academy, 79 students; 14 schools, 624 scholars. Pop. 3909.

NORTH MIDDLETON, t., Cumberland co., Pa. It has one store, one fulling-mill, one flouring-mill, five saw-mills, three distilleries. Pop. 1999.

NORTHPORT, p. t., Waldo co., Me., 50 m. E. Augusta, 643 W. Bounded N.E. and E. by Penobscot bay, and its branch, Belfast bay. It is well situated for navigation, and has four stores, one saw-mill. Pop. 1907.

NORTH PROVIDENCE, t., Providence co., R. I., 4 m. N. Providence. The village of Pawtucket is a large manufacturing place, partly in Massachusetts, being on the line between the two states, on Seekonk river. (See Pawtucket.) The town was incorporated in 1767, and contains 30 stores, two furnaces, two fulling-mills, 30 cotton factories with 20,000 spindles, five grist-mills, one saw-mill, two tanneries, two printing-offices, one bindery, one weekly newspaper; two academies, 80 students; eight schools, 265 scholars. Pop. 4307.

NORTH SALEM, p. t., Westchester co., N. Y., 54 m. N. White Plains, 113 m. S. Albany, 281 W. Bounded W. by Croton river. Drained by Titus's creek, flowing into it. It contains three churches, a Presbyterian, Episcopal, and Universalist, three stores, one grist-mill, one paper-mill; one academy, 48 students, five schools, 87 scholars. Pop. 1161.

NORTH SEWICKLY, p. t., Beaver co., Pa., 233 m. W. by N. Harrisburg, 363 W. Bounded W. by Beaver river. Drained by Consequeness creek. It has four stores, eight grist-mills, seven saw-mills, two tanneries; nine schools, 354 scholars. Pop. 2992.

NORTH STONINGTON, p. t., New-London co., Ct., 53 m. S.E. Hartford, 368 W. It contains four churches, three Baptist and a Congregational; five stores, two grist-mills, seven saw-mills; one academy, 15 students, 13 schools, 544 scholars. Pop. 2399.

NORTH STRABANE, t., Washington co., Pa. Drained by Chartier's creek. It has two grist-mills, three saw-mills; six schools, 300 scholars. Pop. 1207.

NORTHUMBERLAND, a marit. co. of England, being the most northerly of the kingdom; having N. a small detached portion of Durham, by which it is separated from Scotland, E. the German ocean, S. Durham, and W. Cumberland, and the co. of Roxburgh and Berwick, in Scotland. Area, 1,197,440 acres, of which about 800,000 are supposed to be arable, meadow, and pasture. It exhibits every variety of surface and soil. It is divided from Scotland and Cumberland by the Cheviot hills, and a portion of the Pennine, or great central range of mountains, which stretch out into extensive moors, and cover a large portion of the W. parts of the co. with their ramifications. There are, however, very extensive tracts of low land along the coast, and in the vales of the Coquet, Tyne, and other rivers, the soil of which consists, for the most part, of a strong clay loam, and is very fertile. The Cheviot hills are mostly covered with fine verdure, affording excellent pasture for the peculiar and valuable breed of sheep, called by their name, and now so widely diffused: but the mountains and their offshoots belonging to the Pennine range are mostly covered with

NORTH WHITEHALL.

gent earth; and are bleak, dreary, covered with heath, and interspersed with swampy morasses. The climate varies with the elevation and nature of the soil; but along the coast and in the vales it is dry and early. Northumberland is distinguished by its improvements, and is now one of the best cultivated co. of the empire. Wheat and oats are the principal crop crops; but barley, beans, and peas are, also, extensively raised. Turnips are an important crop in the coast district; they are universally drilled, and their culture is no where better understood. Cattle are of various breeds; but the improved short-horns are now, perhaps, the greatest favourites. Estates of all sizes, but mostly large. Farms, also, large, and their occupiers distinguished by their superior intelligence and enterprise. Farms mostly held on leases, varying from 7 to 14 and 21 years. Farm-houses and cottages good. Average rent of land in 1810, 15s. 1½d. an acre. With the exception of those carried on at Newcastle (which see), manufactures are of no importance. Pit-coal forms the staple produce of Northumberland, and is raised and shipped in vast quantities from the Tyne, for the supply of London and other ports on the E. coast, and for exportation. In proof of this, we may mention that of 7,475,677 tons of coal shipped coastwise from the different ports of the United Kingdom in the year 1840, 2,861,343 were shipped from Newcastle. (*Parl. Paper, No. 250, Sess. 1841.*) The pitmen, who are a numerous and important class, receive wages varying from 15s. to 25s. a week, and are honourably distinguished among the working classes by their superior comforts and enjoyments. Their houses are generally clean, roomy, and well furnished; they live well, are but little influenced by political agitation, and are more orderly and decidedly less addicted to ardent spirits, cock-fighting, and such like demoralizing sports, than they were 30 years ago. (*Minutes of Committee of Council on Education, p. 61.*) Exclusive of its coal, Northumberland has mines of lead and iron, and abundant supplies of limestone and sandstone, the quarries of the latter at Gateshead Fell supplying the "Newcastle grindstones," so famous in most parts of the world. Principal rivers, Tyne, Coquet, Alne, Blythe, Wansbeck, and Till. Principal towns, Newcastle, Tynemouth, N. Shields, Morpeth, &c. It returns (inc. Berwick) 10 mem. to the H. of Com., viz. four for the county, two each for the bors. of Berwick and Newcastle, and one each for Morpeth and Tynemouth. Registered electors for the co. in 1838-39, 8019; being 2749 for the N., and 5270 for the S. division. The co. is divided into six wards and 88 par.; and had, in 1841, 48,704 inhab. houses, and 250,268 inhab.; of whom 121,971 were males, and 128,997 females. Sum expended for the relief of the poor in 1838-39, £61,918. Annual value of real property in 1815, £1,291,413. Profits of trade and professions in £. 4436,404.

NORTHUMBERLAND, CO. Pa. Situated near the centre of the state, and contains 440 sq. ms. Watered by the Susquehanna r. It contained in 1840, 11,623 neat cattle, 17,409 sheep, 18,865 swine; and produced 977,297 bushels of wheat, 141,016 of rye, 165,799 of Indian corn, 54,549 of buckwheat, 180,190 of oats, 115,985 of potatoes, 37,305 pounds of tobacco. It had 55 stores, 39 grist-mills, 29 saw-mills, one oil-mill, 17 tanneries, 14 distilleries, one brewery, six potteries, three printing-offices, one weekly newspaper; 61 schools, 2854 scholars. Pop. 30,027. Capital, Sunbury.

NORTHUMBERLAND, CO. Va. Situated in the E. part of the state, and contains 240 sq. ms. Bounded N.E. by the mouth of Potomac river, S.W. in part by Rappahannock river. It contained in 1840, 6300 neat cattle, 4057 sheep, 12,035 swine; and produced 98,038 bushels of wheat, 178,972 of Indian corn, 54,504 of oats, 30,336 of potatoes, 11,908 pounds of cotton, 45,190 of sugar. It had 17 stores, 23 grist-mills, six saw-mills, three tanneries, one distillery; four academies, 106 students; eight schools, 180 scholars. Pop.: whites, 4034; slaves, 3243; free coloured, 647; total, 7924. Capital, Heathsville.

NORTHUMBERLAND, P. L. Saratoga Co., N.Y., 15 m. N.E. Ballston Spa, 38 m. N. Albany, 406 m. W. Bounded E. by Hudson river. It has four stores, two fulling-mills, one woolen-factory, one grist-mill, five saw-mills; six schools, 198 scholars. Pop. 1672.

NORTHUMBERLAND, P. D., Northumberland co., Pa., 50 m. N. Harrisburg, 169 m. W. Situated at the confluence of the N. and W. branches of Susquehanna river. A bridge across the N. branch, connects it with Sunbury. Another over the W. branch leads to Union co. The Shamokin dam across the river here is 94 ft. above the bottom of the river, and 2783 ft. long. The chute through it for the passage of boats and rafts, is 64 ft. wide, and 630 ft. long. The bor. contains three churches, a Presbyterian, Methodist, and German Reformed, an academy, a market-house, a town-house of brick, a bank, six stores; three schools, 190 scholars, and 150 dwellings. Pop. 928. Incorporated in 1828. The Susquehanna and N. and W. branch canals meet here.

NORTH WHITEHALL, P. L., Lehigh co., Pa., 95 m. E.

NORWAY.

N.E. Harrisburg, 186 m. W. Drained by tributaries of Lehigh river. It contains two churches, eight stores, seven grist-mills, four saw-mills, five tanneries, 13 distilleries; seven schools, 260 scholars. Pop. 2333.

NORTHWICH, a market-town and township of England, par. of Great Budworth, hund. of its own name, co. Chester, on the Weaver, 164 m. E.N.E. Chester, and 155 m. N.W. London. Area of township, 900 acres. Pop. in 1841, 1368. It has an antiquated appearance, with badly paved streets. The church, which is subordinate to that of Great Budworth, is a large building, with a semicircular choir, remarkable for the curious decorations on the roof of the nave. There are places of worship, also, for Wesleyan Methodists and Independents, with attached Sunday-schools. A grammar-school was founded in 1558; it is handsomely endowed, and the government is vested in twelve trustees, who appoint both the masters and the free scholars. There is, also, a charity-school for twelve poor children. Northwich is one of the *wiches* or salt-towns of Cheshire, and vast quantities of salt are annually produced in the town and its vicinity. The salt mines are very extensive; they have been wrought since 1670; and the quantity of salt obtained from them is greater, probably, than is obtained from any other salt-mines in the world. In its solid state, when dug from the mines, the salt is not sufficiently pure for use, and is sent to Frodsham and other places on the S. side of the Mersey, where it is refined, by being dissolved in sea-water, and afterwards separated by evaporation and crystallization. By far the largest quantity, however, of the salt now produced in Cheshire is obtained from the brine springs. The brine is first pumped up, principally by means of steam-engines, from very deep wells, and is collected in reservoirs, where it is sometimes saturated or strengthened by an admixture of crushed rock-salt. The business has greatly increased within the last few years, and it is estimated that above 330,000 tons are annually produced in Northwich and its vicinity. A considerable number of the inhab. are also employed in the cotton manufacture. It has every facility for water-carriage by its position on the Grand Trunk navigation, and it is close to the Grand-Junction railway. It is one of the polling places at elections for the N. div. of Cheshire. Markets on Friday; a large cattle fair, Apr. 10; other fairs Aug. 2 and Dec. 6. (*Parl. Papers, &c.; Stat. Account of the British Empire.*)

NORTHWOOD, T., Rockingham co., N. H., 90 m. E. Concord. It has six ponds, which give rise to Isinglass, Suncook, and Lamprey rivers. First settled in 1763. It has three churches a Congregational, Baptist, and Free-will Baptist; six stores, two saw-mills; eight schools, 435 scholars. Pop. 1172.

NORTH YARMOUTH, P. L., Cumberland co., Me., 10 m. N. Portland, 40 m. S.W. Augusta, 535 m. W. Bounded S. E. by Casco Bay, affording facilities for navigation, of which it has about 4000 tons employed in the lumber trade and the fisheries. It has four churches, three Congregational and a Baptist; 15 stores, two fulling-mills, three grist-mills, three saw-mills, five tanneries, three potteries; an academy, 265 students; 18 schools, 1100 scholars. Pop. 2624.

NORTON, CHIPPING. See CHIPPING-NORTON.

NORTON, P. L., Bristol co., Mass., 33 m. S. Boston, 428 m. W. Incorporated in 1711. Watered by Rumford, Cocasset, and Canoe rivers, branches of Taunton river, which afford good water-power. It has nine stores, one furnace, four cotton-factories with 1964 spindles, three grist-mills, nine saw-mills; one academy, 100 students; eleven schools, 377 scholars. Pop. 1545.

NORTON, T., Summit co., O. The Ohio canal crosses its S.E. corner, along the Tuscarawas river. It has seven schools, 963 scholars. Pop. 1479.

NORWALK, P. L., Fairfield co., Ct., 68 m. S.W. Hartford, 209 m. W. Bounded S. by Long Island sound. The v. is situated on both sides of Norwalk river, over which is a bridge, to which vessels come which require six feet of water. It contains two churches, a Congregational and Episcopal; a bank, 24 stores, two printing-offices, two weekly newspapers, and over 100 dwellings. One and a half miles S. of the bor. is South Norwalk where the steamboats land, which ply to New York. The town contains three grist-mills, four saw-mills, two tanneries, two potteries; two academies, 67 students, nine schools, 927 scholars. Pop. 3863.

NORWALK, P. L., cap. of Huron co., O., 90 m. N. by E. Columbus, 392 m. W. The village has an elevated situation, and contains four churches, an Episcopal, Methodist, Baptist, and Presbyterian, a Methodist seminary, a High-school, an insurance company, a public library and reading-room, a steam paper-mill, two printing-offices, two weekly newspapers, 300 dwellings, and about 1800 inhabitants. The town has three saw-mills, one tannery, one distillery; 13 schools, 469 scholars. Pop. 2613.

NORWAY, (Norw. *Norg*, Germ. *Norwegen*), a country

NORWAY.

of N. Europe, forming the W. portion of the great Scandinavian peninsula, and at present united to the crown of Sweden. It extends, including Norwegian Lapland, between the 58th and 71st degs. of N. lat., and the 5th and 31st of E. long.; having E. Russian Lapland and Sweden, S. the Skagerrack, separating it from Denmark, and W. and N. the North sea, and the Atlantic and Arctic oceans. Its entire length from the Naaze, its most S. promontory, to the North cape, is upwards of 1100 m. Its breadth varies greatly; in Norriand, near its N. extremity, it may average about 30 m.; but towards the S. it is as much as 250 m. The area, pop., &c., of Norway, have been estimated as follows:—

Dioecses.	Provinces.	Area in sq. m.	Pop. 1835.	Capitals.
Aggerhusen, or Christiania	Aggerhusen	1,253	91,316	Christiania.
	Soualchoen	1,566	62,921	Moa.
	Hedemarken	9,516	77,929	
	Christian	9,418	90,803	
	Baekedal	4,787	76,689	Drammen.
Christiansand	Jærborg & Laurvig	896	54,516	Laurvig.
	Bradsberg	5,580	63,139	
	Nedenece	4,256	44,542	Arendal.
	Mandahl	5,012	54,258	Christiansand.
	Stavanger	3,305	64,359	Stavanger.
Bergen	S. Bergenhus	6,285	104,471	
	N. Bergenhus	7,515	68,776	Bergen.
	Romsdal	5,323	70,174	Romsdal.
Trondhjem	S. Trondhjem	7,094	77,724	
	N. Trondhjem	9,698	57,432	Trondhjem.
	Norriand	10,058	57,791	Bodo.
Norriand	Finnmark (Norw. Lapland)	27,470	83,394	Tromsø.
Totals		181,726	1,150,000	

In 1835, the pop. amounted to 1,194,327, viz. 585,381 males, and 609,446 females, the ratio of the two sexes being as 100 to 104. The increase between 1825 and 1835 was 13.6 per cent., or about 14 per cent. annually. The rural pop. in 1835 amounted to 1,063,585; the remaining 130,002 individuals lived in towns of 3000 inhab. and upwards, of which there are only 11. The increase of the rural pop. during the previous ten years had been 14 per cent.; that of the town pop. 11 per cent. (*Statistical Journal*, July, 1836).

Physical Geography.—The chief physical characteristics of Norway are its *fields* and *fjords*; the first being lofty mountain plateaux in the interior, and the second deep indentations or arms of the sea all round the coast. Nearly the whole of the country is covered with mountains. The main chain, called the Kjölen (or keel), forms the line of separation between Norway and Sweden, as far S. as lat. 63°; but thenceforward it tends to the S.W., under the names of Dovrefjeld, Langfjeld, &c., forming the watershed between the rivers flowing into the Skagerrack on the S.E., and the North sea and Atlantic on the W. Many of the Norwegian mountains rise to from 6000 to 8000 ft. above the level of the sea. The Sneheetta, (lat. 69° 35', long. 9° 40') 8190 ft. in height, has been long considered the most elevated point of land; but it is now supposed that the Hurrungfjeld, in the prov. Bergen, overtops the former by at least 700 ft. (*Leing*, p. 53). The *Fjorde* have been sometimes compared to the Scottish *fritks*; but they are generally smaller than the latter, and rather resemble the Scottish salt-water lochs. They are most numerous on the W. coast, where the Sogne and Hardanger fjords, with their continuation, stretch inland for at least 100 m. in a direct line; and are of the greatest use as means of communication. Norway has numerous rivers, some of which, as the Glommen, Loven, Drammen Nid, &c., all taking a S.E. direction, are of large size; but their courses are so beset with cataracts, that they are of little service for navigation. Lakes are numerous in the E. half of the country; but none of them can be compared in respect of extent to the lakes of Sweden. The W. coast is lined in its entire extent by a vast number of islands. The principal of these are the Lofoden group (which see ante, p. 208). The shores of Norway (like the W. coast of almost all countries in high latitudes) are iron-bound, and difficult of access; and at the S. extremity of the Lofoden Isles is the celebrated Maelstrom, which inspires the Norwegian fishermen with as much terror as Charibdis did the ancient navigators of the Mediterranean; and perhaps, with more reason.

Geology.—The formations of Norway are for the most part primary. The mountains were long supposed to consist almost exclusively of granite, but in reality this rock is far from common. The most abundant rock is gneiss; next to which, though by no means so widely diffused, is mica slate, resting upon and alternating with the gneiss; and in beds subordinate to both, are limestone, quartz, and hornblende. Upon the high table lands, the ground is often covered with blocks of a conglomerate rock, in which pebbles of quartz, felspar, and other crystallized substances are embedded, and which, being smooth and rounded, have ev-

idently been, during a remote but lengthened period, subject to violent friction. Mr. Lyell (*Princip. of Geology*, l. 336) denies the occurrence of volcanic action and earthquakes in the Scandinavian peninsula; but his opinion, though entitled to great weight, differs from the statements of some recent travellers, from which it would seem that earthquakes are not unfrequent, and that the physical appearance of the country, especially of its fjords, almost demonstrate that it has at a distant period been upheaved by volcanic action. (See *Leing's Norway*, p. 73, 76-114, &c.)

The climate must, of course, vary greatly, according to the elevation of the surface, as well as the difference of latitude; but generally the summers are short, and the changes sudden and extreme. From lat. 59° to 56° the average temp. is about 45° Fahr.; and there is no constant snow-region.

The same vegetables and fruits grow as in England, except apricots and peaches. Beech woods cease at 39°. From 59° to 60° the average temperature is about 44° Fahr.; all kinds of grain grow here on the best soils, and the same fruit trees as before, but at 60° the plum ceases to ripen. From 60° to 61° the average temperature on the coast is 43°; in the interior, 41°. In this division the pine and Norway fir become the predominant forest trees, with birch, hazel, and aspen. The elm ceases; and beyond 61° the oak is not seen in perfection. The principal crops are rye, oat, flax, and hemp; but wheat ripens in favourable situations. Between 61° and 63°, the average temperature is about 40°; all the common fruits still ripen; as will wheat, in certain places; but this grain is very precarious and little cultivated. N. of 63° the ash is scarcely seen. The region between 63° and 63° comprises the highest land in the country, and the upper 5000 ft. of the Doone Fjeld is covered with perpetual snow. The average temperature of the valleys in this zone is about 39° Fahr. Beyond 63°, peas begin to be precarious, cabbage ceases to come to perfection, flax scarcely ripens, and wheat is not seen, except near the sea coast in small quantities; but the pine and fir tribes, birch, mountain-ash, and aspen flourish. From 63° to 64°, the harder fruits ripen in sheltered situations only, and oats begin to be a precarious crop. From 64° to 65°, rye, oat, and barley ripen; but beyond 65°, neither oats nor any fruit, except currans, succeed; and the pine begins to degenerate. Respecting the climate of the country further N., see LAPLAND, ante, p. 147.

Stoves begin to be lighted in Christiania in the middle of September, and cannot be dispensed with till the middle of May; the summer then advances rapidly, and the thermometer, in July, often rises at noon to above 80° Fahr.; but the heats are of short duration; frosts frequently occurring in the latter end of August. The W. coast, though proverbially rainy and damp, is not unhealthy; in the interior, the atmosphere is usually dry and bracing. In some places vegetation is so quick that the corn is sown and cut within six weeks.

Land, Agriculture, &c.—Norway is essentially an agricultural and pastoral country. In 1835, of a total population of 585,381, of whom 434,357 were above 16 years of age, 306,000 were connected with agriculture, either as proprietors, farmers, or farm-servants, journeymen, country papers, &c. 28,903 were estimated to be engaged in navigation and the fisheries; 23,145 in commerce and manufactures; 1193 were government officers, 2104 pensioners, and 679 pauper inhabitants of towns. Only about 100th part of the entire surface is supposed to be under culture, or otherwise productive. As Norway is a country where the property of those who cultivate it. Such land is termed *odel*, a word in its origin probably the same with the German word *ad*, or noble, since it carries an equivalent meaning in all its applications. *Udal* land is noble land, held from or under no superior, not even the king; but by the same right by which the crown itself is held. It is possessed, consequently, without charter, and is not subject to fines, excheats, forfeitures, nor personal suit or service; nor to any of the burdens affecting land held by feudal tenure direct from the sovereign, or from his superior vassal. The succession to land is not vested in the eldest male heir. On the contrary, all the kindred of the *udalman* in possession are what is called *odelsbarn* to his land, and have, in order of consanguinity, a certain interest in it, called *odelsbarn* *ret*. Hence, if the *udalman* in possession should sell or alienate his land, the next of kin is entitled to redeem it on repaying the purchase money; and if he should decline to do so, it is in the power of the one next him to claim his *odelsbarn* *ret*. Formerly the power to redeem estates was unlimited in point of time; but as a power of this sort, by rendering the title of the occupier insecure, prevented him from making any improvements, the right of redemption has latterly been limited to within five years of the sale; and it has also been ordered that the purchaser shall be indemnified for his improvements. But though this be an improvement on the former law, no doubt the better plan would be to abolish

NORWAY.

altogether the privilege of redemption, by making the sale absolute and final.

In 1835 the number of taxed agriculturists was 103,199, of whom 72,624 were proprietors, enjoying the *odde ret*, leaving 30,568 individuals, with only the limited possession or use of a farm.

Farms generally consist of three divisions; the in-field, or acres inclosed for the crops and best hay; the mark, or out-field, also enclosed for pasturing the cattle; and the *seater*, a tract of unmeasured grass land, which is sometimes 30 or 40 m. distant; and on which chalets are erected, and the cattle are pastured for three or four months in summer. A farm of average size is stated by Laing to have comprised 300 acres, exclusive of the *seater*. Of this extent, 148 acres, comprising the in-field, were cleared; only about one third, however, yielded corn and potatoes, the remainder being always in grass for hay. The out-field is usually half cleared, being fenced off and ploughed in patches; and it is in this division that the housemen or cottiers, paying from three or four dollars each of rent, and working at about eight shillings (3s.) a day, with their food, have their houses and their fenced pieces of land. The farm referred to above, supported 30 cows, seven horses, and a score or two of sheep and goats. The accommodations for the cattle were very good, the cow house being floored with timber, and lighted by glass windows: the cows were tended by a woman. The rent was 300 dollars a year; the taxes, including tithe, poor rate, and all other direct assessments, amounted in all to about 36 dollars; the indirect taxes, including excise and other duties, were inconsiderable. A property like this is reckoned worth about 4000 dollars: and the prices of ordinary estates vary from 2500 to 4500 dollars. Almost all the houses are of wood: they are generally comfortable; and owing to the facility with which they may be constructed, there is but little difference between the residence of a public functionary, a clergyman, or a gentleman of large property, and that of a bonds or peasant proprietor. The division of property among children prevents the erection of any splendid mansions, or any thing more expensive than is proportioned to the property upon which it stands.

Except in a few favoured spots the arable land is, generally speaking, sandy and poor. Hence, if a few days of warm sunshine succeed each other without rain, as is frequently the case in the early part of summer, the roots of the corn and grass are apt to be burned up. In autumn, on the contrary, the decreased warmth prevents the corn from ripening, and not unusually, even in favourable seasons, it is injured by violent autumnal rains. Mr. Malthus says there are three nights about the end of August, distinguished by the name of *iron nights*, on account of their sometimes blighting the promise of the fairest harvests. (i. p. 375.) The crops are, in consequence, extremely precarious. Even in the best years a considerable supply of corn has to be imported; and in bad years the inhabitants, especially in the interior, have to sustain the greatest privations.

In addition to the depressing influence of the soil and climate the peasantry are said to be deficient in industry, and wedded to routine practices; and a considerable influence is also ascribed, in the production of dearths, to the great consumption of corn in distilleries. We believe, however, that the latter complaint is wholly without foundation. The demand for corn for distillation makes, no doubt, a greater quantity be sown in ordinary years than if it were prohibited; so that in bad years, when distillation almost wholly ceases, there is a greater supply to meet the necessities of the people. Rye is the crop most extensively cultivated, and next to it oats, flax, and potatoes. The agricultural implements, which are usually made by the peasants themselves, are better than could, under such circumstances, be expected: even threshing machines are pretty common.

All over Norway there are corn magazines, to which the farmers may send their surplus produce, and whence, also, they may be supplied with loans of corn; the depositors receiving at the rate of 12½ per cent. of increase on the corn deposited for a twelvemonth; and the borrowers replacing the quantities advanced at the expiration of the same period, with 25 per cent. increase. These depositories are found to be useful in consequence of the extreme precariousness of the crops. The difference between the increase allowed, on the corn received, and that charged on the corn given out pays the expenses. In the north, and even in other parts, in years of scarcity, the inner rind of the fir tree, kiln-dried, and ground, is used, together with corn meal, for bread. Some travellers have, strangely enough, and without sufficient information, denied this fact; but, according to Laing, the use of this material is more extensive than is generally supposed. The inner rind next the wood is taken off in flakes, like foolscap paper, steeped in warm water, and hung to dry in the sun. When dry it is pounded in small pieces, mixed with corn, and ground on the hand-mill. The extended cultivation of the potatoe since the peace, has probably placed the inhabitants of the lower country beyond the

necessity of generally using it; but those in the higher parts use it, more or less, every year. It is not unpalatable, but is costly. The value of the tree, left to perish, would buy a sack of flour, if the English market were open. "The Norwegians starve, and we shiver in our dwellings, though each country has the means of relieving the other with advantage to itself; and all for the sake of supporting colonies and other interests, which add little to the well-being of the people of Great Britain." (Laing, 340, 341.)

The most profitable branch of rural industry is cattle breeding. The cattle are small in the bone, thin skinned, usually red or white, and obviously of the same stock with the common unimproved breed in England, France, and Germany. The cows give excellent milk, and dairy produce enters largely into the food of every family. Goats are a favourite stock, and on every farm they appear more numerous than sheep. Hogs are not numerous. The horses are, in general, inferior to those of Sweden. The real Norwegian pony, however, met with in the N. of the country, is an admirable little animal, fast going, hardy, and fit for a great deal of work. A few are occasionally imported into Scotland. The live stock suffers frequently from wolves and bears, the hunting of both of which is actively pursued; but that of the latter not so much as formerly, the price of bear skins having greatly fallen. The elk, and many kinds of game, are found; and in the N. large herds of rein-deer constitute the chief wealth of the Laplanders. Aquatic birds are so abundant, that the search after their eggs occupies a large share of the attention of the inhabitants of the coast.

From the want of markets, and of other facilities for commerce, the Norwegian farmer is seldom able to convert his surplus produce or savings into money. His object, indeed, is not to raise produce for sale, but to supply himself with the various materials required for the food, drink, and clothing of his family. "The food of the labourers who work for gentlemen or large farmers, consists of black rye bread and salted butter or cheese, for breakfast; and boiled barley and a herring or some other fish, with beer, for dinner. Once a week, and sometimes twice, they have fresh meat. The common people live nearly in the same way, only not quite so well; and some who have large families are often in great distress." (Clark's *Travels*, i. 448.) Mr. Laing says that the labourers get frequently at their meals an allowance of home-made potatoes or corn spirit. The latter article is especially abundant, being distilled, without let or hindrance, on every farm. Great quantities are drunk, its price being only about 14s. a gallon. The farm labourers, called housemen, live, as has been stated, in cottages on the mark or out-field, at a fixed rent for two lives, under the obligation of furnishing a certain number of days' work on the main farm, at a certain rate of wages. A system, in some respects similar, prevails in some of the best cultivated districts of Scotland; but, according to Mr. Laing, the Norwegian houseman is better off than the Scottish married farm servant. Land, he says, being of less value in Norway, the houseman has more of it: in fact, it constitutes a complete little farm, keeping generally two cows and some sheep, and producing a full subsistence for a family.* The law of the country has especially favoured the class of housemen. In default of a written agreement registered in the parish court, the houseman is presumed to hold his possession for his own life and that of his wife, at the rent last paid by him. He may give up his land and remove, on giving six months' notice, before the ordinary term, and is entitled to the value of the buildings put up at his own expense, which he may have left; but the landlord cannot remove him or his widow so long as the stipulated rent and work are paid.

Fisheries.—Above the parallel of lat. 65°, agriculture and cattle rearing cease to be the primary occupations of the population. The inhabitants of Norland and Flamarik, amounting to 91,000 persons, subsist chiefly by fishing, when they are not supported on the produce of herds of rein-deer. The Lofoden islands (see ante, p. 208) are the principal seats of the cod-fishery; and the average value of the fish caught there, during the winter, has been estimated at £30,500. The winter fishery lasts from February to April; after which the fishermen are either employed by the Russian merchants, or retire to their homes to begin the herring fishery. Besides these general fisheries, in every firth, even at 100 m. from the sea, an abundance of cod, whiting, haddock, flounders, herrings, &c., is caught daily for use and for sale by the seafaring peasantry.

The *Forests and Mines of Norway* might be rendered two of its principal sources of national wealth. Fir timber, deals, &c., are among the chief exports. But the want of navigable rivers, canals and roads occasions great difficulties in the conveyance of timber to the coast; for it is only dur-

* Dr. Clark, however, says, that in the neighbourhood of Christiania, the housemen have seldom land to keep a cow (i. 450); and we understand that this is frequently the case in other parts.

NORWAY.

ing the spring thaws that the rivers or torrents are deep enough to float the timber down to the fjords. No doubt, however, were the timber trade of this country placed on a proper footing, by doing away the impolitic preference given to American timber, a great stimulus would be given to its importation from Norway; and the advantages thence arising would, it may be fairly presumed, lead to the formation of improved means for supplying the shipping ports with timber and deals. The manufacture of the latter is the principal branch of industry carried on in the country. They are mostly shipped from Christiansia, Drammen, &c. "Their forests are of the most essential service to the Norwegians, who apply their products to an infinite variety of purposes. Their *summu bonum* seems to consist in the produce of the fir. This affords materials for building their houses, churches, and bridges—for every article of their household furniture—for constructing sledges, carts, and boats—besides fuel for their hearths. With its leaves they strewn their floors, and afterwards burn them, and collect the ashes for manure. The birch affords, in its leaves and tender twigs, a grateful fodder for their cattle, and bark for covering their houses. The bark of the elm, in powder, is boiled up with other food, to fatten hogs; sometimes also, though rarely, it is used in the composition of their bread." (*Clarke*, i. 344, 5vo. ed.)

No coal has yet been discovered in Norway; but Berendish, between the N. cape and Spitzbergen, appears to consist principally of that mineral. Some is occasionally brought thence by Tromsø and Hammerfest whalers; and, were the forests raised to their due importance by better means of conveyance, it is probable that coal might be supplied to the country in quantities which would render the cutting down of the trees for fuel in a great measure superfluous. The iron of Norway, though inferior to that of Sweden, is of excellent quality, and very generally found. Copper is found at Romsås and near Kongshavn; a silver mine, which has been wrought for upwards of 300 years, was, about the middle of last century, accounted the richest in Europe. In 1768, it produced ore to the value of £79,000; it has since, however, materially declined. Lead, cobalt, arsenic, and a little gold are met with in various places. At Wåløe is a salt mine, producing about 30,000 tons a year. Alum, asbestos, marble, slate, building stone, &c., are among the other mineral products.

Manufactures are almost wholly domestic, the division of labour being carried to a less extent in Norway than in, perhaps, any other European country. The *bedder*, or agricultural peasant, build their own houses, make their own chairs, tables, ploughs, carts, harness, iron-work, basket-work, and wood-work; in short, except the window glass, cast iron ware, and pottery, every thing about their houses is of their own make. The Norwegian peasant, indeed, unites most trades in his own person, his principal tool for executing all kinds of work in wood being the knife he carries in his girdle. The shoemaker and tailor go round and cobble and sew for a few weeks at each village, getting their maintenance, and being commonly paid over or above, in potatoes, meal, butter, or other produce. Spinning-wheels and looms are at work in every cottage and house in the country; the farmers and country people spinning their own flax and wool, and weaving their own linen and woolen clothes. An official report, in 1839, made the total number of manufacturing establishments 337, but of these 138 were distilleries and 80 tobacco factories principally in Christiansia, Drammen, and Bergen. There are, in fact, very few fabrics of clothing materials; and few Manchester or Glasgow fabrics are seen. No doubt, however, were greater facilities afforded to the Norway timber trade by Great Britain, our manufactures would, at no very distant period, supersede the ruder fabrics of the Norwegian peasantry.

Commerce.—Foreign trade is in a very depressed state, from various causes, but principally from impolitic restraints. Bergen and Trondhjem were formerly members of the Hanseatic Association, on the decline of which these towns retained, and still hold separately, the same privileges they enjoyed in conjunction with the other members of that body, though Christiansand and some other minor towns have succeeded, after a long struggle, in obtaining a share of the commercial monopoly. The merchants and shopkeepers in Norway are all licensed burghers of Bergen, Trondhjem, or other privileged towns, to which they pay a certain tax; and each has a certain tract or circle belonging to his factory, within which no other person is entitled to buy or sell. The imports consist principally of coffee, sugar, tobacco, corn, spices, brandy, wines, tea, &c. and the exports of fish, timber, and other native produce. The trade of Norrland and Finmark is, however, different from that of the rest of the kingdom. The privileged traders do not supply the inhabitants of these provinces with necessities, except during the winter fishing season; and as no other Norwegian dare interfere, the trade of these provinces is now almost wholly in the hands of the Russians, whose ships have been, since

1828, allowed admission, free of duty, into every port N. of Tromsø.

Owing to the thinness of the population, and the bad state of the roads and other means of communication, there is but little internal trade. "Even in the largest towns, such as Christiansia and Trondhjem, there is nothing that can be called a market. It is extremely difficult to get a joint of fresh meat; and a pound of fresh butter is an article not to be purchased even in the midst of summer. Fairs are held at certain seasons of the year, and stores of all kinds of provisions that will keep are laid in at these times; and, if this care be neglected, great inconveniences are suffered, as scarcely any thing is to be bought retail. Persons who make a temporary residence in the country, as small merchants, not possessed of farms, complain heavily of this inconvenience." (*Malthus*, i. 372.) Latterly, however, some improvements have been made in the facilities of interchange; and the inconveniences depicted by Mr. Malthus have been in so far diminished.

The *Bank of Norway*, established in 1816, has its head office in Trondhjem, and branches in Bergen, Christiansia and Christiansand. Its principal business consists in advancing its own notes, upon first securities over land, any sum not exceeding two thirds the value of the property, at 4 per cent. interest. The notes of this bank are at only a trifling discount when compared with silver; and its paper is in general use in Norway instead of silver for sums above a mark. The mark or *ort* of 24c. = 9½ English; 5 marks = 1 speciedollar. Money being scarce, internal traffic is almost wholly conducted by barter. Provisions are generally cheap; and a dollar has been, in this respect, estimated as equivalent to a pound sterling in England; but it should be added, that the Norwegians, especially the innkeepers, never omit an opportunity of overcharging travellers. The most usual mode of travelling in this country is with the *servise*, a small carriage furnished somewhat like a shell, and slung between the shafts and two cross bars, harnessed as in Sweden, by two farmers along the road, at the order of station-masters. The price of posting in this manner is about 4d. a mile. Steamers ply along the coast between Christiansia and Bergen, but there is no similar communication farther N.

Government.—Though Norway be under the same crown with Sweden, she is no more connected with that country than Hanover was formerly with Great Britain. The constitution differs from that of Sweden in many important respects. The Swedish government is in part aristocratical; that of Norway is a hereditary monarchy, with a democratic assembly only. This, which is called the *Storting*, consists of a certain number of members, between 75 and 100; about one third of whom are returned by the towns, and the rest by the rural districts. Every native Norwegian of 25 years of age who is a burgess of any town, or possesses property, or the life-rent of land to the value of £30, is entitled to elect and be elected; but for the latter privilege he must not be less than 30 years of age; nor an officer of the crown (which has no representative or organ in the Norwegian storting); and he must have resided in Norway for 10 years. The country is divided into election districts and sub-districts, according to their populations. The mode of election is double, being performed through the intervention of election-men. In the towns one election-man is chosen by every 50 voters; in the rural sub-districts by every 100 voters; the choosing of these takes place in the parish church at the end of every third year. The election-men afterwards meet at the place appointed for the district or provincial election, and there elect among themselves, or from among the other qualified voters of the district, the representatives to the storting, in the proportion of one fourth of the number of election-men for the towns, and one tenth of those for the rural sub-districts. Substitutes (being those who have the next number of votes) take the places of both election-men and members of the storting, in the event of their unavoidable absence from duty. The storting meets for three months once in three years, *ex jure*, and not by any writ from the king or the executive. It may be convened at other times, but in that case it can pass only temporary acts, which must be ratified during the next ordinary session, otherwise they do not become law. Each storting settles the taxes for the ensuing three years; enacts, repeals, or alters laws; opens loans on the credit of the state; fixes the administration of the revenue; impeaches and tries before a section of its own body all state ministers, judges, and its own members, &c. This body, when elected, divides itself into two houses. One, called the *Lathing*, has functions corresponding generally to those of our house of lords, and is composed of one fourth of the total number of members of the storting; the other three fourths constitute the *adelsthing*, or lower house; and all proposed enactments must originate in this division. A bill which has passed both houses usually becomes law, by receiving the sanction of the king. But the Norwegian storting enjoys a right which no other legislative assembly in Europe possesses.

NORWAY.

If a bill pass through both divisions in three successive sittings, on the third occasion it becomes a law of the land without the royal assent; and this right was exerted when the Norwegians abolished their hereditary nobility in 1821. Each member of the storting has an allowance of 1½ dollar a day during its session.

The mode of assembling the people in the country for public business is simple, but curious. A *budstick*, or message-stick, about the size and shape of a constable's baton, with a spike at one end, is made hollow to hold a piece of paper, on which are written the official notice to meet, with the time, place, and object. This is delivered from the court-house of the district to the nearest house-holder who is bound by law to carry it, within a certain time, to his nearest neighbour; he must transmit it to the next; and so on. If the owner be not at home the bearer is to stick it "in the house-father's great chair by the fire side;" and if the door be locked he must fasten it to the outside. He who, by neglect in passing the budstick, has prevented others from attending, pays a fine for every person so absent.

Justice, &c.—The Norwegian peasantry were never *adscripti glebe*, subject to local judicatories, as in feudal countries, but subordinate only to the general jurisdiction of the country. The small kings, expelled in the ninth century by Harold Haarfager, seem never to have attained the powers of the great feudal lords in other countries, but were always in some degree dependent upon the general *things*, or courts, of the people. Trial by jury is a very ancient institution in Norway; but many of the details in the administration of justice originated with the Danes. The latter instituted the courts of mutual agreement, one of which exists in each parish, the arbitrators being chosen by the householders every third year. Norway is divided, for legal purposes into four *stifts* and 64 *sorenskriverier*. In each of the latter divisions is a legal court, which sits once a quarter, and in which the *sorenskriver*, who presides, has only a vote as a member of the jury, a majority of whom decides the case. The *stifts emte*, consisting each of three judges, with assessors, are established in the chief town of each *stift*, are the courts of appeal from the foregoing. The *hoivests ret*, in Christiania, composed of a president and eight assessors, is the highest court, and one of final resort. The special courts are the *regie-ret*, or legating, the ecclesiastical, and the military tribunals. Judges are responsible in damages for their decisions. Capital punishment has been abolished; slavery in chains, for a longer or shorter period, being the ordinary sentence for all kinds of crimes.

The religion is the Lutheran; but much ceremony still remains in the forms of worship. Norway is divided into five bishoprics and 336 parishes: the latter divisions are very extensive, but several are frequently under the care of one priest. The incomes of the parish priests amount to from 800 to 1600 dollars, those of the bishops to 4000 dollars a year. (*Laing*, p. 180.) The former are paid by means of rents from glebe lands, a small tithe of corn from each farm, or of fish in some parts, and fees, and other unfixed sources of revenue. There are no dissenters; all sects of Christians are, however, tolerated, but Jews are excluded from settling in Norway, nor are even suffered to remain in the country for more than a few hours at a time.

In 1837, 176,733 persons, or about one seventh part of the population were receiving public instruction. Schoolmasters are settled in each parish, who live either in fixed residences, or move at stated intervals from one place to another, and who frequently attend different schools, devoting one day only in the week to each. They are paid by a small tax levied on householders, besides a personal payment from each scholar, amounting, in the case of agricultural servants, to about eight skills, or half a day's wages in the year. Instruction in the primary schools is limited to reading, writing, arithmetic, and singing, with sometimes the rudiments of grammar and geography. Almost every town supports a superior school; and in 13 of the principal towns is a *lærde skole*, or college, the instruction in which includes theology, Latin, Greek, Norwegian, German, French, English, mathematics, history, geography, &c. Christiania has a university, founded by the Danes, in 1811, which is modelled on the system of the German universities, but differs from them in the professors not receiving fees; and in which the number of students varies from 600 to 800. (*Bremer*.) There are, also, schools of drawing and architecture, commerce and navigation, and other special schools. Sunday-schools have been widely established; and the Society of Public Good maintains a public library in most parishes of the kingdom.

The press in Norway is altogether free. Every man is at liberty to print and publish what he pleases, being responsible, however, for what he does print. No tax exists on newspapers; and somewhat more than 90 are published in the kingdom, besides several scientific journals. But notwithstanding these aids to science and advancement, Norwegian literature is not in a very flourishing state, and can

NORWICH.

by no means bear to be compared with that of Denmark or Sweden.

The army of Norway consists of about 10,000 infantry, 1000 cavalry, 1000 artillerymen, and 150 engineers; in all, 12,150 men. A militia is raised throughout the interior, into which all males, between 37 and 30 years of age, must enter; and on the sea coast there is a kind of marine militia, in which all seafaring men, and inhabitants of sea ports of a certain age, must be enrolled. The naval force consists of five brigs and 117 gun boats. (*Atlas de Gotha*, 1841.)

The public revenue, for the three years 1830-41, was estimated in the budget of the former year at 2,130,000 dollars; the expenditure for the same period is fixed at 2,415,288 dollars; the deficiency will be made up from the reserve funds in the hands of the government.

People, &c.—The Norwegians are members of the widely spread Teutonic race. The men are, in general, rather small in stature, but well made, and appear to have great muscular power. The Gludbrandsdal peasants are said to be the most athletic, but they are decidedly, as a body, shorter and slighter of limb than the mountaineers of Delectaria, in Sweden. Their complexions, hair, &c., are fair, and resemble more of the Danes, and other N. German tribes, than the Swedes. The dress of the men varies greatly in the different districts, being, for the most part, more gay and fanciful than that of the women: in the towns, however, the upper classes have fully adopted the costume common in the rest of Europe. "The peasants possess much spirit and fire in their manner, are frank and undaunted, yet not indolent; never fawning on their superiors, yet paying proper respect to those above them. The principal mode of salute is by offering the hand; and when we gave them a trifle, instead of returning thanks by a word or a bow, they shook our hands with great frankness and cordiality." (*Coze's Travels in the North of Europe*, v. 7.) They are generally addicted to drinking, and the standard of morals is said to be, in other respects, higher in Sweden than in Norway. Women are very generally employed in field-labour; and beggars are numerous, especially in the towns. The average number of illegitimate births is about 1 in 5; and in one district it was, from 1826 to 1830, as much as 1 in 34. (*Laing*, 151.) But illegitimate children are most commonly legitimized by a legal act, and are seldom or never abandoned by their parents. The Norwegians are extremely fond of dancing, music, and dramatic entertainments, which are the principal amusements introduced at their festivities.

History.—Norway is interesting as the original seat of the Northmen, who made such frequent descents on the coasts of England and France in the dark ages, and who were the ancestors of that remarkable people the Normans, who conquered and carried their institutions to England and other of the fairest portions of Europe.

Little is known of the history of Norway before the end of the 9th century, when Harold Haarfager united the whole country under his dominion. Christianity was introduced by Olaf I. in the succeeding century. In 1387 Norway was annexed to Denmark, to which it remained attached till 1814, when the allied powers gave it to the Swedes in indemnity for Finland. The Norwegians, indignant at the transfer, took arms, and elected Prince Christian Frederick of Denmark for their king; but the latter resigned the crown in the same year, and the country has since been united to Sweden; and this union will probably be maintained without difficulty so long as the Swedish cabinet attempts no rash or violent changes in the internal administration of the country. (*Official Rep.*) *Laing's Norway* is an able work, but its statements are obviously much too favourable, and must be received with great modification; *Bremer's Excursions*, vol. i.; *Coze, Haglie, Clarke, Barrow, &c. passim*; (*Dict. Geog.*)

NORWAY, p. L., Oxford co., Me., 44 m. W. by S. Augusta, 588 W. It has a large pond with its outlet into Little Androsogga river. Incorporated in 1797. It contains four stores, two fulling-mills, one flouring-mill, three grist-mills, four saw-mills, two tanneries; one academy, and 693 scholars in schools. Pop. 1786.

NORWAY, p. L., Herkimer co., N. Y., 96 m. W.N.W. Albany, 411 W. Drained by tributaries of West Canada creek. It contains three churches, a Presbyterian, Episcopal, and Baptist, two stores, one fulling-mill, one grist-mill, five saw-mills; eight schools, 295 scholars. Pop. 1046.

NORWEGIAN, T., Schuylkill co., Pa. It is an important centre of the coal mines and trade. Watered by Schuylkill river and its branches. It contains 14 stores, one flouring-mill, one powder-mill, 14 saw-mills; eight schools, 302 scholars. Pop. 3812.

NORWICH, a city of England, being a county of itself, and an important manufacturing town, locally situated in hund. Humberland, co. Norfolk, of which it is the cap., on the navigable river Wensum (crossed here by 10 bridges), 56 m. N.E. Cambridge, and 96 m. N.N.E. London: lat. 53° 7' N., long. 10° 16' E. Area of the city and co. 5930 acres. population, in 1811, 37,356: ditto, in 1821, 50,938: ditto, 491

NORWICH.

in 1831, 61,116; and in 1841, 62,344. The county of the city is an irregular circular form, with an average diameter of about 54 m., the city itself standing a little E. of its centre on the slope and summit of a hill, gently rising from the river. The buildings are, in a great measure, circumscribed by the remains of the ancient fortifications which still exist, particularly on the W. and N. sides of the city. The streets, with the exception of Giles-street, and one or two more, are narrow, and so irregularly laid out, as to preclude the possibility of any general description. It has, however, many handsome houses, open spaces, &c., and is well paved, watched, and lighted with gas; and its appearance from a distance is remarkably striking. The castle and cathedral are the principal public buildings; but it has no fewer than 36 parish churches, besides chapels and other edifices. The castle (supposed to have been built at intervals between the 10th and 15th centuries, by Canute, Roger Bigod, and others), occupies a commanding eminence near the cattle-market in the centre of the town, and is a very imposing object at a distance: the part now extant forms a large square, on the E. side of which is an entrance tower, recently restored on the original plan. The entire building formerly occupied an area of 23 acres, and had three nearly circular and concentric lines of defence formed by a wall and ditch: the inner ditch, now laid out in gardens, still remains, inclosing the inner baillon, and is crossed by a semicircular bridge of one arch, 40 ft. in diameter, forming one of the largest and most perfect Saxon arches in the kingdom. In 1793 a county jail was commenced on the Castle-hill; and at the same time the ditch was enclosed with iron palisades and gates. Within the precincts, also, a new county hall has recently been erected in the Tudor style. These modern additions, however, are quite incongruous with the ancient and venerable appearance of the original Norman fabric. The cathedral, originally built in 1096, but subsequently so repaired and enlarged that it did not assume its present form till the 16th century, is one of the largest and finest ecclesiastical edifices in the kingdom. The plain is almost wholly Norman. It consists of a nave, with side aisles, two transepts, and a choir with a semicircular E. end: the whole length from W. to E. is 411 ft., that of the transepts from N. to S. being 191 ft., and the breadth of the nave and choir, 72 ft. The cloisters form a square of 174 ft. within the walls adjoining the S. side of the nave. From the intersection of the cross formed by the nave, choir, and transepts, springs a lofty Anglo-Norman tower of four stories, highly ornamented and surmounted by an elegant spire, rising 317 ft. from the basement of the church. The W. entrance is extremely beautiful, and is the best point of view from which the cathedral can be seen; but the friable nature of the stone used in its construction has caused a decay of the more salient ornaments, and thus greatly diminished the external effect. The appearance of the interior is, on the whole, grand and imposing; the architecture, however, is of various eras, from the Anglo-Norman to the English-perpendicular style; and modern alterations and additions have not always been in the best taste. The ecclesiastical establishment consists of a dean and six prebendaries, now five, and having a nett revenue of £5240, besides eight minor canons with separate allowances; but it is to be subjected to various retrenchments. The bishop's diocese comprises the whole of Norfolk, with part of Suffolk, and the revenue amounted, in 1838, to £4465. The episcopal palace stands N. of the cathedral, on the site of that built by the founder: it was erected in 1318, and, after undergoing repairs, and receiving considerable enlargements from successive prelates since the Restoration, has become a tolerably commodious residence, attached to which is a large and well-laid out garden, comprising some ruins of the hall belonging to the ancient palace. Near the W. front of the church is an ancient chapel, dedicated to St. John the Evangelist, which had underneath a charnel-house; it is now used as a free grammar-school. Near it are the two ancient gates of St. Ethelbert and Erpingham; the former is in the decorated English, and the latter a fine specimen of the late perpendicular style. Among the churches, which are here more numerous than in any city except the metropolis, a few deserve notice as good specimens of ancient architecture. St. Peter's, Mancroft, at the corner of the market-place, is a large edifice in the perpendicular style, surmounted at its W. end by a lofty tower; the inside is remarkably light and elegant, and it has a fine altar-piece and E. painted window. The churches of St. Andrew, St. George Colegate, St. Lawrence, and St. Saviour, present similar architectural features, having high towers either of stone or flint. Those of St. Ethelred, St. Benedict and St. Julian, have round towers, and belong apparently to the early Norman era; but they have been much altered and mutilated. Norwich abounds, also, with the remains of other ecclesiastical edifices. The common-hall, in St. Andrew's parish, consists of the nave of a church attached to a monastery of Black Friars; the workhouse till very lately occupied an old Flemish convent, near which is the Dutch church, now used

as a chapel to the workhouse, and St. Giles's hospital comprises portions of the former church of St. Helen's. There are two Roman Catholic chapels, seven places of worship for Baptists, three for Independents, two for Calvinist-Methodists, five for Wesleyan or Primitive Methodists, one for Swedenborgians, one for Unitarians; besides which the Society of Friends have two meeting-houses, and the Jews a synagogue. Attached to the various places of worship are numerous Sunday Schools, of which about a half are supported by the established church, and the rest by dissenters; the whole furnishing religious instruction to upwards of 7000 children; besides which, there are several endowed charity-schools, with national, Lancastrian, and infant schools, either wholly or in part supported by subscription, and attended by about 3500 children of both sexes.

The free grammar-school, founded in 1318, and restored by Edward VI., is maintained out of the funds of a corporation charity, called the Great hospital: it has an upper and under master, and possesses fellowships and exhibitions at Caius college, Cambridge. The boys' and girls' hospitals, founded in the 17th century, are supported by the produce of estates in trust of the corporation, and furnish clothing, and instruction to upwards of 100 children. Doughty's hospital, established in 1517, and under the same patronage, provides for numerous infirm and aged persons; but the principal corporation charity is St. Giles's hospital, near the cathedral, otherwise known as the "Great" or "Old Man's hospital," maintained by rents and other property, averaging £7000 a year, and providing clothing, food, and a small stipend for 165 inmates, besides servants. It appears, however, that till very recently these trusts were most extensively abused for political purposes. (Comp. Char. Comm. 27th and 30th Report, with *Mss. Owp. Report*, App. iv.)

Among the charitable institutions of Norwich supported by subscriptions, the first place is due to the Norfolk and Norwich hospital, occupying a large brick building, erected in 1771, and enlarged in 1802: it has accommodation for about 120 in-patients, and has about the same number of out-patients. Bethlehem hospital is a well-endowed lunatic establishment, established in 1713; and at Thorpe, about 2 m. distant, is the county lunatic asylum. The other principal institutions of this kind are the dispensary, eye-infirmary, madagen asylum, lying-in charity, and blind asylum, with numerous minor benevolent associations, bible and tract societies, provident clubs, &c.

The buildings devoted to the purposes of municipal or civil jurisdiction comprise the guildhall, a large old building of the 15th century, but subsequently much altered and enlarged, though even now it is little worthy of so large a town; 2. St. Andrew's, or the new hall, a noble fabric, previously mentioned as having formed part of an old Dominican church; 3. the county hall, in the castle precincts, a fine commodious building of perpendicular architecture and recent construction; 4. the new city jail and bridewell, a modern and well constructed edifice outside the walls, near St. Giles's gate; and, 5. the county jail and house of correction, on the castle-platform, a large but plain building, well adapted for its purpose, the establishment being conducted on the system of silence, separate confinement, and hard labour; the criminal prisoners average about 80, the weekly cost of each being 2s. 11d. (*Proc. Inspec. 4th Rep.*) A commodious corn exchange was erected in 1829; and the cavalry barracks in Pockthorpe are substantially built of red brick, enclosing an area of 10 acres. Norwich has, also, a large workhouse, belonging to the united parishes: the sum expended for the relief of the poor amounted in 1839 to £14,976.

Among the literary establishments is the public library, originally formed in 1784, and now occupying a handsome structure in the Grecian style, lately erected on the site of the old city jail; the Norfolk and Norwich literary institution, occupies a building of recent erection, and has a good library and a numerous body of subscribers. In the same building is a museum, but not connected with the above society. A society called the Norfolk and Norwich art-union, has occasional exhibitions. Concerts are held in the common hall in St. Andrew's parish, and the musical festivals are held in St. Andrew's hall. Norwich has also a neat modern theatre, and assembly-rooms, two news-rooms, and a mechanics' institute. Two newspapers, (the "Norfolk Chronicle" and "Norwich Mercury,") are published every Saturday.

Norwich has been celebrated for its manufactures since the era of Henry I., when the Flemings first settled here, and introduced the spinning and weaving of long woollen stuffs, called *worsted*, from the name of the village in which the business was first established: the worsted and bombazine trade was also greatly increased during the 16th century, by the immigration of Flemish weavers from the low countries. Norwich, however, appears to have attained its greatest prosperity at the close of the last century, when the value of its goods exported to the E. Indies,

NORWICH.

Russia, and other places abroad (consisting chiefly of camlets and camleets, callamancoes, worsted satins, figured stuffs, lastings, damasks, and shawls), have been estimated to amount to £1,000,000 a year, or to one fourteenth part of the British manufactured goods exported at that period. (*Handloom Weavers' Report*, part II., p. 303.) We believe, however, that this estimate is beyond the mark; and since then the manufactures of Norwich have materially declined, or, rather, perhaps, have not kept pace with their progress in Lancashire and the West Riding of Yorkshire, &c.; the greater facilities enjoyed by the latter, in the command of coal, the absence of corporation privileges, and the greater scope given to competition and improvement, have enabled them to produce, at cheaper rates, several articles that were at one time peculiar to Norwich. In fact, the greater part of the yarn now used in making Norwich fabrics is spun at Bradford, in Yorkshire; and the worsted manufacture of the West Riding is now decidedly more extensive and valuable than that of Norfolk. The principal fabrics that are at present manufactured in and about Norwich comprise bandanas, bombazines and paramattas, fillovers, or ornamental shawls and shawl borders, gauzes and crapes, pincoctas (a fabric of mixed warp, with a worsted shoot), silk, silk shawls, woollen shawls, jacquard, coach-lace, lustrous, shallis and mousselines-de-laine, fringes, &c., with seeking and horse-hair. In 1839, there were in the city and its vicinity 3075 looms, of which 1021 were unemployed; and of the 4054 looms then at work, there were 3395 in the weavers' houses, and 656 in shops and factories: indeed, by far the greater part of the looms belong to families having only one or two. The labourers at these looms comprise 2211 men, and 1648 women, with 195 children. In the same year, two silk-mills employed 731 hands, three worsted-mills 385 hands, two woollen-mills 39 hands, and one cotton-mill 130 hands, making a total of eight mills wrought by a power (chiefly steam) of 151½ horses, and employing 1985 persons. With respect to the weavers' wages, no general reduction has been made since 1839; and the rates of payment for the various fabrics are, on the whole, pretty fairly adjusted according to the labour: if there were full employment at the present scale, the weavers would be able to secure for themselves a comfortable maintenance; but they are usually out of employ four months a year, so that wages are really a third less than they appear to be. The gross wages of the weavers when fully employed, range between 6s. and 25s., those engaged on fillovers, shallis, and fine bombazines, earning from 15s. to 25s. a week; but when "play-time" and expenses have been deducted, the average net wages of the hand-loom weavers are said to amount to only 7s. 2d. a week; but this, we believe, is speaking generally, below the mark. A power-loom factory of mohair (or Angora wool) has been established at Lakenham (one of the out-townships), and employs about 400 hands, chiefly children. As respects the health of the weavers, Dr. Mitchell reported to the hand-loom commissioners, that Norwich is most favourably situated, the ground being on a bed of gravel over a substratum of chalk; that the working people, weavers included, have a fresh and healthy complexion; and that the physical condition of the weavers is much better than that of the same class in Spitalfields. Epidemics, however, occasionally prevail, as in Bethnal Green; but not to the same extent, or so continually, owing to the better air and house-ventilation usual in Norwich. The prevalent diseases are dyspepsia, consumption, female diseases, and those belonging to children, which last are attended with a large mortality. (*Handloom Weavers' Rep.*, II., 330.) On Sunday, the work-people, especially the women, are well dressed; in general they attend divine service, and drunkenness prevails less than in most large towns. Frugality, however, is said to be little practised; few save any thing when they have the means; and when work is scarce, they are in the greatest distress. The industry and morals of the people have suffered materially from their frequent strikes and riots; from the dissipation among the master-manufacturers; the party spirit which pervades all classes, and the electioneering abuses, for which Norwich is pre-eminent. (*Handloom W. Rep.*, II., 333-336.)

Besides its worsted and silk manufactures, Norwich has iron and brass foundries, snuff-mills, vinegar-works, malt-houses, breweries, oil, mustard, and corn-mills; but they are not on an extensive scale. The excise duty collected in this district amounted, in 1839, to £183,193. The trade of the town consists in the exportation of its manufactures, chiefly to London and other English ports, but partly also abroad, in exchange for corn, coal, and various other articles of consumption. The town has, since 1833, had the important advantage of being accessible to vessels drawing 10 ft. water, by means of the canals connected with the Lowestoff navigation (see Lowestoff); and its trade will also, no doubt, be materially promoted by the Eastern Counties' railway. A branch bank of the Bank of England

is established here, and there is a joint-stock bank, called the East of England banking company, besides two private banks and a savings' bank. The Norwich Union insurance company is an establishment of great importance; but which has been shown by a late investigation to have been grossly mismanaged.

Norwich, which claims to be a borough by prescription, and received its principal charter constituting it a separate county in 1403, was governed before the Municipal Reform Act by a mayor, 24 aldermen, and 60 common councilmen; but by the provisions of that act it is divided into eight wards, and has a mayor, with 15 other aldermen, and 48 councillors. The borough has also a commission of the peace under a recorder, and a sheriff's court for the recovery of debts to any amount: the assizes and quarter sessions for the county are also held here. Norwich has returned two members to the House of Commons since the 25th Edward I., the right of election, down to the Reform Act, being vested in the freemen and freeholders not receiving tithes. The electoral limits were left untouched by the Boundary Act, except that the castle precinct was included. Registered electors, in 1839-40, 4334. Norwich is likewise a polling-place and principal election-town for the E. division of Norfolk. Markets on Wednesday and Saturday, but chiefly on the latter, for corn and cattle; large horse and sheep fairs, day before Good Friday, Easter-Monday, and Whit-Monday.

Norwich is supposed to have risen from the decay of an old Roman town, now known as Castor St. Edmund's, probably the *Pontis Icenorum* of antiquity. A royal fortress was erected here by the East-Angles in the 6th century, and a town was gradually formed round it, which, even before the Norman conquest, was so important as to have a mint and 25 parish churches, with 1330 burgesses. William the conqueror bestowed the castle on Roger Bigod, one of his Norman followers, who probably erected the present keep. It continued in the possession of his descendants till the reign of King John, when it was seized by the king, and finally surrendered to the crown in 1294. In the reign of Henry I., a colony of Flemings came over, who were joined by a still greater number of immigrants in 1336, from which time Norwich became an important seat of manufactures. In 1403, Henry IV. separated the city from the county, and made it a county of itself with peculiar privileges. Its prosperity, however, owing to plague, scarcity, and frequent fires, had begun to decline, when, in 1564, a fresh immigration took place of 4000 Flemings, who had fled from the persecutions of the Duke of Alva. In the civil wars of Charles I., Norwich declared for the parliament, and was occupied by its forces till Cromwell became protector. It is remarkable in ecclesiastical history for its numerous convents and other religious establishments, the funds of which have in most cases been converted to charitable uses, and placed in the trust of the corporation. Among other distinguished persons, Norwich has given birth to Matthew Parker, archbishop of Canterbury in the reign of Elizabeth; John Cosin, bishop of Durham; Dr. Kaye, one of the founders of Gonville and Caius college, Cambridge; Dr. Samuel Clarke, the author of the famous work on the Attributes; and Beloe, the translator of Herodotus. (*Parl. Papers; Comm. Rep.*, &c.)

Norwich, p. t. Windsor co., Vt., 40 m. S.S.E. Montpelier, 490 W. Chartered in 1761, first settled in 1763. Organized in 1768. Bounded E. by Connecticut river, which is here from 30 to 40 rods wide. Watered by Ompompanoosuc river, and small tributaries of Connecticut river which afford water-power. A bridge crosses the Connecticut to Hanover. It contains five churches, two Congregational, two Methodist and a Baptist, five stores, three grist-mills, two saw-mills; one college, 70 students, one academy, 70 students; 90 schools, 747 scholars. Pop. 2218. It is the seat of the Norwich university, originally established in 1800 by Capt. Alden Partridge as the American Literary, Scientific and Military academy, and conducted by him and his associate instructors for a number of years. In 1834 it was chartered as the Norwich university, and Capt. Partridge returned, after the discontinuance of his academy at Middletown, Ct. (now the Wesleyan university,) and became its president. It has besides its president, six professors or other instructors, and 40 students. The commencement is on the third Thursday in August. It has no regular term for its collegiate course; but the candidates for degrees are examined as to their qualifications. Everything sectarian is carefully excluded.

Norwich, city and semi-capital of New-England co., Ct., is in 41° 33' N. lat. and 72° 7' W. long.; 13 m. N. New-London, 39 m. S.E. Hartford, 50 m. E.N.E. New-Haven, 38 m. S.W. Providence, R. I. 357 W. Bounded E. by Shetucket and Thames river. Watered by Yantic river which affords extensive water-power. The place consists of three parts and two villages. The city, (formerly called Chelsea or the landing;) the town, 2 m. N. of it; and Westville,

NORWOOD.

(formerly Bean hill.) 1 m. N.W. of the town; and the villages of Yantville, and Greenville. The city is situated on a steep acclivity, at the head of navigation on Thames river, which is formed by the junction of Shetucket river, with a cove at the mouth of Yantic river. The streets rise as in terraces; and the houses in the rear overlook those in front. The situation is peculiarly romantic. It contains four banks, with an aggregate capital of over \$1,000,000, and two insurance companies with a total capital of over \$100,000, and a bank for savings, a high school for boys, and a female academy. The town is 2 m. N.W. of the city, in a pleasant valley, surrounded by hills, which on the E. rise rapidly from the street, affording many handsome sites for residences. Near the church is a pleasant triangular area or public ground, surrounded by dwellings and stores. Between the city and town is a beautiful plain, with many fine buildings. N.W. of the town, on the road to Hartford, is Westville, which contains a number of manufacturing establishments and pleasant residences. At the head of the cove, which sets up over a mile from Thames river, enters Yantic river, by a romantic cataract affording great water-power. A bridge, which serves partially as a wharf, crosses the mouth of the cove, and around the head of it is Yantville, a flourishing manufacturing village. The falls at this place are a curiosity, being angularly wild and picturesque; and in the rocks at its bed, which are exposed at low water are circular holes, often six feet deep, worn with all the regularity of a work of art, by stones whirled round within them by the force of the water. From a high projecting rock which overhangs the foot of these falls, the Mohegan Indians formerly plunged to destruction, rather than fall into the hands of the Narragansetts who were pursuing them. A mile E. of the city on the Shetucket river, is Greenville, a flourishing manufacturing village, possessing great water-power, by means of a dam across the river. The whole town contains a courthouse, jail, eight churches, three Congregational, two Methodist, an Episcopal, Baptist, and a Universalist. The city has 97 stores, with a capital of \$337,000; five lumber-yards, capital \$33,000; hardware was manufactured to the amount of \$50,000; one fulling-mill, one woolen factory, capital \$3,000; one cotton factory with 4000 spindles, and a capital of \$100,000; two grist-mills, one oil-mill, two paper-mills, two rope-walks, one pottery, three printing-offices, two blanderies, two weekly newspapers; total capital in manufactures \$408,700; three academies, 71 students; 13 schools, 908 scholars. In the E. exclusive of the city, are 14 stores, capital \$36,000; six fulling-mills, five woolen factories, one cotton factory with 4636 spindles, 11 grist-mills, two paper-mills, one tannery, one pottery; total capital in manufactures \$453,500; two academies, 90 students; 11 schools, 871 scholars. Pop. in 1830, in the city 3144; whole t., 5179; 1840, city, 4300, exceeding the city 3039; total in the whole t. 7339.

Norwich, p. t., capital of Chenango co., N. Y., 113 m. W. Albany, 336 W. Watered by Chenango river. It contains a courthouse, jail, county clerk's office, bank, four churches, an Episcopal, Congregational, Methodist, and Baptist, 90 stores, five fulling-mills, one woolen factory, six grist-mills, 90 saw-mills, one oil-mill, four tanneries, two printing-offices, two weekly newspapers, and two periodicals; three academies, 82 students; 34 schools, 1049 scholars. Pop. 4145.

NORWOOD, a populous village of England, hunds. Brixton and Wallington, co. Surrey, on the top and sides of a steep range of hills, 5½ m. S. London. Pop. estimated at about 6000. It is very irregularly laid out, chiefly on a wide and elevated common, commanding an extensive view of the metropolis northward, and of the plains of Surrey southward. The neighbourhood is studded with villas, belonging partly to merchants and others engaged in business in the city, and partly to persons retired from active pursuits. Of late years, Norwood has been much frequented in consequence of the discovery of a mineral spring at a place called *Beau-lieu*, or Beulah; where large gardens, laid out with terraces, plantations, &c., have been opened to the public for fêtes, picnic parties, &c. On the N. acclivity of the hill is a handsome church, opened in 1855 (subordinate to Lambeth), with a Corinthian portico and steeple. There are, also, places of worship for Wesleyan Methodists and Independents, with attached Sunday-schools. A school of industry, established here in 1815, furnishes instruction in reading, writing, and needle-work, to nearly 300 girls. Here also is a large national school for children of both sexes, and a Lancelian school, attended by about 250 boys. But the principal ornament of Norwood is the South-Metropolitan Cemetery, lately opened. It comprises about 40 acres, has two fine chapels, is beautifully laid out, and cost in all from £70,000 to £75,000.

NOTO, a city of Sicily, intend. Syracuse, cap. distr., on a hill near the Noto, and 16 m. S.W. Syracuse. Pop., in

NOTTINGHAM.

1831, 11,156. It stands near the site of the ancient *Natus*, now called Vecchio Noto, the surviving inhabitants of which removed thither after the destruction of their city by an earthquake in 1693. Noto has large squares and regular streets, and is one of the best built, most agreeable cities of the island. Besides many handsome private residences, it has various ecclesiastical buildings, a concourse, lyceum, hospital, &c. Some, however, of its public buildings, being on two magnificent and expensive scale for a provincial town, are unfinished. There is in this city an excellent private museum, especially of medals and coins, and also of antiquities, minerals, &c. The ruins of an amphitheatre and of a gymnasium are the principal remains of the ancient city, which stood about 4 m. N.W. the modern town. It is rather unhealthy, but is surrounded by a very fertile tract of country, in the produce of which it has an active trade. (*Smith's Sicily*, p. 177; *Russell's Trav.* 1381-40; *Ortolani, Dizionario della Sicilia*, &c.)

NOTTINGHAM, a central co. of England, in the basin of the Trent, having N. the co. of York and Lincoln, E. the latter and Leicester, and W. Derby. It is oval-shaped. Length, N. to S., 50 m. Area, 335,680 acres; of which about 470,000 are arable, meadow, and pasture. The Trent partly traverses and partly bounds the county on the E., and it is also traversed by its important tributary, the Idle. Excepting the valleys of the Trent and Belvoir, the surface is mostly hilly and uneven; but the hills do not rise to any considerable height. The soil in the valleys is either a sandy or a clayey loam, and is very fertile; elsewhere it is principally sandy and gravelly. The climate is rather peculiarly dry and good. The ancient forest of Sherwood, the scene of the exploits of Robin Hood and his companions, anciently covered the greater part of the hilly portion of this county along its W. side; but it has long since been disforested, and now contains some magnificent seats and parks. Agriculture, though still susceptible of material improvement, is, on the whole, good. The vale of the Trent is famous for its crops of oats; but wheat, barley, beans, peas, and cabbages are also extensively grown. There is a considerable extent of grass and meadow land; and irrigation has been extensively practiced, particularly on the estate belonging to the Duke of Portland. The breeding of heavy black horses is pursued to some extent. Cattle principally of the short-horned variety. Estates of all sizes; many small. Farms generally small, and mostly held at will. Average rent of land, 19s. 11½d. as rent. Coal is abundant in the W. parts of the county. Nottinghamshire is the grand seat of the manufacture of bobbin, or Nottingham lace, and also of the manufacture of cotton and silk stockings. It is divided into six wards, one liberty, and 285 parishes. It returns 10 members to the House of Commons, viz. four for the county, and two each for its boroughs of Nottingham, Newark, and East Retford, which are its principal towns. Registered electors for the county in 1830-40, 7360; being 3746 for the N., and 3614 for the S. division. In 1841, the county had 50,541 inhabited houses, and 949,773 inhabitants; of whom 121,669 were males, and 198,113 females. Sum expended for the relief of the poor in 1839-40, £53,973. Annual value of real property in 1815, £751,690. Profits of trade and professions in 1841, £314,501.

NOTTINGHAM, a parl. and mun. bor., and extensive manufacturing town of England, and co. of itself, locally situated in the above county, of which it is the cap. head. Broxtown, on the Leen, about ½ m. from its junction with the Trent, crossed here by an old bridge of 19 arches, 11 m. E. by S. Derby, and 108 m. N.N.W. London. Area of parl. bor., which is co-extensive with the co. of the town, and comprises three pars., 2610 acres. Pop. in 1821, 60,415; in 1831, 50,690; and in 1841, 53,091. The town stands partly at the bottom and partly on the sides of a steep red sandstone rock, the summit of which is crowned by a modern building, called the castle, occupying the site of a castle built by the son of William the Conqueror, and demolished by order of Charles II. The streets, many of which rise above each other in successive terraces, are very narrow, and irregularly laid out; two long thoroughfares run very nearly parallel N. and S., crossed at right angles by other streets; and considerable improvements have taken place in the N. part of the town. All the streets are well paved, and lighted with gas; there is a good supply of water from two companies, and the police is tolerably effective. The market-place, which is spacious, and surrounded by handsome buildings, has, at its E. end, the new exchange, a quadrangular building of four stories, erected at the beginning of last century, and much improved within the last few years; the lower part comprises shops, butchers' stalls, &c. the upper portion being used for assemblies and public business. The county hall, on the high pavement, near St. Mary's church, is another very conspicuous edifice, comprising two law-courts, a grand-jury room, and other apartments, and the business of the assizes. Behind it, and connected by a long

NOTTINGHAM.

covered passage, is the county prison, built on the edge of a rock, below which, at a depth of 70 ft., is the densely crowded and low quarter, called the Marsh. "The building has been altered and enlarged at various times, but is even now very ill suited for carrying on any efficient system of prison discipline: the supervision and control of the prisoners is hence no easy task; and the entire management is susceptible of great improvement." The borough house of correction, or "St. John's" prison, so called from occupying the site of an old monastery, is conveniently situated for its purpose; and shortly after the passing of the Jail Acts was re-constructed, on the principles of classification. It comprises two sides of a square, each three stories high, possesses considerable capabilities, and is in an efficient state, both as respects discipline and general management. At Lenton, about $1\frac{1}{2}$ m. from the town, is a small jail, belonging to the Honour of Peveril; but "it is small, insecure, and totally unfit for its purpose: indeed, its abolition would be a public benefit." (*Prison Inspectors' 3d Rep.*, ii. 38-39.) The town-hall is a large building, three stories high, of which the lower part is used as a bridewell, while the upper apartments are used for corporate business, and other purposes. The other public buildings consist of a small theatre, little frequented, the cavalry-barracks in the castle-park, the foot-barracks, the yeomanry riding-house, now used as a circus, and the grand stand, on the racetrack N. of the town: with eight churches and chapels, besides numerous places of worship for dissenters.

St. Mary's church, standing on a bold eminence, 170 ft. above the level of the adjacent meadows, is a cruciform structure, in the perpendicular style, with an elegant square tower, rising from the intersection of the nave and transepts. A few years ago it underwent a thorough repair, on a plan consistent with its original architecture, and is now the handsomest church of the town: the living is a vicarage, of the annual value of 700*l.*, with a glebe-house, in the gift of Earl Maunser. St. Peter's, near the market-place, is a building of mixed architecture, partly Saxon and partly Gothic, with tasteless modern additions, being remarkable chiefly for its lofty spire. St. Nicholas, erected in 1678, on the site of a more ancient edifice pulled down during the parliamentary wars on account of its proximity to the castle, is of brick, with stone corners: it comprises a nave with two side aisles, and has a light appearance outside, as well as good interior accommodation. St. James' church, on Standard hill, in the district called the Park, is a modern edifice in the perpendicular style, with a low embattled tower. St. Paul's church, of Grecian architecture, with a Doric portico, is capable of accommodating upwards of 2500 persons. It was formerly subordinate to St. Mary's, but has recently been made an independent district parish church. Trinity church, a handsome Gothic structure, with a tower and spire, fitted to accommodate 1400 persons, is now nearly completed. There are numerous places of worship for dissenters, including a Roman Catholic chapel, meeting-house for the society of Friends, and Jews' synagogue, connected with which, as well as the churches, are above 30 Sunday-schools, attended by above 5000 children of both sexes. The blue-coat school furnishes clothing and instruction to 60 boys and 20 girls; a national school had, in 1834, 570, and three Lancasterian schools, 454 children: there are, also, four other subscription-schools, and five infant schools. The free grammar-school was founded in 1513, and before the close of the last century, had fallen into disuse; but in 1807 the establishment was revived, and it now furnishes the means of a respectable classical education to between 50 and 60 boys.

The other charities of Nottingham comprise, 1. Plumtree hospital (founded in the reign of Richard II., and subsequently enlarged), for 13 aged widows, besides out-pensioners; 2. Colles' hospital, which provides ample accommodation for 24 poor men and women, with a stipend and allowance of coals; and, 3. Lambly hospital for decayed, burgesses or their widows; besides which, several other charities confer essential benefits on the infirm and aged of both sexes. On Standard hill is the general hospital or infirmary, standing in a spacious enclosure, and comprising a centre and two wings, with large, airy wards for patients, about 1300 of whom are relieved, on an average, every year. The lunatic asylum, opened in 1815, is in New Sunnington, and has good accommodation not only for pauper but other patients. Nottingham has likewise two dispensaries, and several other benevolent institutions, with bible tract societies, &c.; and there are few towns in which so much is expended in the relief of the sick and necessitous of the working classes. The three parishes of Nottingham are formed into a poor-law union: the maintenance of the poor, in 1839, cost 218,556*l.*

The chief literary establishment of the town is the public library and news-room in the Market-place, which has a collection of more than 8000 volumes, a museum of mineralogy, lecture-rooms, &c., with an attached literary society.

A mechanics' institute, established in 1894, has a considerable library, with apparatus, &c. Nottingham, also, issues three weekly newspapers, the *Journal*, *Review*, and *Mercury*.

Nottingham is celebrated as being the great centre of the bobbin-net and lace manufacture, besides which it enjoys, in common with Derby and Leicester, a large share of the hosiery business. The first attempt at the manufacture of lace by machinery dates as early as 1768; but though this was followed by many subsequent attempts to shorten the tedious process of making lace on the pillow, it was not till 1809 that Mr. Heathcoat, of Tiverton, discovered the correct principle of the bobbin-net frame, and obtained a patent for his invention. Steam-power, first introduced in 1816, and becoming general in 1823-23, gave a great stimulus to the trade, which was further increased on the expiration of Heathcoat's patent. Prices fell in proportion to the increased production; and the Nottingham lace-frame soon became the organ of general supply, rivalling and supplanting, in plain nets, the most finished productions of France and the Netherlands: so much so that large quantities were smuggled into those very countries from which lace was formerly smuggled into England. But the great object of the manufacturer is not so much to produce very fine, and, consequently, high priced lace, for which the demand must at all times be very limited, as to improve the fabric and lower the cost of the inferior qualities for which the demand is comparatively extensive. At present (1841) there are supposed to be about 1600 bobbin-net and warp-lace frames employed in the town and its immediate vicinity: the wages paid to the individuals engaged in the trade vary from 1*s.* 6*d.* to 5*s.* per week for children, 7*s.* to 15*s.* per do. for young people and inferior men, 15*s.* to 30*s.* per do. for power and hand-frame men on plain work; and 30*s.* to 40*s.* per do. for men working hand-frames, weaving patterns.

The health of the power-machine workmen is said to be, on the whole, good: the factories are neither hot nor confined; and the workmen have only to superintend, not work the machines. Hand machine labour is much heavier; but as it is the custom to work by shift, each man is seldom more than six hours a day at the frame. Hand machines used to be let out at a weekly rent to the workmen by capitalists; but they are now much reduced in numbers; and nearly all those that now exist are the property of those who work them, either by their own hands, or by the aid of journeymen.

Subordinate to its other departments, the town had, in 1839, three cotton-mills, two worsted-mills, and three silk-mills; employing, in all, nearly 900 hands. Nottingham has likewise very extensive establishments for making bobbin-net and stocking frame machinery, large bleaching-works, maltings, and breweries: the Nottingham ale has obtained considerable celebrity. There are two banking companies, and three private banks. The Nottingham canal connects the town northward with the Colsoar Iron and coal district, and southward with the Trent, and the great canal system of the N. midland counties. It has also very extensive railway communication, by means of the Midland Counties railway (opened in June, 1840) which is united southwards with the Birmingham line at Rugby, and with the North Midland railway at Derby. It is $5\frac{1}{2}$ m. long, and cost about 21,300,000*l.*

Nottingham claims to be a borough by prescription, but received charters from Henry II., and many subsequent monarchs. Henry VI. having granted to it the additional privilege of being a county of itself. It is divided, under the Municipal Reform Act, into seven wards; and is governed by a mayor, 13 other aldermen, and 48 councillors: it has likewise a commission of the peace, under a recorder. Corporation revenue, in 1839, 213,718*l.* exclusive of 2344*l.* accruing from the sale of property. A court for the recovery of debts under 40*s.* is held monthly: the assizes, both for the borough and county are held in spring and summer; and quarter sessions for the S. division of the county, in January, April, June, and October. Nottingham has sent two members to the House of Commons since the 12th Edward I., the right of election down to the Reform Act being in the freemen, (by birth, apprenticeship, and purchase,) and in freeholders to the amount of 40*s.* The electoral limits were not altered by the Boundary Act. Registered electors, in 1839 40, 5436. Nottingham is also a polling-place for the N.W. division of the county. Markets on Wednesday and Saturday, but principally on the latter. Large fairs for cattle, cheese, &c., March 7th, 8th, and 9th; Oct. 2d, 3d, and 4th; three other smaller fairs.

The origin of Nottingham is involved in obscurity; but as early as in the time of Alfred, it was of sufficient importance to give its name to the county. The castle was built by William Peveril, the natural son of William the Conqueror. Edward III. held several parliaments here, in one of which were enacted the laws relating to the settlement

of the Flemish manufactures. Nottingham was the chief place of rendezvous for the troops of Edward IV. and Richard III. during the wars of the Roses; and it was here, in 1643, that Charles I. formally raised his standard against the parliament. The inhabitants, however, being attached to the republican cause, the king was soon compelled to abandon the town and castle to the parliamentary forces. Nottingham has been the scene in more recent times of disturbances among the working classes. In 1811, when considerable distress prevailed among the weavers in consequence of our exclusion from the continental markets, combinations were formed among the workmen for the purposes of breaking the frames, which they erroneously supposed had thrown them out of employment; and to such an extent did they proceed, as to call for the most vigorous interference of the legislature. Disturbances of a minor nature have occurred several times since that period; but the only serious riot of late years took place on the 8th Oct. 1831, during the agitation preceding the passing of the Reform Act, when the rioters burnt down the castle. (*Parl. Papers; Private Information.*)

NOTTINGHAM, p. t., Rockingham co., N. H. 25 m. E. S. E. Concord, 493 W. Incorporated in 1722, first settled in 1737. Drained by North river, a branch of Lamprey river. It contains a Free-will Baptist church, five stores, three grist-mills, six saw-mills; 11 schools, 467 scholars. Pop. 1193.

NOTTINGHAM L. Mercer co., N. J., 17 m. N. E. Mount Holly. Watered by Assumpink and Crosswick's creeks. It contains a Presbyterian and a Baptist church, 28 stores, three lumber yards, three furnaces, three fulling-mills, three woolen factories, seven cotton factories with 6500 spindles, 10 grist-mills, seven saw-mills, one oil-mill, five tanneries, four distilleries, one printing-office, one brewery; one academy, 36 students; 13 schools, 248 scholars. Pop. 5109.

NOTTOWAY, county, Va. Situated S. E. of the centre of the state, and contains 290 sq. m. Bounded S. W. by Nottoway river. Drained by tributaries of Appomattox river. It contained in 1840, 3540 neat cattle, 6827 sheep, 10,394 swine; and produced 42,145 bushels of wheat, 248,863 of Indian corn, 70,130 of oats, 8367 of potatoes, 2,912,950 pounds of tobacco, 90,669 of cotton. It had seven stores, eight flouring-mills, 17 grist-mills, five tanneries; 10 schools, 195 scholars. Pop.: whites, 2490; slaves, 7071; free coloured, 138; total, 9719. Capital, Nottoway, C. H.

Nottoway, p. t., St. Joseph co., Mich., 137 m. W. S. W. Detroit, 592 W. Watered by St. Joseph's river. It contains six stores, one flouring-mill, two saw-mills; 10 schools, 201 scholars. Pop. 1236.

Nottoway, C. H., p. v., capital of Nottoway co., Va., 67 m. S. W. Richmond, 186 W. Situated on the N. W. side of Nottoway river. It contains a courthouse, jail, clerk's office, one store, one flouring-mill, 15 dwellings, and about 90 inhabitants.

NOVARIA (an. *Nesaria*), a city of the Sardinian continental dom., cap. division, prov. and mand. of its own name, on an eminence between the Gogos and Tordopio, 52 m. N. E. Turin, and 37 m. W. by S. Milan. Population, in 1838 (ex. gar.), 18,524. It is surrounded by ramparts and ditches, and defended by a castle. Though the streets are mostly narrow, it is, on the whole, tolerably well built, and has many handsome residences. The cathedral, the Dominican church, and that of St. Gandenzio, and the large barracks, are the principal public edifices. Novaria has numerous convents, several hospitals and colleges, a theatre, and a government loan bank. It is a bishop's see; and has manufactures of silk and linen fabrics, leather, &c., and two large annual fairs. Under the French it was the cap. dep. *Agogna*. (*Dict. Obep.*)

NOVA SCOTIA, one of the British colonies of N. America, consisting of an oblong shaped peninsula, between lat. 43° and 46° N. and long. 61° and 67° W.; connected with New Brunswick by a low sandy isthmus, only 14 m. across, and separated from Cape Breton by the narrow strait called the Gut of Canscaw. It is about 300 m. in length, and of very various breadth. Area according to Halliburton, 15,620 sq. m., about 1-5th part of which consists of lakes, rivers, and salt-water inlets. Population, in 1838, 155,000. The coast-line is extremely irregular, forming numerous capes and bays. Capes George and Canscaw are the chief promontories on the N. E. side, and at the S. extremity is Cape Sable. The basin of Minas is a deep inlet on the N. W. side of the peninsula, forming a part of the bay of Fundy, which separates Nova Scotia from New Brunswick. St. Mary's and Argyle bays are on its S. W. side; Pictou, Antigonish, and Chedabucto bays form the chief irregularities on the N. coast; and the E. coast from Cape Canscaw to Cape Sable, is indented with almost innumerable small bays, harbours, and rivers. Rocks and islands fringe its shores, and the aspect of the entire Atlantic coast is exceedingly picturesque. Deep water is found, almost without exception, close to the rocks and islands; and the peninsula

presents towards the bay of Fundy bold and almost precipitous cliffs. The interior is intersected in almost every direction by streams, rivers, and lakes; but, with the exception of Annapolis river and lake Rowan, connected with the sea by the river Mersey, most of them are of very inferior size. The peninsula has no elevations deserving the name of mountains; its highest point, mount Ardoise, between Windsor and Halifax, not rising more than 760 feet above the sea. A pretty high ridge of hills skirts the shore of the bay of Fundy.

As respects geological constitution, "the greater part of Nova Scotia may be described as a low range running from S. W. to N. E., resting on solid rocks of granite, trap, and slate alternately. Towards the E. end of the peninsula are beds of sandstone, graywacke, gypsum, limestone, porphyry, and many other kinds of rock; and on these strata there is usually a rich deep soil. The barren tracts are chiefly of sand or clay; and in these parts, especially about Pictou, are the great coal-fields of the peninsula. Iron is abundantly interspersed among the coal strata; and different varieties of lead and copper ore are met with, though in smaller quantities. Near Pictou are several brine springs, one of which is saturated with salt in the proportion of 13 to 86 of water." (*Report on Brit. N. America*, App. E, p. 140.)

The climate of Nova Scotia, with respect to temperature, bears a general resemblance to that of Lower Canada, and is subject to the same great and sudden variations. The greatest degree of heat observed at Halifax by Captain Moorsom was 85° Fah. and the extreme of cold 16°. The difference of temperature within 24 hours often exceeds 50°, and a difference of 69° has been known to occur within the same period. These changes, however, are seldom so frequent or extreme in the interior, or in those parts of the province less immediately on the Atlantic. Notwithstanding the occasional lowness of temperature, the maritime situation of Nova Scotia tends to abridge the duration of the frost. The severe weather usually sets in about the middle of December, and it is not uncommon for the frost to break up at the end of January. The quantity of snow not only varies greatly from year to year, but is also very unequally distributed throughout the province. The snow-storms are very heavy, some having been known to continue for 60 or 70 hours without intermission. (*Moorsom*, p. 108.) The severity of winter ends late in March, when cold, damp, east and north-east winds succeed, caused by the breaking up and passage along the coast of vast fields of ice from the gulf of St. Lawrence. Hence the most disagreeable season in this country is from the vernal equinox to the end of April. Spring approaches tardily and irregularly, the close of May often arriving before the fields are fully clothed with verdure. A very warm summer occupies three months, dating from the early part of June. May and June are marked by the prevalence of fogs, especially on the eastern coast, while July and August are usually remarkable for a continuance of calm serene weather. Autumn, the most beautiful season of the year, may vie with that of any country. September and October are very similar to the same months in England; but in November, and even December, there are days which, for sunny, warmth, and mildness, are equal to the loveliest mornings of an English May. (*Moorsom*, p. 167.) Westerly and N. W. winds are most prevalent; the fine bear to the west days a proportion of eight to five. The extreme variations of temperature common in this country have not the injurious influence on health which one might naturally expect. Rheumatic and inflammatory complaints are far more prevalent than any other; and a considerable annual mortality occurs from pulmonary consumption. Intermittent fevers, however, so common in Canada and the United States, are here wholly unknown; typhus occurs only in a mitigated form, and the ravages of the yellow fever have never been felt. Nova Scotia, therefore, may, on the whole, be termed a healthy country. Its inhabitants often live to extreme age; many attain ninety and even a hundred years. (*Murray's Brit. America*, li. 119.)

As respects agriculture, Nova Scotia is estimated to comprise somewhat more than 5,000,000 acres of land available for tillage; the proportion of land under cultivation at present being to the wilderness as 1 to 36. The first large public grants of land appear to have been made in 1760; and in less than 13 years from that time, nearly 8,000,000 acres (including the whole of Prince Edward's Island, then a part of Nova Scotia) were granted in lots, ranging from 30,000 to 150,000 acres, to individuals, or companies in England. These grants contained conditions of improvement, but the grantees, after having incurred some expense in trying to settle their extensive properties, abandoned the land to its few inhabitants, or suffered it to remain absolutely waste. Efforts made to excheat these lands to the crown were repeatedly baffled by the influence of the absentee proprietors; and thus the province was effectually closed

NOVA SCOTIA.

against immigration, either from England or the neighbouring colonies. Large grants of escheated land were, however, made on the breaking out of the American war to refugee royalists; but these were seldom occupied, and are now, for the most part, uncultivated, opposing serious obstacles to the cultivation of the lands around them. Licensed occupiers, however, and squatters, have improved some portions of these tracts; and to them the progress made by the colony in population and agriculture is almost entirely ascribable. The system of selling in lots not exceeding 1000 acres was introduced in 1827; and the average price of unimproved land, in 1839, amounted to 2s. 3d. an acre. The largest portion of it, however, has been acquired, not by actual or intending settlers, but by speculators, who, tempted by the low price, have purchased on account of the timber, or with a view to profit from a future sale. Indeed, out of 5,750,000 acres that have been granted in Nova Scotia, only about 400,000 are under cultivation. (*Report on British North America*, App. B., pp. 12, 13, and 139.)

The total quantity of land still ungranted in Nova Scotia was estimated by Mr. Morris, in 1838, at about 2,500,000 acres; but of these not above one-eighth part is fit for tillage. The country, as respects the quality of land and the state of agriculture, may be divided into three distinct sections. The E. division, formed by a line from the mouth of the river Philip to that of the St. Mary, presents a strong upland soil, well adapted for grain, and varied with strips of rich intervalle land along the sides of its rivers. The upland consists principally of a strong, loamy clay, intermixed more or less with sand and gravel, the soil of the intervalle being a rich, sandy, alluvial loam. The lands about Pictou are very rich and productive, seven successive crops of wheat being frequently raised without the use of manure. Agriculture, however, is only imperfectly understood, and no proper use is made of the resources of the soil. In the S. district the land is almost wholly upland, with very little intervalle or marsh: the soil is extremely rocky, varying from a strong loam to a light sand. Good returns of wheat and the coarser grains are obtained in some places; but the state of the farms generally exhibits the very reverse of intelligence. The unskilful use of manure, the indiscriminate employment of sea-weed, and, in many instances, the total neglect of any manure whatever, have retained those lands in a poor and backward state which better management would have rendered comparatively productive. (*Moorsom*, p. 183.) The N.W. division comprises upland, intervalle, and marsh land; the first two being poor, and scarcely susceptible of any improvement. The marsh land is of two kinds,—one, called salt-marsh, being little more than a flat surface of spongy soil, overflowed at spring-tides, and covered with a long rank grass, sometimes converted into hay; the other, called the dyke-marsh, owes its formation to the impetuosity of the tide in the bay of Fundy, which brings along with it fine loamy particles, which it leaves behind as it recedes, and thus, in course of time, a succession of layers raises the surface to the level of spring-tides, when an embankment or dyke, called an *abbeisau*, is formed to prevent any further overflow. A newly-enclosed marsh is usually left unsowed for the first three or four years: in the third year it is fit to receive the plough, and is then sown with wheat, the first crop averaging about 60 bushels an acre; and on long cultivated marshes the returns average about 60 bushels of wheat, and 2½ tons an acre of hay. The crops usually cultivated are wheat, oats, and barley, with smaller quantities of peas, buckwheat, and rye. Potatoes are universally cultivated, and form the staple article of food throughout the province. Crops of beans or cabbage are rarely seen, and horticulture meets with very little attention.

The average produce per acre of medium farm land is estimated at 25 bushels of wheat, 40 of oats, 200 of potatoes, and two tons of hay: but all calculations of this nature are very vague, and little to be depended on. Good dairy-farms are found in the N.W. division. Hire-labour is difficult to procure, and too expensive to allow of its adoption, except by the more wealthy. Labourers (who do not exist here as a separate class, but comprise the more indigent of the new settlers) are usually hired during the six months of summer, for which they receive from £15 to £18, with board and lodging; but a part of the payment is made in produce. (For further information, see *Moorsom's* work, p. 176-222, from which the above remarks are mostly derived.)

The forests of Nova Scotia abound with good timber: pine and birch, oak, beech, ash, and maple, are the most common trees; and many of the inhabitants have for years been supported by the timber trade. The exports of timber in 1837 were valued at £143,736. The principal wild animals of the province are the moose-deer, caribbo, bear, loon-cervier, fox, martin, otter, mink, and squirrel. Hunting and trapping were once extensively pursued: but in proportion as the country has become settled, the number of

animals has gradually but rapidly decreased, so that the exports of furs in 1837 were not estimated at more than £4330. The rivers abound with many varieties of freshwater fish; besides which, cod, herrings, mackerel, halibut, and other kinds of sea-fish, are found in the deep bays of the coast. Chedabucto bay and Annapolis basin are the principal stations for the herring and mackerel fishery: but the inhabitants share, also, in the whale, seal, and cod fisheries; and this branch of industry has for some years been on the increase. The fish of all sorts (chiefly cod) exported in 1837 was valued at £181,960; besides which, the exports of train oil were estimated at £30,980. The fisheries are said to employ about a third part of the inhabitants; but this is, no doubt, an exaggerated statement. Another important branch of employment in Nova Scotia is mining. Coal and iron are abundant, and are pretty extensively wrought by the general mining association, to which all the mines have been let. The total value of the coal produced in Nova Scotia and C. Breton amounted, in 1839, to £25,600.

Gypsum, which abounds in the W. districts, is highly prized in the United States as manure, and the quantity exported thither from Nova Scotia in 1837 amounted to 22,336 tons, valued at £2738. A stone is found in many parts of the province extremely well adapted for grindstones, which are celebrated all over America under the appellation of "Nova Scotia blue grits": the exports to the United States were valued, in 1837, at £12,065. The manufactures are quite unimportant: the weaving of coarse woollen cloths, called *homespun*, is pretty general throughout the colony; and carding-mills are established in some parts. Carpets, also, are woven in small quantities, and ropes are made of hemp imported from N. Europe. Grist and saw-mills are very numerous; besides which, there are several breweries and tan-yards. The position of Nova Scotia, on the extreme W. side of N. America, gives it great commercial advantages; and its trade, especially with the U. States, has been for some years steadily on the increase. The exports, chiefly to Canada, the U. States, and Great Britain, consist of fish and fish-oil, timber, coals, &c.; the whole being valued, in 1837, at £478,461. The imports during the same year comprised corn and flour, British manufactures, colonial produce, &c., and were valued at £790,765. The trade principally centres in Halifax, which *see*. Subjoined is an

Account of the Ships and their Tonnage that entered and left the Ports of Nova Scotia in 1839:

Countries.	Inwards.		Outwards.	
	Ships.	Tons.	Ships.	Tons.

Total,	4,006	332,136	4,422	351,177

The means of internal communication have been improved within the last few years, and some of the roads are stated by *Moorsom* to be equal to the secondary roads in England. They are partly supported by annual grants from the house of assembly, and the inhabitants of each district are compelled to furnish, either personally or by substitute, a certain quantity of labour for the same purpose: this system, however, has not been found successful; and large tracts are still left uncultivated, owing either to the absence or wretched condition of the roads. (*Report*, App. B. p. 135-140.) A water communication has been effected between Halifax and Windsor; but the want of any such communication is severely felt by those whose settlements are at a distance from Halifax, the chief market in the colony for agricultural produce.

The constitution of Nova Scotia is a representative provincial government. The Lieutenant-governor, who is subordinate to the governor-general of British N. America, is commander within the province, and the supreme civil, as well as military authority. Under him is a council of 12 members, of whom the bishop and chief justice are members *ex-officio*, and the rest appointed by the crown. The legislative assembly is a body of 41 members, elected by 40s. freeholders. It is elected, like the British House of Commons, for seven years, but may be prorogued or dissolved by the lieutenant-governor. It meets every year, and all money bills must originate in this assembly: other bills require the consent of the governor and council before they become law. For the purposes of election, Nova Scotia is divided into 10 counties (including Cape Breton). The counties have two members each, and the other representatives are returned by the towns. Justice is administered by a court of queen's bench, sitting at Halifax, and by district courts in the different counties. The common and statute laws of England are in force, together with statutes passed by the local legislature, and approved by the queen in council. The laws, according to McGregor, are, on the whole, judicious; and, as far as they go, calculated to pro-

NOVELLARA.

mote the prosperity of the colony. But there is too frequent a recurrence to courts, and the harmony of society is often broken by a love of litigation.

The provincial revenue, amounting to somewhat more than 60,000*l.*, is raised by duties of 24 per cent. *ad valorem* on property generally, with an additional rate on wine and spirits, and by duties on imported goods, lighthouse dues, rents, &c. Taxation, however, is extremely light; the cost of defence being defrayed by Great Britain, and the inhabitants being burdened only with the civil government and local improvements. The military force consists of three regiments of the line, the expense of whose maintenance to England is estimated at about £190,000 a year.

The Church of England is the established religion, and the colony is divided into 32 parishes, each of which has a rector salaried by the crown or the Society for the Propagation of the Gospel. Nova Scotia was made a bishopric in 1787, the diocese extending over New-Brunswick and Prince Edward Island, Newfoundland, and the Bermudas. The bishop draws no revenues from the colony, and holds spiritual jurisdiction only over the members of his own church. The Presbyterians, however, are the most numerous body, and a synod of 17 members meets annually at Halifax. There are numerous Roman Catholics, consisting principally of the Acadians and Irish settlers. The Baptists and Wesleyan Methodists are also an important body; and a complete toleration is granted to all religious denominations.

Among the establishments devoted to education, the principal is Windsor college, partly supported by the provincial government and partly by subscription; but it has not met with much success. The Presbyterians have an academy at Pictou, and the Baptists have another at Hoxton, attended by about 50 students. There are eight schools at Halifax, furnishing instruction to 1000 children. An Episcopal school at St. George's is attended by 190 boys and 100 girls; and there is a large grammar school at Sydney. The province comprises, also, 600 common schools, and 30 combined English and Latin schools, attended altogether by about 90,000 children. These schools are supported by grants, subscriptions, &c., and 40 other schools are maintained by the Society for the Propagation of the Gospel.

Of the population of the province, the Indians do not now exceed 600; there are about 6000 Acadians (or descendants of French settlers, before the country was ceded to the British), and about 2000 free negroes: the remainder of the population consists of Germans, or their descendants, British emigrants, chiefly from the N. of England and Scotland, a few Irish, and the descendants of refugee loyalists from the U. States. The Acadians congregate in settlements of their own, mixing little with the other colonists.

Nova Scotia was discovered, by John Cabot, in 1497. It was first settled by the French, who called it Acadia. It subsequently fell under the English, having been, in 1677, granted by James I. to Sir W. Alexander, and named Nova Scotia. In 1633, it was restored to France by the treaty of St. Germain's; but it several times subsequently changed masters, and was not finally established in the quiet possession of the British till 1758. At the peace of 1763, the boundaries of this colony were so defined, as to include New-Brunswick and Cape Breton; but, in 1784, the former was made a separate government. HALIFAX (which see) is its capital and the seat of government. (*M. Gregor's Brit. America*, i. 250-437; *Moorson's Letters from Nova Scotia*, passim; *Murray's Brit. America*, vol. II.)

NOVELLARA, a town of N. Italy, duchy of Modena, in the plain of the Po, 16 m. N.W. Modena. Pop. 4070. It is the capital of a principality annexed to Modena in 1737, and has some silk and leather manufactures.

NOVGOROD, a government of Russia in Europe, between the 57th and 61st degrees of N. lat., and the 30th and 42d of E. long.; having E. the government of Volodga, S. those of Jaroslavl, Tver, and Pskov; W. the latter and Petersburg, and N. the last named and Olonez. Length, N.E. to S.W., about 400 m.; breadth, varying from 40 to 160 m. Area, estimated at 43,880 sq. m. Pop., in 1838, 825,400. The surface, which in the N. is low and level, rises gradually toward the S.W., where the Valdai plateau reaches an elevation of 1000 feet above the sea. The government is well watered: principal rivers, Volkhof, Msta, Chexna, Mologda, Lovat, &c., some of which run towards the Volga, and others towards the lake of Ladoga. Among the lakes are those of Bielo-Ozero, Vojle, and Ilmen. The climate, especially in the N., is more severe than in the government of Petersburg, not being tempered by the sea breezes. Except in a few districts, the soil is not eminent for fertility, and night-frosts often spoil the crops. Scarcely any orchard trees are met with, but hemp and flax are grown for exportation; and in 1832, 868,000 *chetverts* of corn, principally rye, oats, and barley, were raised. Timber is an important product: a large part of the government is covered with forests, these belonging to the crown covering 2,737,900 de-

NOVGOROD.

catines. Few cattle are reared. Next to agriculture, sailing is a principal occupation. The salt-springs of Starais-Roums furnish an adequate supply of salt for this government and that of Tver. Manufacturing industry is very backward; there are a few copper, glass, tile, leather, woolen cloth, and other factories; but in 1832 there were not, in all, 50 manufacturing establishments in the government; the population have, however, a turn for commerce, and the different fairs and markets are well attended. Novgorode is divided into 10 districts: Novgorod, Tikhvine, and Valdai are among its chief towns. Except some Lutherans among the Finnish inhabitants, the population is principally of the Greek church. Education is very little diffused. The capital has a gymnasium; and there are schools there and in other parts of the government; but the young persons of all descriptions at school in 1835 amounted to only 1086! The government is not supposed to possess a printing-press. Civil public revenue estimated at 2,733,000 roubles. This territory was made a separate government in 1776.

Novgorod, (called *Feliki*, or "the Great,") a city of Russia, and formerly the most important in that empire, capital of the above government, on the Volkhof, near its exit from the Lake Ilmen, 100 m. S.E. Petersburg, and 305 m. N.W. Moscow. Lat. 59° 31' 32" N.; long. 31° 16' 24" E. Its population, which, in 1830, amounted to only 8634, was estimated to have amounted, in the height of its prosperity, in the 15th century, to 400,000, though this, probably, is much beyond the mark. At this period, Novgorod, with London, Bergen, and Bruges, constituted the four principal foreign depôts of the Hanseatic League; but the fall of the League, and still more the massacres perpetrated by the bloodthirsty barbarian Ivan Vassilievitch II., in 1570, proved fatal to this great emporium; and it soon after fell into all but irretrievable decay. La Motraye, who visited it early in the last century, gives the following description, which will apply nearly as well in the present day. "Nothing is more desolating than the view of Novgorod from a distance: its extent, and the number and height of its towers and spires, seem to announce one of the finest cities in Europe; but, on nearing it, the traveller perceives that its walls and houses are only of wood; and on entering, he finds it ill built and wretchedly paved. Only the churches and a very few private residences are of stone or brick. There may be from 80 to 85 churches, including those of the monasteries: besides which, the castle, a large fortress bristling with artillery, is the remaining principal edifice." (*La Motraye, in Schmitzer, la Russie*, p. 70.) The town, in fact, though comprising a large space, consists principally of scattered groups of miserable habitations, separated by ruins or by fields, which, it is evident, had once been covered with houses. It is divided into two parts by the Volkhof, here crossed by a handsome bridge of 11 arches, which is almost the only modern structure in the city. The piles, &c., of this bridge are of granite; the rest is chiefly of timber: its entire length is 270 yards, and the breadth of its central arch 85 feet. In the *Torgovata*, or market-town, are the governor's residence, an ancient palace of the czars, and most of the shops and warehouses. The *Sofskata*, on the opposite bank of the Volkhof, is about 1½ m. in circuit, and surrounded by an earth rampart and a ditch. In it are the *kremi*, or citadel, the cathedral of St. Sophia, the archbishop's palace, and the various tribunals. The *ciudai* is in many respects similar to the kremlin of Moscow, having a stone wall, flanked with many round and square towers. The cathedral, built between 1044 and 1051, and repaired in 1832, is of stone, somewhat on the model of St. Sophia at Constantinople. It has some remarkable bronze casts, with sculptures in *alto-relievo*, representing passages from scripture history; and many of the paintings on its walls are curious, being said to date from a period previously to the revival of the arts in Italy. Novgorod is the seat of a military governor, whose authority extends over the adjacent province of Tver. It has a few manufactures of sail-cloth, leather, and vinegar, and some trade in corn. Though not the original capital of Rurik, it became the seat of the Russian government in 864. In the beginning of the 11th century, the inhabitants obtained considerable privileges that laid the foundation of their liberty and prosperity; and as the city and its contiguous territory increased in population and wealth, they gradually usurped an almost absolute independency; so that, in effect, Novgorod, in the middle ages, should rather be considered a republic, under the jurisdiction of an elective magistrate, than a state subject to a regular line of hereditary monarchs. During the 12th, 13th, and 14th centuries, Novgorod formed the grand *entrevue* between the countries E. of Poland and the Hanseatic cities; and its wealth and power seemed so great and well established, and the city itself so impregnable, as to give rise to the proverb—

"*Quis contra Deum et magnam Novorodiam P?*"

"Who can resist the Gods and Great Novgorod?"

But in 1477 it was obliged to submit to Ivan I., great duke

of Russia. In 1554 it was visited by the famous Richard Chancellor, who describes it as the "great mart town of all Muscovie, and in greatness beyond Moscow." But not long after it was subjected, as already stated, to the scourge of the destroyer, and fell, never to rise again. The foundation of Petersburg took from it all hope of ever recovering any portion of its ancient prosperity. (*Schmitzer, La Russie*, 152-174; *Cox's Travels in the N. of Europe*, lii, 77-90, 8vo. ed.)

NOVI, a town of N. Italy. Sardinia dom. div. Genoa, cap. prov. and mand.; in the fertile plain of Marengo, at the foot of the Appennines, 14 m. S.E. Alessandria. Pop. in 1838, 10,278. Few remains exist of its old castle; its streets are narrow and ill-paved, and its public edifices undeserving of notice. It has, however, a handsome square. It is the seat of civil and commercial tribunals, and has a college and hospital, and manufactures of the best silk twist in the divisions. It is also an *entrepôt* for goods passing between Italy and Germany. On the 16th of August, 1799, an obstinate conflict took place near this town, when a French army, under Joubert, who fell in the action, was defeated by the Austro-Russian army, under Suwarrow.

NOVI, p.t., Oakland co., Mich., 25 m. N.W. Detroit, 547 W. Watered by the W. branch of Rouge river. It has two stores; 10 schools, 255 scholars. Pop. 1351.

NOVI-BAZAR, a town of Turkey in Europe, province Bosnia, capital Sanjak, on the Ratchka, 130 m. S.E. Bosnaserai. Pop. estimated at from 8000 to 10,000. It is a town of considerable traffic, the residence of a pacha and a Roman Catholic bishop, and has some warm baths. Our acquaintance with it is, however, very limited, as it is seldom or never visited by travellers from W. Europe.

NOXUBEE, county, Miss., situated in the E. part of the state, and contains 680 sq. m. Drained by the W. fork of the Tombigbee river. It contained, in 1840, 10,075 neat cattle, 1461 sheep, 21,140 swine; and produced 4073 bushels of wheat, 400,750 of Indian corn, 15,036 of oats, 11,638 of potatoes, 1,066,345 pounds of cotton. It had seven stores, two flouring-mills, four grist-mills, four saw-mills, one tannery, one printing office, one weekly newspaper; seven academies, 170 students; four schools, 70 scholars. Population: whites, 1817; slaves, 6157; free coloured, 1; total, 6975. Capital, Macon.

NOYON, (an. *Noviomagus Veromandorum*), a town of France, dep. Oise, cap. Canton, on the Vorse, a tributary of the Oise, 42 m. E.N.E. Beauvais. Pop. in 1836, 3473. It is well built, and surrounded with numerous gardens. The cathedral, erected under Popin and Charlemagne, is 340 feet in length, its main entrance being flanked by two towers upwards of 200 feet in height. Noyon has manufactures of fine linens, tulle, hosiery, leather, copperas, &c., and a brisk general trade. It was erected into a bishopric in 531. Charlemagne held his court in this town for a considerable period, and in it Hugh Capet was proclaimed king. But it is chiefly remarkable for its having been the birth-place of the famous reformer John Calvin, born here on the 18th of July, 1509. (*Hugo; Guide du Voyageur*.)

NUBIA (an. *Ekhiopia*), an extensive tract of E. Africa, between the S. boundary of Egypt and the N. limit of Abyssinia; bounded E. by the Red sea, W. by the desert of Libya, between lat. 13° and 24° N., and long. 33° and 39° E. Estimated area, 360,000 sq. m. Pop. unknown. The country is divided into Lower Nubia, or Nubia Proper, extending from Egypt to the N. frontier of Dongola, and thence to the junction of the river Atbara or Tacazzé with the Nile; and Upper Nubia, which includes Shendy, Halfay (an. *Merot*), and Sennaar. (*Encyc. Britannica*, art. *Nubia*; *Ritter's Africa*, &c.)

Nubia is situated almost entirely in the basin of the Nile. Rocks and mountains are the characteristics of *Lower Nubia*; and the mountains here press so closely on the river, that there would be but little ground left for tillage, if they were not interrupted by lateral plains, the productiveness of which, however, is diminished by the continual encroachments of the deserts. Numerous rocky islands dot the stream, and in some places congregate so as to form rapids, hardly deserving the name of "cataracts," by which they are usually designated. Some of these islets are rendered productive (like the high banks of the Nile), by means of the artificial irrigation effected by *sakas*, or Persian water-wheels. Between the river and the Red sea extends the stony and sandy Nubian desert, interspersed here and there with small fertile spots, or oases. On the east of the latter are a few inconsiderable towns. In *Upper Nubia* the country wears a somewhat different aspect, instead of one river, several streams flow through it to pour their waters into the majestic Nile. The land is also much more elevated, being situated on the lowest of the three intertux on which, according to Ritter, this part of Africa is based. The S. extremity of Nubia has an elevation of 1000 feet above the level of the sea; but northwards the elevation gradually lessens, and the Nubian desert forms

the gradual transition from the lower course of the Nile to the higher and more southern lands of Africa.

Mountains.—Ranges of mountains, forming a continuation of the range traversing Egypt, skirt the entire Nubian coast of the Red sea; but they are not nearly so high nor so important as some travellers have stated. Those through which the Nile forces its course are figured in most maps as running parallel to its bed, as in Egypt; but the numerous so-called cataracts, and the many valleys which intersect the hills, prove that these ranges traverse the Nile parallel to each other from E. to W., crossing the current of this river, instead of accompanying its course from S. to N. *Gebel Snigri* (*Chiggrî*, in Bruce) and *Gebel Safika* take the former direction. From Fuka, on the river Atbara, to Suakin, on the Red sea, stretches another internal chain, called the *Orbay Langay*. Several inconsiderable chains and detached rocky hills, off-shoots from this chain, are distributed over the E. desert skirting the Red sea.

The *Climate* of lower Nubia, though intensely hot, is healthy, on account of its dryness; the plague has never been known to reach beyond the second cataract; but the higher districts are subject to those violent tropical rains which contribute in some degree to the regular swelling of the Nile; the N. limit of these rains is between lat. 17° and 17° 30' N. In Berber and Shendy they continue throughout March and the two succeeding months. The deserts E. and W. of the Nile are subject to violent storms of wind. The *geological structure* of the rocks in lower Nubia consists of granite and syenite, interspersed with black marble, of which last the second cataract is formed. Slate (in the E. desert), porphyry, sandstone, and limestone, have also been enumerated. In the upper countries coarse grey granite, primitive quartz, and mica-slate are likewise often mentioned by travellers. Along the coast of the Red sea gold and silver mines are said to exist; but the pacha of Egypt has made more than one unsuccessful attempt to open them. Neither have the "Emerald" mountains, which pass the Egyptian frontier, yielded any treasure to modern adventurers.

Animals.—The S. parts of Merot seem to be the N. boundary of the natural habitation of the African elephant. Tigers and lions have been seen in the valleys of Shendy, where crocodiles also abound. Wild dogs and foxes are exceedingly numerous. Ruppel having discovered four new species. The hippopotamus seldom ascends the Nile higher than Dongola. Antelopes, of three species, occupy the banks of the White Nile and the desert W. of Dongola. The giraffe (*cerafâ*, "the elegant") inhabits the mountains of Dender, near the Atbara. The principal birds of Nubia are the occipital vulture, the red-throated shrike, and several curious specimens of the family of great-legged thrushes. Bustards are also abundant, with partridges, quails, and several other species of game.

Mirbel having, very properly, classed Nubia with Barbary and Egypt, and placed them in the S. transition zone, the *botany* of Nubia assimilates very nearly with that of those countries. (*See Egypt*, sec. *vegetable productions*, 1, 744.) The great enemies to vegetation here, as in other hot countries, are locusts, clouds of which sometimes darken the air, and settling on the land, strip it of every remnant of verdure; on these occasions, the inhabitants catch and eat them, "out of self-defence."

Description of Lower Nubia.—The Nubian valley of the Nile, which ascends as high as the 7th cataract, and ranges between the 9th and 24th degrees N. lat., comprises 13 states, each governed by its melek, or chief subordinate to the pacha of Egypt. Ten of these states are in Lower, and three in Upper Nubia. Between the 1st and 2nd cataracts, in the state of Kenon and Wady Nubia, the Nile flows through a rocky bed, and precipices enclose the river within very narrow limits, scarcely allowing of cultivation on either side; but at short intervals occur those excavated immensities which will hereafter be more minutely described. El-Kalabshah, the largest village on the W. bank, occupies the site of the ancient *Talmis*; and opposite to it is that of *Contra-Talmis*, the ruins of which have occupied the attention of modern travellers. At Sebou, lat. 23° 50' N., the river inclines to the N.W., flowing past Derr, which, though a mere village of 200 houses, is the capital of the five states N. of Dongola. Ipsambdi, with its well-known excavated temples, is near the centre of the state, called Wady Nubia, on the W. bank of the Nile, in lat. 23° 20' N. The second cataract, which occurs about 35 m. below Ipsambdi, is formed by numerous rocky islets intersecting the stream, on each side of which in this vicinity stretches an extensive and not fertile plain.

Through the district of Batn-el-Hadjar, the Nile passes between a chain of syenite hills, those on the W. side having at their foot many deserted villages and monasteries; only the E. side of the valley is now inhabited. The district of *Sakkot* has many poor villages on both banks of the river, possesses numerous antiquities, and is joined

NUBIA.

southward by *Mahass*, where the most cultivated spots, hitherto situated on the E. bank of the river, are transferred to the opposite shore. Remains of castles, churches, and houses afford evidence that this district was formerly well peopled. The course of the Nile here is tortuous; but S. of the 3d cataract, forming the N. boundary of Dongola, it runs in a pretty direct channel as far as Old Dongola, in lat. 18° 10' N. The stream then takes a sweep to the N.E., preserving that direction for about 100 m., through the highly fertile district of Sheygya, ascending beyond the 4th cataract to the island of Mokrat, which divides the stream. The state of Berber commences southward of the 5th cataract, and in this district the villages stand at a considerable distance from the river. Berber, or El-Mekhair, the capital, is near the E. bank, about 17 m. below the junction of the Tacazzé with the Nile.

Upper Nubia, is a triangular tract lying chiefly between the White Nile, or Bahr-el-Abiad, the Blue Nile, or Bahr-el-Azrek, and the Tacazzé or Atbara. It is now divided into the three states of Shendy, Halfay, and Sennar. From the Berber frontier, for some considerable distance southward, the soil of Shendy consists of immense fertile plains, stretching out from both sides of the Nile on elevated ground, at some distance from the river. Shendy el-Garb "on the W. bank" is a large and not ill-built village, with about 6000 inhabitants: Shendy "on the E. bank" is the capital of the province; and being a place of rest for the caravans from Sennar, possesses regular and well-stocked markets. N. of Shendy are some ruins, supposed to be those of the ancient *Merot*. *Halfay* lies between Shendy and Sennar; and, before the Egyptian conquest by Ismael, the son of Mehemet Ali, belonged to the melek of Sennar: its chief town, having the same name, lies N. of the confluence of the White with the Blue Nile, which takes place at Khartum. W. of the Bahr-el-Azrek is the district of Sennar, or Fungi; it is a flat and fertile tract, with some large villages, mostly composed of conical houses, similar to those of the S. African tribes. Six days' march S. of Khartum is Sennar, the *entrepôt* of the caravan merchandise for Kordofan, Darfur, and Abyssinia. Its environs are wide plains, with a long ragged mountain, about 15 m. W. of the town (Sennar). The most considerable port upon the Red sea is Suakim, whence merchants embark their goods for Arabia, &c.

Population, Languages, &c.—The inhabitants of the different parts of Nubia differ considerably in personal appearance; and those southward are much darker than those in the states bordering on Egypt. The marked features of the whole race, however, are long oval countenances, curved noses, somewhat rounded towards the top, rather thick lips, but not so far protruding as those of the negroes, retreating chins, scanty beards, lively dark eyes, strongly frizzled hair, and well-knit, muscular bodies. The Noubas, properly so called, are about the best looking of the race; both men and women have good features and well-proportioned persons, their disposition and character also being, according to Burckhardt, more susceptible of improvement than those of the Dongolese, who are described as dirty, idle, and ferocious. (See DONGOLA, l. 764.) The people inhabiting the valley of Sheygya, E. of Dongola, are the most powerful of the Nubian tribes N. of Sennar. They are good horse-soldiers, and were employed as such by Ismael Pacha, on his expedition against the negroes of the S. The common people are almost naked, wearing nothing but a hip-cloth. They usually speak the Arabic language; and the learned caste among them cultivate most branches of Mohammedan literature. The Berbers present, perhaps, the worst specimens of Nubian character: treachery, dishonesty, and drunkenness, are prevailing features among the men; and the women, who in the better parts of the country are modest and observant of conjugal fidelity, here indulge in the greatest profligacy, and pay no attention to the marriage vow. The inhabitants of upper Nubia are of Arabic descent, speak the language of the Arabs, and resemble them in their love of a restless, roving life. A pastoral population inhabits the banks of the Tacazzé, which, also, are visited by mountaineers, when in search of pasturage, during the dry season. The E. desert is infested by wild nomadic tribes, constantly at war with each other, and remarkable for adroitness in thieving and treachery towards strangers.

Productive Industry and Commerce.—The cultivated portions of the Nubian valley being, on account of the height of its banks, beyond the inundation of the Nile, the land can only be watered by artificial means. Even in the lateral valleys, the few canals cut through them are rarely full; and the water, both from them and the Nile, is raised by Persian wheels. Dhourra is reaped in December and January; next follows a crop of barley, and then dhourra again. Tobacco is universally raised. Although the S. districts present some excellent land, agriculture offers few charms for the inhabitants; and Sennar and Shendy are celebrated only for being the *entrepôts* of the chief commerce

of E. Africa. The town of Shendy, having Soudan and Abyssinia to the S., Egypt and the Arabian gulf to the N. and E., and Darfur to the W., is the centre of much of the trade with those countries. Markets are regularly held there twice a week; and at one of them Burckhardt saw from 4000 to 5000 cows, as many camels, nearly 100 asses, and several horses for sale. In Shendy are several forges for iron and silver. The merchants from the W. pay regularly to Sennar; they exchange Indian goods for gold, which they transport to Djidda and the E. The price of gold at Sennar is estimated at \$12 an ounce, and at Shendy \$16. Every two months merchant caravans arrive at both these places, frequently consisting of 500 or 600 camels laden with dhourra; others, comprising about 100 camels, trade in various products, as well as slaves. The traffic in slaves is extensively carried on, upwards of 5000 being annually imported from the interior of Africa; of these 2500 are disposed of in Arabia, 1500 in Egypt, and 1000 in Dongola and other parts of Lower Nubia. The Arabs of the Desert supply the caravans with senna of the best quality, ostrich feathers, and charcoal.

History, Government, &c.—It has been supposed that the country of the Ethiopians was among the earliest in which advances were made towards civilization, and that the arts descended from Merot to Egypt. But we have little or no authentic information respecting the state of this country in antiquity; and it was not till the 6th century that the wandering ancestors of the Nubians appear to have settled under a regular government. At that period mention is made of Silco, king of the Nubates and the Ethiopians (Létroune, *Journal des Savans*, 1825); under whom they were converted to Christianity, the country divided into ecclesiastical districts, and the whole subjected to the patriarch of Alexandria. After the loss of Abyssinia, the kings of the Noubas resided at Dongola; but in the 14th century their power ceased, and Nubia was divided into several petty states. In the succeeding century the Mohammedan conquerors reached and subdued the country. Christianity was suppressed, and Mohammedanism took its place.

Down to the year 1821 the people of Nubia were independent, living under their own meleks, or chiefs; but at that period Ibrahim Pacha reduced them to a dependency on Egypt. This change is so far fortunate for travellers, that with the permission of Mehemet Ali, the whole country is open to their researches, and no danger is to be apprehended, except from the climate and the dishonesty of the natives. The same system of military despotism and oppressive taxation that exists in Egypt has been extended to Nubia: but it is a question whether the people be now more heavily taxed than formerly by their petty chiefs, while, in other respects, their condition is improved.

Monumental Remains of Nubia.—*Ipsambol.*—Of all the relics of ancient art with which the valley of the Nile abounds over the whole distance from Merot to Memphis, none have excited more admiration than the excavated temples at Ipsambol, lat. 23° 19' 47" N.; long. 31° 23' 54" E. According to Champollion, the great temple, "*c'est une merveille, qui serait une fort belle chose même à Thèbes*." It is wholly cut out of the solid rock, and presents a façade, supported by four seated colossi, of exquisite workmanship, and not less than 61 ft. in height. They represent *Rameses the Great*, and are all portraits, for the faces bear a perfect resemblance to the figures of that king at Memphis, and elsewhere. The interior is not less grand than the entrance: 16 apartments have been enumerated; the first of these is sustained by eight pillars, against which rest the backs of as many figures of *Rameses*, each 30 ft. in height. The walls of this immense hall are covered with innumerable bas-reliefs on historical subjects, the most striking portraying the conquests of the same prince in Africa. The other apartments afford some curious particulars that supply many conjectures relative to Nubian and Egyptian religious history, which it remains for future students in hieroglyphics to verify. The whole is terminated by a sanctuary, at the back of which are seated five statues, representing Amon, Ra, Phré, Ptah, with the never absent *Rameses the Great*. The smaller of these excavations is a temple dedicated to Hathor by Nofre-Ari, wife of *Rameses the Great*, whose façade has six colossi, each 35 ft. high, carved out of the rock. They represent *Rameses* and his wife, having at their feet statues of their sons and daughters, all of whom have their names and titles. The front of the temple is free from end, and access is much easier to its interior than to that of the greater. A passage leads to the pronaos, which is 35 by 34 ft., supported by six square pillars, three on each side; to this chamber succeeds a vestibule, which leads to the adytum, or sanctuary, containing the remains of a sitting statue cut in the rock, which, however, is not in such good preservation as the rest of the structure. The bas-reliefs adorning the sanctuary are painted, the figures yellow, and are enclosed by a border of three colours: the colour of the ceiling is blue.

NUDDEA.

We are indebted to Burckhardt and Belzoni for bringing these splendid temples to light. The entrance of the great temple is so blocked up with sand that it is only passable by a person divesting himself of nearly all his clothing, and creeping on his hands and knees; and then the heat within is more intense than that of a Turkish bath, the want of air being almost insufferable.

Besides the excavated temples of Nubia, of which Ipsambul does not present the only specimen, there are others, partly hewn out of the solid rock, and partly built. Those of Girêh (lat. $23^{\circ} 31' 45''$ N.; long. $32^{\circ} 56' 55''$ E.), Seboua, Dendera, and Gebel-el Birkel (lat. $18^{\circ} 31' 41''$ N. Rupell) are of this class. The interior of these temples is cut out of the solid rock, while the exterior chambers and appendages are formed of stone-work. From the primitive character of the masonry, the rudeness and decay of the sculptures, and the decomposition of the walls, it has been concluded that the temple of Gebel-el Birkel is older than many of the temples of Egypt, or even of Nubia. This site is also remarkable for 13 pyramids, lying in the desert to the E. of the town, differing from those previously known, their sides presenting small temples with gateways and enclosures. Opposite to Birkel, on the other side of the Nile, at Nouri, is another assemblage of pyramids. The age of all these vast masses of stone, many of them exhibiting little else to the modern traveller than mounds of debris, no doubt belongs to the remotest antiquity. At Sammeih and Dendera, we find specimens of a more perfect class of temples than those before mentioned, and which belong to the last epochs of Nubian art. That at the latter place has the proportions of Grecian structures, and in the pillars have been recognised a mixture of the Greek and Egyptian styles.

Ruins of Merot.—The tract of country enclosed by the Nile and the Tacazzé, or Atbara, and terminating at the confluence of these rivers, was the island of Merot of ancient geographers; and near Assur on the Nile, in the prov. of Shendi, the ruins of the ancient capital of Ethiopia have been recognised. Nothing remains but the Necropolis; which consists of a vast assemblage of pyramids, similar in every respect to those of Birkel. For a particular account of which we refer the reader to *Hoskins' Travels in Ethiopia*, p. 66, et seq. We must not, however, omit to notice the inferences drawn from these and other Nubian monuments by those whose acquaintance with antiquities entitles their opinions to respect. They conclude that art and civilization, instead of ascending the Nile from Egypt, descended to it from Ethiopia. The decay in which the mounds of Merot are now found, produced entirely by the slow hand of time, the sculptures of their interior, exhibiting religious rites of a purer and simpler stamp than those of Egypt, and other circumstances which wise observers have supposed they have detected, prove, according to the authorities referred to, that they have been the models of the more stupendous Egyptian structures. The excavated temples, too, furnish, it is alleged, proofs of the remotest attempts at architecture. But, how plausible soever, these conclusions amount to no more than probabilities; and it would not be difficult, were this the proper place, to show that they must be received with great limitations and modifications.

NUDDEA, a district of British India, presid. Bengal, chiefly between lat. 22° and 24° N., and long. 89° and $89^{\circ} 30'$ E.; having N. the districts Moonsheebad and Rajshage, E. Jessore, W. Beerbhoom, Burdwan, and Hooghly, and S. Calcutta and the 24 Pergunnahs. Length, N. to S., about 80 m.; average breadth, nearly 40 m. Area, 3,105 sq. m. Pop., in 1852, estimated at 1,187,160. Its natural features are the same with those of the rest of the delta of the Ganges, by the name of which it is intersected. The culture of the soil has greatly increased since the establishment of the perpetual settlement: total land revenue, in 1850-51, 11,06,935 rupees. Gang-robbery formerly prevailed to a great extent in Nudda; but under the British rule, it has decreased so as to be now of rare occurrence.

NUDDA, a town of British India, presid. Bengal, cap. of the above distr., at the commencement of the Hooghly river, 80 m. N. by W. Calcutta. It is the residence of the collector and judge for the district, and was formerly the capital of a rajshage, and a celebrated seat of Hindoo learning, but it has now fallen into decay. (*Part. Reports*, &c.)

NUNDA, t. Alleghany co. N. Y., 20 m. N. Angelica, 253 m. W. by S. Albany, 352 W. Drained by Canaseraga and Cashaque creeks. It contains three churches, a Presbyterian, Baptist, and Universalist, 13 stores, one fulling-mill, two flouring-mills, six saw-mills; one academy, 47 students; 13 schools, 1064 scholars. Pop. 9637.

NUNDYDRORG, a celebrated hill-fortress of Hindostan, prov. Mysore, on a hill 1700 feet in height, 100 m. N.E. Mysore; lat. $13^{\circ} 29' 78''$ S., long. $77^{\circ} 44'$ E. The hill on which it stands is inaccessible, except on one side: the fort has within it several barracks, magazines, &c., besides a Hin-

NUREMBERG.

doo temple, in which worship is paid to the bull Nundy, whence the name of the fortress. Nundydrorg was taken by the British in 1791, after an obstinate defence of three weeks.

NUNEATON, a market town and par. of England, Atherstone div., hund. Hemlingford, co. Warwick, on the Anker, 84 m. N. by E. Coventry, and 90 m. N.W. London. Area of par., 7020 acres. Pop., in 1841, 7105. The town is large and well built; consisting principally of a long main street, whence another diverges, in which is the market-place. The church is a Gothic structure, with a square tower; the living is a vicarage, in crown patronage. There is also a modern-built chapel-of-ease; and the Wesleyan Methodists, Independents, and Baptists have their respective places of worship. A free school was founded, by the inhabitants, in the reign of Edward VI.; and there is another endowed school, called "Smith's charity school," besides which there are two or three other day schools and Sunday schools. The inhabitants are principally engaged in riband weaving, and, in 1838, there were 3900 looms, nearly all employed. The engine trade is confined to four firms; and there are scarcely any engine looms in the place that are not their property, though some are worked on the premises of the weavers. Floret gauze ribands are the staple article of manufacture; but they are occasionally laid aside for figured satins, sarisets, and lustrings. (*Hand-loom Weavers' Report*.) Malt is carried on to a considerable extent; and there is a silk factory, which, however, was unemployed in 1839. Coal is procured in the neighbourhood, where are also some extensive stone quarries. The government of the town is vested in a permanent constable and three others, annually elected at a court-leet. It is one of the polling-places at elections for the N. division of the county. Markets on Saturday: fair, May 14th, February 18th, and October 31st, for horses and cattle. (*Part. and Comm. Reports*, &c.)

NUREMBERG (Germ. *Nürnberg*), a city of Bavaria, circ. Middle Franconia, on the Pegnitz, a tributary of the Regnitz, 93 m. N.N.W. Munich. Lat. $49^{\circ} 27' 31''$ N., long. $11^{\circ} 4' 40''$ E. Pop., in 1838, with its suburbs, estimated at 40,400, of whom about one tenth part are Roman Catholics. It stands in a sandy but fertile plain, at an elevation of about 1000 feet above the sea; and is divided by the Pegnitz into two nearly equal parts, the Sebald side and the Lawrence side, each deriving its name from its principal church. Nuremberg covers more ground than any other city of Bavaria, and is, next to the capital, the most populous. "It is surrounded by feudal walls and turrets, and these are inclosed by a ditch 100 feet wide and 50 feet deep, lined throughout with masonry. Its arched gates are flanked by four massive cylindrical watch-towers, no longer of use as fortifications, but picturesque in a high degree, and serving to complete the coronet of antique towers which encircle the city, as seen from a distance. The stranger arrived within its walls might fancy himself carried back to a distant century, as he treads its irregular streets, and examines its quaint gable-faced houses. Its churches and other public edifices are singularly perfect, having escaped unharmed the storm of war, sieges, and even of the Reformation, which its inhabitants adopted at an early period, without any outbreak of fanaticism or iconoclasm. Its private buildings, including the palace-like mansions of its patrician citizens and merchant nobles, having been built of stone, are equally well preserved, and many are still inhabited by the families whose forefathers originally constructed them. Though built with narrow but highly ornamented fronts and acutely pointed gables, they are often of large size, inclosing two or three courts, and extending back from one street to another." (*Murray's Handb. for S. Germany*.) The most elevated position within the town, near its N. extremity, is occupied by the *Reichsberg*, or Imperial castle, a building of great antiquity, and the frequent residence of the German emperors in the middle ages. A portion of this castle is fitted up for the accommodation of the king of Bavaria, when he visits the town; and comprises a picture gallery, the paintings in which, however, except one by A. Dürer, are generally of the most ordinary merit. The two principal churches are highly deserving of notice. That of St. Sebald, a fine Gothic edifice, with an elegant choir, built in 1337, has numerous sculptures and carvings by Adam Kraft and V. Stoss, many old paintings and stained glass windows and the remarkable shrine of St. Sebald. This, which still stands in the centre of the church, though the latter is devoted to the Lutheran service, is the masterpiece of the celebrated artist Peter Vischer, who, with his five sons, was employed on it for 13 years. "It is a miniature Gothic chapel, entirely of bronze, consisting of a rich fretwork canopy, supported on pillars, beneath which the relics of the saint repose in an oaken chest, incased with silver plates. The workmanship is most elaborate. The figures of the 12 apostles occupy the niches around the shrine, and are truly first-rate works of art. Above them are 12 smaller figures of fathers of the

NUREMBERG.

church; while about 70 fanciful representations of cupids, mermaids, animals, &c., distributed among flowers and foliage, are scattered over the other parts. The miracles of the saint are subjects of the bas-reliefs under the coffin. In a niche below, at one end, is an admirable statue of the artist himself, in a mason's dress, and at the opposite end is a figure, equally excellent, of St. Sebald." (*Handb. for S. Germ.*) The church of St. Lawrence, founded in 1274, is the largest in the town; and has some very handsome entrances, fine stained glass, curious carvings, &c.; and above all, a repository for the sacramental wafer, a tapering spire of Gothic open-work, 64 feet in height, executed by A. Kraft, with a minaret more commonly bestowed on ivory than on stone. The church of St. Giles, erected in 1718, in the Italian style, has a fine altar-piece by Vandyk, various bas-reliefs, candelabra, &c.; the Roman Catholic church, finished in 1361, and distinguished for its rich decorations; and the church of the Teutonic knights, begun in 1784, are the other principal ecclesiastical edifices: the Gothic chapel of St. Maurice, constructed in 1313, has been converted into a picture gallery, and filled with rejected paintings from the gallery of Munich, &c. The *Rathhaus*, or town-hall, in the Italian style, is one of the most remarkable edifices in the city; it was chiefly built in 1619, but includes the ancient town-hall, dating from 1340. In the latter are the great hall and the council-chamber; the walls of the former apartment being ornamented with several oil paintings by Albert Durer, and those of the latter having many concealed doors "leading to subterranean passages, which extend from the *Rathhaus* under the streets to the town ditch, beyond the walls." (*Handbook*, p. 56.) Nuremberg has a gymnasium, founded by the famous reformer, Melancthon, whose statue is placed in its front; an arsenal, barracks, a theatre, many hospitals and asylums, a savings' bank, a charity for distributing food to the poor, a house of correction, &c. It has also several fountains, some of which are worthy notice, especially the "Beautiful Fountain" (*Schöner Brunnen*), in the great market-place; a Gothic obelisk, or spire of open-work, with statues of various historical characters. Among the other remarkable objects in and near the city are the house of Albert Durer, now occupied by a society of artists; St. John's churchyard, in which is Durer's tomb together with those of many distinguished natives; a succession of stone pillars between the cemetery and the city, ornamented with curious bas-reliefs, &c. Nuremberg is the seat of a high police court, a civil court of justice, a commercial court of appeal, and a forest board. It has a royal and other high schools, several Latin and numerous inferior schools, a teachers' seminary, an academy of arts, a polytechnic, and a high commercial academy (*Handlungs Institut*); a number of public libraries, including the city library of 40,000 printed volumes, and 800 MSS. (*Annuaire de Statist. Jour.*, 1841); societies of national industry, and medical and natural science, an agricultural union, and collections of every description in the arts and sciences. There are but few pictures by the celebrated native artist A. Durer; but those by other artists are very numerous.

Nuremberg has given birth to many distinguished men, including, among others, the famous painter Albert Durer, born here in 1471. Several important inventions in the arts are said to have been made in this city. The famous machine for drawing wire is supposed to have been constructed by Rudolph, a native of this city. (*Beckmann's Hist. of Inventions*, II. 236.) Gunlocks are supposed to have been first fabricated here in 1517; and Beckmann says that the circumstance is probable, though he doubts whether the locks were of the present construction. (IV. 608.) Owing partly to these inventions, but more to the freedom and industry of its inhabitants, Nuremberg early rose to great eminence as a manufacturing and commercial town. It was, in fact, the continental Birmingham of the middle ages, during a portion of which period it is said to have had 70,000 inhabitants. Cannon are said to have been cast here as early as 1258; and in the same century it furnished paper and playing-cards. It had also a very extensive commerce, being a principal port for the produce of both the N. and S. of Europe. It is still, and has long been, celebrated for an extensive manufacture of wooden clocks and toys, which it exports to all parts of the world. It also produces various species of metallic goods and jewellery, with telescopes, mirrors, mathematical and musical instruments, sealing-wax, and lacquered wares; lead pencils, alabaster, horn, and ivory articles; brushes, woollen yarn, lawn, paper, parchment, brandy and liqueurs, &c. Printing is also carried on to some extent.

Though considerably declined, it still ranks as one of the principal commercial cities of Bavaria; and its commerce will probably receive some augmentation from the opening of the canal between the Danube and Rhine, now in progress. The first railroad for steam-carriages in Germany was completed in 1835-36, between Nuremberg and Fürth a distance of 4½ m., now traversed in 15 minutes.

OAKLAND.

Nuremberg, supposed to have been founded in the ninth century, became, in 938, the seat of the first Germanic diet. Until 1417, it had a *burggraf*, or resident governor, appointed by the emperor, and the ancestors of the present royal family of Prussia make their first appearance in history in that capacity. It was subsequently governed much in the same way as Venice, by a merchant aristocracy, consisting of about 30 families, who appointed the executive officers among themselves. It was at the summit of its prosperity in the 15th and 16th centuries. The famous *Æneas Sylvius*, afterward Pope Pius II., who had travelled over the greater part of Europe, celebrates the wealth of this city; and says in his work *De Morib. Germ.*, published in the 15th century, that the kings of Scotland would wish to be as well lodged as the meanest burghesses of Nuremberg. *Capere tam cæptis Sclorum reges, quam medicis Nurembergæ civis habitare* (p. 1055).

Nuremberg early embraced the doctrines of the Reformers, and is celebrated in the history of the Reformation. A diet assembled here in 1524, was of great service to the cause of the Reformers; and here, on the 23d of July, 1532, a treaty was signed, by which full toleration was granted to those professing the new doctrines. "The city preserved its privileges as a free town of the empire to the peace of Presburg in 1805, when it was annexed to Bavaria by Napoleon. (*Berghaus, Allg. Länder, and Volk*, iv. 145-16; *Murray's Handbook for S. Germany*, 34-35; *Dict. Geog.*; *Stein, Cannabich*, &c.)

O.

OAKHAM, a market town and par. of England, hund. of same name, co. Rutland, of which it is the cap. 17 m. E. by N. Leicester, and 83 m. N. by W. London. Area of par., 3130 acres. Population in 1841, 2726. It is tolerably well built. The chief public buildings are the county hall (forming the only remaining part of a castle built in the reign of William the Conqueror), a fine church with a lofty spire, and a large edifice belonging to the Rutland Agricultural association. The free school, founded in 1584, and closely connected with that established at Uppingham, is under the control of 14 official governors; it is well endowed, and has 34 exhibitions at Oxford and Cambridge; it has two masters, and the school is open gratuitously to the children of the poor inhabitants. A hospital for old men was incorporated with it by Queen Elizabeth, and endowed with alienated church property, now producing above £3000 a year. Another hospital once existed here, but it has fallen into decay. A boys' national school is established, and there is a well-attended Sunday school. Oakham is of very little importance with respect to trade, its chief dependence being on its markets and the retailing of goods for domestic consumption. It is connected by a canal with Melton-Mowbray, and has a considerable traffic in coal. The assizes, quarter and petty sessions are held here; and Oakham is the election town for the county. Markets on Saturday; fairs for cattle and sheep, March 15th, second Saturday in April, May 9th, Saturday in Whit-week, Saturday after October 10th, and December 15th.

OAKHAM, p. l., Worcester co., Mass., 64 m. W. Boston, 418 W. Watered by branches of Chickapee river. Chartered from Rutland in 1702. It contains three churches, two Congregational and a Baptist, one store, three grist-mills, two saw-mills; nine schools, 404 scholars. Pop. 1033.

OAKHAMPTON, a decayed bor., market town, and par. of England, hund. Liffon, co. Devon, on the Oke, a trib. of the Torridge, and near the N. border of Devonshire, 30 m. W. Exeter. Area of parish (including the villages of Chisacot, Meldoon, and Kegbar), 12,570 acres. Population in 1841, 3194. It is old and irregularly built. The church stands on rising ground about 1 m. westward; and there is an ancient chantry chapel in the market-place, with place of worship for Wesleyan Methodists and Independents. It has a small endowed free school and two subscription schools, with minor charities for the relief of the aged poor. "The town is not flourishing;" the inhabitants depend chiefly on retail trade, a few, however, being supported by serge weaving. It also derives some advantage from its situation on the great road between Exeter and Falmouth. (*Mass. Corp. Report*.) The borough was not incorporated (till the 21 James I., and, having fallen to decay, it was considered too insignificant to be included in the provisions of the Municipal Reform Act. It, however, sent two members to the House of Commons from the reign of Charles I. down to the Reform Act, when it was disfranchised. Markets on Saturday; fairs, second Thursday after March 11th, May 17th, first Wednesday after July 5th; August 5th, and Saturday after Christmas day.

OAKLAND, county, Mich. Situated in the E. part of the peninsula, and contains 900 sq. m. Watered by Clia-

OAKLAND COLLEGE.

ton, Huron, Flint, Rouge, and Shiawassee rivers. It contained in 1840, 30,561 neat cattle, 19,656 sheep, 30,313 swine; and produced 964,965 bushels of wheat, 6157 of rye, 254,902 of Indian corn, 236,005 of oats, 399,807 of potatoes, 90,614 pounds of sugar. It had 62 stores, one furnace, six fulling-mills, one woolen factory, 64 flouring-mills, 14 grist-mills, 41 saw-mills, three tanneries, six distilleries, two printing-offices, two weekly newspapers; 117 schools, 4800 scholars. Pop. 23,646. Capital, Pontiac.

OAKLAND COLLEGE, p. v., Claiborne co., Miss., 25 m. N.N.E. Natchez, 87 m. S.W. Jackson, 1097 W. It is under the patronage of the Presbyterians, was founded in 1831, has a president and five professors, or other instructors, and 160 students.

OAXACA, or **GUAXACA**, a city of Mexico, the cap. of the state of the same name, on the Rio Verde, 305 m. S.S.E. Mexico, and 160 m. S.S.W. Vera Cruz; lat. 17° 5' N., long. 97° 8' W. Estimated population, 40,000. It is built in the form of a parallelogram, about 2 m. in length and 1½ m. in breadth, including its suburbs, which are laid out in gardens and planted with nopal trees. The streets, which are broad, straight, and well paved, are lined with good houses of a greenish kind of stone; and, on the whole, it is the neatest, cleanest, and most regularly built city of Mexico. The public buildings are in general handsome, solidly constructed, and richly decorated: the town-hall, cathedral, and bishop's palace form three sides of the principal square. There are several churches and convents; and numerous fountains are supplied with water conveyed by aqueducts across the valley from the neighbouring hills of St. Felipe. The climate is peculiarly good, the thermometer seldom falling below 63° or rising higher than 78°; but it is exposed to earthquakes, and suffered considerably during the last that happened in Mexico. Oaxaca was founded by Nuno del Mercado, one of the companions of Cortez, and received its name from the trees called *guazas* that abound in its neighbourhood.

The state of which Oaxaca is the capital is remarkable for its extreme fertility, and for the richness and variety of its products. The cereals and the sugar-cane are raised with great facility, and cochineal is extensively cultivated. Considerable attention is likewise paid to the culture of silk. The mineral riches of the state have been very little explored. (*Ward's Mexico*, ii., 360; *Mod. Trav.*, &c.)

OBAN, a pari. bor. and seaport of Scotland, co. Argyre, on a bay of the same name, in a secluded but beautiful situation, 6¼ m. N.W. Glasgow. Pop. 1480. The only public buildings are a new *quoad sacra* church connected with the establishment, and a dissenting chapel. It has no manufactures, and no trade, except in such articles as the limited consumption of the place and neighbouring district require. It is visited by the steamboats between Glasgow and Inverness, and those that ply between either of these places and Staffa, Iona, &c. The harbour is excellent; and the inhabitants engage extensively in fishing. The magnificent ruins of the royal palace of Dunstaffnage stand on a promontory 3 m. N. the town. The town had no parliamentary representative till the passing of the Reform Act. In 1832; which united it with Campbeltown, Inverary, Irvine, and Ayr, in sending one member to the House of Commons. Registered voters, in 1840—41, 51.

OVERLIN, p. v., Russia L., Lorrain co., O., 110 m. N.N.E. Columbus, 379 W. It is the seat of the Oberlin Collegiate Institute, which contains a male and female department, on the manual labour system. It was founded in 1833, has a president and 10 professors, or other instructors, and 70 students, in the collegiate department. It has a theological department, with 58 students. The Oberlin Evangelist, a religious periodical, is published here.

Obi, a large river of Asiatic Russia, in the governments of Tomsk and Tobolsk, rising by two principal sources on the N.W. side of the Little Altai chain near the frontiers of the Chinese empire; lat. 51° N., long. 89° E.; flowing first N.W., and then N., into the gulf of Obi, after a course of about 2700 m.; but if the Irish, which joins it in lat. 60° 50' N., is the longest and widest stream and most direct from the source, be considered the main river, its length will exceed 3000 m.; the area of its entire basin has been estimated at 1,357,000 sq. m. The Obi, which is the eastern branch, has numerous affluents, the principal of which are the Tom, Telihim, and Ket, joining it on the E. or right bank. After its junction with the Irish, it attains a breadth in some places of nearly 30 m., with a depth varying from 2 to 7 fathoms, and has a very rapid current, forming in the lower part of its course numerous islands, and flowing over rocky ledges that greatly impede navigation during the few months that the river is free from ice. The Irish rises within the Chinese empire, in lat. 47° N., long. 89° 10' E., on the W. side of the Great Altai chain, and pursues a course nearly W.N.W. of 940 m. to lake Talgan, through which it flows, and then turns northward for about 100 m., after which it has a general N.W. direction, passing Semi-

ODER.

polinsk and Omsk, as far as Tobolsk. Below this point it makes a curve northward of about 300 m., and joins the Obi at Samarova. Both the Obi and Irish abound with fish, which might be made a lucrative article of trade, as there is a free navigation during the greater part of the year along the Northern ocean to Archangel. (*Stein's Geographie*, iii., 87; *Dict. Geog.*)

OBIION, county, Tenn. Situated in the N.W. part of the state, and contains 700 sq. m. Bounded W. by Mississippi river. Watered by Obion and Reelfoot rivers. Along the Mississippi it is liable to be overflowed. It contained in 1840, 7569 neat cattle, 1499 sheep, 23,409 swine; and produced 10,348 bushels of wheat, 235,715 of Indian corn, 14,137 of oats, 13,577 of potatoes, 943,190 pounds of tobacco, 42,446 of cotton, 1897 of sugar. It had eight stores, six grist-mills, one saw-mill, two tanneries, three distilleries; six academies, 100 students; 10 schools, 393 scholars. Pop.: whites, 4219; slaves, 587; free coloured, 8; total, 4814. Capital, Troy.

OCANA, a town of Spain in New Castile, prov. Toledo, 26 m. E. Toledo, and 34 m. S. by E. Madrid, on the great road leading from Madrid to Granada. Population according to Milano, 5013. It is an ancient town of considerable size, surrounded by ruined walls, situated on the summit and sides of a steep hill. Streets generally narrow and ill-built; but there are two or three squares which give it a tolerably respectable appearance. It has four parish churches, three decayed monasteries, a hospital, cavalry barracks, and a school of primary instruction; but the only object worth notice is the *Fuente vieja*, a fountain and aqueduct of stone, on 19 arches, supposed to have been constructed by the Romans, which supplies the town with excellent water. Ocana, in the days of its prosperity under the Grand Masters of the Order of St. Inigo, established here in the 12th and 13th centuries, carried on a considerable trade in gloves; but its industry at present is confined to the manufacture of hard soap, the tanning of leather, and the weaving of coarse woollen and linen cloths. A festival and fair is held on the 8th of September and eight following days, which is much frequented, especially by Jewish traders. During the peninsular war Ocana was the scene of a disastrous and obstinately contested battle (Nov. 18th, 1809), between the Spaniards under Arceizaga, and the French under Mortier and Victor, which terminated in the total defeat of the former. (*Milano: Sir A. Brooke's Spain and Morocco*, ii., 391; *Mod. Trav.*)

OCMULGEE, r. Ga., rises in Gwinnet and De Kalb counties, runs S.S.E. for 300 m., and unites with Oconee r. on the S. border of Montgomery co., to form Altamaha r. It is navigable for steamboats to Macon. The Oconee is navigable for steamboats to Milledgeville.

OCRACOE INLET, N. C. is the pass from the Atlantic ocean into Pamlico sound. It has 14 feet of water on the bar at low tide; but has dangerous shoals on each side. It is 23 m. S.W. cape Hatteras, in 34° 55' N. lat., and 75° 59' W. long.

ODENSEE, a town of the Danish dom., isl. Funen, of which it is the cap., on a small river, about 2 m. from the bottom of Stegestrand bay, a deep gulf to which it has been united by a navigable canal, 88 m. W. by S. Copenhagen; lat. 55° 24', long. 10° 24' 30" E. Pop. 8700. It is well built; and has one of the finest cathedrals in Denmark, in which many of the Danish kings are buried, an old episcopal palace, with a library of 6000 vols., a gymnasium, a church seminary, and a convent with an extensive library of Danish books, the collection of which commenced with the introduction of printing into the kingdom. It is the residence of the governor and of the bishop, and has a patriotic society. Most of the gentry of the island reside here for a part of the year, and the inhabitants are said to be the best educated and informed of his Danish majesty's subjects. (*Englis.*) It is celebrated for its manufacture of gloves and leather accoutrements: it has also manufactures of cloth, with extensive breweries and distilleries, soap works, &c. It is the most ancient town of Denmark; and was a place of great note long before Copenhagen was in existence. (*Stein; Fuglia, Cora*, &c.)

ODER, a large and important river of Germany, traversing the centre of the Prussian dom. It rises in Moravia, about 15 m. E. Olmutz, lat. 49° 35' N., long. 17° 33' E., at an elevation of 1800 ft. above the sea. It runs, at first, generally N.E. to Oderberg, near which it leaves the Austrian dom.; it thence flows in general N.W. to near Oderberg in the Middlemark of Brandenburg, from which point its course is mostly N.N.E. to the great Hauff, an inlet of the Baltic, which it enters by numerous mouths near Stettin. In the lower part of its course it forms numerous islands. Its principal tributaries are the two Neisses, the Oppa, Katzbach, and Bober, on its W., and the Malapane, Bartsche, and Netz with the Wartha, on its E. side; the Wartha being by far its most considerable affluent. It is subject to sudden floods, and frequently inundates the plain country through

ODESSA.

which it flows. It is navigable for small boats as far as Ratibor in Prussian Silesia, and for barges of from 40 to 50 tons as high as Breslau. Next to this city, Frankfurt, Stettin, Oppeln, Glogau, Crossen, Kustrin, and Schweidnitz, are the principal towns on its banks. It is connected with the Havel and Elbe by the Finow canal, with the Spree by Frederick-William's canal, and with the Vistula by means of the canals from Nakel on the Netze to Bronberg. It is of the highest commercial advantage to the country through which it flows; as to which, see article *Faustia*, in this vol. (*Dict. Glog.*; *Berghaus*, &c.)

ODESSA, a celebrated city, sea-port, and emporium of S. Russia, gov. of Kherson, on the N.W. coast of the Black sea, about half way between the mouths of the Dniestr and Bug; lat. 46° 28' 54" N., long. 30° 43' 28" E. Pop., in 1838, 68,023. The rise of this emporium has been quite extraordinary; its foundations having been laid, by order of the Empress Catherine, so late as 1792, after the peace of Jassy. It was intended to serve as an entrepôt for the commerce of the Russian dominions on the Black sea, and has, in a great measure, answered the intention of its founders. It has been said, indeed, that a better locality might have been chosen; and in proof of this, it is stated that there are no springs nor fresh water within 3 m. of the town; that the vicinity is comparatively barren and without wood; and that not being on or near the mouth of any great navigable river, its communications with the interior are difficult and expensive. That these considerations have great weight is clear; but, on the other hand, the situation has the advantage of being central and salubrious; the bay, or roadstead, which is generally open and easy of access, is extensive, the water deep, and the anchorage good; the port, which is artificial, being formed by two moles, is fitted to accommodate above 300 ships, and has a lazaretto on the model of that of Marseilles; the inconvenience arising from the want of water has been obviated by the cutting of a canal, by which it is conveyed to the town; and, on the whole, we doubt whether any position could have been chosen so well suited to serve as an entrepôt. The vicinity is by no means so barren as has been represented. Latterly, indeed, it has been signally improved by the formation of many gardens, and by the planting of extensive vineyards.

The town is well built of soft calcareous stone; but the houses being, for the most part, detached from each other, there are few handsome streets. But a more serious defect is, that the streets are generally unpaved; and after rain the ground is so deep that, according to Mr. Elliott, "it is not uncommon for gentlemen to be obliged to leave their carriages in quagmires in the middle of the streets, and to send oxen to drag them out!" (*Trav. in Austria, Russia, &c.*, i. 256.) But some of the principal streets are now either paved or macadamized; and in this respect the city has been materially improved. The warehouses for corn are very extensive. The city is defended towards the sea by some batteries, and on its E. side is a citadel, which commands the town and port. The space, comprising the city and a small surrounding district, to which the franchise of the port extends, is bounded by a rampart. Though it cannot be called a manufacturing town, Odessa has some fabrics of coarse woollen and silk goods; and has extensive tallow refineries, breweries, distilleries, rope-walks, &c.

Among the public buildings may be specified the church or cathedral of St. Nicholas, with a cupola, the exchange, palace of the governor, theatre, barracks, Roman Catholic church, a hospital two stories in height, a large and fine building, with public baths, large hotels, &c. On the quay facing the port, in the centre of the esplanade, is a statue in bronze in honour of the Duc de Richelieu, to whose enlightened administration much of the prosperity of the city is ascribable. Of the various institutions which the city owes to the duke, the Lyceum, which bears his name, founded in 1817, is one of the most important. Its organization has been modified of late years; and at present it is divided into the faculties of philosophy and jurisprudence, and has attached to it a gymnasium with four, and a primary school with three classes. In 1835 it had 350 pupils, and a library with about 7000 vols. There are also schools for the education of young ladies, founded in 1820 and 1835; a Jews' school, attended by about 400 pupils; an institution for the study of the eastern languages; schools of navigation and commerce; an orphan school, &c. The inhabitants as in other commercial towns that have had a rapid rise, are a very motley race, consisting of Russians, Greeks, Jews, Poles, Italians, Germans, French, &c.

In 1817, a ukase conferred on Odessa, for a period of 30 years, the important privilege of being a free port; and her commerce has since rapidly increased. Not being at the mouth of any great river, nor having any considerable manufactures, she is not a port for the exportation of what may be called articles of native growth; but in consequence of her convenient situation, excellent port, and the privileges

which she enjoys, she is, as already remarked, the emporium where most of the produce of southern Russia destined for foreign countries is collected for exportation, and where most of the foreign articles required for home consumption are primarily imported. The shallowness of the water at Taganrog, and the short period during which the sea of Asoff is navigable, tends to hinder foreign vessels of considerable burden from entering the straits of Yenikale, and occasions the shipment of a considerable portion of the produce brought down the Don in lighters to Caffa and Odessa, especially the latter. All the products brought down the Dniestr, the Bug, and the Dniester, are exported from Odessa; but owing to the difficult navigation of the first and last mentioned rivers, by far the greater part of the corn brought to Odessa from Podolia, and the Ukraine, &c., is conveyed to the town in carts drawn by oxen. The roads traversed by these carts are only practicable at certain seasons of the year; and nothing would contribute so much to increase the commerce of the port, and the prosperity of S. Russia, as the opening of improved communications with the interior; whether by removing obstructions in the channels of the rivers, constructing canals, or railways, or good common roads.

Among the articles of export from Odessa, corn, especially wheat, occupies, as every one knows, a high rank; but tallow is also a most important article; and next to it are linseed, wool, iron, hides, copper, wax, caviar, potatoes, beef, furs, cordage, sail-cloth, tar, butter, singlass, &c. We subjoin an official

Account of the Value of the Exports from, and Imports into, the Port of Odessa in the different Years from 1802 to 1839 inclusive.

Years.	Exports.	Imports.	Years.	Exports.	Imports.
1802	1,534,000	719,000	1825	20,522,000	8,423,000
1801	2,339,000	1,223,000	1826	14,711,000	8,722,000
1805	3,306,000	2,136,000	1827	18,478,000	12,709,000
1808	1,885,000	9,165,000	1828	1,873,000	8,483,000
1814	7,280,000	4,888,000	1829	6,794,000	7,138,000
1815	14,664,000	4,316,000	1830	27,631,000	12,778,000
1816	37,717,000	4,204,000	1831	20,063,000	12,301,000
1817	41,809,000	19,710,000	1832	29,104,000	14,922,000
1818	20,535,000	14,191,000	1833	21,532,000	14,914,000
1819	15,225,000	8,308,000	1834	19,273,000	14,888,000
1820	16,881,000	7,229,000	1835	23,941,000	17,308,000
1821	16,095,000	6,003,000	1836	34,361,000	19,292,000
1822	13,009,000	7,216,000	1837	33,426,000	19,233,000
1823	15,913,000	8,555,000	1838	36,269,000	21,269,000
1824	13,036,000	6,946,000	1839	46,826,250	—

The great amount of the exports in 1816 and 1817 is ascribable to the failure of the corn crops in Italy and western Europe during those two years, and to the consequent high price, and ready demand for the wheat of Odessa, Danzig, &c. The small amount of the trade in 1826, and 1829 is accounted for by the war with Turkey having interrupted all communication with the port by the channel of Constantinople. Subjoined is an

Account of the arrivals of wheat at Odessa since the beginning of the present century.

1801	arrived	33,143 chetwerts.*
1802	—	285,106
1803	—	494,838
1804-13	—	1,696,367 average 184,836 chets. a year.
1814-23	—	6,600,000 average 660,000 chets. do.
1824-33	—	7,278,000 average 727,800 chets. do.
1834	—	691,000
1835	—	378,100
1836	—	878,700
1837	—	950,498
1838	—	1,241,000
1839	—	1,159,000
1840	—	690,000

The small amount of wheat brought to Odessa in 1835 was owing to the almost total failure of the crops in S. Russia in the course of that year. The price of the best wheat in Odessa is rarely under 25s. or 28s. a quarter; and, during the three years ending with 1840, it was 34s. 6d. free on board; the freight and other charges on importing a quarter of wheat from Odessa to England may be estimated at about 10s. a quarter. Constantinople, Genoa, Leghorn, Marseilles, and Malta are the principal markets for Odessa wheat; but, when our crops are deficient, considerable quantities are shipped for England. In 1839, the exports from Odessa comprised, among other things, 1,210,322 chetwerts of wheat, nearly 900,000 do. rye, oats, &c., 153,194 do. linseed, 118,000 pounds of wool, and 233,192 pounds tallow. The subjoined account of the merchants belonging to Odessa inscribed in the different guilds affords an additional illustration of the progress of its commerce since 1808.

* A chetwert is equivalent to about 6 imperial bushels, or 8-4ths of a quarter.

The great articles of import into Odesa consists of sugar, coffee, and other colonial products; cottons, silks, woollens, and other manufactured goods; oil, wines, and spirits; spices, and dye-stuffs; cotton-twist and raw cotton; lemon-juice; tin and tin-plates; cutlery, timber for building and firewood, &c. About 800 ships from foreign parts enter and leave Odesa in ordinary years. Including Maltese and Ionians, nearly 200 ships under English colours have arrived in the port in a single season; but their number is very fluctuating, depending essentially on the state of the corn trade.

A tribunal of commerce was established at Odesa in 1824, whose jurisdiction extends over all disputes connected with trade. There is no appeal from its decisions except to the senate. There are 12 sworn brokers, approved and licensed by the tribunal of commerce, who have deputies appointed by themselves. They register all transactions, and receive one half per cent. from each party as commission. There is a discount or loan bank, established in 1833, and marine and fire insurance societies. Most articles of provision are cheap; and fish, which cost next to nothing, is excellent. Fuel, however, is scarce and dear. (*Official Reports; Private Information; Schmitzer, La Russie, p. 734, &c.*)

ODEYPOOR, or OUDEPORE, a city and rajahship of Hindustan, prov. Rajpootana, the city standing in a basin surrounded with rugged hills, 125 m. S.W. of Ajmere, and 165 m. N.W. of Oojein; lat. 24° 35' N. long. 73° 44' E. It has, at a distance, an imposing appearance. On the W. it skirts a large lake, the palaces and garden residences on the brink of which are all of marble, with sculptures that are both highly finished and display considerable taste. (*Hamilton.*) It is protected from inundation by an extensive embankment stretching along the lake. Images, toys, and other articles in marble, crystal, &c., are sent from Odeypoor into the neighbouring provinces. The rajahship, or principality, of which this city is the capital called also Mewar, or Chitrore, holds a high rank among the Rajpoot states. It has N. Jodpoor; E. the territories of Kotah, Sindia, &c.; S. many small principalities of Malwah, Guzrah, &c.; and W. Carowry. Area estimated at 11,784 sq. m.; and population at 300,000.

The surface is hilly and well watered, producing sugar, indigo, tobacco, rice, wheat, barley, &c. Fuel is abundant; and there are mines of iron, copper, lead and sulphur; the last mentioned product being, however, of inferior quality. The pop. consists principally of Rajpoots, Jats, Brahmias, Bheels, and Meenas. The *rana*, or chief, claims to be of the purest dynasty in India, and is held in great reverence by the Mohammedans, because of his supposed descent from the Persian sovereign, Nushirvan. In prosperity and power, however, this state is much inferior to those of Jeypoor and Oudpore; and for a lengthened period previously to its becoming subsidiary to the British, it had been wretchedly mismanaged. The treaty of 1818 secured to the British, as the price of their protection, three eighths of the public revenue.

Chittore, the ancient cap., is the only other town in this principality worth notice. It is on the summit of a scarped rock, 68 m. E.N.E. of Odeypoor. Heber says, "It is still what would be called in England a tolerably large market town, with a good many pagodas, and a meanly built, but apparently busy bazaar." It was, however, formerly famous for its splendour and riches, and has many interesting Hindoo temples, palaces, and other buildings. It was several times taken by the Mohammedans, and by Akbar, after a siege, as account of which is given in the second volume of the *Miscell. Trans. from Oriental Languages*. See also *Dow's Hist. of Hindostan*, ii., 356, 357; *Heber's Journal*, 274-284.

ODIHAM, a market town and par. of England, co. Southampton, hund. of its own name, 21 m. N.W. Winchester, and 40 m. W.S.W. London. Area of par., 7350 acres. Pop. in 1831, 3647. It is pleasantly situated on the N. side of a chalk down, and comprises a principal and well built street, met by two others of inferior size. The church, a large brick structure, has a square tower at its W. end; the living is a vicarage, in the gift of the chancellor of Salisbury Cathedral. It has, also, two places of worship for dissenters, with attached Sunday-schools, a free school for 50 boys, and a large national school, and almshouse for 12 poor persons. Odiham has a considerable retail trade, and some of the inhab. are supported by spinning worsted and winding silk. It also derives some advantages from its situation on the Southampton canal. Petty sessions are held here, and

OFFENBACH.

It is one of the polling-places at elections for the N. division of Hampshire. Markets on Friday; cattle fairs, March 23 and July 31.

About one mile from the town are the remains of an old castle, in which David I., king of Scotland, was imprisoned; and close to the town is a ruined gate, the only existing portion of a royal palace. Lilly, the celebrated grammarian and first master of St. Paul's school, London, was a native of Odiham.

ODENBURG (Hung. *Sopron*, an. *Sopronium*), a royal free town of Hungary, cap. co. of its own name; in a wide and fertile plain near the S.W. border of the Neusiedl lake, 49 m. W. Raab, and 37 m. S.E.E. Vienna. Pop. in 1837, 12,500, principally of German extraction. It is generally well built: the town-proper, which is not extensive, is regularly laid out, and tolerably well paved; and the suburbs are in every respect much superior. The only relic of its ancient fortifications is a huge watch tower, which, according to the Austrian *Nat. Encycl.*, is the loftiest in Hungary. It has several Roman Catholic churches, some of which are interesting specimens of Gothic architecture; a Calvinist church; Lutheran and Ursuline convents; Roman Catholic and Lutheran high schools, two hospitals, two large barracks with a good riding school, a military academy, theatre, &c. It is the residence of the superintendent of the Calvinist church for Hungary beyond the Danube. The inhabitants refine sugar, weave cotton and woollen goods, manufacture potash, and saltpetre; and trade in wine grown in the vicinity), corn, tobacco, wax, honey, and cattle, for which it is an extensive market. Numerous Roman antiquities have been discovered in its vicinity. (*Oesterr. Nat. Encycl.; Berghaus, &c.*)

OELAND, an island of the Baltic, belonging to Sweden, near its S.E. extremity, being separated from the prov. of Calmar, in which it is included, by the straits of Calmar, a channel varying from 2 to about 30 m. in breadth. It is long and narrow, extending between lat. 56° 13' and 57° 23' N., and long. 16° 20' and 17° 10'. Area estimated at 300 sq. m.; and the population at 31,000. (*Horschmann's Stein.*) The W. shore of the island is low, the E. hilly; in the centre is a plateau, elevated about 150 ft. above the sea, principally of a calcareous or sandy formation. It is principally appropriated to pasturage, only a small portion of the land round the coast being under culture. Fishing and navigation form the principal occupations of the inhabitants, who send their fish, butter, cattle, &c., to the mainland, receiving corn, manufactured goods, &c., in return. The forests are rather extensive; and the deer, roebuck, and wild boar, are pretty abundant. About 300 hands are said to be employed in an alum mine, the produce of which is supposed to be worth 50,000 dollars a year. Borgholm, on the W. side of the island, is its chief town and seat of commerce. A royal edict of 1820 conferred the freedom to pursue any trade or calling, without authority from any guild or company, on all handicraftsmen settling in this town. (*Horschmann's Stein*, i., 389; *Diät. Glog.*)

OELS, a town of Prussian Silesia, gov. Breslau, cap. circ., and principality of Oels; on the river of the same name, a tributary of the Oder, 17 m. N.E. by E. Breslau. Pop. in 1838, 3500. It was formerly fortified, but is now merely enclosed by a lofty wall. It has a large ducal castle, in which are some extensive collections in art and science, several churches and hospitals, a theatre, and numerous public schools and charitable institutions. It has manufactures of woollen and linen fabrics. (*Von Zedlitz, Der Preuss. Staat*, &c.)

OESSEL, an island of the Baltic, belonging to Russia, and included in the gov. Livonia or Riga, extending across the mouth of the gulf of Riga, principally between lat. 59° and 59° 40' N., and long. 21° 40' and 22° E. Area, estimated at 1150 sq. m. Pop. including the inhabitants of the adjacent islands of Moen and Runoe, about 35,000, all Estonians except some German landed proprietors, and a few Swedes. The coast is bold; the island is well watered, and its climate is milder than that of the neighbouring continent. The soil is mostly stony, calcareous, or loamy; but with manuring it becomes tolerably fertile, producing wheat, rye, barley, oats, peas, &c.; a considerable extent of the surface is covered with forests. Rearing cattle and fishing are the principal occupation of the inhabitants; and the seal fisheries are of some importance. Manufactures quite insignificant. People all Lutherans. Arensburg, on the S.E. coast, with about 1800 inhabitants, is a bishop's see, and the centre of the commerce of Oessel. This island belonged to the Teutonic knights, when their order possessed Livonia; it afterward belonged to Denmark and Sweden, but was ceded to Russia with the rest of Livonia in 1721. (*Schaitler, La Russie*, *Diät. Glog. Universelle*.)

OFFEN. See BUDA.

OFFENBACH, a town of Central Germany, being the principal manufacturing town of the Grand Duchy of Hesse-Darmstadt, prov. Starkenberg, on the Mayn, 5 m. E. by S.

OGDENSBURG.

Frankfort, and 17 m. N. by E. Darmstadt. Pop., in 1833, 7600. It is well built, and has a castle, four churches, and a synagogue. Its manufactures consist of silk and cotton stockings; cotton fabrics; carriages, and other vehicles; tobacco and snuff; lacquered iron ware, sealing-wax, jewellery, toys, umbrellas and parasols, a few carpets, and other woollen fabrics, &c. Next to Mayence (*Mente*) it has the largest general trade of any town in the Grand Duchy. Some good wine is grown in its environs. (*Berg-haus*, &c.)

OGDENSBURG, p. v. port of entry, Oswegatchie t. St. Lawrence co., N. Y., 210 m. N.W. Albany, 77 W. Situated on the S.E. side of St. Lawrence river, at the mouth of Oswegatchie river. It lies on a beautiful plain, and is regularly laid out and well built. It contains five churches, an Episcopal, Presbyterian, Methodist, Baptist, and Roman Catholic; an academy, a bank, with a capital of \$100,000; three forwarding houses, 60 stores and groceries, one flouring-mill, one saw-mill, one furnace, a machine shop, two tanneries, one distillery, one brewery, one carding machine and fulling-mill, 425 dwellings, and 2526 inhabitants. A steamboat pier to Prescott, in Canada, on the opposite side of the river. Several steamboats owned here ply to lake Ontario, and one goes down the river 40 m., to the long rapids. A dam across Oswegatchie river, has a fall of 14 feet. A canal, 1200 feet long, with a lock of 12 feet lift, connects the river below with the pool above the dam. A canal has been projected from this place to lake Champlain, 130 m. distant, but nothing has been done towards it, though it is thought to be feasible.

OGLE county, Ill. Situated in the N. part of the state, and contains 625 sq. m. Watered by Rock river, and its branches. It contained in 1840, 3333 neat cattle, 507 sheep, 10,339 swine; and produced 69,250 bushels of wheat, 106,868 of Indian corn, 41,650 of oats, 46,130 of potatoes, 300 pounds of tobacco, 370 of sugar. It had 10 stores, one flouring-mill, three grist-mills, 12 saw-mills, two distilleries; one academy; seven schools, 215 scholars. Pop. 3497. Capital, Oregon city.

OGLETHORPE, county, Ga. Situated towards the N.E. part of the state, and contains 490 sq. m. Bounded N.E. by Broad river, by branches of which it is drained. It contained in 1840, 11,812 neat cattle, 7479 sheep, 37,461 swine; and produced 33,919 bushels of wheat, 1180 of rye, 490,518 of Indian corn, 66,220 of oats, 19,496 of potatoes, 1002 pounds of tobacco, 3,639,655 of cotton. It had 19 stores, five flouring-mills, 23 grist-mills, 13 saw-mills, one tannery, one distillery; three academies, 107 students; 10 schools, 278 scholars. Pop., whites, 4306; slaves, 6331; free coloured 31; total, 10,968. Capital, Lexington.

OHIO, the northeasternmost of the north-western states, is between 38° 30' and 42° N. lat., between 80° 35' and 84° 42' W. long., and between 30° 34' and 70° 41' W. long. from W. It is about 200 m. from N. to S., and 230 from E. to W., containing about 44,400 sq. m., or 28,416,000 acres. It is bounded N. by Michigan and lake Erie; E. by Pennsylvania and Virginia, from which latter it is separated by Ohio river; S. by Ohio river, which separates it from Kentucky; and W. by Indiana. The Ohio river, by its various windings, bounds this state for a distance of 436 m. The population in 1790 was 3000; in 1800, 45,365; in 1810, 230,760; in 1820, 581,434; in 1830, 937,637; in 1840, 1,519,467; being the third in population in the United States. Of these 775,360 were white males, 736,762 were white females; 8740 were coloured males, 8602 were coloured females. Employed in agriculture, 272,579; in commerce, 9201; in manufactures and trades, 66,365; in navigating the ocean, 212; do. rivers, canals, and lakes, 3323; in mining, 704; in the learned professions, 5663.

The interior and northern parts of the country bordering upon lake Erie are generally level, and in some places marshy. About a quarter or a third of the eastern and southeastern part of the state bordering on Ohio river, is very hilly and broken. There is nothing in the state which deserves the name of a mountain; but the state is an elevated table land, rising from 600 to 1000 feet above the level of the sea. A ridge of slightly elevated high lands divides the waters which enter lake Erie from those which flow into the Ohio, which is situated much nearer to the lake than to Ohio river; and the waters which flow into lake Erie are more rapid in their course, and more frequently broken by falls than those which flow in the opposite direction. The interior of the state which borders on the Scioto river, which divides the state into two nearly equal parts, and on the Great and Little Miami rivers, contains the most extensive bodies of level and fertile land in the state. On the head waters of the Muskingum and Scioto rivers, and between the sources of the two Missis, are extensive prairies. On these prairies no timber grows, excepting occasionally a few scattering trees. Some of these prairies are low and marshy, while others are elevated and dry. The latter are frequently called barrens, but not always from

OHIO.

their sterility; for they are often tolerably fertile. On the dry prairies the grass grows, but not luxuriantly; but the wet prairies yield spontaneously a coarse grass, from two to five feet in height, which is of a tolerably good quality. The forest trees are black walnut, oak of various species, hickory, maple of different kinds, beech, birch, poplar, sycamore, ash of several species, pawaw, huckery, cherry, and whitewood, which last is extensively used as a substitute for pine, that is very scarce. Wheat may be regarded as the staple production of the state, and immense quantities are annually exported. Indian corn is also extensively produced, and from 70 to 100 bushels to the acre have been frequently raised. Rye, oats, buckwheat, and potatoes are also abundantly produced. There is very little waste land in Ohio. Nine tenths of the surface is susceptible of cultivation, and nearly three fourths of it are continually fertile. The traveller is surprised on passing through the state to see so large a portion of the original forest undisturbed. There is no doubt that the state could support three times its present population without any difficulty, and much more than that, if it were necessary.

The summers are warm and pretty uniform, but subject at times to severe drought. The winters are generally mild in the southern part, though attended with cold and piercing winds on the borders of lake Erie. For the distance of 50 m. from lake Erie, there are generally several weeks of good sleighing in the winter; but in the south part the quantity and duration of snow are not sufficient to produce much good sleighing. The climate is generally healthy, excepting in the neighbourhood of low and marshy ground, where fevers and agues, and bilious fevers, sometimes prevail.

The state is divided into 79 counties, which, with their population in 1840, were as follows:

Counties.	Pop. 1840.	Counties.	Pop. 1840.
Adams	13,138	Licking	35,866
Allen	9,079	Lorain	11,815
Ashtabula	23,751	Lucas	18,467
Athens	18,109	Madison	9,228

Knox	29,579		
Lake	9,728		
Lawrence	13,719		

Columbus, on Scioto river, just below the confluence of Olenatany or Whetstone river, near the centre of the state, is the capital.

There were in this state in 1840, 430,527 horses and mules, 1,217,874 neat cattle, 3,028,401 sheep, 2,099,746 swine; poultry was produced to the value of \$531,193. There were produced 16,571,681 bushels of wheat, 814,905 of rye, 23,563,144 of Indian corn, 212,440 of barley, 633,139 of buckwheat, 14,393,103 of oats, 5,805,081 of potatoes, 3,633,215 pounds of wool, 5,942,275 of tobacco, 6,363,386 of sugar, 62,195 of hops, 38,950 of wax, 4317 of silk cocoons, 1,022,037 tons of hay, 9080 of hemp or flax; the products of the dairy were valued at \$1,848,969; of the orchard at \$475,371; of lumber at \$362,821. There were made 11,524 gallons of wine; 6609 tons of pot and pearl ashes.

Salt springs have been found on Yellow creek in Jefferson county; on the waters of Killbuck creek, in Wayne county; on Muskingum river, near Zanesville, and at various other places. Bituminous coal is found in great quantities in the eastern part of the state, particularly near Massillon in Stark county, and in Talmadge in Summit county. This coal is delivered to consumers in Cleveland at 15 cents a bushel. Iron ore is found in various places,

OHIO.

particularly at the falls of the Licking, 4 m. W. of Zanesville, and on Brush creek, in Adams county.

Ohio river, which gives name to the state, washes much of the eastern, and the entire southern border. This river is 959 m. long from Pittsburgh to its mouth in the Mississippi, though in a straight line it is only 614. It has a gentle current, and no fall excepting a rocky rapid of 294 feet descent in 2 m., at Louisville. Around this is a canal, 24 m. long, with four locks, sufficiently capacious to admit steamboats of the largest class. For about half the year, the Ohio has a depth of water admitting of navigation by large steamboats through its whole course. The Muskingum is the largest river which flows wholly in this state. It is formed by the junction of the Tuscarawas and Walhonding rivers, and flows into the Ohio at Marietta. It is navigable for boats 100 m., to Coshocton, and is 925 yards wide at its mouth. Scioto, the next river in magnitude, is 200 m. long, and enters Ohio river at Portsmouth. It is navigable for boats 125 m., and is 150 yards wide at its mouth. Its largest branch is Olentangy or Wheelstone river, which enters it immediately above Columbus. The Great Miami river is a very rapid stream, 100 miles long, and enters the Ohio in the S.W. corner of the state. It is 900 yards wide at its mouth. The Little Miami is 70 m. long, and enters the Ohio 7 m. above Cincinnati. The Maumee rises in Indiana, is 100 m. long, and enters lake Erie in Maumee bay. It is navigable for steamboats 18 m., to Perrysburg, and above the rapids is boatable for a considerable distance. The Sandusky river rises in the northern part of the state, and after a course of 80 m., enters Sandusky bay of lake Erie. The Cuyahoga river rises in the N. part of the state, and after a broad curve to the S., flows N. into lake Erie at Cleveland. It has a number of fine falls, and affords valuable water-power. It is about 60 m. long, and forms the fine harbour of Cleveland at its mouth. Huron, Vermillion, Black, Grand, and Ashtabula rivers flow into lake Erie.

Cincinnati, on Ohio river, is much the largest and most commercial place in the state. Next in importance is Cleveland, at the mouth of the Cuyahoga river, at the northern termination of the Ohio canal. Dayton, Columbus, Steubenville, Zanesville, Chillicothe, Lancaster, Newark, Circleville, and Massillon, are considerable and flourishing places.

The exports of the state in 1841, were \$793,114; and the imports were \$11,318. This includes but a small portion of its trade, having relation only to its foreign commerce. There were in 1840, 53 commercial and 241 commission houses in foreign trade, with a capital of \$5,998,900; 4005 retail dry goods and other stores, with a capital of \$21,922,325; 9801 persons engaged in the lumber trade, with a capital of \$373,998; 854 persons engaged in internal transportation, who, with 1061 butchers, packers, &c., employed a capital of \$4,617,570.

Home-made or family goods were manufactured to the amount of \$1,853,937; 130 woollen manufactures, and 206 fulling-mills, employed 935 persons, produced articles to the value of \$685,757, with a capital of \$537,985; eight cotton manufactures with 13,754 spindles, employed 946 persons, produced articles to the amount of \$139,378, with a capital of \$113,500; 72 furnaces manufactured 35,236 tons of cast iron, and 19 forges produced 7466 tons of bar iron, consuming 104,312 tons of fuel, employing 2968 persons, and a capital of \$1,161,000; 434 persons produced 2,513,400 bushels of bituminous coal, with a capital of \$45,595; 14 paper-mills employed 305 persons, and produced articles to the amount of \$370,202, with a capital of \$308,900; 31 persons manufactured hemp or flax, producing to the amount of \$11,737, with a capital of \$249; hats and caps were manufactured to the amount of \$738,512, and straw bonnets to the amount of \$3098, the whole employing 963 persons, and a capital of \$309,637; 812 tanneries employed 1790 persons, and a capital of \$957,393; 1160 other manufactures of leather, as saddleries, &c., produced articles to the amount of \$1,986,146, with a capital of \$917,945; 187 persons manufactured tobacco to the amount of \$312,818, with a capital of \$68,810; 99 potteries employed 190 persons, manufactured to the amount of \$9,734, with a capital of \$43,450, 658 persons produced machinery to the value of \$675,731; 959 persons produced hardware and cutlery to the amount of \$393,300; 70 persons produced three cannon and 2450 small arms; 37 persons manufactured the precious metals to the amount of \$53,125; 589 persons manufactured other metals to the amount of \$782,901; 70 persons produced drugs and plants to the amount of \$101,880, with a capital of \$126,335; 401 persons manufactured granite and marble to the amount of \$236,131; 1469 persons produced bricks and lime to the amount of \$712,697, two powder-mills employed 13 persons, and produced 222,500 pounds of gunpowder, with a capital of \$18,000; 105 persons manufactured 3,603,036 pounds of soap, 2,318,456 pounds of tallow candles, and 151 pounds of wax or spermaceti candles, with a capital of \$196,780; 390 distilleries produced 6,329,467 gallons of dis-

tilled spirits, and 59 breweries produced 1,422,584 gallons of beer, the whole employing 789 persons, and a capital of \$693,119; 91 rope-walks employed 66 persons, and produced cordage to the amount of \$50,750, with a capital of \$57,675; 11 persons produced musical instruments to the amount of \$454, with a capital of \$5000; 1490 persons manufactured carriages and wagons to the amount of \$701,228, with a capital of \$390,540; 536 flouring-mills produced 1,311,954 barrels of flour, and, with other mills, employed 4661 persons, producing articles to the amount of \$3,666,213, with a capital of \$4,931,024; vessels were built to the amount of \$522,855; 1928 persons manufactured furniture amounting to \$761,146, with a capital of \$5634,317; 970 brick or stone houses, and 2764 wooden houses were built, employing 6060 persons, and cost \$3,776,893; 159 printing-offices, 41 blinderies, nine daily, seven semi-weekly, and 107 weekly newspapers, and 20 periodicals, employed 1175 persons, and a capital of \$446,750. The total amount of capital employed in manufactures was \$16,905,257.

The university of Ohio at Athens was founded in 1821; the Miami university at Oxford was founded in 1809. These institutions have been publicly endowed with large grants of lands. Franklin college, at New-Athens, was founded in 1825; the Western Reserve college, at Hudson, was founded in 1826; Kenyon college, at Gambier (Episcopal), was founded in 1826; Granville college, at Granville (Baptist), was founded in 1822; Marietta college, at Marietta, was founded in 1832; the Oberlin collegiate institute, at Oberlin, was founded in 1834; Cincinnati college, at Cincinnati, was founded in 1819; as was also Woodward college, at the same place. Willoughby university, at Willoughby, is a medical institution, with a college charter. Lane theological seminary, at Cincinnati, was founded in 1829. There are theological departments in Kenyon, Western Reserve, and Granville colleges, and in the Oberlin institute; a Lutheran theological school at Columbus; and two medical and one law school at Cincinnati. At all these institutions, there were in 1840, 1717 students. There were in the state, 73 academies, with 4310 students, and 5186 common and primary schools, with 218,600 scholars. There were in the state 35,394 white persons over 20 years of age, who could neither read nor write.

In 1836, the Presbyterians had 247 ministers; the Methodists had 300 ministers; the Baptists had 170 ministers; the Lutherans had 47 ministers; the Episcopalians had one bishop and 25 ministers; the German Reformed had 96 ministers; and there were besides, a considerable number of Friends, Roman Catholics, and a few others.

In January 1st, 1840, there were in the state 36 banks and one branch, with an aggregate capital of \$10,507,521; and a circulation of \$4,607,127. The state debt of every description, in Dec. 1843, amounted to \$19,947,325. The whole exports of the state exceed its imports by about \$12,000,000. There is a state penitentiary at Columbus.

This state has some important works of internal improvement. The Ohio canal extends from Cleveland on lake Erie, 307 m., to Portsmouth on the Ohio. It has the following navigable branches: 14 m. to Zanesville, 10 m. to Columbus, 9 m. to Lancaster, 50 m. to Athens, the Walhonding branch of 23 m., Eastport branch of 4 m., and one of 2 m. to Dresden. This important work was begun in 1825, and finished in 1833, at an expense of \$5,000,000. The Miami canal extends from Cincinnati, 178 m., to Defiance, where it meets the Wabash and Erie canal, thus completing a second line of canal from lake Erie to Ohio river. This canal is estimated to cost \$2,750,000. The whole distance from lake Erie is 965 m. The Mahoning canal extends from the Ohio canal 88 m., eight of which are in Pa., to Beaver river, and cost \$764,372. The Sandy and Beaver canal extends from the Ohio canal at Bolivar, 76 m., to Ohio river, at the mouth of Little Beaver creek, and is but partially completed. The Milan canal extends from Huron, 3 m., to Milan, to which steamboats now ascend. The Mad river and Sandusky city railroad extends from Tiffin, 36 m., to Sandusky city, and is designed to be continued to Cincinnati; but is finished only 28 m. from Cincinnati, and the remainder of this great work is not likely to be soon completed. Other railroads have been projected.

The governor is elected biennially by the people, but is not eligible for more than six years in eight. He must have been a citizen of the United States for 19 years, and an inhabitant of the state for four years next preceding his election, and must be at least 30 years of age. The senate consists of 36 members, chosen biennially by the people, one half being elected annually, must be citizens of the United States, and have resided in the county or district for which they are elected for two years immediately preceding the election, and have paid a state or county tax. The house of representatives consists of 72 members, elected annually by the people, and must have resided in the county for which elected, for one year next preceding the election, and have paid a state or county tax. The judges of the supreme

OHIO.

overt, and of the courts of common pleas, are appointed by the joint ballot of the two houses of the general assembly, and hold their offices for seven years. The secretary of state, treasurer, and auditor, are elected in like manner, for three years. The general assembly meets annually at Columbus on the first Monday of December. All white male inhabitants of full 21 years of age, who have resided in the state for one year next preceding an election, and have paid, or are charged with a state or county tax, enjoy the right of suffrage.

The first permanent settlement in Ohio was made, April 7th, 1788, at Marietta, and the first judicial court was held in September of the same year, under an act of Congress passed in 1786. The next settlement was at Columbia, 6 m. above Cincinnati, in 1789. The next was made by French emigrants, at Gallipolis, in 1791. The next was made at Cleveland and Conneaut on lake Erie, in 1796, by emigrants from New-England. In 1799, the first territorial legislature met at Cincinnati, and organized the government. Early in 1800, Connecticut relinquished her jurisdiction over the Western Reserve, and received a title to the land, which she sold, to constitute her large school fund. In 1803, Ohio formed her state constitution, and was admitted to the Union. Thus, in a little over 50 years, this state has risen up, which in 1840, contained 1,519,467 inhabitants, with taxable property to the amount of \$113,037,561. For the early events, see the accounts of Cincinnati and Cleveland.

Ohio, a large river of the United States, which separates the states of Virginia and Kentucky from Ohio, Indiana and Illinois is second in importance only to the Mississippi, is formed by the confluence of Alleghany river from the N., and Monongahela from the S., at Pittsburg, in the western part of Pennsylvania. The Alleghany river rises in Potter co., Pa., on the W. side of the Alleghany mountains, flows into the state of New-York, and returns into Pennsylvania, and is the most important tributary of the Ohio. It is navigable for boats of a hundred tons, and of a light draft to Olean, Cattaraugus county, New-York, 270 m. from its mouth in the Ohio, 600 feet above the level of the river at Pittsburg, 1350 feet above the level of the ocean, and 2500 m. from the gulf of Mexico. The Monongahela rises in Virginia, and where it unites with the Alleghany, is more than 400 yards wide. It is navigable at a good stage of the water for large boats, 100 m. from its mouth. The Alleghany, though not larger than the Monongahela at the junction, is the more important stream. Immediately below the junction, the Ohio is over 600 yards wide, and is a placid and beautiful stream. At Pittsburg it is 630 feet above tide water; at the mouth of the Muskingum, 541 feet; at the mouth of the Scioto, 464 feet; at Cincinnati, 414 feet; at its mouth in the Mississippi, 301 feet. Its length from Pittsburg to its mouth, according to the Western Pilot, is 950 m.; but the distance in a direct course is about 614 m. Its average descent is not quite five inches in a mile. The French called it *la belle riviere*, or the beautiful river; but its name, according to Heckewelder, is derived from the Indian word *Ohiopckehanna*, meaning a very white stream, alluding to the white caps with which its gentle surface is covered in a high wind, omitting all but its first part for ease of pronunciation. The Ohio for some distance below Pittsburg is rapid, and the navigation interrupted at low water, by chains of rocks extending across the bed of the river. The scenery is exceedingly beautiful though deficient in grandeur, exhibiting great sameness. The hills, two or three hundred feet high, approach the river, and confine it on either side. Their tops have usually a rounded and graceful form, and are covered with the verdure of an almost unbroken forest. Approaching Cincinnati, the scenery becomes still more monotonous. The hills recede from the river, and are less elevated. Heavy forests cover the banks, and limit the prospect, but exhibiting a beautiful verdure, and often exuberant with blossoms. The river exhibits the same scenery, as we continue to descend it, except that the hills become less bold and rocky. Many villages and farm houses are passed, through the whole course of the river; but as the bottom lands on its immediate margin are liable to be overflowed, the inhabitants prefer to settle a little back from the river, so that the dwellings in view, do not correctly exhibit the population in the vicinity. Between Pittsburg and the mouth of the Ohio there are as many as 100 considerable islands, besides a great number of sand bars and tow-heads. These last are low sandy islands incapable of cultivation, and covered with willows. Some of the islands are of exquisite beauty, and furnish desirable situations for a retired residence. The principal tributaries of the Ohio are the Muskingum, Great Kanawha, Big Sandy, Scioto, Great Miami, Kentucky, Green, Wabash, Cumberland and Tennessee. The last three are the most important, of which the last is the largest. One remarkable circumstance respecting the Ohio as well as other western rivers, is its great elevations and depressions. In the summer and autumnal months, it often

dwindles to a small stream, affording limited facilities for navigation. Among the hills of Pennsylvania and Virginia, it is seen rippling over chains of rocks, through which a passage is barely afforded to boats of the lightest burthen. Farther down, and bars often extend across the stream or project into the bed of the river. Steamboats are at sometimes grounded on the bars, where they are obliged to wait in peril, for the periodical rise of the river. The lowest water is generally in the months of July, August, and September. The melting of the snows in the spring, and heavy rains in autumn or winter fill the river to overflowing, and many of its islands and the bottoms on its margin are covered with water. These rises are generally gradual, and attended with no danger. As the waters rise, trade and navigation are quickened into activity; the largest steamboats, often of 600 tons burthen, now float in security. The average rise of the water from low water mark, is 50 feet, but in the year 1833 an extraordinary flood was experienced. The river began to rise early in February, and on the 10th of that month it was 63 feet above low water mark, and the lower parts of Cincinnati and Covington were flooded. The river here is 1000 feet wide, and the velocity of the stream at its height 64 miles per hour. The water discharged by the rise of the river above low water alone, would fill a lake of one square mile in surface, 107 feet deep, in one hour. The surface drained by the Ohio and its numerous tributaries is about 77,000 sq. m.; and water 4 inches in depth on this surface would be sufficient to maintain the river at the above height and velocity for fourteen days. Such a flood as this has scarcely been known, since the first settlement of the country. There are no considerable falls in the river, excepting at Louisville, Ky., where it descends 22½ feet in the course of 2 miles. Even over these, boats pass in high water. But they have been obstructed by a canal around them, which admits of the passage of the largest steamboats. The current of the Ohio is very gentle; at the mean height of the river the current is about 3 miles an hour, at high water it is more, but at low water not more than 2 miles. During five or six weeks in winter, the navigation is obstructed by floating ice. The Ohio and its tributaries have not less than 5000 miles of navigable waters. The following distances have been derived from the Western Pilot, and are doubtless correct. From Pittsburg to Steubenville, O., 170 miles; to Wheeling, Va., 98 miles; to Marietta, O., 174 miles; to Gallipolis, O., 364 miles; to Portsmouth, O., 349 miles; to Mayville, Ky., 337 miles; to Cincinnati, O., 455 miles; to Lawrenceburg, Ia., 479 miles; to Louisville, Ky., 587 miles; to New-Albany, Ia., 591 miles; to the mouth of Cumberland river, Ky., 900 miles; mouth of Tennessee river, Ky., 911½ miles; mouth of Ohio, 950 miles.

Ohio, county, Va. Situated in the N.W. part of the state, and contains 125 sq. m. Bounded W. by Ohio river, which crosses along its border for 26 m. It contained in 1840, 4239 neat cattle, 93,989 sheep, 9651 swine; and produced 194,996 bushels of wheat, 2576 of rye, 323,537 of Indian corn, 1424 of buckwheat, 145,365 of oats, 43,036 of potatoes, 3909 pounds of sugar, 1,178,000 bushels of bituminous coal. It had 91 stores, four furnaces, one forge, two woolen factories, one cotton factory with 400 spindles, 13 flouring-mills, seven grist-mills, 11 saw-mills, four paper-mills, seven tanneries, one distillery, three glass-houses, two potteries, three printing-offices, three weekly and two semi-weekly newspapers, and one periodical; two academies, 90 students; 39 schools, 999 scholars. Pop.: whites, 19,849; slaves, 212; free coloured, 303; total, 13,357. Capital, Wheeling.

Ohio, county, Ky. Centrally situated toward the N.W. part of the state, and contains 578 sq. m. Bounded S. by Green river, and drained by its branches. It contained in 1840, 7098 neat cattle, 8511 sheep, 25,093 swine; and produced 30,646 bushels of wheat, 1905 of rye, 940,915 of Indian corn, 49,091 of oats, 6720 of potatoes, 954,709 pounds of tobacco. It had 17 stores, one cotton factory with 30 spindles, two flouring-mills, seven grist-mills, four saw-mills, four tanneries, three distilleries, one school, 25 scholars. Pop.: whites, 5747; slaves, 823; free coloured, 92; total, 6592. Capital, Hartford.

Ohio, L. Alleghany co., Pa. 11 m. N.W. Pittsburg. Drained by Great and Little Beckwicks creeks. It has three stores, four grist-mills, seven saw-mills: two academies, 71 students; nine schools, 302 scholars. Pop. 1631.

Ohio, L. Beaver co., Pa. 10 m. S.W. Beaver. Watered by Little Beaver creek, flowing into Ohio river, which latter bounds it on the S. It has four stores, one grist-mill, three saw-mills; seven schools, 239 scholars. Pop. 1273.

OHIO CITY, p. v., Brooklyn L. Cuyahoga co., O., 145 m. N.N.E. Columbus, 360 W. Situated on lake Erie, at the mouth of Cuyahoga river, opposite to Cleveland. The ground on which it is built is uneven, but presents fine situations which overlook the lake, the city of Cleveland, and the surrounding country. It contains an elegant Epis-

OHLAU.

Cathedral church of stone of the Gothic architecture, a Presbyterian and other churches, seven commission houses in foreign trade, seven retail stores, two furnaces; machinery manufactured to the amount of \$40,000, and 1577 inhabitants. A bridge across the Cuyahoga connects it with Cleveland, with which place it enjoys a harbour in common. From its situation, it is likely to constitute virtually one great city with Cleveland.

OHLAU, a town of Prussian Silesia, gov. Breslau, cap. circle, on the Oder, 17 m. S.E. Breslau. Pop. in 1833, 4000. It was formerly one of the strongest fortresses of Silesia, but its works were, in great part, demolished after its occupation to Frederick the Great, in 1741. It has a royal palace, with a gallery of paintings, several Lutheran and Roman Catholic churches, a hospital, orphan asylum, workhouse, manufactures of woollen cloth, &c. A good deal of tobacco is grown in its neighbourhood. (*Von Zedlitz; Berghaus.*)

OISE, a dep. of France, reg. N. formerly comprised in the Ile-de-France; between lat. 49° 3' and 49° 45' N., and long. 1° 40' and 3° 10' E.; having N. the dep. Somme, E. Aisne, S. Seine-et-Marne and Seine-et-Oise, and W. Eure and Seine Inférieure. Length, E. to W., 63 m.; average breadth, about 35 m. Area, 592,560 hectares. Pop., in 1836, 387,725. Surface gently undulating. A range of hills traverses the dep., dividing the basin of the Somme from that of the Seine, but no summit rises to any considerable height. Principal rivers, the Oise, Ternois, and Eppe, all of which have a S. direction. The Oise, whence the name of the dep., rises in the Belgian province of Hainaut, near the frontier of Ardennes; and after a generally S.W. course of about 190 m., through the depts. Du Nord, Aisne, Oise, and Seine-et-Oise, joins the Seine at Compiègne St. Honoré, about 12 m. N.W. Paris. It is navigable from Chassy in Aisne to its mouth, a distance of 75 m. Some pools and marshes exist in the E. and S.E. of the dep. In 1836, the arable lands of this dep. were estimated to comprise 359,466 hectares; meadows, 38,597 hect.; vineyards, 2801 hect.; orchards, gardens, &c., 15,368 hect.; forests, 80,578 hect.; and heaths, waste, &c., 15,709 hect. In 1835, of 24,414 properties subject to the *contrib. foncière*, 108,057 were assessed at less than 5 francs; and 34,000 at from 5 to 10 francs. The number of large properties is, however, greater than in most depts. Soil principally calcareous, everywhere requiring manure. Agriculture is considerably advanced, and is improving. Fallows are decreasing, and agricultural implements are made more effective. More corn is grown than is required for home consumption; it is principally oats and wheat. Peas, beans, &c., are raised in large quantities for the Paris markets. Pear and apple orchards are numerous, and a great deal of cider of good quality is made. Some wine is grown, but of indifferent quality. The rearing of cattle is an important branch of rural economy; and the fat calves, known in Paris as *œufs de Pontoise*, are from this dep. In 1830, the stock of horned cattle, calves, &c., was estimated at about 96,580 head, and that of sheep at 538,000. The latter have been improved by crossing with the merino, Southdown, and Leicester breeds, and yield annually about 800,000 kilogr. wool. (*Hugo.*) Butter and cheese, including the cheese of Songeons, are valuable products. Hogs and poultry are numerous. Mineral products, excepting limestones, are few, and of little importance. Oise is distinguished for its manufacturing industry. Woollen fabrics, especially at Beauvais and Crevecoeur; table-linen, cotton, and hempen cloths, woollen and cotton yarn, cotton stockings, lace, metallic and glass wares, and fans, horn, wooden and ivory articles at Meru, &c., are among the principal goods manufactured. This dep. is divided into four arrondis.; chief towns, Beauvais, the cap., Clermont, Compiègne, and Senlis. It sends five members to the chamber of deputies. Registered electors in 1838-39, 3105. Total public revenue in 1831, 14,000,396 francs. (*Hugo, art. Oise; Dict. Géog.; French Official Tables.*)

OKTIBBEHA, county, Miss. Situated N.E. of the centre of the state, and contains 635 sq. m. Watered by Oktibbeha creek and other branches of Tombigbee river. It contained in 1840, 8447 neat cattle, 764 sheep, 10,043 swine; and produced 3475 bushels of wheat, 138,990 of Indian corn, 16,061 of oats, 10,896 of potatoes, 1900 pounds of tobacco, 1,824,444 of cotton. It had four stores, two grist-mills, three saw-mills; 13 schools, 247 scholars. Pop.: whites, 2064; slaves, 2197; free coloured, 15; total, 4276. Capital, Starkville.

OLBERA (an. *Hipe*), a town of Spain, in Audulusia, prov. Seville, in a mountainous district, 48 m. S.E. Seville. Pop., acc. to Mifano, 8000. It is, acc. to Captain Scott, "a wretched place, containing some of the rudest-looking and least scrupulous inhabitants of the Serranía de Ronda." A parish church, hospital, three decayed convents, and a Moorish castle, are its principal buildings; and the view from the last is very commanding over a great extent of mountains, intersected by well wooded valleys. A few

OLDENBURG.

oil-mills are established here; but the population is almost wholly occupied in rearing hogs for the Seville market. (*Mifano; Scott's Ronda and Granada, H. 151.*)

OLD CODORUS, t., York co., Pa., 10 m. S.W. York. Drained by Codorus creek and its branches. It has four stores, five grist-mills, three saw-mills, one tannery, 28 distilleries; three schools, 97 scholars. Pop. 1131.

OLDENBURG (GRAND DUCHY OF), a state of N.W. Germany, consisting exclusive of some portions of country inclosed by the Duchy of Holstein, of an oblong-shaped territory, between lat. 53° 30' and 53° 43' N., and long. 7° 35' and 8° 50' E.; having N. the North sea, and surrounded on all other sides by the Hanoverian dom., except on a small portion of its E. frontier, where it adjoins the territory of Bremen. Length, N. to S., 80 m.; breadth varying from 10 to nearly 50 m. It is divided into three provinces, as follows:

	Area in sq. m.	Pop., 1837.	Chief towns.
Oldenburg	2,103	217,257	Oldenburg.
Lubeck	105	20,082	Eutin.
Birkenfeld	148	27,661	Birkenfeld.
Total	2,356	265,000	

The natural features, climate, &c., of this duchy are similar to those of the adjacent kingdom of Hanover. (*See p. 1080.*) It is almost a perfect level, except towards the S., where are some hills, though none rises above 300 or 400 feet. The principal rivers are the Weser, on the N.E. boundary, its tributaries, the Hunte, Haase, Leda, Jahde, &c. There are many small lakes, the principal being the Drummersee, in the S. The coast is so low that dykes are necessary, as in Holland and Friesland, to prevent inundations of the sea. Here, and on the banks of the rivers, the soil is alluvial and rich; but in most parts of the grand duchy it is either marshy or sandy; and the country does not produce sufficient corn for home consumption, the deficiency being mostly made up by potatoes and pulse. The industry of the inhabitants is, however, principally rural; flax, hemp, hops, and rapeseed; together with cattle, horses, salt beef, butter, and bacon, are the chief exports. The horses and cattle are of superior breeds; large flocks of sheep are pastured on the heath lands, but their wool is of inferior quality. In this district, also, a good many bees are kept. Next to tillage and grazing, taking fish, with which the rivers abound, is a chief employment of the population. Timber, fit for ship-building and carpenter's work, grows in the hilly district in the S. of the duchy, where the forests are estimated to cover an extent of nearly 170 sq. m.; but in other parts the fuel used consists almost wholly of turf, which is very abundant in the marshes. Iron is the only other mineral product of much utility. The spinning of linen yarn, and the domestic weaving of linen and woollen stuffs, are the chief branches of manufacturing industry; but these are pursued only as auxiliary occupations by the agricultural population. Though the country produces oily seeds, animal fat, &c., in considerable quantities, neither candles, soap, nor oil are made to any extent, all being imported from foreign countries, to which the raw materials are sent. Neither is the trade of the grand duchy at all extensive; it has but a small seafaring population, and its commerce is principally confined to a constant traffic with the neighbouring countries of Denmark, Hanover, Holland, Lubeck, &c.

The government is an unlimited monarchy, except in respect to the distribution of the taxes, which is under the control of the states, composed of deputies of the nobles, citizens, and peasantry. For administrative purposes, the Grand Duchy (exclusive of Lubeck and Birkenfeld) is divided into six circles and 98 districts, each of which has its own judicial courts. The court of chancery, and other high courts of appeal, are in Oldenburg or Jever, except for the principality of Lubeck, which has its own superior courts in Eutin. Total public revenue estimated at 850,000 six dollars a year. The population is principally Lutheran, but there are about 66,000 Roman Catholics, and a few Calvinists and Jews.

Oldenburg holds the 10th place in the full diet of the Germ. Confed., in which it has one vote; and the 15th in the committee, in which it has a vote in conjunction with Anhalt and Schwartzburg. Its contingent to the army of the Confed. consists of 2899 men. The house of Oldenburg is connected with the reigning families of Denmark and Russia. The duchy was erected into a sovereign state in 1773, but Birkenfeld was not united to it till 1813.

OLDENBURG, a town of N.W. Germany, cap. of the above Grand Duchy, and residence of its sovereign, circle of same name, on the Hunte, a tributary of the Weser, 24 m. W.N.W. Bremen. Lat. 53° 8' 24" N., long. 8° 13' E. Pop. in 1837, 5564. It is fortified, and divided into the Old and the New Town, the latter being pretty well built. The ducal castle is an imposing building, with a fine park. The chancery-

OLDHAM.

chamber, and other buildings for the use of the government, St. Lambert's church, in which the sovereigns of Oldenburgh are interred, some other places of worship, the observatory, and the barracks, are the principal public edifices. It has a gymnasium, a military school, and a ducal library of 24,000 volumes. Its manufacturing industry is quite insignificant; but it has some trade in wool, timber, &c. (*Berghaus, Allg. Länder und Völkerk.* iv. 410-430; *Dict. Geogr.*)

OLDHAM, a parl. bor., market-town, and township of England, par. of Prestwich, hund. Salford, co. Lancaster, near the source of the Irk and not far from its junction with the Medlock, 6½ m. N.E. Manchester, and 163 m. N.N.W. London. Area of parliamentary borough (which includes, with Oldham, the townships of Chadderton, Crompton, and Ruyton), 11,180 acres. Pop., in 1841, 42,565. The town has entirely risen since 1780, when it comprised only about 60 thatched tenements; it now consists of many well-built streets, extending on the side of a hill on the road from Manchester to Leeds; and is well paved, lighted with gas, and well supplied with water. The chief thoroughfare runs from E. to W., and is crossed by two or three others in an opposite direction. The principal edifices are the town-hall, built in 1810, a small theatre, the "Terrace Buildings," comprising a public room, a market-house, &c., and a large gas establishment. The church, which is subordinate to that of Prestwich, is a modern Gothic structure, completed in 1830, at a cost of £22,000; there are also two chapels of ease within the town, the livings of which are in the gift of the rector of Prestwich. There is a Rom. Catholic chapel; and 11 other places of worship belong to different denominations of dissenters, among whom Methodists are the prevailing body; and attached to the churches and chapels are numerous Sunday schools, which, in 1839, furnished religious instruction to 12,377 children of both sexes. The town has a small endowed grammar school, and a large blue-coat school, founded, in 1807, by the late Mr. Henshaw, hat-manufacturer. This school, however, owing to a long chancery suit respecting the property, which amounted to £40,000, was not opened till 1833. The schoolhouse is at Oldham-edge, and the establishment supports, clothes, and educates 110 boys. There are likewise two large national schools, and several Lancastrian as well as infant schools, wholly, or in part, supported by subscription. The other public institutions consist of three benevolent societies, a bible and tract association, subscription library, lyceum (with schools, news-rooms, &c.), and two mechanics' institutes.

Oldham owes its present consequence entirely to the cotton manufacture, of which it was early a considerable seat. In 1785 there were within the chapelry six cotton-mills; but such and so rapid has been the increase of the manufacture in the interval, that in 1839 it had 200 manufactories, set in motion by a steam-power equal to 3942 horses, and employing 15,321 hands. It had then, also, 300 handloom weavers, chiefly of silks similar to those manufactured in Manchester. (*Factory, Comm. Rep.*) Hat-making (once the staple manufacture of Oldham) is also very extensively carried on, employing 3800 hands; and about 1400 men are engaged in collieries, that have been opened during the last few years within the chapelry. The beds vary from 3 to 5 ft. in thickness; the coal is of excellent quality, and furnishes the chief supplies for Manchester, Ashton, Rochdale, and other manufacturing towns, with which it is connected by the Oldham and Rochdale canals, which latter also communicates with the Ayr and Calder navigation. The Manchester and Leeds railway passes within 2 m. of Oldham, and a branch railway up to the town is in course of construction. Besides the Oldham banking company, it has branches of one or two other banks, and a savings' bank. The affairs of the township are regulated by commissioners, according to an act passed in 1826. Petty sessions are held twice a week; and there is a court of requests for the recovery of small debts, once a month. The Reform Act conferred on Oldham, for the first time, the important privilege of returning two members to the House of Commons. The electoral limits comprise with the townships three outwards, as above mentioned. Registered electors, in 1830-40, 1402. Markets on Saturday: fairs May 2d, July 8, and first Wednesday after October 12. (*Butterworth's Stat. of Lanc.; Baine's Hist. of Lancaster; Parl. Rep.*)

OLDHAM, county, Ky., situated in the N. part of the state, and contains 220 sq. m. Bounded N.W. by Ohio river. It contained in 1840, 5403 neat cattle, 9673 sheep, 19,144 swine; and produced 87,846 bushels of wheat, 2967 of rye, 419,937 of Indian corn, 72,761 of oats, 8163 of potatoes, 102,078 pounds of tobacco, 2191 of sugar. It had 14 stores, three flouring-mills, 11 grist-mills, 13 saw-mills, two tanneries, 16 distilleries, one pottery; one academy, 30 students; 14 schools, 320 scholars. Pop.: whites, 4958; slaves, 2377; free coloured, 145; total, 7580. Capital, La Grange.

OLD TOWN, p. t., Penobscot co., Me., 80 m. N.E. Augusta.

OLMUTZ.

675 W. Bounded E. by Penobscot river, and contains a part of Marsh Island in Penobscot river. On an island in Penobscot river, about a mile above Old town, is the settlement of the remnant of the Penobscot tribe of Indians. The settlement is called Indian Old town, and contains 95 families and 268 individuals, and they own all the islands in the river as far up as the forks. They receive a considerable annuity from the state, for lands which they have sold. They have a small Roman Catholic church, with a bell, containing the Latin inscription, "Deus pro nobis, quis sit contra." They have a number of small dwellings for themselves. The island is fertile, and many wharves are taken here in the spring of the year. The township contains 11 stores, one grist-mill, 35 saw-mills; eight schools, 629 scholars. Pop. 2342.

OLEAN, p. t., Cattaraugus co., N.Y., 293 W. by S. Albany, 29 m. S.E. Ellicottville, 307 W. Watered by Alleghany river and Oil creek. It contains a Presbyterial and Episcopal church, five stores, one grist-mill, three saw-mills; two schools, 100 scholars. Pop. 638. The village on the Alleghany river is the point where the Genesee valley canal is to terminate, whence the river is navigable to Pittsburgh.

OLERON (ISLE OF), an island off the W. coast of France, dep. Charente-Inférieure, opposite the mouth of the Charente, lat. 46° N., long. 0° 30' W., 7 m. S. the Isle of Re, and 2 m. from the nearest point of the continent. Area estimated at about 100 sq. m. Pop., in 1836, 16,402. It is tolerably fertile, producing various kinds of corn, timber, red and white vines (a portion of which is converted into brandy), and considerable quantities of salt, from salt-pans along the coast. Chateau d'Oleron, the cap., on its S.E. side, is a fortified town, with a population of about 2800.

OLEY, p. t., Berks co., Pa., 62 m. E. Harrisburg, 155 W. Watered by head branches of Manataway and Maaconkey creeks. It contains two churches, a German Presbyterian, and a Lutheran; five stores, two furnaces, three forges, six grist-mills, eight saw-mills, two oil-mills, two paper-mills, two tanneries. Pop. 1877.

OLIVA, a town of Spain, prov. Valencia, 39 m. S.S.E. Valencia, and 318 m. S.E. Madrid, built amphitheatre-wise on the side of a hill, 1¼ m. from the Mediterranean, in a well watered and productive district. Pop., according to Miñano, 5367. Its chief public buildings are two churches, one of which has a collegiate establishment, a hospital, ancient palace, and two prisons. Its manufactures are confined to hemp and linen fabrics. In the neighbouring river Molinet are found fine eels and leeches, the latter of which are exported in considerable quantities to France. (*Miñano.*)

OLIVENZA, a town of Spain, prov. Extremadura, close to the frontiers of Portugal, and about 6 m. from the left bank of the Guadiana, 14 m. S.S.W. Badajoz, and 211 m. W.S.W. Madrid. Pop., according to Miñano, 10,447. It is surrounded with walls, and strongly fortified; it has seven parish churches, seven convents (now applied to secular uses), three hospitals, and a poorhouse. The surrounding country, though very imperfectly cultivated, produces abundant crops of wheat, barley, and other grain, with pulse, wine, &c.; and the town is much resorted to by traders from Alentejo, who come to exchange manufactured goods for farm produce. Olivenza was attached to Portugal till 1801, when it was ceded to Spain, to which it is still attached, notwithstanding the order for its restitution by the Congress of 1815. (*Miñano.*)

OLIVER, t., Mifflin co., Pa. It contains three stores, one woollen factory, one furnace, one forge, three grist-mills, 10 saw-mills, 10 schools, 323 scholars. Pop. 1907.

OLMUTZ, a town of Moravia, of which it was formerly the cap., being one of the strongest fortresses of the Austrian dom., cap. circ. Olmütz, on the March, 40 m. N.E. Brünn. Pop., in 1837 (ex. garrison), 12,782. It is well built, but the loftiness of its buildings darkens the streets. The cathedral is a fine Gothic edifice, in which its founder, Wenceslaus III. of Bohemia, is buried: some of the other churches also deserve notice. The archbishop's palace, deanery, town-hall, theatre, arsenal, barracks, a military hospital, a hospital for lying-in women and orphans, and a large convalescent establishment comprise the other chief public buildings. Olmütz is the seat of a university, founded in 1531, and restored in 1827. In 1833 it had, in all, 692 students. It still possesses a library of about 50,000 printed volumes, and many hundred MSS.; it had formerly a rich library of Slavonic literature, but this was carried away by the Swedes, and lost towards the end of last century. It has a gymnasium, an Episcopal seminary, an academy of nobles, a military school, and numerous inferior schools, and is the residence of the high military authorities, and the seat of the superior judicial courts for the circle. It has some manufactures of woolsens, laces, and cotton fabrics, earthenware, leather, and vinegar; and an active transit trade with

OLNEY.

the neighbouring Austrian provinces, Prussia, Poland, &c., especially in cattle. Olmütz was taken by the Swedes in the 30 years' war; and was besieged unsuccessfully by Frederick the Great in 1758. Lafayette was confined here in 1794. (*Oesterr. N. t. Encyc.; Berghaus.*)

OLNEY, a market-town and par. of England, co. Buckingham, hund. Newport, on the W. side of the Ouse, crossed here by a bridge of four arches, 16 m. E.N.E. Buckingham, and 50 m. N.W. London. Area of par. 3140 acres. Pop., in 1831, 2344. The town consists of one long street, lined with stone houses. The church is a large Gothic structure, with a spire 185 ft. high, seen from a great distance: the living is a vicarage in the patronage of the Earl of Dartmouth. The Baptists and Independents have their respective places of worship, which, as well as the church, have well attended Sunday schools. Almshouses for necessitous females are supported at the sole expense of a benevolent Quaker lady. Lace-making was long the chief employment of the inhabitants; but it has been for many years declining. More recently silk-weaving and the manufacture of hosiery were attempted on a small scale, but they also have been abandoned. Olney derives its principal celebrity from its having been for a lengthened period the residence of the poet Cowper: the "substantial brick-built house" in which he resided still stands near the centre of the town, and the arbour in which he studied is in excellent preservation, and is an object of great attraction. The latter years of the poet's melancholy existence were not, however, passed here, but at East Dereham, in Norfolk. It is rather singular that though the vicarage of Olney be not worth £100 a year, it has been held by some rather distinguished persons, including Moses Browne, Scott the biblical commentator, and Newton the friend of Cowper.

OLONETZ, a gov. of European Russia, between the 60th and 65th degs. of N. lat., and the 30th and 62d of E. long.; having N. and N.E. the gov. Archangel, S.E. and S. Volhoda, Novgorod, and Petersburg, and W. lake Ladoga and Finland. Area (including lake Onega) estimated at nearly 62,400 sq. m. Pop., in 1838, 239,000. The W. part of this gov. resembles Finland, in being alternately mountainous and marshy, or covered with lakes. Of the latter, Onega (which see) is by far the largest. Principal rivers, the Onega, by which the lake Lacha discharges itself into the White sea, Vodia, Svir, Suna, &c. For 32 weeks in the year the mean temperature is below 39° Fah., and mercury sometimes freezes. Bleak winds are almost constant; but the country is tolerably healthy. Soil thin, stony, and not very fertile. Except in the district of Kargopol, into which some improvements have been introduced, agriculture is very backward. The produce of corn, in 1838, was estimated at 399,000 *chetverts*, a quantity insufficient for the wants of the population. The peasantry are supported chiefly on turnips, carrots, and other vegetables, of which their bread partly consists, and on the produce of the chase, fisheries, &c. Hemp and flax are grown for exportation; but the principal source of wealth consists in the forests, which are of great extent, those belonging to the crown covering 8,956,795 *deciatines*. Pasturage is not abundant, and few cattle are reared. Marble, granite, serpentine, alabaster, &c., are found; and there are mines of iron, copper, and even silver, though they are but little wrought. The poverty of the country obliges many of the inhabitants to emigrate annually into the adjacent governments to take charge of cattle, hew millstones, &c.; and in summer the number of absentees is estimated at about a third part of the entire population. These circumstances are hostile to manufacturing industry; and, exclusive of the royal cannon foundry at Petrozavodsk, it has only a few tanneries and iron forges. It exports raw produce to Petersburg and Archangel; from which cities, corn, salt, spirits, and colonial and manufactured goods are imported. Olonetz is under the same military jurisdiction as Archangel. Its inhabitants are principally of the Greek church, and subordinate to the archbishop of Novgorod. Total public revenue estimated at only 988,110 rubles. (*Schaitzler, La Russie; Pessart; Russ-land, &c.*)

OLORON, or OLERON (an. *Ilaro*), a town of France, dep. Basses-Pyrenees, cap. arrond., on the summit and declivity of a hill behind the Olerno, across which it communicates with the town of Ste. Marie by a lofty bridge, 13 m. S.W. Pau. Pop., in 1836, 6037. It has a court of primary jurisdiction, a board of customs, and a chamber of manufactures; with manufactures of woollen cloths, yarn, hosiery, paper, and leather; and an active trade in French and Spanish wool, sheep-skins, *lambons de Bayonne*, and other salted meats, cattle, and timber. It is the general depot for the timber of the Pyrenees destined for the dockyard of Bayonne.

OLOIT, a town of Spain, in Catalonia, near the small river Pluvia, 53 m. N.N.E. Barcelona; lat. 43° 13' N., long. 2° 45' E. Pop., according to Mifano, 13,845. It is tolerably well built on level ground, at the foot of a range of volcanic

ONEGA,

hills, and has several squares and streets adorned with fountains; its public buildings consist of two parish churches, cavalry barracks, and a hospital. It has considerable manufactures of cotton cloths and woollen caps, with extensive tanneries and soap factories, and some paper-mills. Well-attended markets are held twice a week; and Olot is one of the most thriving towns of Catalonia. Its neighbourhood is peculiarly interesting to geologists, on account of the extinct volcanoes with which it abounds, scattered over a tract measuring about 15 m. from N. to S., and about 6 m. from E. to W. Mr. Lyell, who visited it in 1830, says, "There are about 14 distinct cones with craters in the vicinity of Olot; and the largest, called Santa Margarita, is 435 ft. deep, and about a mile in circumference. These volcanic rocks, also, have often a cavernous structure; and at the base of the same hill, adjoining the town, are the mouths of about 12 subterranean caverns, here called *bufaredes*. In 1431 the whole of Olot, except a single house, was thrown down by an earthquake; but this calamity may, perhaps, be ascribed more to the cavernous nature of the subjacent rocks than to the extraordinary violence of the movement on that spot; for Catalonia is beyond the line of these European earthquakes which have within the period of history destroyed towns throughout extensive areas." (*Mifano; Lyell's Geology, iv., 38-48.*)

OMER (38°), a strongly-fortified town of France, dep. Pas de Calais, cap. arrond., on the Aa, and at the union of several great roads, 40 m. N.W. Arras, and 29 m. E. by N. Boulogne. Lat. 50° 44' 48" N.; long. 3° 25' 18" E. Pop., in 1838, 18,789. It is partly built on a hill, but principally in the low and marshy plain at its foot. The circ. of its ramparts is about 2½ m.; beyond its moats and glacis are several strong and extensive outworks; and from the town being half surrounded by marshes, the greater part of its vicinity may be readily laid under water. Its streets are broad and regular, but being lined generally with mean-looking houses of yellow brick, it has a dull appearance. It is however well furnished with public fountains. The cathedral of Notre-Dame, an edifice completed towards the middle of the 15th century, is of Gothic architecture, and 373 ft. in length internally. In it are several colossal statues, a fine painting by Reubens, the tomb of St. Omer, a superior organ, &c. The abbey of St. Bertin, in which the last of the Merovingian kings died, was destroyed during the phrensy of the revolution, and only some ruins of its church exist. The college, formerly the Jesuit's church; the military hospital, occupying the building formerly a seminary for the English and Irish Roman Catholic clergy; the town-hall, arsenal, and powder magazines, several hospitals and prisons, the theatre, and some convents, are the other principal public buildings. The ramparts are planted with elms, and form fine promenades; as do the banks of the canal of Neuf Fossé, which connects St. Omer with Aire, and the Aa with the Lys. It is the seat of a sub-prefecture, and has courts of primary jurisdiction and commerce, a chamber of manufactures, a communal college, and a public library of 16,000 volumes. Its manufactures consist of common woollen cloths, woollen yarn, lace, basket-work, fishing-nets, soap, starch, glue, tobacco-pipes, &c.; it has also many distilleries, breweries, paper-mills, and tanneries, and an active trade in corn, wine, oil, flax, coal, &c. Beyond the walls are two suburbs, the inhabitants of which are principally gardeners. Near the town is a lake, on which are some curious floating islands, held together principally by the trees which grow on them, and affording pasturage for sheep and cattle.

This town was originally called Sithiu; it took its present name from St. Omer, who founded its cathedral about 645. It was walled at the end of the 9th century; and was long an object of contention between the Burgundians and French, to whom it finally fell in 1677. (*Hugo, art. Pas de Calais; Dict. Glog.*)

ONATE, a town of Spain, in Biscay, prov. Guipuzcoa, 38 m. E.S.E. Bilbao, and 194 m. N.N.E. Madrid. Pop., according to Mifano, 19,000. It stands on the side of a hill in the valley of its own name, and is well built with regular streets, most of them terminating in a large square, which has a remarkably fine town-hall, a parish church, with a tower 190 ft. high, and a large building with a Doric portico, formerly used as a convent of Jesuits: in the centre of the square is an elaborately ornamented fountain. There are two other parish churches, and several deserted convents, a well supported hospital, and a college of handsome architecture, attended by between 150 and 200 students. Iron is extensively wrought in the neighbouring mountains, and within the town are iron-foundries, nail factories, &c. The late civil war, however, which chiefly raged in the Basque provinces, gave a great shock to its industry, from which it is only slowly recovering. The surrounding district is extremely productive, and has numerous mineral springs and quarries of jasper and limestone. (*See BISCAY.*)

ONEGA (LAKE) a considerable lake of Russia, being

ONEIDA.

next to that of *Ladoga*, the largest in Europe, in the centre of the gov. of *Onondaga*, between lat. 60° 50' and 63° 50' N., and long. 34° 30' and 36° 30' E. Length, N.W. to S.E., 130 m.; breadth varying from 30 to 45 m. Area variously estimated at from 3300 to 4300 sq. m. It receives numerous rivers, and at its S.W. extremity discharges itself into the lake *Ladoga* by the *Svir*. Its shores, which are generally rocky, present several deep bays and gulfs; and there are numerous islands near its N. extremity. Its navigation is impeded by sandbanks, but it is less subject to storms than lake *Ladoga*. Principal towns on its bank, *Petrozavodsk* and *Povenets*. (*Schmidt, La Russie; Passerat; &c.*)

ONEIDA, county, N.Y., situated N.E. of the centre of the state, and contains 1101 sq. m. Drained by Black and Mohawk rivers. The Erie and the Chenango canals, and the western line of railroads pass through it. It contained in 1840, 92,669 neat cattle, 177,070 sheep, 66,543 swine; and produced 238,159 bushels of wheat, 8064 of rye, 364,075 of Indian corn, 30,940 of buckwheat, 98,331 of barley, 657,952 of oats, 1,574,109 of potatoes, 38,794 pounds of hops, 966,502 of sugar. It had two commercial and three commission houses in foreign trade, 342 retail stores, 14 furnaces, one forge, 40 fulling-mills, 23 woolen factories, 13 cotton factories with 37,316 spindles, two dyeing and printing works, five flouring mills, 57 grist-mills, 246 saw-mills, two oil-mills, six paper-mills, two rope-walks, three glass-houses, 61 tanneries, 11 distilleries, four breweries, two potteries, nine printing-offices, nine weekly newspapers; two colleges, 190 students; 94 academies, 3035 students; 441 schools, 20,166 scholars. Pop. 85,310. Capital, *Utica*, *Rome*, and *Whitesboro*.

ONEIDA, lake, N.Y., borders on Oneida, Madison, Onondaga, and Oswego counties, and is 92 m. long, and from 2 to 6 m. broad. It receives Wood, Oneida, and Chittenango creeks, and has its outlets into Oswego river.

ONEONTA, p. l., Otsego co., N.Y., 30 m. S. Cooperstown, 9 m. W. Albany, 349 W. Watered by Susquehanna river and its tributaries. It contains two churches, a Presbyterian and Baptist, eight stores, two furnaces, one fulling-mill, two grist-mills, seven saw-mills, one printing-office, one weekly newspaper; one academy, 35 students; 13 schools, 555 scholars. Pop. 1936.

ONION, or Winooki river, Vt., rises in Cabot, and flows S. and S.W. to Montpelier, where it receives a large branch. It then flows northwesterly, until it enters lake Champlain. m. N. of Burlington village on the dividing line between Burlington and Colchester townships. Along the margin of this river is the most level road through the Green mountain range. On each side of it in some parts the mountains tower to a great height, leaving on the bank of the river, barely sufficient room for a road. It is one of the four large rivers of Vermont on the W. side of the mountains, which enter lake Champlain, and is about 70 m. long. Winooki is the Indian name; and though this river has been long known by the name of Onion river, Thompson, in his Gazetteer of Vermont, has adopted the name Winooki, and it may perhaps prevail. Winooki signifies the land of onions. The turnpike road from Burlington to Montpelier, along this river, was long since chartered by the name of the Winooki turnpike. The river has falls, which afford good water-power.

ONLOW, county, N.C., situated in the S.E. part of the state, and contains 790 sq. m. Watered by New river and its branches. It contained in 1840, 9003 neat cattle, 5161 sheep, 23,128 swine; and produced 9117 bushels of wheat, 1556 of rye, 928,759 of Indian corn, 8196 of oats, 74,994 of potatoes, 4411 pounds of rice, 218,104 of cotton. It had four stores, three flouring-mills, 18 grist-mills, 10 saw-mills; three schools, 71 scholars. Pop.: whites, 4675; slaves, 2739; free coloured, 113; total, 7597. Capital, *Onslow* C.H.

ONONDAGA, county, N.Y., centrally situated towards the N. part of the state, and contains 711 sq. m. It contains Skeneateles and Otisco lakes, and has Oneida lake on its N.E. border. Watered by Oneida and Seneca rivers, which unite to form Oswego river. The salt springs of this county are owned by the state, and yield to it a large revenue. In the villages of Salina, Syracuse, Liverpool, and Geddes, which are near to each other, and the centres of the salt manufacture and trade, there were produced in 1840, 2,692,335 bushels of salt, yielding a revenue to the state of \$162,404. The Erie canal passes through it; and the Oswego canal extends from it at Syracuse to lake Ontario. It contained in 1840, 46,090 neat cattle, 159,050 sheep, 61,733 swine; and produced 655,799 bushels of wheat, 3593 of rye, 401,303 of Indian corn, 14,430 of buckwheat, 348,615 of barley, 534,762 of oats, 800,317 of potatoes, 178,520 pounds of sugar. It had 264 stores; 2,864,634 bushels of domestic salt were produced; one furnace, 23 fulling-mills, 10 woolen factories, three cotton factories with 3792 spindles, 28 flouring-mills, 20 grist-mills, 114 saw-mills, one oil-mill, two paper-mills, 43 tanneries, seven distilleries, one brewery,

ONTENIENTE.

six printing-offices, one daily and five weekly newspapers, and one periodical; 19 academies, 1533 students; 333 schools, 17,570 scholars. Pop. 67,911. Capital, *Salina*.

ONONDAGA, p. l., Onondaga co., N.Y., 5 m. S. Syracuse, 133 W. by N. Albany, 246 W. Drained by Onondaga creek. It contains five churches, three Presbyterian, an Episcopal, and a Methodist; one academy, 394 students; 25 schools, 1748 scholars. Pop. 5658.

ONONDAGA, lake, N.Y., is situated in the N. part of Onondaga co., is 8 m. long, and from 2 to 4 m. broad, and is celebrated for the salt springs on its borders, the largest and best in the United States, though its own waters are fresh. It has its outlet into Seneca river, and receives from the S. Onondaga creek.

ONSLow, C.H., p. v., capital of Onslow co., N.C., 145 m. S.E. Raleigh, 373 W. Situated W. of New river. It contains a courthouse, jail, and several stores and dwellings. Net proceeds of the postoffice in 1842, \$57.

ONTARIO, lake, N.Y., the easternmost and smallest in extent of the five great lakes of North America. It is between 43° 10' and 44° N. lat., and between 76° and 80° W. lon. It receives Niagara river, the great outlet of the upper lakes, in its S.W. part, and has its outlet by St. Lawrence river in its N.E. part; in which, immediately below the lake, is the cluster denominated "the Thousand Islands." Its shape approaches to a long and narrow ellipse, being 190 miles long, and 55 miles wide in its widest part, and about 480 miles in circumference. It is very deep, being in some places over 600 feet, so that its bottom is considerably below the level of the Atlantic. It is 334 feet below the level of lake Erie, and 931 feet above tide-water. In every part, it has sufficient depth of water for the largest vessels. It has many good harbours, and is rarely frozen, excepting in shallow places near the shore. The principal rivers which enter it on the S. side are the Genesee, Oswego, and Black rivers, and a large number of creeks. The bay of Quinte is a long and irregular body of water in its E. part, which receives a considerable river, the outlet of several small lakes; and Burlington bay is in its W. part. Both of these bays are in Canada. It has several important places on its shores, the principal of which are Kingston, Toronto, and Coburg, in Canada; and Oswego, Sacket's Harbour, port Genesee or Charlotte, in the United States. It is subject to violent storms and heavy swells; but the numerous steamboats which navigate it pass quickly through it, having a great draught of water. It is connected with the Erie canal and Hudson river by the Oswego and Erie canals, and much of the trade of New-York for the west passes through it, and through the Welland canal, which is 36 m. long, with 24 locks; and admits the passage of the largest vessels which navigate the lakes. The canal-boats generally have decks, which fit them for navigating the lakes. This canal commences at Sherbrooke, near the mouth of Grand river on lake Erie, and terminates at port Dalhousie on lake Ontario, 9 m. W. of Niagara village. Its entrance being a considerable distance W. of the outlet of lake Erie, it is open earlier than the Erie canal at Buffalo, where the ice often accumulates in the spring.

ONTARIO, county, N.Y., situated centrally in the W. part of the state, and contains 617 sq. m. It has Seneca lake on its E. border, Canandaigua lake in its central and S. part, and Honeyoye and Hemlock lakes in its W. part. The outlet of Canandaigua lake flows into Seneca river. Iron ore, gypsum and marl, are abundant. It has a spring which emits carburetted hydrogen or inflammable gas, and several sulphur springs. The Erie canal touches its N. border, and the Auburn and Rochester railroad passes through it. It contained in 1840, 34,300 neat cattle, 174,190 sheep, 46,837 swine; and produced 770,235 bushels of wheat, 6162 of rye, 246,018 of Indian corn, 16,661 of buckwheat, 117,060 of barley, 462,266 of oats, 365,844 of potatoes, 183,273 pounds of sugar. It had 136 stores, 27 fulling-mills, 10 woolen manufactories, 23 flouring-mills, 35 grist-mills, 92 saw-mills, one oil-mill, one paper-mill, 30 tanneries, 14 distilleries, three breweries, three potteries, six printing-offices, three binderies, four weekly newspapers; one college, 146 students; 18 academies, 1373 students; 84 schools, 12,427 scholars. Pop. 43,500. Capital, *Canandaigua*.

ONTARIO, p. l., Wayne co., N. Y., 22 m. W. Lyons, 96 m. W. by N. Albany, 362 W. Bounded N. by lake Ontario. It contains one store, one furnace, one forge, one grist-mill, 11 saw-mills; 10 schools, 423 scholars. Pop. 1699.

ONTENIENTE (an. *Foniente*), a town of Spain, prov. Valencia, on the Clariano (a trib. of the Júcar), crossed here by a handsome stone bridge, 35 m. N. by W. Alicante, and 47 m. S.S.W. Valencia. Pop. acc. to Milano, 12,000. It is tolerably well built, with a fine central square, and several wide though steep streets: its principal public buildings being three parish churches, five decayed convents, a hospital and college now partly in ruins. It is a place of considerable industry, chiefly engaged in wool-

ing linens and woollen fabrics; besides which there are several falling, corn, oil, and paper-mills. In the neighbourhood is an extensive *Acacia*, or irrigated tract, which is very productive. A great fair is held here in November.

OOCH, a town of N.W. Hindostan, prov. Mooltan, rajahship of Bhawalpore, is a fertile plain 4 m. E. the Chenab (an. *Acacia*), where it is joined by the Gagra, or united Sutlej and Beas; lat. $29^{\circ} 11' N.$, long. $70^{\circ} 30' E.$ Pop. 20,000. "It is formed of three distinct towns, a few hundred yards apart from each other, and each has been encompassed by a wall of brick, now in ruins. It is a mean place: the streets are narrow, and covered with mats as a protection from the sun. It is highly celebrated in the surrounding countries for the tombs of two saints of Bokhara and Bagdad. These are handsome edifices, about 500 years old; but an inundation of the *Acacia*, some years back, swept away one half of the principal tomb, with a part of the town." (*Burns's Trav. to Bokhara*, &c., i., 79-82, &c.) Ooch is built on an elevated mound of clay, apparently composed of the debris of former houses, it being a place of high antiquity.

OOJEIN (Hindoo *Ujjain*, or *Asanti*, the *Ozma* of Ptolemy and the *Periplus*), a city of Central India, prov. Malwa, and the former cap. of Scindia's dom., on the Siprah, a tributary of the Chambul, 34 m. N. by W. Indore, and 1600 ft. above the sea; lat. $23^{\circ} 11' N.$, long. $75^{\circ} 51' E.$ It is of an oblong form, about 6 m. in circuit, and fortified with a stone wall and towers. Within this space is some waste ground, but the greater part of the surface is thickly covered with buildings and very populous. The streets are broad, airy, paved, and clean; the houses of brick or wood, and tiled or terraced. Four mosques, some mansions, Scindia's palace, an extensive and commodious edifice, but without any claim to magnificence, an ancient Hindoo gate, and some Hindoo pagodas, are the principal public edifices. In a temple to Mahadeo is an extraordinary sculptured image of the bull Nandi. The population of Oojein includes a great many Mohammedans, who are actively engaged in trade. The imports are principally fine white cloths, turbans, and dyed goods; European and Chinese produce from Surat; *sassafras*, &c., from Sind; cotton, coarse cloths, opium and other drugs, are exported, and diamonds in transit from Buncleedun to Surat.

Ancient Oojein, which stood about 1 m. northward, was destroyed at an uncertain period by some physical catastrophe. On digging to a depth of 15 or 18 ft., brick walls, stone pillars, and other antiquities have been discovered, frequently in good preservation. Adjoining these subterraneous ruins, is what has been called the cave of Bhirtory, a palace now in great part buried by an accumulation of the surrounding earth, but of which many portions remain entire, including a long gallery, supported by pillars curiously embellished with figures in relief. Elsewhere around Oojein, there are various temples, &c., worthy of notice; and about 4 m. N. is an elegant summer palace, cooled by artificial cascades, built in the 16th century, and but little injured by time. (*Forbes, Hunter, &c., in Mod. Trav.*, x., 280-288; *E. I. Gaz.*)

OOSTERHOUT, a town of Holland, prov. N. Brabant, arrond. Breda, cap. cant. 5 m. N.E. Breda. Pop. about 6300. It has numerous potteries and brick-kilns, and is the seat of three large annual fairs, at each of which the sale of woollen and linen fabrics, shoes, &c., is estimated to amount to 40,000 florins.

OPELOUSAS, p. v., capital of St. Landry par. La., 217 m. W.N.W. New-Orleans, 1948 W. Situated on a branch of Teche river, and surrounded by a level and pleasant country. It contains a courthouse, jail, U. States' land-office, three stores, and about 500 inhabitants. It is the seat of Franklin college, founded in 1830, which has a president and three professors or other instructors, and 70 students. The commencement is on the 1st of November.

OPORTO, or PORTO, an important commercial city and seaport of Portugal, on the N. bank of the Douro, about 9 m. from its mouth, 174 m. N. by E. Lisbon, lat. $41^{\circ} 10' 30'' N.$, long. $8^{\circ} 37' 18'' W.$ Pop. in 1837, including Villanova and Gaya, on the opposite side the river, 80,000. The town has four suburbs, which, with the city itself cover an area of about 9 sq. m. It is built amphitheatre-wise, partly on the sides and tops of two hills, but partly also on a plain near the river, from which it has a strikingly beautiful appearance. A wall, flanked at intervals, with towers, encircles the town, which is further protected by a fort; but these fortifications have not been kept in good repair, owing to the city being naturally secure against an attack by sea, and one on the land side not being apprehended. An elevated quay extends the whole length of the town: it has on one side a row of houses, and on the other a strong stone wall, with rings, booms, &c., for securing vessels during the heavy swells of the river. It is generally well built, the houses are all white-washed, and though it has many narrow and dirty streets, it is said to be (which,

however, is no great recommendation) the cleanest and most agreeable town in Portugal. From the quay rises a broad well-paved street, flagged on both sides, and leading to two cross streets of equally fine proportions; but the streets on the slope of the hill are mostly irregular, contracted, steep, and dirty. At the E. end of the city the houses, which overhang the side of the river, are built on so steep an acclivity as to be accessible only by steps cut out of the rock. On the summit of the hills are several fine broad streets, lined with good houses, with gardens attached, occupied by some of the principal merchants. Oporto has several squares, the largest of which are the *Praca da Constituição* and the *Campo da Cordaria*, lined with three rows of trees, and much frequented as a public promenade. There are nine parish churches, and a great many other churches and chapels. The cathedral, built in 1105, is a large and fine, though rather heavy edifice: the church, *das Clerigos*, has the highest steeple in Portugal, except that of Mafra: the rest exhibit no features worth notice. There are also 17 convents, now luckily unoccupied, or applied to secular uses. The other public edifices comprise a modern-built episcopal palace, a town-hall (*es-cadela da Comarca*), courthouse, with attached prisons, royal hospital, *caserna*, or pawnbroking establishment, and a very pretty theatre, with extensive warehouses belonging both to the Oporto company and the British merchants. The English factory is a handsome building, in one of the principal streets, comprising reading-rooms, ball-rooms, &c., and a residence for the British consul. Oporto has several establishments for public instruction, the principal of which are the academy of navigation and commerce, the school of medicine and surgery attached to the hospital *de la Misericordia*, the episcopal seminary, school for foundlings, and four colleges, with numerous schools for primary and higher instruction. It has a large tobacco factory, a soap-boiling establishment, with roperies, tanneries, and fabrics of cotton, silk, linen, and wool: besides which there are ship-building yards for the construction and repair of merchant-vessels; but in none of these establishments is there any great display of activity. The harbour within the bar, across the mouth of the Douro, can only be entered, at least by vessels of considerable burden, at high water; and it is rarely practicable at any period of the tide for any vessel drawing more than 16 ft. On the N. side the entrance is the castle of St. Joao de Fos, near which, on high ground, is a lighthouse, with a fixed light. The ordinary rise of spring tides is from 10 to 13 ft., and of neaps from 6 to 8 ft. The bar being liable, from the action of the tides, and from sudden swellings and *freshes* in the river, to perpetual alterations, should never be attempted by any vessel without a pilot.

The swellings or *freshes*, now alluded to, most commonly occur in spring, and are caused by heavy rains, and the melting of the snow on the mountains. The rise at such times often amounts to 40 ft.; and the rapidity and strength of the current are so great that no dependence can be placed on anchors in the stream. Fortunately, a fresh never occurs without timely warning, and it is then the practice to moor with a cable made fast to stone-pillars erected on the quay for that purpose. On the opposite side of the river, but connected by a bridge of boats, are the towns of Gaya and Villanova, which may be considered as suburbs of Oporto. The former of these is said to occupy the site of the ancient Cala: more eastward is Villanova, inhabited chiefly by coopers, porters, and other labourers, employed by the merchants; and between these towns are immense vaults or warehouses for storing wine previously to its shipment.

Commerce.—Owing to her situation on the Douro, which is navigable partly by barges and partly by boats about 100 m. inland, Oporto is the emporium of a large portion of Portugal, and enjoys a pretty extensive commerce. The famous and well-known red wine called port is produced on the banks of the Douro, about 50 m. above Oporto, and has derived its name from its being exclusively shipped at this city. The exports of port, which is the great article of trade, have varied during the last 10 years from about 16,500 to above 40,000 pipes. England is by far the largest consumer of port. The high discriminating duties on French wine, imposed in the reign of William III., originally introduced port into the British markets, and gave it a preference, to which, though an excellent wine, it had no natural claim: this preference first generated, and its long continuance has since so confirmed, the taste for port among the great bulk of the population, that it bide fair to maintain its ascendancy as an after-dinner wine, notwithstanding the late equalisation of the duties. In 1840, for example, 2,668,534 gallons port were entered for consumption in the United Kingdom; whereas the entire entries of French wines during the same year, including champagne, claret, *sauterne*, &c., amounted to only 341,841 gallons! At an average of the three years ending with 1840, the

OPPELN.

shipments of port wine from Oporto for England were 25,964 pipes a year. Next to England, Brazil, the U. States of America, and Hamburg, are the principal importers of port. The other articles of export from Oporto are oil, oranges, and other fruits; wool, refined sugar, cream of tartar, shumac, leather, cork, &c. The imports are sugar, coffee, and other colonial products, principally from Brazil; corn, rice, beef, salt fish, and other articles of provision; cotton and woollen goods, hardware, tin plates, &c. from England; hemp, flax, and deals from the Baltic, &c. Subjoined is a

Statement of the Shipments of Port from Oporto during each of the Three Years ending with 1840, specifying the Quantity shipped for each Country.

	1838.	1839.	1840.	Annual Average of the 3 Years.
	Pipes.	Pipes.	Pipes.	Pipes.
Great Britain	28,027	26,120	25,478	26,541
Brazil	7,191	1,913	2,738	3,280
United States	2,233	5,471	1,400	2,689
Hamburg	503	330	645	590
Other countries	1,506	1,260	2,974	1,780
Total	37,375	33,205	35,130	34,760

The climate of Oporto is damp and foggy in winter, less from the vicinity of the Atlantic than from its position in the midst of woods and mountains. The cold is severe for the latitude, though it seldom freezes; and in summer, on the other hand, the heat would be intense, if not moderated by winds blowing regularly from the E. in the morning, S. at noon, and W. at night. The soil in the vicinity is not fertile, nor is Oporto supplied with provisions from its own immediate neighbourhood; but there are many beautiful and pleasant gardens, producing, according to their exposure or elevation, the fruits of N. or S. Europe. The neighbouring mountains exhibit many traces of metallic ores; and along the S. bank of the river are veins of copper and beds of coal. (*Dalrymple's Travels in Portugal*, 128-129.)

Oporto was occasionally the residence of the ancient emperors of Portugal, till Alphonsus I., in 1174, wrested Lisbon from the Almoravides, and made it the permanent capital of his kingdom. The city received many important privileges from John II. at the close of the 15th century; but most of them were withdrawn, in consequence of an insurrection of its inhabitants in 1577. In 1805 it was taken and sacked by the French, who retained it till 1809, when the British crossed the Douro, and compelled them to retreat. It afterwards became, in 1831-33, the scene of an obstinate and long-protracted conflict between the late Don Pedro and his brother Miguel. The siege of Oporto lasted upwards of a year, during which a considerable portion of the town was battered down by Don Pedro's artillery, a great deal of property was wantonly destroyed by Miguel's troops, many of the wine-stores were blown up, and several of the wealthiest merchants were ruined by the annihilation of all trade. (*Dalrymple's Portugal*; *Bulbi, Essai Stat. de Portugal*; *Dict. Geog.*; *Mod. Trav.*)

OPPELN (Slav. *Oppelina*), a town of Prussian Silesia, cap. reg. and circ. Oppeln, on the Oder, 51 m. S.E. Breslau. Pop., in 1838, 6381. It is walled, and has, in general, lofty and massive houses, with an old Gothic cathedral, several other Roman Catholic and Protestant churches, various schools, a royal salt magazine, and several good hotels. It is the seat of government for the regency, of a board of taxation, a municipal tribunal, &c.; and has a gymnasium and a society for the promotion of the public good. (*Von Zedlitz*; *Berghaus*.)

OPPENHEIM, p. t., Fulton co., N. Y., 64 m. N.W. Albany, 402 W. Bounded W. by East Canada creek. Drained by branches of Mohawk river. It has a Dutch Reformed church, one store, 17 saw-mills, one oil-mill, three tanneries; 13 schools, 601 scholars. Pop. 3109.

OPPIDO, a town of the Neapolitan dom., prov. Calabria Ultra, cap. cant., on a hill close to mount Aspromonte, and 14 m. N.E. Reggio. Pop. about 9000. The old town of Oppido, supposed by Cluverius to occupy the site of the ancient *Mamertium*, was utterly ruined by the great earthquake of 1783. The modern town, which is also a bishop's see, was built in the vicinity of the former.

Oppido is the name of another Neapolitan town, prov. Basilicata, 13 m. N.E. Potenza. Pop. 5000. (*Croce's Tour*, &c., p. 275-76.)

ORANGE (an. *Arausia*), a town of France, dep. Vaucluse, cap. arrond. on the Meyne, a tributary of the Rhone, in a fine plain about 5 m. E. the latter river, and 12 m. N. Avignon. Pop. in 1838, 5897. It has several parish churches, a Protestant church, a communal college, hospital, &c., and many good private houses and public fountains; but the widest thoroughfare being only 19 or 13 ft. across, scarcely any vehicles enter its streets; and the road from

ORANGE.

Lyons to Avignon, instead of passing through, goes round the town. It has manufactures of handkerchiefs, coloured linens called *toiles d'Orange*, serge and silk twist.

Orange is indebted for its celebrity to its Roman antiquities. The principal of these is a splendid triumphal arch, situated a short way out of the town. It has been conjectured that this structure was erected by Marius; but from its profusion of ornament it would seem to date from a much later period; and, according to Woods, is probably not prior to the age of Hadrian. (*Letters of an Architect*, l. 146.) In many of its details it presents more of the Grecian than the Roman style of architecture; but from the absence of any inscription, its date is wholly conjectural. It is about 64 ft. in length and breadth, and rather more in height. It has three arched passages, the central and largest of which is 35½ ft. in height. The archways are flanked by fluted Corinthian columns, and the whole structure is profusely covered with groups of figures and other sculptured ornaments. This monument was a good deal injured in the middle ages, from having been converted into a fortress; but it is, notwithstanding, in a state of tolerable preservation; and of late years it has been repaired, and surrounded by a palisade. Extensive remains of a theatre, and the traces of several other Roman buildings, also exist here.

Orange was long the capital of a small principality of the same name that gave the title of Orange to the family which now occupies the thrones of Holland and Nassau. The king of Holland, however, retains merely the title of Prince of Orange; the town and principality having been ceded to Louis XIV. at the peace of Utrecht. The principality, 12 m. in length by 9 m. in breadth, is very productive of wine, oil, saffron, madder, fruits, and aromatic plants; its inhabitants are distinguished by their industrious habits. (*Hugo's Guide du Voyageur*; *Brasseur, Tableau de Nimes*, &c.; *Artaud, Arc. d'Orange*; *Woods*, &c.)

ORANGE, county, Vt. Situated in the E. part of the state, and contains 850 sq. m. Watered by Omphacum river, Waits' river, and branches of White river. Connecticut river bounds it on the E. Large quantities of sulphur of iron are found in Theford, and some lead ore in Strafford. It contained in 1840, 38,853 neat cattle, 154,053 sheep, 92,516 swine; and produced 60,565 bushels of wheat, 11,933 of rye, 190,543 of Indian corn, 30,144 of buckwheat, 58556 of barley, 945,878 of oats, 1,055,379 of potatoes, 686,639 pounds of sugar. It had 60 stores, 23 fulling-mills, five woolen factories, 33 grist-mills, 109 saw-mills, two oil-mills, two paper-mills, 38 tanneries, one printing-office; 41 academies, 964 students; 367 schools, 9923 scholars. Pop. 37,873. Capital, Chelsea.

ORANGE, county, N. Y. Situated in the S.E. part of the state, and contains 760 sq. m. Shawangunk mountains lie in its W. part, and the highlands in the S.E. part. Drained by Delaware and Wallkill rivers. Bounded E. by Hudson river. The Delaware and Hudson canal crosses its W. part, and the Erie railroad is finished and in operation, 45 m. from Piermont, on Hudson river. It contained in 1840, 54,709 neat cattle, 50,218 sheep, 47,084 swine; and produced 94,774 bushels of wheat, 396,668 of rye, 410,194 of Indian corn, 112,993 of buckwheat, 1879 of barley, 417,701 of oats, 359,563 of potatoes, 1845 pounds of hops. It is particularly celebrated for its butter and cheese. The products of the dairy were valued at \$669,806. It had 471 stores with a capital of \$1,191,395; 91 lumber yards, capital \$25,000; three furnaces, 14 fulling-mills, 15 woolen factories, 28 cotton factories with 3590 spindles, four flouring-mills, 32 grist-mills, 100 saw-mills, four paper-mills, 26 tanneries, 41 distilleries, one brewery, three potteries, six printing-offices, one bindery, five weekly newspapers and two periodicals; total capital in manufactures \$1,515,415; 21 academies, 1409 students; 170 schools, 8727 scholars. Pop. 36,738. Capital, Goshen and Newburgh.

ORANGE, county, Va. Situated in the central part of the state, and contains 380 sq. m. Drained by branches of North Anna and Rivanna rivers. It contained in 1840, 7399 neat cattle, 10,708 sheep, 15,036 swine; and produced 97,747 bushels of wheat, 8430 of rye, 394,784 of Indian corn, 91,671 of oats, 30,897 of potatoes, 416,325 pounds of tobacco, 9061 of cotton. It had 15 stores, eight smelting-houses, producing gold to the amount of \$64,000, 45 flouring-mills, 24 grist-mills, 30 saw-mills, seven tanneries; five academies, 41 students; 26 schools, 347 scholars. Pop. whites, 3575; slaves, 5364; free coloured, 186; total, 9725. Capital, Orange C. H.

ORANGE, county, N. C. Centrally situated towards the N. part of the state, and contains 1300 sq. m. Watered by Neuse and Haw rivers. It contained in 1840, 9397 neat cattle, 46,340 sheep, 28,131 swine; and produced 67,379 bushels of wheat, 2643 of rye, 368,490 of Indian corn, 81,613 of oats, 14,847 of potatoes, 962,888 pounds of tobacco, 253,437 of cotton. It had 12 stores, three cotton factories with 2300 spindles, 18 flouring-mills, 27 grist-mills, 35 saw-

ORANGEBURG.

mills, three oil-mills, 11 tanneries, 11 distilleries, one pottery; five academies, 900 students; seven schools, 157 scholars. Pop.: whites, 16,771; slaves, 6954; free coloured, 631; total, 24,356. Capital, Hillsboro'.

ORANGE, county Ia. Centrally situated towards S. part of the state, and contains 378 sq. m. Watered by Lost river and Lick and Patoka creeks, which afford water-power. It contained in 1840, 7508 neat cattle, 15,678 sheep, 22,260 swine; and produced 140,264 bushels of wheat, 1391 of rye, 529,927 of Indian corn, 140,796 of oats, 9088 of potatoes, 268,327 pounds of tobacco, 22,968 of sugar. It had 97 stores, 14 grist-mills, five saw-mills, two oil-mills, five tanneries, four distilleries, three potteries, one printing-office, one weekly newspaper, and one periodical; 40 schools, 974 scholars. Pop. 9602. Capital, Paoli.

ORANGE, p. t., Franklin co., Mass., 74 m. W. by N. Boston, 415 W. Watered by Miller's river, which affords water-power. Incorporated in 1783. It contains a Baptist church, six stores, two grist-mills, seven saw-mills; 19 schools, 494 scholars. Pop. 1501.

ORANGE, t., New-Haven co., Ct., 4 m. S.W. New-Haven. Organized in 1838 from New-Haven and Milford. It contains three churches, two Congregational and an Episcopal, three stores, four grist-mills, three saw-mills; eight schools, 493 scholars. Pop. 1329.

ORANGE, p. t., Steuben co., N. Y., 301 m. W. by S. Albany, 313 W. Drained by Mead's creek. It contains two stores, six saw-mills, one tannery; 10 schools, 325 scholars. Pop. 1694.

ORANGE, p. t., Essex co., N. J., 44 m. N.W. Newark, 53 m. N.E. Trenton, 219 W. Drained by Second river, and branches of Rahway river. It contains five churches, three Presbyterian, an Episcopal and Methodist, 10 stores, one tannery; eight schools, 330 scholars. Pop. 3361.

ORANGE, t., Cuyahoga co., O., 13 m. E.S.E. Cleveland, 13 m. S. Willoughby. The E. branch of Chagrin river here has a fall of 98 ft. perpendicularly, affording good water-power. It contains four stores, one fulling-mill, one woollen factory, one flouring-mill, one grist-mill, five saw-mills; eight schools, 330 scholars. Pop. 1113.

ORANGEBURG, dist., S. C. Situated a little S. of the centre of the state, and contains 1224 sq. m. Bounded N. by Congaree river, E. by Santee river, S.W. by South Edisto river. Watered by North Edisto river. It contained in 1840, 23,507 neat cattle, 3323 sheep, 33,383 swine; and produced 12,490 bushels of wheat, 477,011 of Indian corn, 12,357 of oats, 74,240 of potatoes, 510,670 of rice, 878,370 of cotton. It had 18 stores, 67 grist-mills, 78 saw-mills; one academy, 40 students; 11 schools, 236 scholars. Pop.: whites, 6321; slaves, 11,934; free coloured, 264; total, 18,519. Capital, Oranburg.

ORANGEBURGH, C. H. p. v., capital of Orange dist. S. C., 44 m. S. by E. Columbia, 550 W. Situated on the E. side of North Edisto river, and contains a courthouse, jail, an academy, several stores, and about 500 inhabitants.

ORANGE, C. H. p. v., capital of Orange co., Va., 84 m. N.W. Richmond, 94 W. It is situated at the foot of S.W. mountain, and contains a courthouse, jail, two churches, a Methodist and Presbyterian, a female academy, nine stores, a printing-office, issuing a weekly newspaper, about 60 dwellings, mostly of brick, and 500 inhabitants.

ORANGETOWN, t., Rockland co., N. Y., 123 m. S. Albany. Bounded E. by Hudson river, on which is Piermont village, where the New York and Erie railroad terminates. It contains 30 stores, four lumber-yards, one cotton factory with 576 spindles, seven grist-mills, four saw-mills, two tanneries, two distilleries; eight schools, 319 scholars. Pop. 2771.

ORANGEVILLE, p. t., Genesee co., N. Y., 257 m. W. Albany, 360 W. Drained by Tonawanda creek and its tributaries. It has two stores, one grist-mill, five saw-mills; 16 schools, 659 scholars. Pop. 1949.

OREGON TERRITORY, consists of a large extent of country lying between the Rocky mountains and the Pacific ocean, and drained by the Columbia river and its tributaries, and supposed to contain about 350,000 sq. m. The boundaries of the territory are in dispute between the United States and Great Britain, which it is hoped may be amicably adjusted by a pending negotiation.

This territory is divided into three belts or sections, separated by ranges of mountains running very nearly parallel with the shore of the Pacific. The first or western section lies between the Pacific ocean and the Cascade mountains or President's range. The second or middle section is between the Cascade mountains and the Blue mountains. The third or eastern belt is between the range of the Blue mountains and the great range of the Rocky mountains. These sections have a distinction of soil, climate and productions. The first range of mountains is continuous, from 100 to 150 miles from the coast, and has many high conical peaks of from 12,000 to 14,000 ft. above the level of the sea, that are above the region of perpetual

OREGON.

snow, which is here 6500 ft. high. The Blue mountains are irregular in their course and occasionally interrupted, but generally proceed from the east of north to the south of west. On the S. part of the territory is the Klamath range, running on the parallel of 49° N. lat., and dividing the territory from California. The climate of the region between the ocean and the first range, though not unhealthy, is not in general very favorable to agriculture. The climate is mild throughout the year, neither experiencing the severe cold of winter nor heat of summer. The mean temperature is 54° of Fahrenheit. The winter is supposed to last from the last of December until February; the rains begin to fall in November and last till March, but they are not heavy, though frequent. Snow sometimes falls, but it seldom lies longer than three days. The frosts are early, occurring in the latter part of August. This however is owing to the proximity of the mountains, as the winds from them always cause a fall in the temperature. The nights are cold, and affect vegetation so far that Indian corn will not ripen. Fruit trees blossom early in April, at Vancouver and Nisqually; at which latter place peaches were a foot high on the 12th of May, strawberries were in full blossom, and milled had gone to seed. The country is in general well timbered with pine, fir, spruce, oaks, (red and white), ash, arbutus, arbutus vitæ, cedar, poplar, maple, willow, cherry and few; with an undergrowth of hazel, rubus, roses, &c. Near the coast, the trees grow to an astonishing height. A fir tree growing near Astoria, 8 m. from the sea, was 46 ft. in circumference, 16 ft. from the ground, and 153 ft. in length before giving off a single branch, and not less than 300 ft. in its whole height. Another tree of the same species, on the banks of the Umpqua, was 57 ft. in circumference, and 216 ft. in length below its branches; and sound pines, from 200 to 260 ft. in height, and from 20 to 40 ft. in circumference, are not uncommon. These enormous trees are an impediment to cultivation. Near the foot of the Cascade range, the climate and soil are adapted to all kinds of grain, wheat, rye, oats, barley, pease, &c.; and apples and pears succeed well. The low grounds of the eastern section are well adapted to grazing, and cattle subsist on the green or dried grass through the year, which favours the rearing of great numbers of horses and horned cattle. The valley of the Willamette or Multnomah river is thought to contain the finest land in Oregon. This river has a course of about 100 m., nearly N. and enters the Columbia on the S. side. The wheat of this valley is of a superior quality, and yields from 20 to 30 bushels to the acre. The soil of the second or middle section is generally a light sandy loam; in the valleys a rich alluvion, and barren on the hills. The third or eastern section of Oregon between the Blue and Rocky mountains, is a rocky broken, and barren country. Stupendous mountain spurs traverse it in all directions, affording little level ground; and in its elevated parts, snow lies nearly through the year. It rarely rains, and no dew falls. The difference of temperature, at sunrise and at noon is often 40 degrees.

The Columbia is the great river of this territory. Its northern branch rises in the Rocky mountains in 30° N. lat., and 116° W. long., and thence pursues a northern route to near McGillivray's pass in the Rocky mountains. Here the river is 3000 ft. above the level of the sea, and receives Canoe river, it then turns S., and receiving many tributaries, among which are Kootanie, or Flat Bow, and the Flat Head or Clark's river from the E., proceeds to fort Colville. The Columbia is thus far surrounded by high mountains, and often expands into a line of lakes. At Colville it is 2040 ft. above the level of the sea, having fallen 550 ft. in 290 m. To the S. of this it tends to the W., receiving Spokane river from the east. Thence it pursues a westerly course for 60 m., and bending to the S. receives Okanagan river, which has its source in a line of lakes, extensively susceptible of canoe navigation. The Columbia thence passes to the southward until it reaches Walla-walla, in 45° N. lat., and receives Sepin or Lewis river. This river has many rapids, which greatly obstruct canoe navigation, and receives the Koonkooke, Salmon and several other rivers from the E. and W. The length of Lewis river to its junction with the Columbia is 530 m. from its rise in the Rocky mountains. The Columbia at Walla-walla is 1266 ft. above the level of the sea, and is 3500 ft. wide. It now takes its last turn to the westward, receiving Umatilla, Quilmes's, John Day's and Chute rivers from the S., and Cathlamet's from the N., pursuing a rapid course for 80 m., previously to passing through the range of the Cascade mountains, where is a series of falls and rapids that form an insurmountable obstacle to passage of boats, even in time of floods, which are overcome by portages. From thence there is a still-water navigation for 40 m., when it is again obstructed by rapids. Thence to the ocean, 120 m., it is navigable for vessels requiring 12 ft. of water, at the lowest state, though obstructed by many sand bars. In this part, it receives the Willamette from

the S., and the Cowellitz from the N. The Willamette is navigable for small vessels to within 3 m. of its falls. The Columbia is greatly increased in its width within 30 m. of the ocean, which it enters between Cape Disappointment and point Adams, 7 m. apart, from each of which a sand bar extends, which renders its entrance dangerous. Frazer's river rises in the Rocky mountains near the sources of the Canoe river, and flowing northwesterly for 80 m., it turns to the southward and receives Stewart's river, which rises in a chain of lakes near the N. boundary of the territory. It then pursues a southerly course, receiving several rivers on the E. and W. side, and under the parallel of 49° N. lat. it passes the Cascade range in a succession of falls and rapids; and after a westerly course of 70 m. it empties into the gulf of Georgia in 49° 7' N. lat. Through this last portion, it is navigable for vessels requiring 12 ft. of water; its whole length being 350 m. The lower part of this river, and its precise outlet were unknown in 1819. There are many small lakes in various parts of the territory. The harbors on the coast at the mouth of the rivers are generally obstructed by sand bars; and even the entrance of the Columbia is impracticable for two thirds of the year, during which time it is equally dangerous to leave it. Within the straits of Juan de Fuca, there is a great number of the finest harbors for the largest class of vessels; and the rise and fall of the tides is 18 ft. Here are found the greatest portion of the valuable harbors of the territory.

Among the most striking features of the territory are the passes through that immense barrier, the Rocky mountains. These mountains are in general a continuous chain; and though they are often 16,000 ft. or more in height, yet in several places they are so interrupted as to allow of a road for crossing them. At fort Boisals on Lewis's river, 8 m. N. of the mouth of Reed's river, Farnham in his tour through Oregon says: "Among the curiosities of this establishment were the fore wheels, axletree and thills of a one-horse wagon, said to have been run by the American missionaries from the state of Connecticut through the mountains, thus far toward the mouth of the Columbia. It was left under the belief that it could not be taken through the Blue mountains. But fortunately for the next that shall attempt to cross the continent, a safe and easy passage has lately been discovered by which vehicles of this kind may be drawn through to Wallawalla." There are three places where the great chain of the Rocky mountains has been passed. The north one is that passed by Lewis and Clark, in about 46° 30' N. lat. The second is in 44° 30', where a road is practicable. But the best, probably, is the south pass, in about 43° 30' following up the north fork of Platte river, and its branch the Sweet-water river at the foot of the Wind River mountains and W. of them, over to the head waters of Lewis's river. This is believed to have been the route of the wagon above spoken of.

The various tribes of Indians inhabiting this territory amount probably to about 30,000. Of the whites, Canadians and half breeds, there are between 700 and 800, about 150 of whom are Americans; the rest are settlers, and officers and servants of the Hudson's bay company. The American board of commissioners for foreign missions have several missionary stations, and the Methodists have a flourishing station on the Willamette river. Fort Vancouver on the N. bank of the Columbia, 90 m. from the ocean, is the principal seat of the British fur trade, though they have a number of other posts, which are at present reaping nearly all the advantages of the fur trade of the territory.

On the 7th of May, 1792, Captain Robert Gray, in the ship Columbia, of Boston, discovered and entered the Columbia river, to which he gave the name of his vessel. He was the first person who established the fact of the existence of this great river, and this gives to the United States the title from discovery. In 1804-5, Captains Lewis and Clarke, under the direction of the government of the United States, explored the country from the mouth of the Missouri to the mouth of the Columbia, and spent the winter of 1805-6 at the mouth of the Columbia. This exploration of the river, the first ever made by white men, constitutes another ground of the claim of the United States to the territory. In 1806, the Missouri fur company, established a trading house on Lewis's river, the first ever formed on any of the waters of the Columbia. In 1810, the Pacific fur company, under John Jacob Astor of New-York, was formed; and in 1811, Astoria was founded by them, at the mouth of the Columbia. In consequence of the exposure of Astoria by the last war with Great Britain, the post was sold out to the Hudson's bay company; but it was restored to its original proprietors, by order of the British government, at the close of the war, agreeably to the first article of the treaty of Ghent. See a Memoir of the North West coast of North America, by Robert Greenhow, translator and librarian to the department of state;

presented, by a select committee, to the senate of the United States, Feb. 10th, 1840; a work which clearly exhibits the mass of historical facts that bear upon the great question of title to this territory, which it is hoped will be soon settled by negotiation.

OREBRO, or CEREBRO, a town of Sweden, in the centre of the country, lap. lan. Orebro, at the W. extremity of the lake Hjelmar, 100 m. W. Stockholm, lat. 59° 17' 13", long. 15° 13' 30" E. Pop., in 1836, 4135. "The houses are built chiefly of wood, not merely of logs clumsily put together, as is the case in Russia, but of logs covered with boards neatly finished; the workmanship of which would not disgrace the tools of any of our English carpenters. Their exterior planking is invariably painted a deep red colour, with white doors and window-frames. The roofs are generally covered with turf; but there are several well-built brick houses stuccoed white." (*Barrow's Excurs. in the N. Europe*, 162.) Streets wide and clean, and some of them are paved with granite. In the principal church is a monument in honour of Engelhardt. From its central position, Orebro becomes sometimes the seat of the Swedish diet. The inhabitants manufacture woollen cloth, stockings, &c., and carry on an active trade with Stockholm, by the lake Hjelmar, the canal of Arboga, and the lake Malar. The town also is an entrepôt for the iron of the interior. (*Stein's Hand-Book; Barrow, &c.*)

OREL, a central prov. of European Russia, to the S. of Kalouga and Tula. Area, 16,750 sq. m. Pop., 1,305,000. Surface undulating; soil, extremely rich and fertile. Principal rivers, Dnepsa, an affluent of the Dniepr; Soma, an affluent of the Don; and Oka, an affluent of the Volga. Forests very extensive; occupying nearly a third part of the surface. Agriculture is the principal dependence of the inhabitants; and owing to the excellence of the soil, the return, notwithstanding the bad husbandry, is frequently 7, and sometimes 10 times the seed. Manufactures have made little progress, but distilleries are numerous. Instruction very defective; there being in the entire government, in 1832, only 39 schools, and 4266 scholars. The public revenue amounts to about 10,500,000 roubles, of which the spirit and beer duties yield 6,336,663 roubles. (*Schmitzer, La Russie, &c.*, 346, &c.)

OREL, a city of European Russia, cap. of the above gov., on the Oka, where it receives the Orlyk; lat. 52° 57' 29" N., long. 35° 57' 15" E. Pop., according to the official accounts, in 1830, 31,406; having been only 20,000 in 1820. This rapid increase is owing to its favourable situation for commerce, in the centre of a rich country, on a navigable river communicating, partly by the aid of canals with the Baltic on the one hand, and the Black sea and the Caspian on the other. Orel may be reckoned the entrepôt of the commerce between Russia, Little Russia, and the Crimea; and at the same time the dépôt for corn, both of its own and the adjacent fertile governments. The principal articles of commerce are corn, hemp, tallow, butter, bristles, leather, wax, honey, cloth, horned cattle, &c., which is merchants chiefly buy in the southern provinces. Immense quantities of most of these articles are shipped upon the Oka, partly to be landed at Serpuchof for the consumption of Moscow, and partly to be forwarded to Petersburg. It has an ecclesiastical seminary, attended by a great number of pupils; a gymnasium, &c. It has also establishments for the spinning of cotton, manufactures of cloth and coarse linen, with tanneries, distilleries, tallow-melting houses, rope-works, &c.; and is the seat of some important fairs. It is built of wood, and palisaded; and the inhabitants are distinguished for their industry and wealth. (*Schmitzer, La Russie, &c.*, p. 351; *Lyall's Travels*, l. 29, &c.)

ORENBORG, a very extensive government of the Russian empire, mostly in Europe, but partly in Asia, lying between the governments of Astrakhan on the W., and that of Tobolsk on the E., and having Persia on the N., and the country of the Independent Kirgheses on the S. Area estimated at about 138,000 sq. m. Pop., 1,771,000. (*Keppen*.) It is divided into two unequal portions by the Oural mountains; and the river Oural has its source and termination in this government. It is also traversed by the Belz and other affluents of the Volga, and is bounded on the E. by the Ennsa. Soil very various; in part mountainous, in part arid, saline steppes, but the larger portion is decidedly fertile. Forests very extensive. Climate in extremes; being exceedingly hot in summer, and proportionally cold in winter, particularly to the E. of the Oural mountains. Notwithstanding the backwardness of agriculture, the produce of corn is estimated at about 4,000,000 chetverts. The principal wealth of the inhabitants consists in their horses, cattle, and sheep; of all which, but especially the first two they have vast numbers. They have also camels, &c. &c. The river Oural teems with fish, which are taken in great numbers, and are said to furnish the best caviar. Mines important and valuable, yielding some gold, with large quantities of iron and copper, in the working of which

ORFORD.

many individuals are employed. A manufactory of arms was established in the district of Trotak, in this government, by workmen from Rhenish Prussia. The salt-mines of Ilesak furnish annually about 300,000 poods, and a large supply is obtained from the salt-lakes. A considerable commerce is carried on with the Kirghises and other people to the S. of Orenburg, which principally centres in the town of that name. In 1833 there arrived at the latter 14 caravans, with 2547 camels; and during the same year there were despatched 13 caravans, with 4700 camels and 264 draught-horses. The value of the imports was 3,551,198 roubles, and of the exports 3,577,921 do. (*Schneider, La Russie, &c.*, p. 701.)

ORENBURG, the principal city of the above government, and the residence of the military governor, on the N. bank of the river Oural, lat. 51° 46' N., long. 53° 4' 45" E. Pop. 18,000 or 20,000.* It is well built, and regularly fortified. Principal edifices, cathedral and custom-house. In 1895 a school was established here for the special use of the Mohammedans, and the study of their language. The seat of the commerce alluded to in the preceding article is on the southern side of the river, in a vast bazaar erected exclusively for that purpose, and protected by a camp of Cossacks.

ORFORD (formerly *Ore-ford*), a decayed bor., market-town, and par. of England, hund. Flomergate, co. Suffolk, at the confluence of the Alde with the Ore; 16 m. E. by N. Ipswich, and 80 m. N.E. London. Area of bor., 2740 acres. Pop., in 1841, 1026. It was formerly of much greater importance than at present, having, in 1350, sent three ships and 69 men to Edward III. at the siege of Calais. Its decay is attributed to the loss of its port, the sea having receded from this part of the coast. It is now, having lost its privilege of sending members to the House of Commons, sunk into insignificance; though its large ancient church, decayed town-hall, assembly-house, and fine old castle, attest its former consequence. Its present inhabitants are chiefly supported by the oyster fisheries in the neighbouring rivers. Orford claims to be a borough by prescription, but has received several royal charters. Its corporate officers are a mayor, eight portmen, and 12 capital burgesses; but it was considered too unimportant to be included in the provisions of the Municipal Reform Act. It sent two members to the House of Commons from the reign of Richard III. down to the Reform Act, by which it was disfranchised. Sudborne hall, a seat of the Marquis of Hertford, is about 1 m. N.E. from the town. Markets on Monday: fair, June 24.

ORFORD, p. l., Grafton co., N.H., 60 m. N.N.W. Concord, 17 m. N. Hanover, 505 W. Bounded W. by Connecticut river, over which is a bridge to Fairlee, and drained by its small tributaries, and by headwaters of Baker's river, which flows to the Pemigewasset and Merrimac. Limestone and a fine quality of soapstone are extensively found. It contains three churches, two Congregational and a Universalist, four stores, two fulling-mills, one woollen factory, four saw-mills, one tannery, one pottery; 17 schools, 390 scholars. Pop. 1707.

ORIA (an. *Hyrria*), a town of the Neapolitan dom., prov. Otranto, cap. canton, 21 m. E. by N. Taranto. Pop. 5080, principally of Greek origin. It is a "city romantically situated upon three hills, in the centre of the plains. The castle and cathedral stand boldly on the highest points." (*Swimburne*.) Oria is a bishopric, and is very ancient. (*Cramer's Anc. Italy*, II, 310, &c.)

ORIHUELA, an Episcopal city of Spain, prov. Valencia, on both sides the Segura, crossed here by two bridges, 14 m. E.N.E. Murcia, and 98 m. S.E.W. Valencia. Pop., according to Mifano, 25,551. It is situated at the foot of a ridge of bare rocks, near the head of a very fruitful *sega* or vale, forming a continuation of the *huerta* of Murcia. The streets are broad, but not paved; and there is not a single fountain in the town. Its principal buildings are, a cathedral (with an attached chapter of five dignitaries and 17 canons), five parish churches, two of which are in the suburbs, and five dependant churches (*angels*), two hospitals, a foundling asylum, public granary, and cavalry barracks. The inhabitants are remarkable for their superstition, demoralization, idleness, and poverty. The greater part are engaged in agriculture; and the town is a considerable mart for corn and oil. It produces linen and hats, and has numerous tanneries, corn and oil mills, soap-houses, and starch manufactories. A large fair is held in October. The neighbouring *huerta*, about 17 m. in length by 5 m. in breadth, can scarcely be exceeded in beauty and fertility. "Even the vale of Murcia yields in this respect to that of Orihuela, because the latter is so abundantly supplied with water as to be independent of rain. The cypress, silver elm, and

ORINOCO.

pomegranate are here seen mingled with the mulberry, orange, and fig; and here, also, the palm, rising in rich clusters, lends novelty as well as beauty to the enchanting scene." (*Ingles*, II, 230.) The *huerta* yields also very plentiful crops of wheat, barley, and canary seed, hemp, flax, garden vegetables, &c., and is deservedly called the "garden of Spain."

Orihueles, the an. *Orgeles*, is supposed to have existed prior even to the Carthaginians, from whom it passed successively to the Romans, Goths, and Moors. In 1057 it was made the capital of a small kingdom subordinate to the caliphate of Cordova. In 1293 it became annexed to the Moorish kingdom of Murcia, and finally, in 1365, fell by conquest into the hands of James I., the Christian king of Aragon. (*Ingles*, II, 216-220; *Mod. Trav.*: *Mifano*.)

ORINOCO, a large river of S. America, in Columbia, for a knowledge of which we are chiefly indebted to Humboldt, who explored the greater part of its course in 1800-1802. Its sources have not been traced, but are supposed to lie in about lat. 3° 30' N., long. 64° W.: it has a circular course, running first W., then N., and latterly E., to its embouchure in the Atlantic, opposite to and S. of Trinidad: its length, including windings, is estimated at 1360 m., being nearly equal to that of the Danube. In lat. 3° 10' the river runs over a ledge of rocks, forming a cataract called the Raudal de Guaharibos, about 50 m. above the station of Esmeralda, the highest point attained by Humboldt. About 15 m. below this station it is joined on the S., or left bank, by the Casiquiare river ("two or three times broader than the Seine nearer the Jardin des Plantes"), which unites with the Rio Negro, an affluent of the Amazon, and thus connects the Orinoco and the latter by a navigable water communication. Its course from this point is W.N.W. to the junction of the Guaviare, after which it becomes a broad and deep river, flowing N. by E. over a rocky bed, in which are the two large cataracts called the *Raudales*, or rapids, of Maypures and Atures, joining together an archipelago of islands, which fill the bed of the river for several miles, and in some places do not leave a free passage of 20 or 30 ft. for its navigation, though its breadth at this point exceeds 8000 ft. (*Humboldt's Pers. Narr.*, v., 138.) About 50 m. below these falls the Orinoco receives from the W. bank the waters of one of its principal affluents, the Meta; and about 70 and 130 m. lower still, the large rivers Arauca and Apure. At the junction of the Apure, where the rocky country terminates, the main stream deflects eastward, and runs E. by N. past Angostura, to the delta at its mouth, the only considerable affluents in this part of its course being the Caura and Carony, joining it from the S. The delta has its apex about 130 m. from the sea: the S., or principal channel, called *Boca de Novias*, runs eastward into the Atlantic, and is divided for a distance of about 46 m. into two channels, by the island of Imataca, the E. end of which is about 35 m. from point Barima, at the mouth of the river, in lat. 8° 45' N., long. 60° W. The N., or smaller channel, divides itself into a number of branches, called *Bocas chicas*, or small mouths; most of them are sufficiently deep for vessels of considerable burden; but they cannot be navigated without the aid of the neighbouring Indians, who alone are acquainted with the deep and safe channels formed in the alluvial soil near the mouth of the river. The greatest distance between the mouths of the Orinoco is estimated by Humboldt at 47 nautical leagues, or 140 m.: two of the northern mouths fall into the gulf of Paria.

The effluents of the Orinoco are very numerous, many of them contributing an immense volume of water to the principal river. Those on the W. and N. banks, however, are the only rivers available for navigation, except in the lower part of its course, where it receives Caura and Carony. The Guaviare, which is supposed to connect itself with the Rio Negro by a natural channel, in the same way as the latter river is connected with the Orinoco, appears to have a navigable course of more than 200 m. The Meta rises in the Andes, E. of Bogota, and is navigable for about 500 m. The Apure rises in the Andes, by several sources, between the 6th and 8th parallels of N. lat.; and after a course of nearly 500 m., enters a low and swampy district, through which it forms many different channels, in the neighbourhood of which are extensive *llanos*, furnishing very rich pasturage.

The tides of the Orinoco, at the lowest season, in March, are perceptible as far as Angostura, about 290 m. from Pt. Barima; but the rise is not material above the juncture of the Carony, about 160 m. from the mouth. The annual swell of the Orinoco commences in April and ends in September, during which it remains with the vast body of water which it has acquired the five preceding months, and presents an astonishingly grand spectacle. At the distance of 1300 m. from the ocean, the rise is equal to 13 fathoms. In the beginning of October the water begins to fall, imperceptibly leaving the plains, and exposing in its bed a num-

* The official returns quoted by Schneider make the population only 2800; but this is no doubt an error, and most probably refers either to houses or families. According to the same returns, the births in 1833 were 600, and the deaths 620, showing that the population cannot differ materially from what is stated above.

ORISSA.

bar of rocks and islands. At the beginning of February it is at its lowest ebb, and continues in this state till the beginning of April. It abounds in fish of various descriptions. Amphibious animals are also found in great numbers on its shores; caymans, or round-mouthed crocodiles, are met with in great abundance throughout the river, and are, not without justice, an object of dread to the natives. Scorpions and mosquitoes are stated, likewise, to be so abundant as to offer the greatest hindrances to European travellers. The Indian tribes above Angostura are described as a miserable, savage race, little improved by the efforts of the Jesuit missionaries; and the ferocity of the natives along the upper part of the river prevented Humboldt and Schomburgk from ascertaining its farthest sources. (*Humboldt's Pers. Narr.*, v.; *Geog. Journal*, x, 242-247.)

ORISSA, a prov. of Hindostan, now wholly included in the British presid. of Bengal and Madras, between the 18th and 23d degs. of N. lat., and the 83d and 87th of E. long.; having N. the provinces Bengal and Bahar, W. Gandwanah, S. the Godavery, and E. the bay of Bengal. Length, N.E. to S.W., about 400 m.; average breadth, 70 m. Area, 28,000 sq. m. Population uncertain. Orissa proper is almost wholly included in the British district of Cuttack, which see (I, 723; see also *Asiatic Researches*, xv, for a detailed description of the prov.). The shore of Orissa is in general low and sandy; the interior remains in a very wild state, being composed of rugged hills and uninhabited jungles, pervaded by a pestilential atmosphere. The population consists, for the most part, of castes considered impure by other Hindoos; including Ooreas, and other hill tribes, quite distinct in language, features, and manners, from the Hindoos of the plains. Principal towns, Cuttack, Juggernaut, and Balasore. Orissa has been continually subject to foreigners since 1558, when it was conquered by the Afghans. In 1578 it was annexed to the Mogul empire; in 1756 it was transferred to the Marhattas, and in 1803-4 it was occupied by the British. (*Hamilton's E. I. Gazetteer*.)

ORISTANO, a town of the island of Sardinia, div. Cagliari, cap. prefecture, near the mouth of the Tirsi (an *Tirso*), in the bay of Oristano), on the W. shore of the island, 30 m. N.N.W. Cagliari. Pop., in 1838, 5791. It is in a fertile, but unhealthy plain, and is not fortified. Its steeples and turrets give it a tolerable appearance from the sea; but it is straggling, unpaved, and ill supplied with water. It has a cathedral, a spacious edifice, with a detached octagonal belfry, one of the most striking objects in the town. There are several other churches and convents, a hospital, a Tidestene seminary, and a Parlat college. The Tirsi is crossed here by a bridge of three arches. The bay of Oristano, the mouth of which is 5 m. across, affords excellent anchorage during the prevalence of winds blowing off shore, but those from the W. throw in a heavy sea. The E. shore of the bay is shoal, but near its N. side vessels anchor to six or seven fathoms water. Many of the inhabitants are occupied in the manufacture of salt, and the tunny fishery; and some tolerable wine is grown near the town. Oristano was founded about 1070. (*Smyth's Sardinia*, 294, 295, &c.)

ORIZABA, a town of Mexico, in the state of Vera Cruz, in a valley remarkable for its fertility, 70 m. W.S.W. Vera Cruz, and 140 m. E.S.E. Mexico. Pop. between 8000 and 10,000, including whites and Indians. It is laid out in wide, neat, and well-paved streets; though so great is the power of vegetation, that grass grows in almost every part of the town. Coarse cloths are made here in small quantities, and there are several tanneries. The valley in which Orizaba is situated is well clothed with forest trees, above which rises the now extinct and snow-covered volcano of Orizaba, to the height of 17,380 ft. above the Atlantic. The neighbourhood produces all the tobacco consumed in Mexico; and within the town is a large government manufactory of that article.

ORKNEY AND SHETLAND ISLANDS. These islands, which are most probably the *Thule* of the ancients, lie in two groups to the N. of Scotland, and form between them a county. The Orkneys (*Orkades*), the most southerly group, are separated from the county of Caithness by the Pentland frith, about 6 m. in breadth. They are comprised between the parallels of 59° 44' and 59° 24' N. lat., and 3° 25' and 3° 30' W. long. There are about a dozen principal islands; Pomona, or Mainland, being decidedly the largest. But, including the smaller islands (provincially *holms*) and islets, the total number is estimated at about 67, of which about 40 are uninhabited. They are supposed to comprise an area of about 281,600 acres, and had, in 1831, a population of 28,847.

The Shetland, or Zetland, isles, the most northerly group (perhaps the *Ultima Thule* of the ancients), are separated from the Orkneys by a channel 48 m. across, and lie principally between the parallels of 59° 52' and 60° 50' N. lat., and 30° and 10° 40' W. long. Including islets, they are supposed to exceed 100 in number; but the mainland or principal

ORKNEY AND SHETLAND.

island is a good deal more extensive than all the others put together. Between 30 and 40 are inhabited. They are about twice as extensive as the Orkneys; their total area being estimated at 563,200 acres. In 1831 they had a population of 39,392.

The aspect of these islands is pretty similar; but the Shetland group is the more wet and barren of the two. They are generally fenced, particularly on the W. side, with high, black, precipitous cliffs, against which the sea, when vexed by storms, dashes with astonishing fury. They are destitute of high mountains; the altitude of mount Rona, in Shetland, the highest, not exceeding 919 ft. Their general appearance is that of dreary, heathy wastes, interspersed with rocks, varied sometimes with swamps and lakes, and, in a few places, with beds of moveable sand. In some parts, however, particularly in Orkney, the land is abundantly fertile, producing good crops of corn and luxuriant herbage. Some of the islets, or holms, appear like gigantic pillars, rising perpendicularly from the sea; these are the resort of vast numbers of sea-fowl; and in the breeding season hunting for eggs and young birds forms one of the principal and most dangerous employments of the natives. Climate similar to that of the outer Hebrides, except that the days are a little longer in summer and shorter in winter. During the latter, the aurora borealis is uncommonly brilliant. The cultivated lands bear but a very small proportion to the others, being supposed not to exceed 25,000 acres in Orkney, and 22,000 in Shetland. Farms generally very small; few having more than 10 acres of arable land, and many not nearly so much. Agriculture is considered, particularly in Shetland, of subordinate importance, and, though a good deal improved, is still very backward. In Shetland, most part of the ground is turned over with the spade; but in Orkney ploughs are in pretty general use. Oats, and bere or bigg (*Hordeum hazaridum*), are the only white crops cultivated; and, except on a few improved farms, they follow each other alternately as long as the land will bear any thing, which it does for a very long time when well manured with sea weed. The barley of Orkney is a great deal more abundant, and of a much better quality, than could have been anticipated; and, besides supplying the home demand, considerable quantities are exported. Potatoes are cultivated in all the islands, and form an important part of the food of the people. Turnips have also been planted, and have succeeded very well. At present, no trees can be made to grow, and hardly a shrub is to be met with; which is the more singular, as the trunks of large trees are not unfrequently found imbedded in moss and sand, both in Orkney and Shetland. The hardy, spirited little horses, known by the name of *Selkies*, are bred in Shetland, and are exported in considerable numbers. The stock kept in the islands is estimated at from 10,000 to 12,000; they are never housed, nor receive any food, except what they gather for themselves. Some of them are exceedingly well proportioned, active, and strong for their size. The horses of Orkney are inferior in estimation. Cattle very small, sometimes not weighing more than 35 to 40 lbs. a quarter: they are shaggy, and not well shaped; but they are hardy, feed easily, and, when fat, their beef is fine and tender. The stocks in both groups of islands is supposed to amount to about 45,000 head. The native sheep are of the small dun-faced breed; they yield short wool, which, though generally soft and fine, is sometimes as hairy as that of a goat. Recently the black-faced and Cheviot breeds, and even pure merinos, have been introduced into Orkney with considerable success. The stock in both groups of islands is believed to exceed 135,000. A small breed of swine is very abundant: they roam at large, and are not a little destructive. Rabbits are abundant in both sets of islands, but particularly in the Orkneys; as many as 36,000 skins have been exported in a single season from the port of Stromness. Fowls are plentiful, and large quantities of eggs are exported from Orkney. The fisheries, however, in Orkney as well as Shetland, are the grand object of pursuit. The islands are periodically visited by vast shoals of herrings; while the surrounding bays and seas are uniformly well supplied with cod and other species of white fish. *Driftus is rari s. mari, ab omni parte summa piscandi commoditate objecta.* (*Buck.* lib. 1., § 50.) Braesay sound, in Shetland, has always been one of the principal stations of the Dutch herring fishers; but the fishing there is now principally carried on by the islanders. During the year ended the 5th of April, 1840, 19,396 barrels herrings, and 9968 cwt. cod were cured in Orkney; and 25,685 barrels herring, and 46,581 cwt. cod, in Shetland. About 100,000 lobsters are supposed to be annually shipped from the Orkneys for London. Vessels from British ports bound for the N. whale fishery mostly touch at Orkney or Shetland; and, besides taking on board supplies of provisions, usually complete their crew with seamen belonging to the islands, whom they put on shore on their way back. Rye straw grown in Orkney has

ORKNEY AND SHETLAND.

been found peculiarly well fitted to serve as a substitute for the straw used in Italian plait; and the manufacture of this straw into plait has been carried on for several years to a considerable extent, and with pretty good success. Kelp, though comparatively unprofitable, continues to be extensively produced. Woollen stockings and gloves, sometimes of extraordinary fineness, are exported from Shetland. Messrs. Anderson, in their valuable work on the Highlands, give the following account of the

Sums received in Orkney, in 1833, for Farm Produce, Manufactures, Fish, &c., exported.			
Bere, or bigg, 5178 bolls, at 15s. per boll of 6 bushels, or 90s. per quarter	3683	10	0
White oats, 1515 bolls, at 12s. 6d. of do., or 16s. per quarter	909	0	0
Malt, 10,066 bushels, sent to Leith, say 3s. per bushel	1004	8	0
Pens, 234 do., at 3s.	35	2	0
Outmeal, 40 bolls, at 14s. per boll of 140 lbs. Imperial	98	0	0
Horses, cows, and oxen, 954, 1 quarter horses, at £9; 3 quarter cows, at £3.	4290	0	0
Do. not entered at custom-house, about 246, at do	1104	0	0
Eggs sent to Leith, 50 tons, 100 doz. per cwt., 100,000 doz. at 6d.	2500	0	0
Sheep and swine, 40 of each at £1	80	0	0
Butter, about £3000; hides, about £700	3700	0	0
Rabbit-skins, more than 2000 doz., at 5s. 6d. per doz.	600	0	0
Feathers, about	250	0	0
Kelp, supposed scarcely to exceed 500 tons, at £4 10s.	2250	0	0
Straw manufacture, including rent, cutting, planting, &c.	4900	0	0
Herrings, 34,000 barrels, at 10s. per barrel	17,000	0	0
Cod, fished by about 40 sloops of 30 tons, 14 tons each, at £13 per ton	7290	0	0
Lobsters, caught by 432 men, in 316 boats	1800	0	0
Whale fishing, about 25 ships, taking 90 men each, 500 men, at £15	7500	0	0
Hudson's Bay Company pay annually for the wages of men employed in Hudson's Bay, about	1500	0	0
Total	60,114	0	0

There is no similar account for Shetland; but the sums received by its inhabitants do not differ materially from those received by their neighbours in Orkney. The shipping of the islands is considerable. In 1836 there belonged to the Orkneys 77 ships, carrying 4218 tons and 383 men; and there belonged at the same time to Shetland 101 ships, carrying 3967 tons and 744 men, exclusive of a great number of boats engaged in the fisheries.

The people of these remote islands being of Scandinavian and not Celtic origin, neither the Gaelic dress nor language has ever prevailed among them. All of them now speak English; but, of old, Norse was the prevalent language. The cottages of the poorer ranks are in general miserable hovels, affording accommodation in winter to cows and fowls, as well as to the family. Owing to the scarcity or exhaustion of moss, the want of fuel is in some islands very severely felt. On the whole, however, the inhabitants are decidedly better off than those of the Outer Hebrides, being comparatively industrious, civilized, and well fed. Kirkwall in Orkney, and Lerwick in Shetland—the only towns of consequence in the islands—had, in 1831, the former a population of 3065: and the latter 2750. The society in both is good, and the inhabitants hospitable.

Shetland and some parts of Orkney suffer much from the exaction of tithes. They are not only charged upon the produce of the land, but on that of the fisheries; and being generally farmed, they are rigidly collected, are productive of much irritation, and are a formidable obstacle to improvement. Being the good effects that have resulted everywhere else in Scotland from the abolition of tithes, it is singular that they have not been commuted here. The few duties, payable to the crown, or rather to its donatory, Lord Zealand, have also contributed materially to check improvement. Mari, though neglected, is common in Orkney. Lead ore also has been met with, and limestone is of frequent occurrence. These islands are divided into 40 parishes. The gross rental of Orkney amounted, in 1810, to £2495; and that of Shetland to £2741.

The Orkneys are divided into 18, and the Shetlands into 23 parishes. They send one member to the House of Commons. Registered electors in 1839-40, Orkney, 374; Shetland, 152: making together a constituency of 526. Inhabited houses in both islands, in 1831, 10,396; families, 11,815. Population, 58,239. Annual value of real property, in 1815, £20,930. (For further information, see *Wallace's Descrip-*

ORLEANS.

tion of the Orkney Islands, &c., 1700; *Berry's Hist. of Orkney*; and *Sheriff's Agricultural Survey of Orkney*; *Edmondson's View of Zealand*, 2 vols., 8vo.; *Hibbert's Description of the Shetland Isles*; and *Sheriff's Agricultural Survey of Shetland*, &c.)

ORLAND, p. l. Hancock co., Mo., 61 m. E. by N. Augusta, 657 W. Bounded W. by Penobscot river. Opposite to it is Orphan Island. Incorporated in 1800. It possesses great facilities for navigation, and has 15 schools, 622 scholars. Pop. 1381.

ORLEANS (an. *Genabum*, and afterward *Aurélian*), a city of France, in the centre of the kingdom, cap. dep. Loiret, on the Loire, 34 m. N.E. Blois, and 68 m. S.S.W. Paris. Lat. 47° 54' 13" N.; long. 9° 45' 49" E. Pop., in 1836, 40,372. "Orleans is a large, but not a beautiful city; in its environs, though rich and highly cultivated, are less agreeable than the country round Tours or Blois. The city itself has few good streets; but there is one spacious and elegant avenue, terminating in a noble bridge. The great square is also magnificent." (*Anglia's Twr.* p. 365.) The bridge across the Loire, the foundations of which were laid in 1751, is 254 yards in length, and has nine arches, the central one being 104 feet in width. On either side the river are spacious quays; and from the bridge, the *Rue Royale*, one of the handsomest streets in France, leads in a direct line to the *Place du Martroy*. In this square is the monument erected to Jean d'Arc: consisting of a bronze statue of that heroine, 8 feet in height, on a marble pedestal, upon the sides of which are four bas-reliefs in bronze, representing the principal actions of her life. A few remains of the ancient fortifications of Orleans exist, but their place is now principally occupied with plantations and public walks, one of which is a fine promenade called the *Mail*. In the old parts of the city the houses are chiefly of timber, and the public thoroughfares narrow, dirty, and wretchedly paved; but several new and tolerable streets have been opened of late years, and various improvements are in progress. (*Huys*.) The cathedral, one of the finest Gothic edifices in France, is in a great measure hidden by the surrounding houses. It was begun in the 13th century; partly destroyed by the Huguenots, but rebuilt by Henry IV. It has a fine western portal, flanked with two towers, built by Louis XV. in the most gorgeous style. At the intersection of the nave and transepts is an elegant spire: the side entrances, the lofty vaults, the high altar, and the carving of some parts of the interior also possess great beauty. Some of the other churches and chapels are handsome; but, though still numerous, several of them have been converted into warehouses. The old town-hall, an edifice of the 15th century, is now appropriated to the museum; in its court-yard is an old tower, serving to support a telegraph. The Palace of Justice, a handsome edifice erected in 1831, the theatre, *akater*, prison, large infantry barracks, corn-hall, intendancy, and general hospital, are the other principal public edifices. There are several private buildings, curious for their Gothic architecture and decorations; the most remarkable of these are the houses of Agnes Borel and Francis I. The city is surrounded by extensive suburbs, and its vicinity is sprinkled with numerous villas.

Orleans is the seat of a bishopric, of a royal court for the depts. Loir-et-Cher, Indre-et-Loire, and Loiret; of tribunals of primary jurisdiction and commerce, a court of assize, the forest-direction for the basin of the Loire, a *conseil de prud'hommes*, and a chamber of commerce. It has a royal college; an *académie universitaire* (for the three depts. specified above); a society for the promotion of science, *belles-lettres*, and art; a public library of 25,000 vols.; a museum, with an extensive collection of paintings of the French school; cabinets of natural history, &c.; a botanic garden; courses of medicine, &c., at the general hospital; of drawing, architecture, botany, &c.; maternity and Bible societies; schools of mutual instruction, &c.; and a departmental assurance company. Its former university, founded in 1512, had, among its illustrious students, De Thou, Erasmus, Calvin, and Theodore Beza.

Orleans is well situated for commerce, but its trade is less flourishing than before the revolution. It has declined, while Havre and Paris have risen as commercial towns. Its manufactures comprise fine woollen cloths, flannels, woollen yarn, hosiery, cotton yarn, refined sugar, vinegar, and wax candles; and besides its trade in these, Orleans deals extensively in corn, wines, timber, wool, cheese, and colonial produce. It has a large general fair in June, which lasts 15 days, and one in November, lasting eight days.

D'Anville has shown conclusively that Orleans occupies the site of the an. *Genabum*, the emporium of the Cornutes, taken and burned by Cæsar. (*Notice de l'Antienne Gaulle*, p. 345.) It subsequently rose to great eminence, and was unsuccessfully besieged by Attila and Odoacer. It became the cap. of the first kingdom of Burgundy, under the first race of French kings. Since the time of Philip of Valois,

ORMSKIRK.

in the 14th century, it has usually given the title of duke to a member of the royal family. It was besieged by the English in 1496-98, who were ultimately obliged, through the efforts of Joan of Arc, to raise the siege and retire. In 1563 it was besieged by the Catholics; and during the progress of this siege the Duke of Guise was assassinated. (*Hugo, art. Lettre; Dict. Gég., &c.*)

ORLEANS, county, Vt. Situated in the N. part of the state, and contains 790 sq. m. The S. part of lake Memphremagog lies in its N. part. Drained by Barton, Black, and Clyde rivers, flowing into lake Memphremagog, and by head branches of Mississippi, and Onion or Winooki rivers. It contained in 1840, 18,999 neat cattle, 46,669 sheep, 9750 swine; and produced 33,315 bushels of wheat, 2400 of rye, 30,888 of Indian corn, 90,067 of buckwheat, 10,997 of barley, 133,301 of oats, 596,885 of potatoes, 507,446 pounds of sugar. It had 38 stores, one furnace, one forge, 13 fulling-mills, four woolen factories, 19 grist-mills, 53 saw-mills, one oil-mill, 11 tanneries, one distillery; two academies, 111 students; 132 schools, 3916 scholars. Pop. 13,634. Capital, Irsaburg.

ORLEANS, county, N. Y. Situated in the N.W. part of the state, and contains 378 sq. m. Bounded N. by lake Ontario, and drained by Oak, Orchard, Johnson's, and other creeks flowing into it. The Erie canal passes through it. It contained in 1840, 18,193 neat cattle, 69,563 of sheep, 27,933 of swine; and produced 701,212 bushels of wheat, 196,998 of Indian corn, 10,047 of buckwheat, 30,738 of barley, 180,561 of oats, 303,314 of potatoes, 1533 pounds of hops, 150,786 of sugar. It had 77 stores, five furnaces, 12 fulling-mills, four woolen factories, five fulling-mills, 15 grist-mills, 53 saw-mills, 10 tanneries, one brewery, four printing-offices, four weekly newspapers; seven academies, 750 students; 163 schools, 8947 scholars. Pop. 25,127. Capital, Albion.

ORLEANS, parish, La. Situated in the S.E. part of the state, and contains 160 sq. m. Bounded N. by lake Pontchartrain and the Rigolets, E. by lake Borgne, S. by Mississippi river. It has much low and marshy land, and produces cotton, rice, Indian corn, garden vegetables, and oranges, figs, and peaches. It contained in 1840, 36330 neat cattle, 1807 sheep, 1894 swine; and produced 31000 bushels of Indian corn, 10,000 pounds of cotton, 10,000 of sugar. It had eight commercial and 375 commission houses in foreign trade, capital \$16,490,000; 1881 retail stores, capital \$11,018,235; 33 lumber yards, capital \$67,800, three saw-mills, one tannery, two distilleries, 18 printing-offices, nine daily, six weekly, and two semi-weekly newspapers; two colleges, 165 students; 10 academies, 440 students; 25 schools, 975 scholars. Pop.: whites, 59,519; slaves, 23,448; free coloured, 19,396; total, 102,193. Capital, New-Orleans; the statistics of which are, of course, included in the above, as is always the case in the United States census.

ORLEANS, p. t., Barnstable co., Mass., 95 m. S.E. Boston, 496 W. It extends across the narrow part of cape Cod. The inhabitants are extensively employed in the fisheries, and the manufacture of salt. It has four churches, a Congregational, Methodist, Baptist, and Universalist, 10 stores, four grist-mills; 10 schools, 765 scholars. Pop. 1974.

ORLEANS, t., Jefferson co., N. Y., 19 m. N. Watertown, 178 m. N.N.W. Albany. Drained by Chaumont and Perch rivers. It has a church, five stores, two grist-mills, three saw-mills; 11 schools, 371 scholars. Pop. 3001.

ORMSKIRK, a market-town and par. of England, hund. W. Derby, co. Lancaster, 11½ m. N.N.E. Liverpool, and 189 m. N.W. London. Area of par., which comprises six townships, 30,063 acres. Pop. of Ormskirk township, in 1841, 14,608. The town is well-built, paved, and lighted with gas, consisting of four principal streets, meeting each other at right angles in a large market-place, in which is the town-hall, built in 1779. The church is a large edifice (rebuilt in 1739), with a tower and steeple, detached from each other, and standing side by side: the living is a vicarage, in the gift of Earl Derby, lord of the manor. The out-townships have three district churches. The Wesleyan Methodist, Independents, and Unitarians have their respective places of worship; and at Scarisbrick is a Roman Catholic chapel. Attached to the churches and chapels are seven Sunday-schools, three of which are also national day-schools. A grammar school, endowed in 1614, is supported by an income of about £140; and there are three infant-schools. The other charitable institutions consist of Lathom's almshouses, and apprentice-fund, three benevolent societies, a savings' bank, and a dispensary, opened in 1797. The principal business of the inhabitants is in weaving light cottons and silks, silk-winding, hat and rope-making: in 1830, one cotton-mill employed 58 hands. Within the parish, also, are considerable coal-mines, the produce of which is sent to Liverpool and other places by the Dryden Navigation, and by the Leeds and Liverpool canal, which passes within 3 m. of the town. The local government of Ormskirk is in the county and manorial

ORNE.

police; and courts-leet are held by the lord of the manor (Earl Derby) once a year. Petty sessions, also, are held here; and it is one of the polling-places at elections for the S. division of Lancashire. Markets on Thursdays; large cattle-fairs, Whit-Monday and Tuesday, and 10th Sep.

About 3 m. E. Ormskirk is Lathom House, once the seat of the Stanleys, Earls of Derby, and celebrated for the siege which it sustained under the Countess of Derby in the civil wars of the 17th century: it is now the property of Lord Skelmersdale. A battle was fought near the town in 1644, between the royalists and parliamentarians, when the former were defeated with great loss. (*Parl. Papers; Butterworth's Stat. of Lancashire.*)

ORMUZ (an. *Oxyris*), an island situated at the mouth of the gulf of Persia, in lat. 27° 12' N., long. 56° 32' E., about 18 m. in circ. It resembles, when viewed from the sea, a mass of rocks and shells violently thrown up from the bottom to the surface of the ocean. The fort, which is in tolerable repair, is built on a narrow projecting neck of land; and this, with a wretched suburb, has a population of not more than 500 persons. The remains of aqueducts, walls, &c., on a plain near the suburb, mark the seat of the former capital. The harbour is sheltered on three sides by land, and has good anchorage ground. A range of hills intersects the island from E. to W.; and the rocks consist almost entirely of fine crystallised salt, which might be exported in unlimited quantities. The geological formation of the island indicates the former existence of volcanic action, and sulphur, iron, and copper, are found in large quantities, though few attempts have yet been made to apply these mineral riches to any useful purpose. (*Finneir's Persia*, p. 12, 13.)

This island, at present so inconsiderable, would not have been worth notice but for its former celebrity and importance. It had, however, owing to its advantageous situation, become, previously to the appearance of the Portuguese in the east, a great emporium, being, in fact, the centre of the trade of the Persian gulf, and of the contiguous countries, and possessed great wealth, population, and prosperity. It was taken by Albuquerque, the Portuguese viceroy, in 1515; and was held by the Portuguese till 1622, when it was wrested from them by Shah Abbas, assisted by an English fleet. The booty acquired by the captors on this occasion is said to have amounted to two millions sterling! Subsequently the trade of the island was diverted to Gombroon and other places; and this once rich and flourishing emporium gradually fell into that state of irreparable decay in which we now find it. (*Modern Universal History*, L., 301, &c., 8vo., ed.)

ORNE, a dep. of France, reg. N.W., formerly included in the prov. of Normandy and Perche; between lat. 49° 12' and 49° 48' N., and long. 10° E. and 10° W., having N. the depts. Calvados and Eure, S. the latter and Eure-et-Loir, S. Sarthe and Mayenne, and W. Manche. Length, E. to W., 80 m.; breadth very variable. Area, 610,361 hectares. Pop., in 1836, 441,881. A chain of hills runs E. to W. through this dep., separating the basins of the Orne and Seine from that of the Loire; but its summits do not reach a height of more than from 1900 to 2000 feet: the hills are mostly covered with thick woods. The dep. is abundantly watered. Principal rivers, the Orne, Dive, Vire, &c., running N., and the Sarthe, Mayenne, and Huis, &c. The Orne, whence the name of the dep., has its source near Slez, and flows generally N. through the depts. Eure and Calvados to the English channel; which it enters, after an entire course of about 90 m., 15 m. below Caen, from which city it is navigable. Small lakes are supposed to occupy 1300 hectares; and there are numerous marshes. The soil is very various; and in several places there are distinct traces of volcanic action. In 1834, 333,400 hectares were estimated to be arable, 131,045 in meadows, 11,121 in orchards, 72,000 in woods, and 18,253 in heaths, wastes, &c. In 1835, of 147,135 properties, subject to the *censé foncière*, 63,854 were assessed at five francs and under, and 33,128 at from 5 to 10 francs. Agriculture is extremely backward. On the small farms, which are extremely numerous, spade husbandry is very general. Except oats, not enough of corn is produced for home consumption, and the deficiency is, in part, made up by potatoes and buckwheat. Hemp and flax are among the principal products; in some cantons beet-root for sugar is grown. Large quantities of cider and perry are made, from a portion of which brandy is distilled. The best horses of Normandy are reared in this dep. Cattle, hogs, and poultry are fattened for the Paris markets, and honey is an important product. The sheep, which are of an inferior breed, are supposed to yield 450,000 kilog. wool a year. Iron mines are wrought in some parts; manganese, building and other stone, and porcelain clay, being the other principal mineral products. Metallic and glassen goods are those chiefly manufactured. L'Aigle is celebrated throughout France for its needles and pins, copper and brass wire. The coarse linen cloths made

at Montagne amount annually to about 12,000 pieces, of from 80 to 100 sils each; and Alençon is particularly famous for a fine and highly prized species of lace, termed *points d'Alençon*. Muslins, calicoes, hair cloths, paper, gum, and beet-root sugar are among the other manufactures. Orne is divided into four arronds.; chief towns, Alençon, the cap., Argentan, Domfront, and Mortagne. It sends seven members to the chamber of deputies. Registered electors in 1838 39, 2312. Total public revenue in 1831, 10,414,522 francs. (*Hugo, art. Orne; Dict. Géog.; Official Tables.*)

ORONO, p. t., Penobscot co., Me., 75 m. N.E. Augusta, 670 W. Bounded E. by Penobscot river, in which is Marsh Island, belonging to this t., containing 5000 acres. The falls in the Penobscot afford great water-power. Incorporated in 1806. A railroad, 12 m. long, extends from Bangor to Stillwater village in this township, and to Oldtown, which cost \$35,000. It contains six stores, two lumber-yards, one grist-mill, 36 saw-mills; four schools, 350 scholars. Pop. 1521.

ORONTES. (Arab. *El-Aassy*, "the rebellious.") a river of Asiatic Turkey, in Syria, which rises in a natural rocky basin on the E. side of the mountain chain of Antilibanus, near the village of El-ras, within the pach. of Damascus, about 30 m. N. of that city. It runs N.N.E. as far as the lake Kadez, through which it flows, and then takes a N.W. direction through the beautiful vale of El-Ghab, as far as lat. 36° 15', where it receives the waters of lake Antakiah, near the city of that name (the ancient *Antioch*), and then suddenly defects westward, falling into the Mediterranean, near *Soveldia*, or *Solucia*, after a course of about 240 m. At its mouth is a bar, over which there is from 2½ to 9 feet water during winter. (*Geog. Journ. viii., 220.*) "The Orontes in the winter season inundates a part of the low grounds, through which it flows in the upper part of its course, thus insulating the villages and cutting off all communication between them, except by boats. In summer the inundation subsides; but the lakes remain half dried up, and give birth to swarms of gnats and flies, which, coupled with the exhalations from the marshes, oblige the inhabitants to retire into the mountains with their cattle, goods, and chattels." (*Robinson's Pal. and Syria, ii., 247.*) This river is not navigable; "and the rapidity of the stream in many parts of its course, its sudden and numerous windings, its frequent shallows, its various bridges, and the many changes to which it is subjected in the vicissitudes of the seasons, appear to be insuperable obstacles to any plan for making it navigable, or for using it to any considerable extent for trading purposes. In fact, the Orontes is scarcely available at all, even for small craft; and to reach Antioch in a steamer would be a work of consummate difficulty, and, when accomplished, by no means worth the trouble and expense incurred." (*Bewer's Stat. of Syria, p. 49.*) Its use, therefore, is chiefly confined to the irrigation of the surrounding country, which is effected by means of water-wheels similar to those described in the article *HAMAZ*, *etc.*, p. 10.

The river abounds with fish, and produces a species of oaks much in request with the Greeks; they are salted and sent in every direction to serve during the fasts before Easter. They are said to produce 60,000 piastres a year to the proprietors of the mills at Antioch, in passing through which they are taken. (*Barker's Rep. in App. to Bewer's Stat.*) The valley of the Orontes has on several occasions been visited by earthquakes, the last of which, in January, 1837, nearly destroyed several cities, and occasioned the loss of many thousand lives. (*Robinson's Syr. and Pal. ii.; Geog. Journal, vii. and viii.; Mod. Trav.*)

ORRINGTON, p. t., Penobscot co., Me., 70 m. N.E. Augusta, 666 W. Bounded W. by Penobscot river. It has two stores, one saw-mill, one flouring-mill, six saw-mills; 10 schools, 645 scholars. Pop. 1590.

ORTHEZ, or ORTHES, a town of France, dep. Basses-Pyrénées, cap. arrond., on the Gave de Pau, across which it communicates with a suburb by an old bridge of two arches, 34 m. N.W. Pau. Pop., 1836, 5367. It is well laid out and built, but ill supplied with water. It has manufactures of woollen stuffs, brass and iron wire, and copper wares; with dyeing houses, tanneries, &c.; and an extensive trade in hams of a superior kind, improperly termed *jambons du Bayonne*, goose-feathers, and cattle. It suffered much during the religious wars. One of its governors, a Viscount d'Orthez, is justly famous for being one of the few who refused to carry into effect the orders of the court for the detestable massacre of St. Bartholomew.

Near this town, on the 27th of February, 1814, the Anglo-Spanish army, under the Duke of Wellington, defeated a French force under Marshal Soult. The action was well contested and bloody: the French lost nearly 4000 men, killed, wounded, and prisoners, and the allies, 3300. (*Napier's Peninsular War, vi., 564.*)

ORTONA a seaport town of central Italy, kingdom of

Naples, prov. Abruzzo Citra, cap. canton, on the Adriatic, 11 m. E.N.E. Chieti. Pop., in 1832, 8000. Its chief edifices are its cathedral and other churches, convents, &c.; and a palace, once the winter residence of Margaret, daughter of the Emperor Charles V. It was anciently the principal port and naval arsenal of the Frentani (*Strabo, v., 341; Pliny, iii., 11, &c.*), and it has still a few insignificant remains of antiquity; but its harbour has now ceased to exist. Vessels anchor in soft ground about half a league from shore, in from 10 to 15 fathoms water, or nearer if requisite, in less water; but the station is exposed to N. and E. winds; and there are various rocks and shallows. (*Norris's Sailing Directions.*)

ORVIETO (the an. *Herbanum*, afterward *Urbs Vetus*?), a town of central Italy, Papal States, cap. deleg. of same name, close to the junction of the Paglia and Chiane, about 5 m. from their union with the Tiber, 11 m. N.E. the lake of Bolsena, and 50 m. N.N.W. Rome. Pop. about 7000. It stands on an isolated and scarped tufa rock; and is clean, well built, and embellished with fine palaces. Among the latter are the bishop's palace; the Gualterio, with frescoes by Domenichino, Albano, L. Signorelli (?), &c.; and the palazzo Petrangeli, with paintings by Pietro Perugino. The cathedral, founded in 1290, is a remarkable Gothic edifice, very rich in bas-reliefs, mosaics, paintings, and statuary, with a large and handsome circular window. It has several other churches, a Jesuit's college, and a large well, dug by order of Clement VII., which is shown as a curiosity. Various Etruscan antiquities have been discovered here; and a light white wine is grown near the town, which has acquired greater celebrity than it deserves. The inhabitants carry on some trade in cattle, wine, and silk. (*Dict. Géog.; Wood's Letters of an Architect, i., 319, 322.*)

ORWELL, p. t., Rutland co., Vt., 79 m. S.W. Montpelier, 463 W. Bounded W. by lake Champlain, lies opposite to Ticonderoga, N.Y., and contains much independence, both of which were celebrated in the Revolutionary war. Chartered in 1762, organized in 1767. Drained by East creek and Lemonfair river, which afford water-power. It is one of the best farming towns in the state, and contains two churches, a Congregationalist and Baptist, three stores, one saw-mill, one grist-mill, one saw-mill; 10 schools, 473 scholars. Pop. 1504.

ORWELL, p. t., Bradford co., Pa., 146 m. N. Harrisburg, 526 W. Watered by Wysox creek and its tributaries. It contains one store, one woollen factory, one grist-mill, four saw-mills, two tanneries; eight schools, 225 scholars. Pop. 1037.

ORWIGSBURG, p. b., capital of Schuykill co., Pa., 62 m. N.E. Harrisburg, 172 W. Situated on a small creek flowing into Schuykill river, and surrounded by beautiful hills, cultivated to their tops. It contains 150 dwellings, many of them handsome brick houses, three stories high. It has a courthouse surmounted by a cupola, and the county offices, all of brick, a jail, an academy endowed by the state with \$2000, a spacious Lutheran church; seven stores, one saw-mill, one printing-office, one weekly newspaper, two academies, 87 students; two schools, 80 scholars. Pop. 779.

OSAGE, r., Mo., rises in the Indian territory in about 36° 30' N. lat. and 97° W. long., and flows into the state of Missouri, and falls into Missouri river 123 m. above the Mississippi. It has a very winding course, is 397 yards wide at its mouth, and is navigable for steamboats for 300 miles. There is much fertile land on its borders. Its length is supposed to be about 350 miles.

OSIMO (an. *Azzimino*), a town of central Italy, Papal States, deleg. of Ancona, 2½ m. S.E.W. the city of that name. Pop. about 7000. It is well built, having a handsome bishop's palace, a cathedral, several churches and convents, a college, &c. In antiquity this was one of the most important towns of Picenum. It was included among the cities of the Pentapolis, and was taken by Belisarius from the Goths, after an obstinate defence. (*Cramer's Anc. Italy; Dict. Géog.*)

OSNABURG (Germ. *Osnabrück*), a town of the kingdom of Hanover, cap. prov. and principality of its own name, on the Hase, a tributary of the Ems, 63 m. W. by S. Hanover. Pop., in 1838, 11,500. It is walled and divided into the Old and New town. "The palace, the townhouse (in which the treaty of Westphalia was concluded in 1648), the court of justice, and the cathedral (in which some relics supposed to have belonged to Charlemagne are kept), are all good buildings; and there are a great many good-looking private houses, belonging to merchants. Though not the largest, it is undoubtedly the best situated and the handsomest town of the Hanoverian dominion." (*Hodgskin's Trav. in the N. of Germ., 1819, i., 310.*) But other authorities represent the town as irregularly and ill built. There are two Lutheras and two Roman Catholic churches, a Lutheran orphan-house, four hospitals, a workhouse, a Catholic and a Lutheran gymnasium, and a house of correction. Oms-

OSSEIPEE.

burg is a place of considerable trade, from being in the centre of a country where great quantities of the linen cloths termed Osnaburgs are made, and which are brought thither for inspection, stamping, and sale. (See HANOVER, I., 1062.) But it is in a great measure indebted for its trade in these fabrics, and in cattle, to its position on the high road between Bremen and the Lower Rhine. It has, also, manufactures of woollen cloths, tobacco, chicory, soap, paper, leather, &c. No court has been kept up in Osnaburg since the time of Ernest Augustus, father of George I.; but the nobility of the province generally reside here; and without either having a university or being a royal residence, it is in some degree celebrated for the literature and polish of its inhabitants. It is the seat of a Roman Catholic bishop; and its civil governor, nominated by the King of Hanover, is called, though without having any ecclesiastical duties to discharge, the Prince-bishop of Osnaburg: this dignity was held by the second son of George III. (*Berghaus, Allg. Land., &c.*, IV., 234; *Hodgskin's Trav. in N. Germ.*, I., 308, 318, &c.)

OSNABURG, p. t., Stark co., O., 199 m. N.E. Columbus, 308 W. Watered by a branch of Sandy river. The village contains a church, three stores, two tanneries, three distilleries, 70 dwellings, and about 400 inhabitants. Pop. of the township, 3333.

OSSEIPEE, p. t., capital of Carrol co., N.H., 53 m. N.N.E. Concord, 533 W. Bounded N.E. by Ossipee lake, covering about 7050 acres. Incorporated in 1780. Watered by Bear Camp river. It contains a courthouse, jail, four churches, a Congregational and three Freewill Baptist; seven stores, five grist-mills, 10 saw-mills, three tanneries; 39 schools, 876 scholars. Pop. 2170.

OSBUNA, a town of Spain, in Andalusia, prov. Seville, 49 m. E. Seville. Pop., according to Mifflano, 16,000. It is built amphitheatre-wise on the declivity of a lofty hill, on the top of which stands the parish and collegiate church. It has, also, four hospitals and two sets of barracks. The town formerly possessed a university, which attained considerable celebrity in the time of Cervantes; but at the close of last century it was in a state of decay, and was suppressed in 1824. Osuña is neat and pretty, surrounded by orchards, among which are some fine public walks; but it has an insufficient supply of water. The climate is good, except in summer, when, during the prevalence of the *Solano*, or E. wind, the thermometer often rises to 111° Fahr. The inhabitants are principally employed in agriculture, and the neighbourhood has the reputation of being one of the most productive grain districts of Andalusia. It is, also, celebrated for its capera, large quantities of which are pickled and sent to Seville and Cadiz. (*Mifflano*.)

OSTEND, a fortified seaport town of Belgium, province of W. Flanders, capital of the canton, on the shore of the North sea, 14 m. W. by N. Bruges, 27 m. E.N.E. Dunkirk, and about 60 m. E. the North Foreland. Lat. 51° 13' 57" N., long. 2° 53' 8" E. Pop., in 1836, 12,161. Few English travellers speak in favourable terms of Ostend. It is, however, neatly and regularly built, and has a lively appearance, the houses being painted of different colours. (*Barrow's Trav.*, 285.) It is also a favourite watering place of the Belgians, and is occasionally resorted to by the royal family. It has no public edifice worth notice, except a good bathing-house, with reading-rooms, &c., on the *levee*, a sloping glacis of stone-work, originally erected to serve as a dyke, having on its summit a favourite promenade. Ostend is strongly fortified by ramparts, a broad ditch, and a citadel; but it is ill supplied with water, which is assigned as a reason for its being in parts rather dirty. The interior harbour, which is large and commodious, is bordered by a broad quay; but ships of considerable burden can only enter the port at high water, and in strong off-shore winds is difficult of access. There are two lighthouses which, when brought in line, mark the channel that leads into the port. The exports consist of corn, clover seed, cattle, and other farm produce; and the imports of sugar, coffee, and other colonial products, wines, spices, English manufactured goods, &c.

The cod and herring fisheries, especially the former, are carried on to a considerable extent from Ostend. In 1836 the produce of this fishery amounted to 7841 tons salt fish, and in 1837 to 8799 tons. The aggregate value of the imports by sea, in 1840, amounted to 9,383,557 fl. Exclusive of its trade, Ostend has some sugar and salt refineries, and salicloth, soap, tobacco, and other factories, with ropewalks, building-docks, distilleries, &c. It is connected by a canal and railroad with Bruges, and by the great Belgian railroad with Antwerp and other cities of the interior. It is the seat of a tribunal and chamber of commerce, and the residence of a military commandant and of an English consul.

During the ever-memorable struggle made by the Dutch to emancipate themselves from the blind and brutal despotism of Old Spain, Ostend sustained one of the most cele-

OSTIA.

brated sieges of which history has preserved any account. It continued from the 4th of July, 1601, to the 26th of September, 1604, when the garrison capitulated, on honourable terms, to the ablest of the Spanish leaders, the famous Marquis of Spinola. This siege is supposed to have cost the contending parties the lives of nearly 100,000 men! (See *Watson's Philip III.*, I., 22-188, 8vo ed.; *Official Returns*, &c.) We subjoin an

Account of the Ships that entered and left the Port of Ostend, in 1836 and 1837; specifying the Countries to which they respectively belonged.

And this number is exclusive of the steamers conveying the mails to and from England.

OSTERODE, a town of central Germany, kingdom of Hanover, princip. Grubenhagen, on the Böse, a tributary of the Leine, at the foot of the Harz, 49 m. S.E.E. Hanover. Pop., in 1837, 4600. It is walled, and has several churches, a hospital, a gymnasium, &c., but its principal public edifices are the royal granaries, which supply about 56,000 scheffel of corn annually, at 16 grochen (2s.) the scheffel, to the miners and other labourers of the Harz. Osterode has manufactures of woollen and cotton goods, tanneries and long cloths, hats, tobacco, soap, white lead, copper and wooden articles, with breweries, distilleries, tanneries, &c. (*Herschmann's Stein*; *Berghaus*.)

OSTIA, a decayed town and seaport of Italy, Papal States, on the left or S. arm of the Tiber, a little below where it divides into two branches to enclose the Isola Sacra, about 3 m. from its mouth, and 15 m. W.S.W. Rome, lat. 41° 43' 35" N., long. 12° 16' 35" E. This miserable little town, which has scarcely 100 inhabitants, and which, in fact, is all but uninhabitable from malaria, was in antiquity a flourishing emporium. It was for a lengthened period the seaport of Rome; and was founded by Ancus Martius in that view, who is, also, said to have constructed the salt-works in its vicinity. (*In ore Tiberis Ostia urbs condita, sedine circa facta*: *Livius in Anco*, lib. I., cap. 33.) In the course of time Ostia rose, with the rise of Rome, to be a place of great wealth, population, and importance. It was taken by Marius, who appears to have treated it with great severity. (*Livii Epit.*, lib. I., cap. 13.) But it soon recovered from this disaster, and continued for a lengthened period to engross the whole trade of Rome carried on by sea. But its port had never been good; and, owing to the gradual accumulation of the mud and other deposits brought down by the river, it ultimately became inaccessible to ships of considerable burden, who were obliged to anchor on the coast in an exposed and hazardous situation. Many efforts were made at different periods to obviate these inconveniences, but apparently without much success; and at length the Emperor Claudius determined to construct a new port (*Portus*) at the mouth of the N. or right arm of the Tiber. This harbour was wholly artificial, and was formed at a vast expense by moles projecting into the sea. (*Sueton. in Claud.*, cap. 20; *Dio Cassius*, lib. I., cap. 33.) Manner, in his article on Ostia, says that the port constructed by Claudius was repaired by Trajan, and continued to be the port of Rome as long as the Roman empire existed! This statement is, however, in all respects, wide of the mark. The truth is, that the same circumstances (the accumulation of sand and mud at the mouth of the river) that had destroyed the harbour of Ostia, very soon began to choke up the new port; and instead of attempting to improve the latter, Trajan judged it more expedient to construct a totally new harbour at *Centumcellæ*, now Civita Vecchia, though the latter was more than double the distance of the former from Rome! (*Plinius Epist.*, lib. VI., ep. 31, and art. CIVITA VECCHIA in this work.) The harbour formed by Trajan is at this moment the best by far on the W. coast of central Italy; the great works, the construction of which is described by Pliny, still remain entire, and evince the superior discernment and power of its illustrious founder. The port of Claudius, as well as Ostia itself, is now at a considerable distance from the sea; and its harbour (which, according to Bergier (*Hist. des Grands Chemins*, II., 356), could not

OSTUNI.

have been executed by any European monarch, is a shallow, noisome pool:—

"Tantum aevi longinquae valet metare vetustas."

OSTUNI, a town of the Neapolitan dom. prov. Otranto, cap. canton, on the brow of a steep hill, 31 m. W.N.W. Brindisi. Pop. about 6000. It is a bishop's see, but remarkable for little more than the number of its churches and convents. Its climate is said to be highly salubrious. (*Craeen's Tour*, 4c., 123, 124.)

OSWEGATCHIE, t., St. Lawrence co., N.Y., 16 m. W. Canton, 200 m. N.N.W. Albany. Bounded N.W. by St. Lawrence r. Watered by Oswegatchie r. It contains a part of Black lake in its S.W. part. The village of Ogdensburg lies in its N. part. It contains five churches, an Episcopal, Presbyterian, Methodist, Baptist, and Roman Catholic; two commission houses in foreign trade, 57 stores, three furnaces, three fulling-mills, two grist-mills, seven saw-mills, four tanneries, two printing-offices, one bindery, two weekly newspapers; 19 schools, 663 scholars. Pop. 3193.

OSWEGO, r., N.Y., is formed by the union of Seneca and Oneida rivers. Seneca river receives the waters of Seneca, Cayuga, Crooked, Canandaigua, Owasson, Skeneateles, and Cross lakes. Oneida river forms the outlet of Oneida lake. After the junction, Oswego river pursues a N.W. course for 24 m., and enters lake Ontario at Oswego village. It forms for some distance the Oswego canal, its falls being overcome by a number of locks. The harbour of Oswego at its mouth has been much improved by artificial structures. The village affords good water-power. It is not navigable for lake vessels, having falls near its mouth.

OSWEGO, county, N.Y., situated in the N. part of the state, and contains 923 sq. m. Bounded N.W. by lake Ontario, S.E. by Oneida lake. Watered by Oswego river. The Oswego canal passes through it. It contained in 1840, 26,369 neat cattle, 63,843 sheep, 39,233 swine; and produced 138,602 bushels of wheat, 1676 of rye, 189,397 of Indian corn, 41,618 of buckwheat, 11,061 of barley, 215,177 of oats, 599,137 of potatoes, 264,960 pounds of sugar. It had seven commission houses in foreign trade, 107 retail stores, three lumber-yards, six furnaces, 16 fulling-mills, two woolen factories, 10 flouring-mills, 29 grist-mills, 135 saw-mills, two oil mills, one paper-mill, 35 tanneries, five printing-offices, five weekly newspapers; five academies, 468 students; 265 schools, 12,193 scholars. Pop. 43,619. Capitals, Oswego and Pulaski.

Oswego, p. v., port of entry, and semi-capital of Oswego co., N.Y., 160 m. W.N.W. Albany, 373 W. The village lies in the township of Oswego and Scriba. Incorporated in 1828. It is regularly laid out with broad streets, crossing each other at right angles. The two parts of the village are connected by a bridge across Oswego river, 700 feet long, and which cost \$6000. It contains a courthouse, jail, seven churches, two Presbyterian, an Episcopal, a Tabernacle (Union), Methodist, Baptist, and Roman Catholic; two banks, with an aggregate capital of \$400,000, an academy, and a flourishing female seminary. The harbour, next to that of Sackett's harbour, is the best on the S. side of lake Ontario. It is formed by a pier or mole filled with stone 1259 feet long on the W. side of the harbour, and 200 feet on the E. side, with an entrance between them. The water within the pier has a depth of from 12 to 20 feet. The cost of this work was \$53,000. On the end of the W. pier there is a light, and a lighthouse on the hill on the E. side of the harbour near the port. More than 70 vessels, including steamboats, are owned at this port, besides a large number of canal-boats, built in the most substantial manner, generally having decks, and capable of being towed through the lakes. Not far from one fourth of the trade from New-York city with the west, goes through Oswego and the Welland canal, which passes round Niagara falls into lake Erie. The salt from Salina, destined for the west, generally passes this way. The tonnage of the port in 1840, was 8246. Oswego has great manufacturing advantages. A feeder dam, 74 feet high, three fourths of a mile above the village, furnishes an abundance of water taken from the canal on the E. side of the river, under a fall of 19 feet. A canal has also been constructed on the W. side, by a wall on the margin of the river 18 feet high, forming a canal along the bank 62 feet wide, 7 feet deep, with a fall of 19 feet, which cost \$75,000.

Oswego village contains three commercial and four commission houses in foreign trade, with a capital of \$246,000; 40 retail stores, with a capital of about \$104,000; two cotton factories, one iron foundry, eight flouring-mills, one saw-mill, six machine shops, one plaster-mill, one large tannery, one morocco factory, one snuff factory. There are a marine railway and three ship-yards. The market building, a large edifice of brick, contains also a town-hall, the corporation chamber and offices, the postoffice, county clerk's office, a room for the Mechanics association, and in the attic a spacious room 132 feet long, for various public occasions.

OTLEY.

The cost of the building was nearly \$25,000. There is nearly a mile of wharves and dockage in the harbour, and many extensive warehouses and forwarding establishments. The population is about 6000. Daily lines of steamboats for the conveyance of passengers, run from Oswego to Lewiston, Sackett's Harbour, and Ogdensburg, and to Kingston in Canada. On the E. side of the harbour, on rising ground ceded to the United States, is fort Oswego, for the defence of the harbour, which occupies nearly the site of an old fort, famous in the French and Revolutionary wars. The town fell into the hands of the British during the late war, but they were driven from it in 12 hours, with loss.

OSWESTRY (corrupted from *Oswaldstree*), a market-town and parish of England, hund. of its own name, co. Salop, on the borders of Wales, 16 m. N.W. Shrewsbury. Area of par., 13,690 acres: pop. of township, in 1831, 4478. The town, which was formerly surrounded with walls, is well paved and lighted; its chief public buildings are a town-hall, prison, theatre, and a fine old church, remarkable for its lofty, ivy-mantled tower. The living is a vicarage, in the gift of Lord Clive. The Independents, Baptists, Wesleyan Methodists, Welsh Calvinists, and Primitive Methodists, have their respective places of worship, to which are attached Sunday schools, furnishing religious instruction to upward of 700 children. A grammar school has been established here, and "is free for all boys born in the parish to be instructed in grammatical learning in the English, Latin, and Greek languages. The present annual value of the endowment is £300; but the number of free scholars seldom exceeds 20, besides whom there are about 24 pay-boys residing with the master. There is also an extremely well-regulated national school, attended by about 230 boys and 150 girls." (*Mss. Corp. Report*.) Oswestry, which from 1461 to 1681 was the great mart for woollens called Welsh webbs, has still a few manufacturers of flannel and coarse linen cloth; but its principal dependence is on its retail trade with an extensive agricultural district. The borough, which received its charter in 23 Richard I., is divided, under the Municipal Reform Act, into two wards, and the corporation consists of a mayor, five other aldermen, and 18 councillors. Corporation revenue, in 1839, £411. Quarter and petty sessions are held under a recorder, and there is a court for the recovery of small debts. Oswestry is one of the polling-places at elections for the N. division of Salop. Races are held near the town in September. Markets on Wednesday: large cattle fair, 15th March, 12th May, Wednesday before 24th June, 15th August, and 10th December.

Oswaldstrepe (more anciently called Maserfeld) is supposed to have derived its name from Oswald, king of Northumbria, killed here in battle in 642, and subsequently canonized. It was surrounded by walls by Edward II., in 1377, and became highly important as one of the keys to the principality of Wales. At the W. end of the town, on a lofty hill, are some remains of its castle, supposed to have been built about the time of the Norman conquest. (*Pennant's Tour in Wales*, i., 333, 4c.; *Parl. Reports*.)

OTAEITE. (See *POLYNESIA*.)

OTEGO, p. t., Otego co., N.Y., 23 m. S.W. Cooperstown, 86 m. W. Albany, 340 W. Bounded S.E. by Susquehanna river, and drained by its tributaries. It contains three churches, a Presbyterian, Episcopal, and Baptist; five stores, two fulling-mills, two grist-mills, eight saw-mills; 15 schools, 571 scholars. Pop. 1919.

OTIS, p. t., Berkshire co., Mass., 15 m. S.E. Lenox, 119 W. Boston, 369 W. Drained by branches of Farmington and Westfield rivers. It contains four churches, a Congregational, Episcopal, Methodist, and Baptist; three stores, one forge, two grist-mills, six saw-mills, two tanneries; one academy, 30 students; 10 schools, 305 scholars. Pop. 1177.

OTISCO, p. t., Onondaga co., N.Y., 15 m. S. Syracuse, 138 m. W. by N. Albany, 335 W. Bounded N.W. by Otisco lake. It contains two churches, a Methodist and Presbyterian; two stores, one grist-mill, four saw-mills, two tanneries; 16 schools, 783 scholars. Pop. 1906.

OTISFIELD, p. t., Cumberland co., Me., 71 m. S.S.W. Augusta, 578 W. Bounded W. by Crooked river, which flows into Sebago lake or pond. It contains four stores, one fulling-mill, two grist-mills, two saw-mills. Pop. 1307.

OTLEY, a manufacturing and market-town, parish and township of England, W. Riding, co. York, upper div. wap. Skyrack, on the Wharfe, 94 m. N.W. Leeds. Area of par., comprising 12 townships, 25,060 acres. Pop. of Otley township in 1831, 3161. The town, though small, is well built, and delightfully situated in a picturesque river valley. The church is large, but has few remains of its original architecture: the living is a vicarage in the gift of the lord chancellor. There are places of worship for Independents, Wesleyan and Primitive Methodists, with attached Sunday schools. A grammar school was founded here in 1611, and there is a national school for children of both sexes. Otley formerly enjoyed a considerable share in the woollen trade;

OTRANTO.

but it has long since been removed to situations nearer to the coal districts, and better placed for inland navigation. Within the parish, however, there were, in 1830, two cotton-mills, four woolen-mills, and 10 worsted-mills, moved chiefly by water-power, and employing 1183 hands, chiefly in the townships of Gristley, Yeodon, and Rawden. Tanning and malting are carried on in the town to a pretty considerable extent, and it has large markets and fairs for corn and cattle, besides an agricultural show held in April. The Archbishop of York is lord of the manor, and holds courts-baron for the recovery of small debts. Petty and quarter sessions are held here by the magistrates under the archbishop's commission. Markets on Friday: cattle fairs, Wednesday in Easter week, and every fortnight after till Whit-Sunday, and then every three weeks till 1st August.

OTRANTO (an. *Hydruntum*), a seaport town of Italy, near its S.E. extremity, kingdom of Naples, prov. of its own name, cap. canton, on the strait of Otranto, close to the point of Italy nearest to the Greek peninsula, 24 m. S.E. Lecce, and 44 m. W.S.W. cape Linguetta, in Albania. This petty town, of 1600 inhabitants, has little to interest the English reader, except the celebrated "Castle of Otranto," with the name of which every lover of romance is familiar. "The castle, however, is far from realizing the expectations created by the perusal of the work bearing its appellation. It is now, what it ever was, the citadel of the town, a fort of no considerable extent or power, but not entirely deficient in picturesque beauty, especially on the land side. Two large circular towers rise from the rich foliage of the trees which fill the town ditch, and among which a very high palm is conspicuous." (*Croton's Trav.*) The castle, which comprises prisons, stables, a mill, a chapel, &c., was built by Alphonso of Aragon, who otherwise fortified the town, as a bulwark against the Turks. Otranto has a very ancient cathedral, in which are some columns taken from the temple of Minerva in the vicinity; an archbishop's palace and a few Roman antiquities. In 1480 it was taken and sacked by the Turks. Under Napoleon, it gave the title of duke to Fouché. (*Croton's Trav.* in the *S. Provinces of Naples*, 142, 144; *Burgess's Groups*, i. 28, 30; *Dict. Geog.*)

OTSEGO, lake, N.Y., is 9 m. long, and from 1 to 3 broad. It is situated in the N. part of Otsego county and is a beautiful sheet of water, furnishing a variety of excellent fish. Its outlet forms the E. branch of Susquehanna river, and on it, as it leaves the lake, is the beautiful village of Cooperstown, which commands a fine view of the lake to the N.

Otsego, county, N. Y. Situated centrally towards the E. part of the state, and contains 893 sq. m. It contains Otsego and Canadagua lakes, the outlets of both of which flow into Susquehanna river. Bounded W. by Unadilla river. Watered by Susquehanna river, and Butternuts, Otsego, and Cherryvalley creeks. In Burlington, the stones abound with marine petrifications. It contained in 1840, 69,035 neat cattle, 235,979 sheep, 47,637 swine; and produced 148,890 bushels of wheat, 68,236 of rye, 132,383 of Indian corn, 45,059 of buckwheat, 116,715 of barley, 693,999 of oats, 1,293,109 of potatoes, 168,705 pounds of hops, 351,748 of sugar. It had 130 stores, seven furnaces, 43 fulling-mills, four woolen-factories, eight cotton-factories with 17,502 spindles, one dying and printing works, 65 grist-mills, 223 saw-mills, three oil-mills, one paper-mill, 47 tanneries, nine distilleries, one brewery, five printing-offices, four weekly newspapers and one periodical; nine academies, 385 students; 300 schools, 13,293 scholars. Pop. 49,693. Capital, Cooperstown.

OTSEGO, l. Otsego county, N.Y., 66 m. W. of Albany. Bounded E. by Otsego lake, N.W. by Canadagua lake, and Oak creek; the outlet of the latter, affords water-power. It contains 96 stores, two cotton-factories with 4000 spindles, one furnace, six grist-mills, 12 saw-mills, one paper-mill, 4 tanneries, one brewery, three printing-offices, two weekly newspapers and one periodical; three academies, 187 students; 94 schools, 1021 scholars. Pop. 4130.

OTSSELIC, p. l. Chemango county, N.Y., 15 m. N.W. Norwich, 86 m. W. by S. Albany, 344 m. W. Drained by Otsego creek. It has one store, one grist-mill, seven saw-mills, two tanneries; 14 schools. 521 scholars. Pop. 1621.

OTTAJANO, a town of the Neapolitan dom. prov. Napoletano, at the E. foot of mount Vesuvius, 19 m. E. Naples. Pop. estimated at 6000. It has three churches, a castle, and some other public buildings. Its inhabitants are principally engaged in agriculture, having but little taste for commerce. Several antiquities found here are supposed to have formed part of a palace anciently belonging to the Octavian family, from whom the town is conjectured to have derived its name.

OTTER CREEK, Vt., the longest river which runs wholly in the state; rises in mount Tabor, Peru, and Dorset, and flowing by a general course of N.N.W. for 90 miles, it enters lake Champlain in Ferrisburg. It has fertile alluvial borders; and at Middleburg, Weybridge, and especially at Vergennes, it affords extensive water-power. It is naviga-

OUDE.

ble for the largest lake vessels and steamboats, 8 m. to Vergennes. The large vessels of McDonough's squadron, and several of the largest steamboats on the lake, have been built at Vergennes.

OTTER, Peaks of, Va., constitute the highest summits of the Blue ridge, and the highest land in the state. The E. peak is 3104 feet high, and the W. 2946 feet high. Other statements make the greatest elevation over 4000 feet. They are situated between Bedford and Botetourt counties, 30 m. W. by N. of Lynchburg.

OTTERY ST. MARY, a market-town and par. of England, co. Devon, hued, its own name, on the Otter (whence it derives its name), 11½ m. E. by N. Exeter. Area of par. 9470 acres. Pop. in 1841, 4194. It is large but irregularly built; containing many vestiges of antiquity, among which is a house formerly inhabited by Sir Walter Raleigh. The church is a large and curious structure, built like Exeter cathedral, with two towers opening into the body of the church, and serving as transepts; a lady-chapel occupies the E. end, and in the interior is a fine arched monument. The living is a vicarage, in the gift of the lord chancellor. The Independents and Wesleyan Methodists have likewise their respective places of worship, with attached Sunday-schools. A grammar-school was founded here by Henry VIII.; but it has for many years been an almost useless appendage to the town. Two day-schools are supported by subscription, and an infant-school is attended by about 60 children. Almshouses are established here, and there are numerous minor charities for the relief of the poor within the parish. Ottery St. Mary, which had formerly a considerable share in the manufacture of serges and coarse woollen-cloths, is now chiefly supported by agriculture and retail trade. A silk-mill, however, has been established within the last few years, which in 1839, employed 325 hands. Petty sessions for the hundred are held here. Markets on Tuesday; fairs, Tuesday before Palm-Sunday; Whit-Tuesday, and Aug. 5, for cattle and sheep.

OTTO, p. l. Cattaraugus co., N.Y., 10 N.W. Ellicottville, 306 m. W. by S. Albany, 348 m. W. Bounded N. by Cattaraugus creek, by branches of which it is drained. It contains three stores, one fulling-mill, two grist-mills, five saw-mills; 12 schools, 636 scholars. Pop. 2133.

OTTAWA, county, O. Situated towards the N.W. part of the state, and contains 350 sq. m. Drained by Carrying or Portage river, and Toussaint and Crane creeks. It contained in 1840, 327 neat cattle, 1489 sheep, 5074 swine; and produced 14,506 bushels of wheat, 1693 of rye, 26,757 of Indian corn, 1522 of buckwheat, 3465 of oats, 15,734 of potatoes, 9449 pounds of sugar. It had five stores, two grist-mills, two saw-mills; four schools, 115 scholars. Pop. 2242. Capital, Port Clinton. It includes Cunningham's, and the Beebe's islands in lake Erie.

OTTAWA, county, Mich. Settled in the N.W. part of the settled portion of the peninsula. Watered by Grand river and its tributaries, and Muskegon river. Bounded W. by lake Michigan. It contained in 1840, 260 neat cattle, 482 swine; and produced 1936 bushels of wheat, 3659 of Indian corn, 2235 of oats, 7741 of potatoes, 12,239 pounds of sugar. It had two commission-houses in foreign trade, two retail stores, 12 saw-mills, one tannery. Pop. 298. Capital, Grand Haven.

OTTAWA, p. v. cap. of La Salle co., Ill., 133 m. N.N.E. Springfield, 773 m. W. Situated on both sides of Illinois river, at the junction of Fox river. For the distance of eight or nine miles below, there are rapids, which are an impediment to navigation, except in high-water. The place has a convenient steamboat landing with deep water. It has ten stores, about 80 dwellings, and 500 inhabitants.

OUDE, (*Ayodhya*), a prov. and kingdom of Hindostan, under the protection of the British, between the 26th and 28th degs. of N. lat., and the 79th and 83rd of E. long. It has N. Nepal, but is every where else surrounded by the territories of the Bengal and Agra presidencies, having W. the provinces of Delhi and Agra, S. Allahabad, and E. Bahar. Area estimated at about 25,300 sq. m. Pop. probably 5,000,000. This country is an extended plain, bounded northward by the lower Himalaya ranges, and W. and E. by the Ganges, being well watered by several tributaries of the latter. When properly cultivated, the soil is extremely productive, yielding crops of wheat, barley, rice, and other grains, sugar, indigo, opium, and all the richest crops raised in India; and Heber states, that from Lucknow to Saundee the country is as populous and well cultivated as most of the Company's provinces. But Oude was for a lengthened period so wretchedly mismanaged by its native authorities, that, from being one of the richest states of Hindostan, it had become, a few years ago, one of the poorest and most miserable, being especially distinguished for anarchy and disorder. The total revenue is estimated at between 18 and 19 million rupees a year, and its collection is farmed out to the highest bidder. Large tracts of the country are also in jaghire, or feudally conferred for military service; the

OUDENARD.

annals, or revenue collectors, and the seminaries, are so independent of the royal authority, that they yield only a very imperfect obedience, and so late as 1830 Oude was distracted by civil war between the sovereign and his military chieftains. A full account of the condition of the country at that period may be found in the *Report on E. I. Affairs*, 1832. (*Political Appendix*, p. 396-430.) Under the new king, however, great ameliorations have been effected, and the standing army has been reduced from 50,000 men to less than half that number. The subsidiary troops furnished by Oude to the Anglo-Indian army amount to 10,000 men. The foreign relations and treaties of the state are wholly conducted through the British resident at Lucknow. It has been secured ever since 1765, by the British government from foreign aggression; and it is to be regretted that we did not also so far interfere in its internal concerns as to introduce regularity and efficiency into the administration, and to repress disorders. See *Crawford's Letter in Rep. Polit., Appendix*, p. 92, 94.

Oude, a town of Hindostan, in the above prov. and kingdom, of which it was the former capital: on the Goggra, across which an iron bridge, the materials having been brought from England, is said to have been very recently thrown, 74 m. E. Lucknow [lat. 30° 48' N., long. 80° 4' E.]. It extends for a considerable distance along the banks of the river, stretching as far as Fyzabad. It is said by Hamilton to be tolerably populous; but except along the river's brink, it consists wholly of ruins and jungle, among which are remains of various celebrated Hindoo temples. Hindoo pilgrims still visit Oude; and did so in great numbers, until Aurangzeb demolished most of their places of resort. A mosque erected by that monarch, and two tombs, greatly venerated by Mohammedans, are now the principal and almost sole remaining public edifices. (*Mod. Trav.*, ix. 319-315, &c.)

OUDENARD, or AUDENARD, a town of Belgium, prov. E. Flanders, cap. arrond. on the Scheldt, 14 m. S.W. Ghent. Pop. in 1838, 5539. It is generally well built, and has one of the handsomest town-halls in the Netherlands, several churches, a hospital, two orphan asylums, a convent, a college, and other schools, including one for spinning yarn. It has some manufactures of cotton and woollen fabrics, with breweries and tanneries. On the 11th of July, 1708, a powerful French army, commanded by the Duke of Burgundy and Vendôme, was defeated in the vicinity of this town, and obliged to make a disorderly retreat, by the allied army under the Duke of Marlborough and Prince Eugene.

OUNDLE, a market-town and parish of England, county Northampton, and hundred Polebrook, on the Nen (crossed here by two bridges, one of which has five arches), 25 m. N.E. Northampton, and 67 N. by W. London. Area of par., 5300 acres; pop. in 1831, 3296. The town, though small, is neat and well built, having a good market-house. The church is large and handsome, with a square tower, having octagonal turrets at the angles, and surmounted by a lofty spire; the living is a vicarage, in the gift of the lord chancellor. A grammar-school, established in 1541, attended by about 60 boys. Two charity-schools furnish clothing and instruction to 42 boys; and a national-school is attended by about 130 children of both sexes. There are also two almshouses. Petty sessions for the hundred are held here once a fortnight. Markets on Thursday; fairs, Feb. 25, Whit-Monday, August 31, and October 15, for horses, sheep, &c.

OURAL, or YAIK, the *Rhyanus* of the ancients, a large river of the Russian empire. It rises in the Oural mountains, whence its name, in the district of Troitsk; and after a lengthened south-westerly course past Orsk, Orenbourg, and Ouralak, pours its waters by various mouths into the northern part of the Caspian sea. It is shallow, and of little use for navigation; but teems with fish, which, at the proper season, afford a rich harvest to the Cossacks of the Oural. It is reckoned one of the bulwarks of the Russian empire against the incursions of the nomades of the Tartar steppes.

OURAL, or OURAL MOUNTAINS, an extensive mountain-chain, extending, including its subsidiary portions, nearly under the same parallel from the N. border of the sea of Aral to the shores of the Arctic ocean, or from about the 48th to about the 69th degree of N. lat. It forms, during the greater part of its course, the boundary between Europe and Asia. Where highest, it attains to an elevation about 6400 ft. above the level of the sea; but the ascent to the summit, particularly on the European side, is so very gradual, that its height does not appear nearly so great as it really is. Its breadth varies from one to five geographical miles. It is very productive both of the precious and useful metals; being estimated to afford, at an average, about 300 pounds of gold, 200,000 do. of copper, 5,500,000 do. of forged, and 8,500,000 do. of cast iron. (*See art. RUSSIA; Schmittler, La Russie*, &c., p. 639; *Humboldt's Fragments de Géologie*, &c., il. 315, &c.)

OVERTON.

OURFA, (an. *Edessa* or *Calirrhoe*) a fortified city of Asia Minor, pach. Diarbeker, 81 m. S.W. the city of that name, and 112 m. N.E. Aleppo. Pop. 30,000, 3-4ths of whom are Turks and Arabs, and the rest Armenians and Jews. It occupies the slopes of two hills, in the valley between which is a fountain and large basin containing a number of fish accounted sacred by the inhabitants. The houses are substantially built of hewn stone, and surmounted by terraces; gutters two or three feet in width run through the middle of the streets, and on each side are tolerably clean pavements. The mosques, which are numerous, have all lofty and many of them handsome minarets; there are churches also for the adherents of the Greek and Armenian creeds. The bazaars are of tolerable size, and covered in by the weather, some being occupied by cloth merchants, others by goldsmiths and other artisans.

Ourfa is a place of considerable industry; large quantities of cotton fabrics are made in it; its goldsmith work and morocco leather are highly esteemed, and the produce of the neighbourhood, especially wheat and barley, is sent to Aleppo and the N. of Syria, and, by way of Ekr, across the Euphrates. "The general trade with Aleppo is carried on almost entirely by about twenty Turkish and Christian merchants. They employ a capital not exceeding 50,000 dollars; but they trade on credit, both at Ourfa and Aleppo, for a much greater amount. Three fifths of this are for British manufactures, principally cotton twist, calicoes, a few priets, muslins, and nankeens; the remaining two fifths being for colonial produce, and different articles in the country. The inland duty paid at Ourfa by the rayas is invariably 5 per cent. on the invoice cost; and the price of carriage from Aleppo ranges between 80 and 100 piasters per Aleppo cantar on every kind of goods." (*Bearing's Report on Syria*, p. 44.)

The ancient *Edessa* was for a lengthened period the cap. of the prov. Oromo, in Mesopotamia. It is said to have been one of the numerous cities built by Seleucus Nicator, and continued under his successors as long as they remained possessors of Syria. It was taken by the Arabs during the caliphate of Abubeker, in the seventh century, and, after many vicissitudes, Selim I. united it, in 1517, to the Ottoman empire. (*Ohler, Voyage dans l'Empire Ott.*, iv. 310-323.)

OUSE, a river of England, co. York, one of the principal affluents of the estuary of the Humber, and which, indeed, may be considered as representing the various rivers that join it before it falls into that great estuary. The Swale, the remotest branch of the Ouse, has its source in the mountain of Shunnor Fell, on the borders of Yorkshire and Westmoreland, one of the most elevated in the great central range. Pursuing a S.E. course, the Swale is joined a little below Boroughbridge by the Ure, from Askir, Middleham, and Ripon. A little lower down the united river takes the name of the Ouse, and flowing past York, receives at Cawood its important tributary, the Wharfe, which, flowing through Tadcaster, has its source near Armcliffe. From Cawood the Ouse flows S.E., with many windings, to Goolia, where it unites with the Humber, receiving the Derwent from the N., and the Aire and Don from the S. The Ouse is itself navigable for considerable vessels as far as York, and for barges to Linton; and the Aire, Don, and Derwent, have been partly by improvements in their channels, and partly by canals, rendered navigable to a great distance. The Ouse, is in fact, connected not only with the ports on the Humber but by an internal navigation, with Liverpool, London, and Bristol.

Exclusive of the above, another river, called the Great Ouse, rises in Northamptonshire, near Brackley; its course at first is E., a little inclining to the N., through Bucks; it then passes Olney and Harold, and, after many windings, reaches Bedford, where it becomes navigable. It then traverses the counties of Huntingdon and Cambridge, and the N.W. corner of Norfolk, falling into the estuary of the Wash at King's Lynn. From Huntingdon Sluice to Denver Sluice, a distance of about 90 miles in a direct line, the Ouse is now called the New Bedford river, from the greater part of its water flowing in the great channel or drain of that name, during the reign of Charles II. The principal affluents of the Great Ouse are the Nen, Cam, Little Ouse, Lake, Wiskey or Stoke, and Nar.

OVERTON, a par. bor. of N. Wales, co. Flint, hund. Mayor, on the Dee, (crossed here by a handsome stone bridge), 14 m. S. Chester, and 158 m. N.W. London. Pop. of par. bor. and par., 1746. The town is situated on rising ground above the river, and is on the whole well built. The church is a venerable structure, picturesquely situated; and in the church-yard are some yews which, for size and beauty, are ranked among the wonders of the principality. The town has little trade; and would be unworthy of notice, were it not that it enjoys the privilege, in connexion with Flint and six other towns, of returning one member to the House of Commons. Registered electors for the united boroughs in 1839-40, 1053, also for Overton, 44.

OVIEDO.

OVIEDO, (*Ovetum*), an ancient city of Spain, cap. of the prov. of Asturias, in a plain at the confluence of the two small rivers Ovía and Nora, 60 m. N. by W. Leon, lat. 43° 14' N., long. 5° 57' W. Pop., according to Mifano, 10,470. It is an old-fashioned city, with many narrow and irregular streets; but it has several good squares, that forming the market-place being large and handsome. The town is supplied with water by a magnificent aqueduct of 41 arches, communicating with the fountains in the public squares. The principal public buildings are the cathedral, the collegiate church, and three parish churches, besides a district church, three hospitals, and four colleges. The cathedral (supposed to have been founded in the 8th century) is a large structure of Gothic architecture, and one of the most elegant in Spain, very similar to that of Toledo, though much smaller; it is surmounted by a beautiful, though unfinished, tower; and at the W. end is a noble open porch. (*Cook's Sketches in Spain*, ii. 99.) It contained many valuable vases, &c., taken away during the Peninsular war: it has also a large mausoleum, in which are deposited the remains of 14 kings and queens of Asturias. The university, founded in 1580, is well endowed, and has a large library: the university buildings are among the finest in the town. Oviedo has a weekly market, and three annual fairs; but its trade is chiefly confined to the neighbourhood. A few tanyards, manufactories of hats, horn combs, and metal buttons are established here, and domestic weaving is carried on to a considerable extent. A manufacture of arms was, till lately, supported by the government; but within the last few years it has been abandoned.

Oviedo is supposed to have been founded about A. D. 759. It afterwards became a place of refuge, during the persecutions of the Moors, for great numbers of Christian clergy, and hence acquired the name *Civitas Episcoporum*. The pope in 901 made Oviedo an archbishop's see; but afterwards this honour was transferred to St. Jago, since which time the bishops of this city have been suffragans. The foundation of the university improved the condition of the inhabitants; and for upwards of 150 years Oviedo was a popular resort for literary monks and others desiring to avail themselves of the advantages offered by the ecclesiastical seminaries. When Mr. Townsend visited the town, it swarmed with mendicants, encouraged by a wealthy clergy; but since the French war, and the suppression of the conventual establishments the importance both of the town and university has very much diminished. (*Townsend*, i. 1-14. *Mod. Trav.*, *Mifano*.)

OVERTON, county, Tenn. Situated in the N. part of the state, and contains 625 sq. m. Drained by Obies river, and its branches. It contained in 1840, 12,913 neat cattle, 11,011 sheep, 42,034 swine; and produced 28,452 bushels of wheat, 3713 of rye, 541,647 of Indian corn, 77,061 of oats, 19,464 of potatoes, 861,180 pounds of tobacco, 18,049 of cotton, 31,339 of sugar. It had 15 stores, two forges, 28 grist-mills, 14 saw-mills, one oil-mill, two powder-mills, five tanneries, 33 distilleries, 90 schools; 648 scholars. Pop., whites, 8324; slaves, 899; free coloured, 58; total, 9270. Capital, Monroe.

OVID, p. t., semi-capital of Seneca co., N.Y., 189 m. W. Albany, 323 m. W. Situated about mid-way between Seneca and Cayuga lakes. It contains a courthouse, jail, county clerk's office, six churches, a Presbyterian, Episcopal, Methodist, two Baptist, and a Dutch Reformed, 19 stores, a furnace, a steam grist-mill, one printing-office, one weekly newspaper, one academy, 48 students; eight schools, 306 scholars. Pop. 3731.

OWASCO, p. t., Cayuga co., N.Y., 3 m. S.E. Auburn, 169 m. W. Albany, 334 m. W. Owasco lake lies on its S.W. border. It contains a Presbyterian church, one store, one fulling-mill, one grist-mill, four saw-mills; seven schools, 831 scholars. Pop. 1319.

OWEGO, p. t., cap. of Tioga co., N.Y., 161 m. W.S.W. Albany, 375 m. W. Watered by Susquehanna river and Owego creek. It contains a court-house, jail, county clerk's office, a bank, four churches, a Presbyterian, Episcopal, Methodist, and Baptist, 36 stores, eight grist-mills, 59 saw-mills, two oil-mills, two printing-offices, two weekly newspapers, one academy, 988 students; 1399 scholars in schools. Pop. 5340.

OWEN, county, Ky. Situated in the N. part of the state, and contains 390 sq. m. Bounded S.W. by Kentucky river. It contained in 1840, 5,796 neat cattle, 11,810 sheep, 19,900 swine; and produced 61,090 bushels of wheat, 3913 of rye, 368,575 of Indian corn, 59,965 of oats, 8357 of potatoes, 778,909 pounds of tobacco, 18,457 of sugar. It had 13 stores one flouring-mill, eleven grist-mills, 19 saw-mills, two tanneries; 17 schools, 511 scholars. Pop., whites, 6915; slaves, 1981; free coloured, 36; total, 8239. Capital, New Liberty.

OWEN, county, Ia. Situated a little S.W. of the centre of the state, and contains 380 sq. m. Watered by the W. fork of White river, and its tributaries, and by the E. fork of Eel river, which affords good water-power. It contained in 1840, 8450 neat cattle, 9578 sheep, 24,971 swine; and pro-

OXFORD.

duced 47,082 bushels of wheat, 1900 of rye, 397,050 Indian corn, 45,985 of oats, 11,909 of potatoes, 41,744 pounds of tobacco, 69131 of sugar. It had 19 stores, one woollen factory, one flouring-mill, 25 grist-mills, 16 saw-mills, one oil-mill, four tanneries, eight distilleries; 19 schools, 356 scholars. Pop. 6359. Capital, Spencer.

OVENSUORO, p. v., cap. of Daviess co., Ky., 166 m. W.S.W. Frankfort, 663 m. W. Situated on the S. side of Ohio river, and contains a courthouse, jail, a church, five stores, and about 300 inhabitants.

OVINGBROOK, p. v., capital of Bath co., Ky., 73 m. E. Frankfort, 499 m. W. Situated a little W. of Slate creek, a branch of Licking river. It contains a courthouse, jail, two stores, and 251 inhabitants.

OWHYTHEE. See POLYTHEA.

OXFORD, an inland and central co. of England, of a very irregular shape, bounded S. and S.W. by the Thames, by which it is separated from Berks, and having W. Gloucester, N. Warwick, N.E. Northampton, and E. Buckingham. Area 463,840 acres; of which above 400,000 are said to be arable, meadow, and pasture. Surface, a good deal diversified. The S. division of the county is traversed by the range of the Chiltern hills; but elsewhere it is mostly flat, or merely undulating. Soil very various; in the N. it consists of a deep, red, fertile loam; in the middle district it is comparatively sandy, gravelly, and poor; and in the S., thin and chalky soil predominates. The county is extremely well watered; for, besides being bounded, as already stated, for a lengthened distance by the Thames, it is traversed by the Windrush, Evenlode, Cherwell, and Thame. Oxford is principally in tillage; but though numerous improvements have been effected of late years, its agriculture is far from being in a very advanced state. This is accounted for principally, perhaps, from the tenants not being bound to follow any particular mode of husbandry, and not being restricted in the sowing of wheat, so that the land is frequently foul and over-wrought. There is, also, in many parts, a great want of drainage. The soil is particularly suitable for barley, which is the principal crop; but large quantities of wheat are also raised. Turnips are extensively cultivated. Dairy husbandry is, in some districts, carried on upon a large scale, and the sheep stock is supposed to exceed 300,000 head. There are but few large estates, and farms are generally small; it is common to grant leases for 7 and 14 years. Average rent of land in 1810, 20s. 6d. an acre. Manufactures and minerals of no importance. Principal town, Oxford. The county is divided into 14 hundreds, and 217 parishes. It sends nine members to the House of Commons, viz. three for the county, two for the city, and two for the university of Oxford; and one each for the boroughs of Banbury and Woodstock. Registered electors for the county in 1830-40, 5791. In 1841, Oxford had 32,141 inhabited houses, and 161,573 persons, of whom 80,357 were males, and 81,190 females. Sum expended for the relief of the poor, in 1838-9, £70,847. Annual value of real property in 1815, £790,866; profits of trade and professions in ditto, 312,809.

OXFORD, a pari. bor. and city of England, cap. of the above county, and the seat of one of the two great English universities, on the left bank of the Isis, near its confluence with the Cherwell, which are both crossed by numerous bridges, (one of which on the London road, is a handsome stone structure of five arches,) 59 m. W.N.W. London, lat. (Observatory) 51° 45' 28" N., long. 1° 15' 29" W. Pop. of pari. bor. (which includes with the old borough, the parishes of St. Clement's and a portion of that of Cowley) in 1831, 21,345.

The city stands on a plain, in the midst of meadows thickly planted with trees, and is surrounded on three sides by the above mentioned rivers: it has an imposing external appearance from whatever side it may be viewed; but more especially from the adjacent high ground on the London and Abingdon roads. The High-street is one of the finest in England, not only for its width and regular arrangement, but for the beauty and magnificence of the churches and collegiate edifices lining it on both sides: the towers of Magdalen and All Souls' colleges, the noble fronts of University and Queen's colleges, and the university church, are its chief and most admired features. Three other streets meet it at its W. end; one of which, called the Corn-market, leads northward to the airy suburbs of St. Giles'; and the second passes southward by the town-hall, and the noble building of Christ-church, towards Abingdon; while the third, called Queen-street, runs westward in continuation of High-street, into the low and densely peopled parishes of St. Ebbe and St. Thomas. Parallel to and N. of High-street, is another fine, though not long line, called Broad-street, in which are Balliol, Trinity, and Exeter colleges, the Ashmolean museum, Clarendon-rooms, Sheldonian theatre, &c.; and between High-street and Broad-street is an oblong space, occupied by a quadrangular building, forming a hollow square, round which are the academical "schools,"

OXFORD.

the upper stories being occupied by the Bodleian Library and Picture Gallery. Between the schools and St. Mary's church is the Radcliffe Library, a circular Grecian edifice, surmounted by a dome, and contrasting rather strangely with the Gothic structures by which it is surrounded. St. Giles's and Beaumont-streets are lined with substantial private dwellings; besides which, St. John's and Worcester colleges, and the Taylor-building, a large structure of Corinthian architecture, now in course of construction, greatly contribute to the embellishment of this part of Oxford. The other streets are mostly narrow, irregular, and crooked. Some new streets, however, with good substantial houses, an entire new suburb, and several hundred smaller tenements, have been erected within the last 20 years, and the city has thus been greatly improved. (*Municipal Board Report*.) The principal thoroughfares are well paved, cleaned, lighted with gas, and plentifully supplied with water. The police, a very efficient body, is regulated and maintained by the university. The town-hall, a long stone building, with little pretension to architectural elegance, is open below for the accommodation of farmers and corn-factors, the upper stories being divided off into court-rooms, and apartments for municipal and judicial business. A large and commodious new sessions-house, however, is in course of erection near the old castle, which has been converted into a modern jail. The arrangements of the county prison are very imperfect; its size does not admit of classification or solitary confinement to any great extent, and hard labour is only partially enforced. There is likewise a city bridewell, comprising about 50 cells; but its management is said to be unsatisfactory. (*Prison Inspector's 4th Rep.*, part iii. p. 193-201.) The market-house is a modern range of buildings, entered from the High-street, and, with its aisles, arcades, and shops, forms one of the greatest improvements made in the city. The Radcliffe infirmary erected towards the middle of the last century by the trustees of the fund left by Dr. Radcliffe, is in the N. suburb, not far from the observatory, which owes its origin to the same founders. It is a plain stone building, within a spacious enclosure, capable of accommodating between 150 and 200 patients; besides medical officers, &c. The only other edifices, exclusive of those devoted to public worship, are the house of industry, a large structure near the infirmary, built for the reception of the poor belonging to 11 united parishes (the expense of whose maintenance amounted, in 1839, to £3195), a small music-hall, and two sets of almshouses.

The city is divided into 14 parishes, and is the seat of a bishopric. The cathedral church connected with Christ-church college, presents the styles of different ages, from the 12th to the 16th century; it is built in the form of a cross, and measures, from E. to W., 154 ft.; the length of the transeps being 102 ft., and the height from the floor to the roof, 43 ft. At the intersection of the nave and transeps rises a tower, surmounted by a spire 146 ft. in height. The carvings of the choir are very elaborate, though somewhat heavy; and in some of the windows are fine specimens of painted glass. Unfortunately it is so hemmed in by college buildings and gardens, that no view of the whole can well be obtained. The cathedral establishment is identical with that of Christ-church college; and the sum annually divided by the dean and eight canons amounts to £12,350, besides which each has a handsome residence. The income of the bishopric amounted at an average of the three years ending with 1831, to £3648 a year; but it is to be increased to about £4000 a year. St. Mary's church (used by the university for the academical sermons, Bampton lectures, &c.) is a fine structure, in the perpendicular style, surmounted by an elaborately ornamented tower and spire, 180 ft. high. The side towards the High-street, however, is disfigured by an incongruous porch, with twisted columns. The interior was renovated in 1836, and is handsomely fitted up. It is likewise a parish church, the living being in the gift of Oriel college. Carfax, or St. Martin's, the corporation-church, facing the W. end of High-street, is an oblong stone building, with a low tower. All-Saints, in the High-street, is in the Grecian style: the roof is entirely supported on the side walls, and the whole is surmounted by a tower and spire: the living is in the gift of Lincoln college. St. Peter's-in-the-East, near Queen's college, is the oldest church in Oxford. Mr. Rickman says that its original portions are Norman; but it has had many introductions and alterations, mostly in the perpendicular style, which have greatly altered its exterior appearance. The interior has recently been restored and beautified, so as to correspond with that of the original building; the living is in the gift of Merton college. St. Mary Magdalen at the junction of the Corn-market with Broad-street, is in the decorated style; it has recently undergone a thorough repair, and is about to be enlarged by the addition of a large aisle and lofty tower, to be dedicated by subscription, in commemoration of the martyrs, Cranmer, Hooper, and Ridley. The other churches of Oxford deserve no particular description. The Roman Catholics have a small

chapel: and there are places of worship for Wesleyan and Calvinist Methodists, Independents, and Baptists. Most of the churches have their attached charity-schools, besides which there are various Sunday schools, attended by great numbers of children of both sexes. The diocesan national schools give instruction to about 600 boys and 300 girls; and a school of industry is attended by 200 girls. A few schools, also, are supported by dissenters. Most of the parishes have considerable funds for the relief of the aged and sick poor; And there are dispensaries, lying-in charities, clothing-societies, provident clubs, &c., to aid the numerous indigent persons in the town and neighbourhood.

The great glory of Oxford, however, consists in its buildings devoted to collegiate education; which far surpass those of Cambridge in number, and in extent and beauty. Most of them are built in the style peculiar to the 15th and 16th centuries; but a few, as Queen's and Worcester colleges, with parts of Christ-church and Magdalen colleges, partake more of the Grecian style, introduced late in the 17th century. They are chiefly built in hollow squares, round which are the member's rooms; and the quadrangles of Christ-church, All-Souls, Magdalen, New, and Brasenose colleges are very large and imposing. The chapels, halls, libraries, and gardens of these establishments are likewise extremely beautiful; nor must we omit to mention the shady promenades, called the Christ-church Meadows and Magdalen Walks, which are of great extent and beauty.

Oxford in a very great degree depends, and has during many centuries depended, for its prosperity on the university. Till the opening of the Birmingham and Great Western railways, it enjoyed considerable advantages from being on the great roads leading northward to Birmingham, Shrewsbury, &c., and westward to Cheltenham, Gloucester, and South Wales. Between 90 and 30 coaches used daily to pass through the town, and its inns were among the largest in England: but this source of wealth is now almost extinct, and owing to the opposition of the university, no railway has hitherto been brought near the city. It is believed, however, that this will speedily be the case; and there can be no doubt that Oxford will gain incomparably more by such a speedy means of communicating with the metropolis and other great towns than she has lost by the annihilation of her posting business. There are no manufactures; and the trade of the place is chiefly confined to the supply of the academic population. It has the advantage of a canal navigation by the Isis to London, and by the Oxford canal northward, which channels supply it with coal, and all the more bulky articles of domestic consumption. (*Parl. and Mun. Board Rep.*) It is also the mart for an extensive agricultural district, and its weekly corn-market is one of the largest in the midland counties. Oxford has four private banks, with a savings' bank; and two weekly newspapers, the "Oxford Journal," and the "Oxford University Herald." Races are held during August in the Port-meadow, W. of the town.

The corporation of Oxford claims to exist by prescription, but it has also received many charters, the last of which was granted in 3 James I. It is divided, according to the Mun. Reform Act, into five wards, and is governed by a mayor, nine other aldermen, and 30 councillors. Corp. revenue, in 1839, £3914, exclusive of £61 accruing from the sale of property. Quarter and petty sessions are held by the recorder; besides which, there is a mayor's court for the recovery of small debts, and a court of hustings. The assizes for the county are held here: the quarter sessions take place on the Mccdays after January 4, April 5, June 23, and October 18. The vice-chancellor of Oxford is a magistrate *ex officio* within the borough, and exercises jurisdiction over the town as well as the university. The city has sent two members to the House of Commons since the reign of Edward I.; the right of election down to the Reform Act having been in the free burgesses (becoming so by birth, apprenticeship, purchase, or gift). The limits of the borough were enlarged by the Boundary Act so as to include with the old borough, the parish of St. Clement's and a part of Cowley parish E. of the Cherwell. Registered electors, in 1839-40, 3773. Oxford is likewise the election town for the county. Markets on Wednesday and Saturday, but chiefly on the latter. Fairs, May 3, Monday after September 1, and Thursday before Michaelmas-day.

Oxford (originally called Oxnafor, or Oxenford) lays claim to very high antiquity. It suffered much during the ravages of the Danes, and was the residence of Canute, and of his son Harold Harefoot. William the Conqueror stormed the town in 1067. Soon after, the castle (remains of which are still existing contiguous to the county jail) was built, by Robert de Oigil, one of the Norman barons. Henry I. built a palace here, which continued to be a favourite royal residence during several successive reigns; but it was pulled down at the dissolution of the religious houses. Oxford had a share in the civil wars of Stephen and Henry II., which were terminated by a council held in it in 1154. The

history of the city is henceforward closely connected with that of the university, which now began to attain a high celebrity. Hot disputes on points of scholastic doctrine prevailed between the reigns of Henry III. and Edward III.; and in the middle of the 14th century a large body of the students removed to Stamford, in Lincolnshire. (*See Gutch's Annals*, anno 1348.) Pestilence at the same time made great ravages; the city was almost deserted, and the university all but ruined. The introduction of the doctrines of Wycliffe, at the close of the 14th century, occasioned a great commotion in the academic body; the city suffered much during the wars of the Roses, and Oxford was again visited by plague in the reign of Henry VII. The troubles of the Reformation, and the spoliation of the academic houses by Henry VIII., drove many of the students from their habitations; but that monarch may be said to have resuscitated the university by the establishment of the cathedral of Christ-church, as well as by the foundation of professorships for the learned faculties. The forms of popery were restored under Queen Mary; and during this period Oxford acquired an unenviable notoriety by the martyrdom of the three great reformers, Cranmer, Ridley, and Latimer, in 1555-56. In the following reigns the city and university gradually recovered from their previous depression, and the latter received from James I. and Charles I. many important privileges. Oxford warmly espoused the cause of the royalists during the reign of Charles I., who made it his head-quarters after the battle of Edgehill. For a lengthened period after the Revolution, Oxford was attached to the party of the Jacobites; and since the accession of George III. down to the present time, the university has, speaking generally, supported what are called high church and high Tory principles. (*Ackerman's History of the City and University of Oxford*; *Ant. Wood's Antiq. of Oxford*; and *Athena Oxon.*; *Brewer's Account of Oxfordshire*, art. *Oxford*; *Prior's Papers*; *Prior's Inform.*)

OXFORD (UNIVERSITY OF). This celebrated university lays claim to very high antiquity; but its exact origin is unknown. Tradition has assigned its foundation to King Alfred, about the year 890; and University college is supposed to have been the nucleus round which, in the course of nine centuries, have been formed the present assemblage of colleges and halls. Mr. Hullah and Mr. Dyer countenance this opinion, which, however, seems to rest on no very solid grounds. But there can be no question that Oxford was known as a school of ancient learning as early as the reign of Edward the Confessor, for Ingulphus, abbot of Croyland, says of himself, that "he was sent to study at Oxford, where he made greater progress in the Aristotelian philosophy than most of his contemporaries, and became well acquainted with the rhetoric of Cicero." (*See Contrarius de Antiq. Academ. Diss.*, lib. ch. 7.) During the reigns of Henry I. and II., Oxford appears to have comprised a theological school of some note, and civil law was studied in it as early as the middle of the 12th century, about which time doctors both of divinity and law were first created; but we do not find it designated as a university till the 3 John, 1801, which is of earlier date than the application of the term either to Paris or Cambridge. The earliest charter was granted by John, and its privileges were confirmed and extended by subsequent monarchs, the act by which it was created a corporate body, by the style or title of "The Chancellor, Masters, and Scholars of the university of Oxford," having been passed in the 13th Elizabeth, 1570. The statutes, however, by which the university is now either nominally or really governed were drawn up during the chancellorship of Archbishop Laud, and received the sanction of Charles I. in 1636. (*Ant. a Wood's Antiq. of Oxfr.*, transl. by Gutch, i. 403.) The university was sanctioned, also, by Papal authority; and Oxford is mentioned in the Constitutions of Clement V. (A.D. 1311), with Paris, Bologna, and Salamanca. Collegiate foundations date from a very early period; and University, Balliol, Merton and Oriel colleges, were founded prior to the reign of Edward III. The number of colleges or endowed establishments, however, was for some centuries small, in comparison with that of the halls or *mans*, in which the students lived, chiefly at their own expense, under the supervision of a tutor, or principal. For the establishment of these halls, of which there were about 300 in the early part of the 14th century, nothing more was necessary than the agreement of a number of students to form themselves into a society, under a doctor or master of their own choice; for the chancellor could not refuse his sanction to the establishment. Pestilence, civil war, the decline of the scholastic philosophy, and other causes, led to a diminution in the number of students, in consequence of which, also, the halls decreased in number. The Reformation still further thinned the ranks of the students, and at the beginning of the 16th century the university was almost entirely deserted, and the halls fell to decay; a circumstance which gave to the secular colleges a preponderating weight, and allowed them so to extend their circuit, and increase their numbers, that they were subsequently

able to comprise within their walls nearly the whole academical population, though, previously to the 15th century, these endowed establishments appear to have rarely, if ever, admitted independent members. (*See Edin. Review*, lili. 411.) In 1546, the number of halls had fallen to only eight; and Antony Wood informs us that in 1551 the ancient halls were "either laid waste, or had become the receptacles of poor religious people, turned out of their cloisters." Many of these buildings were purchased by the colleges, which were thus considerably extended, and began to provide for the accommodation of members *not on the foundation*. Six colleges were founded in the 16th century, chiefly on the sites of old halls or deserted houses. After this period, one fresh college (Wadham) was founded; and three out of the eight surviving halls (namely, Broadgates, Gloucester, and Hert halls) were changed, by endowment, into Pembroke, Worcester, and Hertford colleges, of which, however, the last is now extinct. The Earl of Leicester, chancellor of Oxford during the reign of Elizabeth, obtained from the university the privilege of nominating the principals of the halls; and this right, which was, in effect, a veto on the institution of new halls, was vested by statute in his successors. Of the five still existing halls, Magdalen and St. Edmund's are the best attended by students; and they are the only examples in the country of unendowed academical houses; for the establishments called *halls* at Cambridge differ in no respect from the colleges. In the 15th century an enactment was made compelling all students to become members of some college or hall; and by the regulations of Leicester (which were confirmed by Laud), it was made necessary for them to enter under a particular resident tutor. The business of instruction was originally carried on by the doctors and masters of arts (all of whom had the liberty of teaching), or else by the salaried professors of the university. The tutor, therefore, was at first rather a moral guardian than a professed teacher; and his duties did not consist in teaching the sciences constituting the *trivium* and *quadrivium*, but in imbuing his pupils with good principles, instructing them in the rudiments of religion, especially in the doctrines of the 39 articles, and making them conform generally to the statutory regulations of the university. These duties the tutor still performs; but he has, also, become an acknowledged teacher, giving daily instruction in language, science, &c., to those under his charge; and bye-statutes enacted at different times have rendered an attendance on the professors' lectures merely optional, and wholly unnecessary either for the acquisition of the university degrees, or for a participation in academical honours. Indeed, out of 36 professors, only 12 now give lectures; and, excepting those of one or two professors, they receive little attention from the great body of students. The following are the existing collegiate institutions of Oxford, with the dates of their foundation, and the number of foundation-members, independent members, &c., in 1841. (*See Mr. Maden's valuable work On the Orig. of Universities*, p. 80-92.] [*See Table*, next page.]

The buildings belonging to all or most of these societies, are of great extent and beauty. Christ-church, New college, All-Souls, Magdalen, and Queen's colleges, are very large, comprising several quadrangles, and lay claim to considerable architectural elegance. The libraries and dining-halls of these establishments are on a large scale, and the rooms within the colleges are capable of accommodating several hundred students. Oxford, indeed, from the great number of its fine academical buildings, has a very imposing appearance when seen either near or at a distance; and it has been not inappropriately called a city of palaces, vying in external and internal beauty with the finest cities.

Each college, as in Cambridge, is governed by its own statutes; and its principal or head master, in most cases, is in orders, as a living commonly forms the chief part of his *salutatio*. The direction of the college is vested in the principal and senior fellows (technically called the *seniority*); but in matters affecting discipline the principal is the supreme arbiter, and he appoints the deans and tutors, who are immediately responsible to him for the conduct of the members in *status pupillari*. The fellowships and scholarships are, in most instances, reserved for the natives of certain towns and counties, or for those who have been educated at certain schools; so that birth or interest, more than any positive amount of scholarship, usually procure the candidate's election. At Balliol, Oriel, Lincoln, and Wadham colleges, however, the fellowships and scholarships have been either wholly or in part thrown open to general competition, and the candidates for these usually comprise the most promising students of the university. Most of the colleges have *exhibitioners*, or students, receiving annual allowances from charters held in trust by the fellows, by city companies, trustees of schools, &c.; and at Christ-church there are *vergeries*, an inferior class of students, somewhat resembling the *sizaris* of Cambridge. All Souls' college has no under-graduate members, except its bible-clerks, and cannot be considered as an establishment

OXFORD (UNIVERSITY OF).

Colleges and Halls.	Date of Foundation.	Founders.	Visitors.	Details of Foundation.	Members in 1841.	
					M. A.	Total.
University . . .	878 ? 1349	King Alfred and William of Durham.	The crown.	A master, 13 fellows, 2 travelling fellows, 17 scholars, 6 open, and 4 exhibitors: 10 benefices.	119	236
Balioi	1369 ?	John Balioi, father of John Balioi, king of Scotland.	The Archbishop of Canterbury (elected by the College).	A master, 18 fellows, and 14 scholars, (all open); several exhibitions for natives of Scotland: 20 benefices.	151	238
Merton	1364	Walter De Merton, Bishop of Rochester, who removed it from Malden in Surrey, in 1362.	The Archbishop of Canterbury.	A warden, 24 fellows, 14 post-masters (perpetuities), 8 chaplains, and 2 bible clerks: 18 benefices.	70	149
Exeter (originally called Stapledon Hall)	1314	Walter De Stapledon, Bishop of Rochester.	The Bishop of Exeter.	A rector, 26 fellows, 19 scholars (3 open): 12 benefices.	158	346
Oriel	1388	Edward II. at the suggestion of Adam De Brome, his almoner.	The Crown.	A provost, 18 fellows, and 17 exhibitors (all open): 13 benefices.	165	303
Queen's	1240	R. Eggesfield, confessor to Philippe, consort of Edward III.	The Archbishop of York.	A provost, 12 fellows, and 6 scholars on the old foundation; 8 fellows, 4 scholars, and 4 exhibitors (all open), on the Michael foundation: 23 benefices.	100	303
New	1386	William of Wykeham, Bishop of Rochester, founder of Winchester School.	The Bishop of Winchester.	A warden, 70 fellows and scholars, 10 chaplains, 3 bible clerks, and 16 chorists: 26 benefices.	76	158
Lincoln	1487	Richard Fleming, Bp. of Lincoln.	The Bishop of Lincoln.	A rector, 12 fellows, 8 scholars, 19 exhibitors, on Lord Crew's foundation: 10 benefices.	71	151
All Souls	1487	Henry Chichele, Archbishop of Canterbury.	The Archbishop of Canterbury.	A warden, 40 fellows, 2 chaplains, and 4 bible clerks.	83	107
Magdalen	1486	William of Wykeham, Bishop of Winchester and Lord Chancellor of England.	The Bishop of Winchester.	A president, 40 fellows, 30 scholars, called <i>damas</i> , 2 schoolmasters, 4 chaplains, 8 bible clerks, and 16 chorists: 26 benefices.	136	174
Brown and Col. and King's Hall	1609	William Smith, Bishop of Lincoln, and Sir R. Sutton of Prestbury, in Cheshire.	The Bishop of Lincoln.	A principal, 20 fellows, 17 scholars, 2 bible clerks, and 15 exhibitors, on a separate foundation by W. Hulse: 48 benefices.	223	308
Corpus-Christi	1516	Richard Fox, Bishop of Winchester, and Lord Privy Seal.	The Bishop of Winchester.	A president, 30 fellows, 20 scholars, 2 chaplains, and 4 exhibitors: 22 benefices.	92	187
Christ-Church	1525 and 1592	Cardinal Wolsey: King Henry VIII. refounded it and gave it the name of Henry VIII's College. It was made a cathedral church in 1545.	The Crown and Chancellor of the University.	A dean, 8 canons, 101 students, 8 chaplains, 8 bible clerks, and 8 chorists: 91 benefices.	500	914
Trinity	1554	Sir Thomas Pope of Titchmarsh, in Hertfordshire.	The Bishop of Winchester.	A president, 12 fellows, and 18 scholars (all open): 9 benefices.	122	204
St. John's	1585	Sir Thomas White, alderman of London, and founder of Merchant-Tailors' School.	Ditto.	A president, 60 fellows and scholars, 1 chaplain, 2 bible clerks, 6 singing men, and 6 chorists: 29 benefices.	136	260
Jesus	1571	Queen Elizabeth, on the endowment of Dr. Price.	The Earl of Pembroke (hereditary).	A principal, 19 fellows, and 18 scholars, all natives of Wales: 23 benefices.	95	136
Wadham	1613	Nicholas Wadham of Thimfield in Somersetshire, and Dorothy his wife.	The Bishop of Bath and Wells.	A warden, 15 fellows, and 15 scholars (all open), 10 exhibitors on Dr. Bodley's foundation, 2 chaplains, and 2 bible clerks: 9 benefices.	98	207
Pembroke	1624	Thomas Tundale, and Richard Lightwick, B.D.	The Chancellor of the University.	A master, 14 fellows, and 29 scholars or exhibitors, and 2 bible clerks: 15 benefices.	109	180
Worcester	1714	Sir Thomas Cooke of Bentley, in Worcestershire.	The Bishops of Oxford and Worcester, and the Vice Chancellor of Oxford.	A provost, 21 fellows, 16 scholars, 3 exhibitors, and 2 bible clerks: 8 benefices.	113	247
St. Mary Hall	1333	Oriel College.	The Chancellor of Oxford, who appoints the Principals.	None	23	74
Magdalen Hall	1487	Rishop Wykeham, the founder of Magd. College.		None	48	178
New Inn Hall	1606	William of Wykeham, who gave it to New College.	The Provost of Queen's College.	None	4	64
St. Alban Hall	1547	Merton College.		None	8	85
St. Edmund Hall	1569 and 1859	The canons of Ousey: afterward William Dunsen, provost of Queen's College, which society has the appointment of the Principal.		None	52	99
19 Colleges, { 5 Halls {					2,799	5,515

(Oxford Calendar for 1841; and Chalmers' History of the Colleges and Halls of Oxford.)

for education, though it has 40 fellows, *bene nati, bene vestiti, et in arte cantandi medicis et docti*. New college is connected with Winchester school, which owes its origin to the same founder, and, like King's college, Cambridge, has little connexion with the rest of the university; but it has not, like the last-named college, the privilege of examining its own members for academic degrees. Residence in college, which, at Cambridge, is to a certain degree optional, is compulsory at Oxford on all under-graduates who have not passed their examination for the B. A. deg.; and hence the out-college men at Oxford comprise the senior, not the junior portion of the academic population. Attendance at chapel and the tutors' lectures is enjoined on each student, and omissions in either case are visited by impositions, rustication (temporary banishment), and other penalties. At the end of each term, also, examinations are held within the colleges on the subjects of the tutors' lectures: these trials (called *collections*) have no necessary connexion with the public examinations, though they in some measure familiarize the student with the method pursued in the academic schools. With respect to college lectures, however, it seems to be a generally received, and, we are inclined to think, a well-founded opinion, that, as at present conducted, they confer but little benefit on the student, who is indebted for his degree and distinction, should he acquire any, almost entirely to his own exertions, or to the assistance of a tutor, procured at

an expense of from £50 to £70 a year. The degree of attainment requisite for passing the university examinations has, since 1801, been determined by statute; and every candidate must belong to some college or hall, and must have been under collegiate instruction. It is usual, also, for the students to consult their tutors before they put down their names in the list of those to be examined. On admission to the university, each member is required to subscribe his assent to the 30 articles of the Church of England, the act of supremacy, and certain sections of the university statutes; and hence Oxford is exclusively resorted to by parties professing the established religion; whereas, at Cambridge, the education furnished by the university, though not the degrees, may be participated in by all parties, dissenters as well as churchmen.

There are at Oxford four terms in each year, two of which (Michaelmas and Hilary terms) last nine, and two others (Easter and Trinity terms) last from three to four weeks each. By statute, however, the two first mentioned terms may be kept by six weeks' residence, and the two latter by three weeks each; though by those who have taken the first degree in arts, or have passed the examination for that degree (having previously resided 12 terms), any term may be kept by a residence of three weeks. Sixteen terms (occupying the same time as the *twelve* terms at Cambridge) are required for the degree of B. A. from all, except the sons of British and Irish peers, baronets, knights,

OXFORD (UNIVERSITY OF).

and their sons, if so entered in the university books; but of these the term of matriculation is reckoned as one, the day of admission to the degree as another, and two others are dispensed with by a regular order of the governing body; so that, in fact, a residence of 12 terms in Oxford, as of nine terms in Cambridge, is all that is necessary for the B. A. degree. The examinations for this, the lowest degree, are conducted in a large square building, known as "the schools," and consist of two trials, the first, or preliminary examination, called the *little-go*, or *responsions*, and the second the examination for the B. A. degree, both under masters of arts appointed by the vice-chancellor and proctors. There are seven public examiners of candidates for the B. A. degree, and three examiners, or masters as they are called, of the *little-go* schools. The *little-go* examination, which commonly takes place at the completion of the eighth term from matriculation, comprises a mere grammatical and elementary examination, offering few impediments except to the duller or idler students. To have failed in this examination is in Oxford phraseology, said to have been *plucked*; and three successive failures are considered as tantamount to a disqualification from further university pursuits. The next examination, or that for the degree of B. A., is the last to which the student is subject during his probationary residence: the lowest acquirements for the degree comprise a knowledge of the rudiments of religion, sacred history, the doctrines of the thirty-nine articles, the *libera humaniores*, including, at least, two works of Latin and two of Greek authors, (usually Herodotus or Thucydides, with a few Greek plays, and portions of Livy or Tacitus, with Virgil or Horace,) with a fair knowledge either of Aldrich's Logic or Euclid's Elements. For honours, however, (of which, since 1830, there have been four instead of three classes as previously,) a very extended course of reading is necessary; the number of classical works on the candidate's list (each being compelled to send in an account of them) often amounts to twelve or sixteen, of which Aristotle's Ethics and Rhetoric commonly form two; and the amount of historical and metaphysical knowledge requisite for the honourable distinction of a *first-class* man is so great as to require intense labour during the three years' probation. It has been alleged, however, that the education of first-class men at Oxford is more extensive than solid, owing to its not being bottomed on any sound philological basis: but it may be doubted whether there be any good foundation for this statement. Classics are the favourite studies of the under-graduates, and till recently the pursuit of physical science was, if not discouraged, at least not encouraged. Hence mathematics form an unimportant part of the general examination for the B. A. degree; but for the honours in *disciplina mathematica* or *physica* an amount of knowledge is required, varying from that of pure mathematics, (including differential equations,) to a somewhat extended acquaintance with physics, astronomy, &c. The highest mathematical degrees, however, may be generally obtained by persons of less attainments than the *wranglers* of Cambridge. (See Prof. B. Powell on the *State of Mathem. Studies in the Univ. of Oxford*; *Journ. of Education*, vii., 46; and *Stat. Account of the Brit. Empire*, vol. ii.) Of those members who, during the last six years, have taken the degree of B. A., the *passmen* (those not ambitious of honours) have averaged at each examination about 100, those receiving honours in classics, 78, and in mathematics only 18. A few of the students aim at distinction both in classics and mathematics; and there are occasional instances of men having attained a *double first-class*, the highest honour that the university can bestow. The examinations for the degrees are held twice a year, during the Easter and Michaelmas terms, and last about three days. A large part of the examination is now carried on by written questions and answers, the oral examination being principally confined to theology. About 300 students pass at each of these examinations.

The annual prizes of the university, which are subjects of considerable competition among those in *statu pupillari*, comprise three of £30 each, given by the chancellor for the best compositions in Latin verse, Latin prose, and English prose; the first being confined to under-graduates, and the others to those who have exceeded four, but not completed seven years. Sir Roger Newdigate, in 1808, left property for an annual prize for English verses on ancient sculpture, painting, or architecture, confined to under-graduates; a prize of 50 guineas was founded, in 1825, by Dr. Ellerton, for the best English essay, by bachelors of arts, on the doctrine or duties of religion; and two other theological prizes of £30 each were founded by Mrs. Denyer, in 1836, for the best discourses written on selected subjects by clerical members of the university under the standing of 10 years. The university has likewise several public scholarships and fellowships, five Craven scholarships for under-graduates, four scholarships of £30 a year each, established by

Dean Ireland, and tenable for four years, the Boden scholarships for the encouragement of Sanscrit literature, three mathematical scholarships founded in 1831, the Kemait scholarships for proficiency in the Hebrew language, and the Eldon scholarships of £300 a year, tenable for three years by bachelors of arts studying the profession of the law. Several scholarships have, also, within the last few years, been established with the view of encouraging mathematical studies; and they are usually held by those who have attained honours in the mathematical schools of the university. These prizes and scholarships are contested for with great spirit, and the holders of them are usually among the ablest of those in *statu pupillari*. The prize compositions are in most cases recited in the Academic or Sheldon theatre, at the Commemoration or Act held in Trinity term for conferring honorary degrees. After the degree of B. A. has been taken, there are no further examinations except for degrees in medicine; but certain exercises, now merely nominal, are performed in the schools, and the candidate must have had his name on the books of some college or hall for a certain number of terms, during some of which also he must reside in Oxford. Subjoined is a summary of the different periods at which the several degrees, &c., may be acquired in the course of a student at Oxford:

B. A.	16 terms	12 in residence.
M. A.	28 —	13 or one after B. A.
B. C. L.	28 —	17 —
B. M.	28 —	17 —
B. D.	56 —	14 —
D. M.	40 —	or one after B. A.
D. C. L.	36 —	but usually honorary.
D. D.	68 —	—

B. Mus. } chiefly honorary, but dependent on the per-
D. Mus. } formance of a musical exercise.

The orders in the different colleges rank as follows: 1. The heads, or principals, most of whom are D.D. 2. The fellows, D.D., M.A., or B.A. 3. Noblemen who have graduated. 4. Graduate members not on the foundation. 5. Under-graduate noblemen. 6. Gentlemen-commoners. 7. Scholars. 8. Commoners. 9. Bible-clerks and servitors.

The expenses of academical residence vary greatly according to the taste and habits of the student; but about £300 a year may be assumed as the average outgoings of the more economical commoners, and an additional expense of £50 a year is incurred by those who engage the services of a private tutor. The payments to the college for living, tuition, &c., are usually called *bettels*, and in the case of commoners range from £70 to £90 a year; but those of noblemen and gentlemen-commoners are on a considerably higher scale, and their annual expenses are consequently much greater.

The University of Oxford is governed, as before stated, by the *Corpus statutorum*, drawn up by Archbishop Laud. The highest officer is the chancellor, anciently elected for three years, but since 1434 for life. This office, however, as well as that of the high steward or seneschal, is little more than a honorary dignity conferred on some distinguished noblemen; and the chancellor's duties are ordinarily performed by the vice-chancellor, who is, in fact, the supreme executive and judicial authority resident in the university. He is annually selected by the chancellor from the heads of houses, and approved by convocation; but in practice the office is held for four years, and four deputies are appointed, called *vice-chancellors*, to take the duties of the office in case of the vice-chancellor's absence or illness. The proctors (those masters of arts, of at least four and not more than 10 years standing) are the conservators of the peace and discipline of the university; they rank next to the vice-chancellor, and have an extensive police jurisdiction over the town. They are assisted in their duties by four pro-proctors, and have at their command a large constabulary force. They are annually nominated by the colleges, each college taking its turn, according to a cycle fixed by the statutes. The business of the university, in its corporate capacity, is transacted by the doctors and masters at large, in two distinct assemblies, called *convocation* and *congregation*. The former consists of regents either *necessary* or *ad placitum*, including resident doctors, heads of houses, professors and tutors of colleges, its business being chiefly confined to the granting of degrees and dispensations: the vice-chancellor has a negative on its proceedings, and the proctors *conjunctly* have the same privilege. Convocation is the legislative assembly of the university, comprising all doctors and masters resident or not, whose names are on the books of a college or hall; and its business is unlimited, extending to all subjects affecting the credit, interest, and welfare of the corporate body. The statutes, however, cannot be altered, nor any new laws be enacted, before the matter has been referred to the *honorabil meeting* of the vice-chancellor, proctors, and heads of houses, who, if they approve of the measure, draw up the terms in which it must be promulgated in convocation.

OXFORD.

OXUS.

The hebdomadal meeting was first instituted in the reign of Charles I.

The public professorships of Oxford are of two classes, those established by royal foundation, and those supported by private endowment. The regius-professorships of divinity, civil law, medicine, Greek, and Hebrew, were founded by Henry VIII. and canonries in Christchurch cathedral are attached to the chairs of divinity and Hebrew. George I. also founded a regius-professorship of modern history in 1724, which was confirmed by George II. in 1733. There is also, as at Cambridge, a Margaret-professor of divinity. The other professorships are, 1, natural philosophy, founded by Sir W. Bledley, in 1618; 2, geometry and astronomy, established by Sir H. Savile; 3, moral philosophy, by Dr. White, in 1691; 4, ancient history, by W. Camden, in 1693; 5, anatomy, in 1696; 6, Arabic, by Archbishop Laud, in 1636; 7, botany, in 1693; 8, poetry, in 1708; 9, Anglo-Saxon, in 1750; 10, common law, by Charles Viner, in 1755; 11, clinical medicine, in 1773; 12, 13, 14, anatomy, practice of medicine, and chemistry, by Dr. Astruc, in 1683; 15, political economy, in 1833; and 16, Sanscrit, by Colonel Bodden, in 1850. There are also lectureships or readerships of Arabic, anatomy, experimental philosophy, mineralogy, and geology; there being, in all, 98 professors or readers.

The lectures are delivered either in the public schools, or in a building near them, formerly the university printing-office. An edifice, however, in course of erection, the funds for which are provided by the munificent bequest of the late Michael Angelo Taylor; it will be, when completed, one of the finest buildings belonging to the university, and will comprise several large lecturing theatres for the professors, besides a noble picture gallery for the reception of the numerous portraits and other pictures belonging to the university.

The public orator, who delivers the Crewelan oration alternately with the professor of poetry, is chosen by convocation; and his office is to write public letters and make addresses on grand occasions in the name of the university. The archives are kept by a registrar, elected also by convocation; this office was first established in 1634. The Clarendon press is superintended by delegates, of whom the vice-chancellor and proctors form three *ex officio*; the rest are heads of houses. The present building, opened in 1839, is of great extent, the bible department is on a magnificent scale, and the editions of classical and other works printed at this establishment are celebrated both for beauty and accuracy. The Bodleian library, founded by Sir Thomas Bodley, is the property of the university, and its affairs are regulated by the vice-chancellor, proctors, and the five *regii professorum*, its officers being a librarian, two under-librarians, and two assistants. It has received many valuable additions from the libraries of Selden, Archbishop Laud, Bishop Tanner, Browne Willis, Hearne, Gough, Malone, &c.; and it now comprises, exclusive of about 300,000 printed books, a great number of valuable MSS.: it is entitled, also, to a copy of all new works published in the United Kingdom. It is said, however, to be of less utility than might have been supposed. Owing to a justifiable apprehension of fire, the library is very inadequately warmed, and is very uncomfortable in winter; and the books are not allowed to be removed from the library. But though this is a very proper regulation as respects the rare and more valuable works, all the more common works might be lent out here as in Edinburgh, on lodging a deposit equal to their value, without any loss to the library, and with very great advantage to the students. The Radcliffe library, founded by Dr. Radcliffe, in 1718, and erected at an expense of £40,000, is under private trustees, and has little or no connexion with the university. The books in this collection are principally on medicine and natural history. An observatory was erected in 1773, out of the funds left by the same munificent individual, and the observer (commonly the Savilian professor of astronomy) is appointed by the Radcliffe trustees. The Ashmolean museum was built in 1683, for the accommodation of a rich collection of natural objects and articles of virtue, brought together by Elias Ashmole: large additions are annually made to it; and in the department of natural history, this museum is inferior only to the British Museum and that of the Zoological Society. It is under the care of official visitors, appointed by Ashmole's will.

The few remarks we ventured to make, under the article CAMBRIDGE, on the system of education followed in that university, apply with little variation to Oxford. This, like its sister institution, is essentially a scholastic establishment, and is well fitted to make good Greek and Latin scholars, and perhaps good divines. But it is obviously quite unsuitable, as a place of instruction, for the *Mites* of the youth of such a country as this. It must be entirely changed before it either send forth legislators capable of appreciating the various interests of this vast empire, or individuals capable of promoting and extending those manufacturing and commercial pursuits, to the success of which we are mainly in-

debted for our unparalleled increase in wealth and population. The university of Oxford received, in 1603, the privilege of sending two representatives to the House of Commons; the right of election is vested in the vice-chancellor, doctors, and other members of convocation, of whom there were, in 1840, 3798. (*Gutch's ed. of Wood's Antiquities of the University of Oxford; Achromann's Illustrat. Hist. of Oxford*, 3 vols.; *Madden on the Origin of Universities; Ingram's Memorials of Oxford*, 3 vols.; *Oxford Calendar; Edinburgh Review*, vols. 31, 35, and 53; and *Private Information*.)

OXFORD, county, Me. Situated in the W. part of the state, and contains 1800 sq. m. It contains a number of lakes in its N. part, connected together, which discharge their waters into Umbagog lake, and thence into Androskoggin river, by which, and by Saco river, it is watered. It cogs in river, by which, and by Saco river, it is watered. It contained in 1840, 24,955 neat cattle, 63,547 sheep, 8229 swine; and produced 66,098 bushels of wheat, 22,342 of rye, 83,339 of Indian corn, 4859 of buckwheat, 7075 of barley, 110,179 of oats, 669,684 of potatoes, 19,153 pounds of sugar. It had 59 stores, one furnace, 10 fulling-mills, one woollen factory, six scouring-mills, 37 grist-mills, 63 saw-mills, three oil-mills, one paper-mill, 36 tanneries, one printing-office, one weekly newspaper; eight academies, 359 students; 309 schools, 14,330 scholars. Pop. 38,351. Capital, Falmouth.

OXFORD, p. t., Oxford co., Me., 50 m. S.W. Augusta, 589 W. Watered by Little Androskoggin river, which receives the outlet of a considerable pond in its S. part. It contains five stores, one flouring-mill, two grist-mills, three saw-mills; 12 schools, 516 scholars. Pop. 1254.

OXFORD, p. t., Worcester co., Mass., 59 m. W. Boston, 394 W. Watered by French river, a branch of Quinebaug river, which affords water-power. It contains four churches, two Congregational, a Methodist, and Baptist, nine stores, three woollen factories, four grist-mills, six saw-mills; one academy, 30 students; 11 schools, 500 scholars. Pop. 1742.

OXFORD, p. t., New-Haven co., Ct., 55 m. S.W. Hartford, 209 W. Bounded S.W. by Housatonic river. Drained by Naugatuck river, which affords water-power. It contains two churches, a Congregational and an Episcopal, five stores, four fulling-mills, three woollen factories, two grist-mills, seven saw-mills, two tanneries; one academy, 25 students; 13 schools, 469 scholars. Pop. 1696.

OXFORD, p. t., Chenango co., N. Y., 10 m. S. Norwich, 109 W. Albany, 398 W. Watered by Chenango river, along which passes the Chenango canal. It contains six churches, a Presbyterian, Episcopal, a Methodist, two Baptist, and a Universalist; 17 stores, five fulling-mills, one woollen factory; two academies, 369 students; 25 schools, 903 scholars. Pop. 3179.

OXFORD, t., Warren co., N. Y. Drained by Pequest creek. It contains 19 stores, two grist-mills, one saw-mill, two tanneries, four distilleries; 12 schools, 893 scholars. Pop. 2653.

OXFORD, t., Philadelphia co., Pa., 4 m. N.E. Philadelphia. Bounded S.E. by Delaware river. It contains Frankfort v. Watered by Tacony creek. It contains an insane asylum, a U. States arsenal, 40 stores, three lumber-yards, three cotton factories with 9479 spindles, one tannery, one brewery, one pottery; six schools, 313 scholars. Pop. 1592.

OXFORD, p. t., Butler co., O., 105 m. W.S.W. Columbus, 502 W. The land belongs in fee simple mostly to the Miami university, located in the t., granted by the Congress of the United States, and yields an income of \$4500 annually, which is increasing. The university was founded in 1809, has a president and five professors or other instructors, has 300 alumni, of whom seven have been ministers of the gospel, 105 students, and 4353 volumes in its libraries. The commencement is on the second Thursday in August. The t. has one academy, 163 students; nine schools, 264 scholars. Pop. 3368.

OXFORD, p. v., capital of Granville co., N. C., 45 m. N. Raleigh, 256 W. Situated 8 m. E. of Tar river. It contains a courthouse, jail, market-house, a hospital for males, and also for females, three churches, a Presbyterian, Episcopal, and Methodist, and about 450 inhabitants.

OXUS (called by the natives Amoo or Jimou), a river of central Asia, flowing westward through the territories of Budukshan, Kunduz, Bokhara, Khiva, &c., into the Aral sea, and extending between long. 58° and 74° E.; estimated length, 1300 m. This great river was, in 1835, traced up to its source by Lieut. Wood, who ascertained that it rises in the mountain-lake of Sir-i-kol, within the district of Pamir, lat. 37° 37' N., long. 72° 40' E., at an elevation of 15,600 ft. above the sea. (*Wood's Journey to the Oxus*, p. 354.) Its course hence is S.W. for about 70 m. to Langer Kish, where it turns westward. In long. 71° 40', it passes the ruby mines of Budukshan, near the town of Ishkashm, and is deflected northward by a large offset of the Western Himalaya chain. After another turn southward, its course is pretty regularly W.N.W. through extensive plains, and at the point where Sir A. Burnes crossed it on his way to Bok-

OYSTER BAY.

bars, he found it to be upwards of 800 yards in width, about 30 feet in depth, with muddy waters, and a current of about 34 m. an hour, and from Kharpoo downwards, for 300 m., it is made available for commercial communication. (*Burnes' Travels*, II, 214, and *Geog. Journal*, IV, 309.) The river passes about 30 m. N.E. Khiva, which is situated in a verdant plain, irrigated by numerous canals supplied from its waters. It forms at its mouth a pretty extensive delta, the apex of which is about 50 m. from its principal and only navigable embouchure in the Aral sea, the breadth of coast from the W. to the E. mouth being about 45 m. The Oxus has numerous tributaries; few of which, however, have been satisfactorily explored. A large river, called the Kokcha, rises in the Hindoo-Koosh, near the celebrated lapis-lazuli mines of Budukshan, and, flowing N.W., joins it at Kilapack on the S. bank. About 75 m. lower its waters are further augmented by the Ghorri, an important stream rising in the Hindoo-Koosh, near the celebrated pass of Bamian, and having a general direction northward, passing in its course the large cities of Ghorri and Kunduz. The only other affluent explored by Europeans is the Kulm, partly traced by Moorcroft, and joining the Oxus on its S. side, about 30 m. below the tributary last mentioned. Several tributaries flow in from the N. bank, bringing considerable volumes of water; but their extent is almost wholly unknown. The Oxus, according to Moorcroft, begins to rise in April, and remains full till July, when it again falls. When at its height it inundates the plain on either side, but especially on the right bank, the extent of the floods being marked by a belt of sedge, weeds, &c., and then by a thick jungle of dwarf trees and brushwood. (*Moorcroft and Trebeck's Travels*, II, 498.)

The Oxus, regarded by some critics as the Araxes mentioned by Herodotus as flowing through the territories of the Massagete (I, 301-205; IV, 11), was supposed by Strabo and Ptolemy to fall into the Caspian; and the traces of a valley, nearly resembling the dry bed of a river, have induced some modern geographers to adopt the opinion, that in the course of ages the Oxus formed for itself a new channel, running into the Aral sea. But, however confused our information respecting this river, it undoubtedly formed the boundary line between the more civilized and settled nations of W. Asia and the wandering hordes of Tartary. The Oxus was the northern limit of the territories subdued by Cyrus and Alexander, and it seems to have been used, at a very early period, as a channel for commercial intercourse between India and the countries bordering on the Caspian and Euxine. The Oxus is mentioned by Strabo as one of its principal affluents; but his account is inconsistent, and unworthy of credit. (*Strabo*, ix.)

OYSTER BAY, p. t., Queen's co., N. Y., 182 m. S. by E. Albany, 293 W. It extends across Long Island. It has Oyster bay of Long Island sound on the N., and Great South bay of the Atlantic on its S. part. It contains three churches, an Episcopal, Baptist, and Friends, 14 stores, four fulling-mills, three woolen factories, eight grist-mills, two saw-mills; one academy, 30 students; 90 schools, 800 scholars. Pop. 5863.

P.

PACIFIC OCEAN (THE), a vast expanse of water, extending between Asia and America (sometimes, though improperly, called the South sea), and covering a large portion of the surface of the globe. Its extreme S. limit is the Antarctic circle, from which it stretches northward through 133 degrees of lat. to Behring's straits, which separate it from the Arctic ocean. Its greatest breadth from E. to W., measured along the equator, is about 10,100 m. Its shape is very irregular; but it becomes gradually narrower, as it extends northward, till at length the sea of Kamtschatka has a breadth of only 170 m. The American coast is pretty uniform, though high and bold, presenting the long range of the Andes close down to the shore. Its chief indentations are the gulf of California and bay of Panama; besides which, at the N. and S. extremities, it is broken and rugged, forming numerous islands and flocks, similar to those of other high latitudes. The coast-line of Asia, on the contrary, is extremely irregular, formed into deep bays, and subdivided by groups of islands into separate gulfs or seas, as the sea of Okhotsk, separating Kamtschatka from Siberia, the channel of Tartary dividing Saghalien from the main land, and the Yellow sea separating the peninsula of Corea from China; besides which numerous straits are formed between the islands of the Asiatic archipelago, as the straits of Sunda, between Sumatra and Java; the straits of Macassar, between Borneo and Celebes; Torres straits, between New Guinea and Australia; Bass's strait, between Australia and Van Diemen's Land, &c. The equator divides this vast expanse of water into the two grand portions of the N.

PACIFIC OCEAN.

and S. Pacific oceans, both being remarkable for the numerous groups of small coralline and volcanic islands with which they are studded, and which constitute a separate portion of the world, entitled POLYNESIA, to which the reader is referred for further particulars. These numerous islands form several archipelagos, in which are reefs and sandbanks, that render the navigation extremely difficult and dangerous. The reefs are sometimes of great extent, stretching from island to island, upwards of 600 m. Earthquakes are felt in most of the islands; and all the archipelagos seem to be the seat of extensive volcanic action. (*Lyell's Geology*, III, 236-239.)

The general motion of the Pacific ocean is from W. to E., or from the coast of America to that of Asia; and this movement is very powerful in the vast and uninterrupted extent of its waters, though it gradually decreases as it approaches the shores of Asia, while its temperature increases: its average velocity is stated by Captain Beechey to be about 28 m. a day. (*Geog. Journal*, I, 310.) Near Cape Corrientes, in Colombia, the sea, owing to this cause, appears to flow constantly from the land; and from Acapulco, in Mexico, ships are carried with great celerity to the Philippine islands. In returning, however, it is found advisable to take a course N. of the tropics, in order to have the advantage of the variable winds and polar currents, as well as of a counter-current, which sets eastward in about lat. 10° N. In the S. Pacific, the Polar currents being less interrupted by land, proceed with less deviation from their general course than those in the N. hemisphere; and carry vessels nearer to the tropical regions than is usual N. of the equator. The equatorial current, as it approaches the shores of Asia, is interrupted and broken by the vast chain of islands, shoals, and submarine banks, which stretch from China to New Zealand. The general direction is changed and modified by the form of these lands, and the vast mass of New Holland is one cause of those dangerous currents around its shores, noticed by Cook, La Perouse, and Flinders. A current, also, sets eastward in the lat. of the Japanese islands, but turns northward about 150 m. from the shore, and probably joins the stream that runs N.N.E. through Behring's strait; besides which there is a variable current on the E. side of Australia, setting northward from August to April, and northward through the rest of the year. The N.E. trade wind prevails uninterruptedly between lat. 50° and 23° N.; and, with the currents, enables vessels to sail from America to Asia with great rapidity, and almost without changing the sails. The S.E. trade wind, which is not met with near the American coast, varies in its extent at different seasons; but it commonly prevails between the equator and 26° S., so that the region of calms in the Pacific extends over only five degrees of lat., or somewhat less than in the Atlantic. In this region, however, there are occasionally severe storms, attended with lightning and heavy rain. (See *Bennett's Whaling Voyage*, I, 190.) These winds are still stronger in the numerous straits of the Asiatic archipelago, and in the neighbourhood of the Philippine islands, and immediately N. of Australia their violence becomes extreme, and even dangerous. The attraction of great masses of heated land also causes local variations in the wind, as is the case in New Holland, on the W. side of which there prevails a constant W. wind. Every island has, likewise, its land and sea breezes. In lat. 40°, on both sides the equator, tempests and variable winds prevail; but it may be remarked generally, that N. of lat. 40° N., winds from W. and N.W. are more prevalent than any others, whereas in the region S. of the trade winds, the prevailing winds are from E.W., and often extremely violent. Winds from the S., however, are found along the coast of Peru, and may be attributed in some measure, at least, to the strength of the polar current in the S. hemisphere. They are generally light, though steady; and N. of Guayaquil they are ways blow from S.E.E., extending westward as far as the Galapagos. (*Travels in Phys. Geography*, 95, 198; *Müller-Bresl.* I, 337, 385; and *Hall's America*, II, App.)

Vessels in sailing northward from the coast of Chili are favoured both by wind and tide, so that they may safely run near the shore; but those going in the contrary direction sail south-westward, by means of the trade winds, till they arrive in the region of the variable winds, and are obliged to run as far as about lat. 26° S., before they can reach a port. Navigators traversing the ocean between Asia and America, sail westward from Mexico, touching at the Sandwich islands, and entering the Chinese sea between the islands of Luzon and Formosa; but from the ports of S. America the ordinary track is westward, between the Marquesas and Society islands, beyond which it assumes a W.N.W. direction, and joins the former in lat. 30° N., and long. 125° E. The voyage from Asia to America is effected by seeking the region of the variable winds N. of lat. 30°, and making the coast of California; but from Sydney the course is pretty direct E. as far as the coast of America, where the winds and currents are favourable for reaching

PADANG.

its principal ports. One track for vessels sailing from Sydney to India is through the islands N. of New Guinea; the other, however, by Basm's straits, is more common, and is the only one used in making the passage from India to New South Wales. (See *Berghaus's Physical Map of the Pacific Ocean*, and vol. i., 572, of his *Geography*.)

This ocean, which received its name *Pacific* from Magellan, in consequence of the prosperous weather with which he met while navigating its surface, was not known to the ancients, nor was the existence of so vast an ocean at all suspected by Europeans, till, in 1513, Vasco de Balboa beheld it from the summit of the mountains near the isthmus of Panama. Magellan traversed it from America to Asia in 1521, and at the close of the same century Sir Francis Drake explored a great portion of the W. coast of America, in the view of ascertaining whether this ocean had any other communications with the Atlantic than by the straits of Magellan and round cape Horn. The Pacific was pretty extensively explored during the 18th century; and to the observations of Behring, Anson, Byron, Bougainville, Cooke, Vancouver, Broughton, and La Pérouse, we are principally indebted for the grand outlines of our best maps of this ocean. These navigators have been succeeded in the present century by Entrecasteau, Krusenstern, Beechey, Fitzroy, Bennett, &c., and means are now provided for the formation of a pretty accurate chart of this sea so thickly studded with rocks and islands. Meanwhile the intercourse of the islanders with Europeans, and the efforts of European missionaries, have introduced among some of them the arts of civilized life; trade has gradually extended itself along the American shore as well as in the different islands; and in Australia, and very recently in New Zealand, the British have established numerous and very flourishing colonies. For particulars respecting the trade of its various ports, the reader is referred to the articles MANILLA, CANTON, and NANGASAKI, on the coast of Asia; to ACAPULCO, PANAMA, GUAYAQUIL, CALLAO, VALPARAISO, on the W. side of America; and to SIDNEY, and ZEALAND (New), in Australia. (*Malta-Brun's Geog.* i. and iii.; *Diet. Geog.*; *Hall's S. America*, vol. ii., Appendix; *Geog. Journal*, i. 193-222; *Bennett's Whaling Voyage*, &c.)

PADANG. See SUMATRA.

PADERBORN, a town of Prussian Westphalia, reg. Minden, cap. circ. at the source of the Pader, a tributary of the Lippe, 52 m. E.S.E. Munster. Pop., in 1838, 7895, principally R. Catholics. It is walled, is tolerably well built, and has a good cathedral and several other Roman Catholic churches, a Lutheran church, synagogue, gymnasium, Episcopal seminary, female teachers' seminary, and numerous almshouses, and other charities. It has a few manufactures of starch, leather, &c.; but its trade is insignificant. It was erected into a bishopric by Charlemagne, who is said to have made it his head-quarters during his wars with the Saxons. It was the temporary residence of several succeeding emperors, and the palace they occupied still exists. Paderborn was subsequently one of the Hanse towns. In 1622 it was taken and pillaged by the Duke of Brunswick; and in 1693 it was annexed to Prussia. (*Berg.*; *Diet. Geog.*, &c.)

PADIHAM, a town and chapel of England, par. of Whalley, co. Lancaster, and upper div. of hund. Blackburn, on the Calder, a tributary of the Ribble, 154 m. E. Preston. Area of township, 1700 acres; pop., in 1831, 3559. The town, though small, is respectably built, and has an appearance of considerable activity. The church, subordinate to that of Whalley, was rebuilt in 1776; but its old tower, built at the close of the 15th century, is still remaining. The Wesleyan Methodists and Unitarians have their respective places of worship; Sunday-schools are established. The inhabitants are principally employed in the manufacture of cotton goods. A market once held here has been for some years discontinued. Fairs, on the 8th May, and 26th September.

PADSTOW (corrupted from *Patrickstown*), a seaport, market-town, and par. of England, co. Cornwall, and hund. Frier, on the W. side of the estuary of the Camel, 11 m. W.W. Bodmin, and 930 m. W. by S. London. Area of par. 3670 acres; pop., in 1841, 2145. The town, which is situated in a richly cultivated vale, sheltered by bold rocks and hills, has been considerably improved by the erection of new houses; but the streets are inconveniently narrow, and many of the buildings are antiquated. The church is in the perpendicular style; the living is a vicarage in the patronage of the descendants of Dr. Prideaux, the learned author of the famous historical work on the "Connection" of the Old and New Testaments, a native of the town, where he was born in 1648. The Wesleyan Methodists have also a place of worship, and there are two Sunday-schools, besides a small endowed national school. Facing the river are good quays and a custom-house, the gross amount of customs' duty in 1840 being £3018. The entrance to the harbour is between Stepper Point, on the W., and Pendre Point on the E., close to the former. The passage

PADUA.

is narrow, and rather difficult, especially with N.W. winds; it has from 13 to 18 ft. water at spring ebbs. This is the only harbour between the Land's End and Hartland Point. (*Purdy's Sailing Directions for the English Channel*.) In the reign of Edward I., Padstow furnished two ships for the siege of Calais; and in the time of Leland it carried on a considerable trade with Ireland and Wales; at present about 80 ships, of the aggregate burden of about 4500 tons, belong to the port. The town was incorporated by Queen Elizabeth; but the charter has lapsed by desuetude.

PADUA (Ital. *Padova*, an *Atavium*), a city of Austrian Italy, gov. Venice, cap. deleg. of its own name, in a low and rather marshy situation, between the Brenta and Bacchiglione, at the termination of the canal of Monselice, 94 m. W. Venice; lat. 45° 24' 7" N., long. 11° 52' 15" E. Pop. circa, 45,000. (*Austrian Encyc.*) It is of a triangular shape, is surrounded with walls and a broad ditch, and intersected by canals. Mr. Rose speaks very slightly of Padua, and represents it as a city which, beyond all others, disappoints the expectations of the traveller. (*Letters*, i. 51.) It is, certainly, dull, damp, and gloomy, having numerous narrow, dirty, monotonous streets, bordered by arcades, without any leading thoroughfare; there are three or four squares or open spaces, which, however, are all of very limited dimensions, excepting the Prato della Valle, the principal public promenade. This, which occupies what was once a marsh, bears some resemblance to a London square, but the interior is differently laid out; being surrounded by a circular stream of running water, the banks of which are fringed with a double row of statues representing distinguished natives of Padua. The houses, though old, are generally well built and lofty. The principal public buildings are the churches, of which there are said to be nearly 100. The cathedral, a large brick edifice of Grecian architecture, was intended to have a stone front, which, has not yet been built. There is in it little remarkable; except a monument to Petrarch, his portrait, and some Madonnas, one of which is by Titian. The church of St. Anthony, begun in 1259 and finished in 1294, 336 ft. in length by 160 ft. in width, is a vast ugly pile, exhibiting seven domes, a small octagonal tower above the gable of the front, two high octagonal towers, near the choir, and a lofty cone in the centre surmounted by an angel. (*Wood's Letters of an Architect*, i. 246.) The splendid shrine of the saint, with *mezzo-reliefs* in white marble, and two fine bronze panels, by Riccio, are the principal objects of interest within. The church of S. Giustina, begun and finished during the 16th century, is partly modelled on the foregoing, but is far handsomer. It is of brick, 367 ft. in length, by 252 ft. in the transept, and 63 ft. in height inside. It was built from a design by Palladio; its interior is generally admired. Forsyth says, "it is rich in the bones of 3000 saints, and disputed bodies of two apostles;" and it possesses a less questionable, if not so precious a relic, in a fine painting of Paul Veronese. The Benedictine abbey, to which this church was attached, is now converted into a barrack. The churches of the Eremitani; the Annunziata, with some fine frescos by Giotto; la Madre dolente; S. Giustina, &c., have all valuable works of art, or are remarkable for their architecture. The palace of Justice, or town-hall, is one of the most striking edifices in Padua: it has a saloon, 276 ft. in length, 86 in breadth, and 75 in height, being one of the largest in Europe, unsupported by columns. The roof is of dark carved wood, shaped like a reversed keel, and sustained by a number of iron ties. The walls are ornamented with frescos, originally the work of Giotto. In the hall is a monument in honour of Livy, a native of Padua; and at the entrance are two basalt statues, brought from Egypt by Belzoni, who also belonged to the city. The tower of Giotto, still used as an observatory; the theatre, the museum of antiquities, &c.; the mayoralty; and several other official and private palaces; the *café Padrocchi*, one of the oldest and best establishments of its kind in Europe; several good hotels; and the university buildings, are among the most conspicuous of the remaining public edifices; but, according to Mr. Woods, the last mentioned structure hardly surpasses mediocrity.

The university of Padua, founded in the 13th century, was in the height of its popularity during the 15th and 16th centuries, when it was not only frequented by vast numbers of students from all parts of Europe, but even by some from Mohammedan countries. Its medical school was particularly celebrated. Fallopius, Fabricius ab Aquapendente, Morgagni, &c., have been among its medical teachers; and Galileo, Guglielmini, &c. among its professors of philosophy. Dante, Petrarch, and Tasso were of the number of pupils. Harvey took his doctor's degree here in 1603. Evelyn also studied here in 1645, and it was resorted to by many

* It is said in *Conder's Italy* (ii. 132), that Vesalius was professor of anatomy at Padua from 1537 to 1542; but this is an error. He was offered the chair of anatomy, vacant by the death of Fallopius, in 1564, the same year in which he died. (*Biographie Universelle*, art. *Vesalius*.)

PADUCAH.

other distinguished foreigners. Defects of discipline and the quarrels of the students seem to have been the first causes of the decline of the university, which has for more than a century been in a languishing state. But it has still to boast of several distinguished professors and ranks as the second seminary of its kind in Italy, that of Pavia being the first. It has faculties of theology, law, medicine, and philosophy, and 35 professors, with between 400 and 500 students. It is governed by a senate, composed of a rector and 13 other individuals chosen from its general assembly; which includes, with the directors, deans, and professors, all the doctors who have graduated at Padua, and reside in the city. The university library comprises about 70,000 vols., and it has a fine botanic garden, one of the oldest in Europe. Padua has a celebrated society of arts and sciences an Episcopal seminary, with an extensive library, formerly belonging to the Benedictine abbey, a city-school, two gymnasia, a high female school, agricultural, veterinary, and various other schools, a famous chemical laboratory and cabinet of mineralogy, and several libraries and museums of the arts, &c., this city being the seat of one of the five sections of the literary union of Austrian Italy. Among the charitable institutions are a civil and military hospital, a workhouse, foundling and orphan asylums, a *monte di pietà*, &c. Padua is a bishop's see, and the seat of the council and superior judicial courts for the deleg. It has been celebrated, both in ancient and modern times, for its woollen manufactures; but these have greatly declined since the time of the Venetian republic, to which they once supplied a considerable revenue.

It has still, however, manufactures of woollen cloth, broad silks, silk ribands and leather, and an extensive trade in wine, oil, cattle, garden vegetables. The fair of St. Anthony, which lasts 15 days, from June 13th, renders the city for a time a scene of bustle and gaiety; and the inhabitants derive some benefit from Padua being, for a part of the year, the residence of the Venetian nobility. It is very ancient, being said to have been founded by Antenor, after the siege of Troy—

"Hic tamen ille urbes Patavina, sedesque locavit
Theocrum, et genti nomen dedit;" *Strabo*, l. 248.

and Mela enumerates the *Patavium Antenoris* among the principal cities of that part of Italy. (Lib. ii. cap. 4.) The historian Livy was a native of Padua; and the alleged *patavinus* of his style has long been a topic for critical discussion. Padua was taken by Alaric, Attila, and the Lombards; but being restored by Charlemagne to something like its former grandeur, it became, under his successors, flourishing and independent. In 1318, it came into the possession of the Carrara family; and in 1405 was united to the Venetian territory. Under the French, it was the cap. dep. Brenta. (*Est. Nat. Encecl.*; *Borghese*; *Von Raumer's Ita.* l. 197, 198; *Eustace, Class. Trav.* l. 144-153; *Wood's Letters of an Architect* l. 245-250; *Ross's Lect. from the N. of Italy*.)

PADUCAH, p. v., capital of McCracken co., Ky., 284 m. W. S. W. Frankfort, 816 W. Situated on the S. bank of Ohio r., immediately below the entrance of Tennessee r. It contains a courthouse, jail, 15 or 20 stores, and about 1000 inhabitants.

PAGE, county, Va. Situated toward the N.E. part of the state, and contains 160 sq. m. Bounded E. by the Blue Ridge. Drained by S. fork of Shenandoah r. It contained in 1840, 3300 neat cattle, 3333 sheep, 13,517 swine; and produced 105,109 bushels of wheat, 20,850 of rye, 155,784 of Indian corn, 20,166 of oats, 14,743 of potatoes; 6588 pounds of tobacco. It had 11 stores, two furnaces, five forges, 21 flouring-mills, 14 grist-mills, 40 saw-mills, one oil-mill, five tanneries, two distilleries; 11 schools, 527 scholars. Pop., whites, 5197; slaves, 781; free coloured, 216; total, 6194. Capital, Luray.

PAINSVILLE, p. t., capital of Lake co., O., 30 m. E. Cleveland, 179 m. N.E. Columbus, 349 W. Watered by Grand r., at the mouth of which are the villages called cities of Fairport and Richmond, which have good harbours. The village is situated on a high bank of Grand river, near the centre, and contains a courthouse, jail, five churches, a Presbyterian Congregational, Episcopal, Methodist and Universalist. The town contains 53 stores, about 20 of which are in the village, one furnace, two grist-mills, five saw-mills, two printing offices, three weekly newspapers; one academy, 120 students; nine schools, 975 scholars. Pop. 2580.

PAINT, t. Holmes co., O. Watered by a branch of Sugar cr. It has one grist-mill, two saw-mills. Pop. 1361.

PAINT, t. Highland co., O. It has six schools, 410 scholars. Pop. 3560.

PAINT, t. Fayette co., O. It has three stores, one saw-mill; nine schools, 360 scholars. Pop. 1910.

PAINT, t. Ross co., O. Watered by Paint cr. Pop. 1360.

PAINT, t. Wayne co., O., 35 m. N.E. Columbus. It has six stores, one flouring-mill, five saw-mills, three tanneries. Pop. 1610.

PAISLEY.

PAIMBOEUF, a seaport town of France, dep. Loire inférieure, cap. arrond., on the Loire, 23 m. direct distance W. Nantes, of which it is, in fact, the deep-water harbour. Pop., in 1696, 3350. It consists principally of one good street, fronting the quays which border the river. It has a fine mole 300 ft. in length, a school of navigation a communal college, and court of primary jurisdiction. Vessels of more than 300 tons trading with the port of Nantes stop here to load or unload their cargoes. (*Hugo, art. Loire Inférieure*.)

PAINSWICK, a market town and par. of England, co. Gloucester, hund. Brisley, on the S. declivity of Spooned hill, 6 m. S. Gloucester, and 90 m. W. by N. London. Area of par. 6510 acres. Pop., in 1841, 3730. The town is small and irregularly built, the streets being neither paved nor lighted. The church, which is large, has at its W. end a fine tower and spire 174 ft. in height; but the building is rendered unsightly by the strange admixture of Doric and Ionic pillars, with the more ancient architecture in the Gothic style. There are, also, two places of worship for dissenters, and six Sunday schools, furnishing religious instruction to about 500 children of both sexes. The town has an endowed free school for 36 boys besides which three subscription schools, and an infant school, are attended by 300 children. The inhabitants are principally employed in the manufacture of woollen cloth, especially broadcloth and kerseymere. In 1559 there were nine mills at work, employing 219 hands. About 70 families are employed in hand-loom weaving, the weekly wages of a family averaging 10s. 10d., in 1858. Markets on Tuesday; fair, Whit-Tuesday and September 19 for sheep and oxen.

At the top of Spooned hill is an ancient fortification, called Kinsbury castle; its form is that of a parallelogram, enclosing about three acres within a double trench, and commanding the adjacent country. The discovery of numerous coins and other antiquities have led to the supposition that this fortress is of Roman origin.

PAISLEY, a par. bor., partly on a eminence and partly on a plain, on both sides the White Cart, 3 m. S. Renfrew Ferry, on the frith of Clyde, and 8 m. W. by S. Glasgow. The surrounding country is nearly a dead level, except on the S., in which direction the "Braes of Glasfirth" rise to a height of 760 ft. within little more than 1 m. of the town. Population of the town and parish in 1755, 6799; in 1801, 31,179; in 1831, 57,463. Population of the town only, in 1831 48,100; in 1841, 48,998.

Paisley, inc. its suburbs, is spread over a tract of ground comprising an area of about 24 sq. m.; but the boundary of the par. bor. embraces an area of about 6 sq. m. Its main street runs from E. to W. for nearly 9 m., and forms part of the road from Glasgow to Beith, and the towns on the coast of Ayrshire. Another long line of road passes through it from N. to S. That part which lies E. of the river is called the new town; the first houses in this important addition to the borough having been erected in 1779. But though well built, Paisley is not so handsome as some of the larger Scottish towns. Of late years, however, its appearance has been greatly improved by the substitution of numerous substantial houses for low thatched cottages. Improvements of this description are in rapid progress; but still, in passing along the streets, one observes a singular alternation of handsome with mean edifices. The streets are generally paved, and are lighted with gas; and the town is well supplied with water from the Gleniffer Brae, by means of reservoirs constructed under an act passed in 1836. The police is efficient. In the neighbourhood are many elegant villas and baronial seats. The most important of the public edifices is that for the civil business of the town and county, including the jail and bridewell, erected in 1830 at an expense of £38,000. It is a quadrangular building, in the castellated style. The original parish of Paisley has been divided into four distinct parishes, with seven parishes *quoad sacra*, having no fewer than eleven places of worship connected with the estab. church. Of these Abbey church, which is a collegiate charge, is the most imposing and magnificent. It consists of the nave of an ancient monastery, being the only portion of that once splendid building which now remains. The High church, on an eminence in the old town or "the borough," as it is commonly called, is an elegant building, with a lofty spire. The other churches require no particular notice, if we except St. George's, a spacious Grecian structure; the Episcopal chapel, a handsome building of chaste Gothic; and one of the secession churches, an elegant Grecian edifice. The new town is connected with the borough by three bridges: and the river is also crossed by the line of the Glasgow, Paisley, and Greenock railway, which passes through the town. About two years ago, barracks were erected in one of the suburbs for the accommodation of a battalion of infantry.

In addition to the eleven churches (one of which is a

PAISLEY.

Gaelic chapel), there are no fewer than seven Presbyterian dissenting churches, besides two Baptist places of worship, two Methodist chapels, and one each, belonging to the Independents, Roman Catholics, Episcopalians, Unitarians, and New Jerusalemites; and there are two or three additional dissenting chapels in Johnston, a large village within the parish. Within the past year, 12,813 persons belonged, in 1836, to the established church; 33,430 to other religious denominations; the remainder not being known to belong to any Christian denomination. Paisley is the seat of two seminaries for theological instruction; one connected with the Reformed Presbyterian Synod, the other with the Relief Synod; the professor of divinity in each being a minister in the town. The number of students at both seminaries may average 40. Each hall has attached to it an extensive collection of theological books. (*New Stat. Acc. of Scotland—Renfrewshire*, p. 247, 248.)

The grammar-school is a royal foundation (though the endowments have nearly disappeared), established by James VI., in the 16th century, and confirmed by subsequent royal deeds: it is an efficient seminary. There are, exclusive of Sunday schools, 64 other schools in the town and parish, some of which are parochial or endowed, with some trifling exceptions. A philosophical institution, similar to a mechanics' institution, was founded here in 1806, for the delivery of courses of lectures on different branches of sciences and literature. A small library and a museum are attached to it; but the institution is not in a very flourishing condition. There are various printing presses; and the town has two weekly newspapers. Among the eminent characters that Paisley has produced may be named Alexander Wilson, the celebrated American ornithologist, and Robert Tannahill, the Scottish poet. Dr. Witherspoon, author of various theological works, and afterwards president of the college of New-Jersey, was, for ten years, one of the ministers of the town. The Public Subscription library contains about 5000 volumes, and is supported by 300 subscribers. The Trades library, supported chiefly by workmen, is a valuable collection. There are various others, generally of religious books.

Poor rates were introduced into the borough so early as 1740; and into the Abbey parish in 1785. The annual assessment in each is nearly £3000. The number of paupers in both, including occasional and permanent poor, is about 1800, including children. The whole sum left for charitable purposes do not exceed £3000. There is a hospital or poor-house in the borough erected in 1752. The number of inmates, old and young, is about 200. The children are boarded and educated in the country. A public infirmary, which can accommodate about 45 patients, was erected about 30 years ago. The town was visited by cholera asphyxia in 1832: number of cases, 796; of deaths, 446. Cholera reappeared in 1834: number of deaths, 140.

Manufactures.—Paisley was early distinguished by its manufactures. The first impulse given to this department was by pedlars or travelling merchants, who, soon after the union, bought the goods made here, and sold them in England; and a good many of whom, having made some money, settled in the town. The articles then manufactured were striped linen cloths, handkerchiefs, and Bengals: these were succeeded by plain lawns, some of them chequered with cotton, and others ornamented with a great variety of figures; by linen gauze; and by white sewing thread, known by the name of *Ounce or Nun's thread*: in fact, this species of thread, so long as it was made in Scotland, was principally produced in Paisley.

In 1700 the making of silk gauze was first attempted, in imitation of that of Spitalfields; and it soon attained to great importance, both in the town and villages round to the distance of 90 m. This trade afterward declined; but not till the Spitalfields manufacturers had been driven out of the market, and some of them had transferred their establishments to Paisley. It has again revived; and "Paisley now furnishes nearly all the silk gauzes used in the kingdom, with the exception of those imported from France." (*New Stat. Account, ut supra*, p. 287.)

In 1785, when the silk gauze trade experienced a temporary interruption, many of the principal houses in the town, entered into the muslin manufacture, which rose to a great height of prosperity. This branch has considerably declined; but the fabrics, which are chiefly designed for the London market, are of first-rate excellence in point of taste and elegance of execution. The ornamenting of muslins by fine needle-work has lately become a considerable employment.

The shawl manufacture is one of the staple branches carried on in Paisley. Imitation shawls of all kinds have, at different times, been made here,—such as Thibet shawls, Cashmere ditto, and zebras; the last being so called from their resemblance to the skin of the zebra. The genuine Cashmere wool is imported for making the Cashmere shawls; and the first Cashmere shawl made in Britain was manufactured in Paisley. It is a curious and not easily ex-

plained fact, that the yarn is generally spun in France, and that the attempts to produce it here have not been very successful. Edinburgh had long the lead in this manufacture, but it has been nearly beat out of the field; and Paisley is at present without a rival in this department. Damask and embroidered shawls are also extensively manufactured; and a beautiful and ingenious kind of shawl, *Chenille* (caterpillar), from its variegated colour and the softness of its feel. This shawl is often labelled in shops with the words *velour au vis* (silk velvet), a name descriptive of its appearance. But the shawls now chiefly made are, 1st, those wholly of silk; 2nd, half silk and half cotton; and 3d, wholly cotton. The manufacture of these varieties has been increasing with astonishing rapidity for some years past; several makers effecting sales to the amount of from £40,000 to £60,000 a year. The total sales in 1834 were estimated at £1,000,000 sterling; and the trade has greatly increased since. Machinery has been advantageously employed in finishing the shawls, in the operation of *clipping*, which was formerly performed, in a comparatively clumsy way, by the hand. The Jacquard loom has also been recently introduced. All the trades depending on and subordinate to the shawl branch have necessarily increased; in particular that of dyeing. "Fifteen years ago," to quote from the *New Statistical Account*, written in 1837, "perhaps 40 or 50 hands were employed as dyers; now, ten times that number at least are engaged." (P. 267.) Gape dresses are manufactured to a considerable extent. Paisley has, in fact, been long the centre of the manufacture of ornamental or fancy goods. (*Wilson's Survey of Renfrewshire*, p. 255.)

Instead of the linen-thread formerly made in this town, a pretty extensive cotton-thread trade has sprung up, which employs several factories; and the annual value of the thread may be about £100,000 sterling. But while so large a quantity of cotton-yarn is exported from Paisley, it imports from Lancashire a considerable portion of the yarn used in making the finer muslins; and yarn is not unfrequently sent thither by the Manchester manufacturers to be woven into those fancy muslins for which Paisley is so famous. The cotton manufacture employs altogether about 13 mills, with nearly 3000 hands. There is also a silk-mill, with about 300 hands.

"The number of looms in Paisley at present (1837) is ascertained to be about 6000: of these, 5700 are employed by Paisley manufacturers; the remaining 300 work to Glasgow houses. About 3000 looms are employed in the country by Paisley capital, chiefly in the neighbouring villages. The number of apprentices to the looms in Paisley is at present 728; the number of harness weavers is 3350; plain-weavers, 650; female weavers, 40; in all, exclusive of apprentices, 6040." (*New Stat. Acc.*, p. 263.) Besides the above, there is in the new town a power-loom factory for cotton cloth used in printing. The printing of silks and other fabrics, has lately been attempted, but on a small scale.

The town has four iron foundries, three brass foundries, one large tan-work, three breweries, two distilleries, one large soap-work (which has been in operation for nearly 70 years), seven extensive bleachfields in the neighbourhood, and various other minor branches of business. The foregoing accounts, generally speaking, are confined to Paisley and its suburbs, and do not include Johnston, Elderslie, and other villages at some distance, though within the limits of the original parish of Paisley. (*Vide Johnston*, in this work.) Still, however, we regret to have to state that Paisley, during the last 10 years, has done little more than keep its ground, and that neither its population nor its manufacturing industry has materially increased. During that period, its manufacturing pop. has frequently, indeed, been involved in extreme distress; occasioned sometimes by fluctuations of demand, but more frequently, perhaps, originating in the improvident loans made by the banks to individuals without capital; which has tempted the latter to engage in the most hazardous speculations, generally to their own ruin, and in most instances, also, to the great injury of the town.

Renfrew, or Renfrew Ferry, 3 m. from the town, is, properly speaking, the port of Paisley; but the White Cart, which falls into the Clyde, 3 m. from the borough, and only a few hundred yards W. of Renfrew, is navigable to Paisley for vessels of 80 tons. Much has been done to improve the navigation of this river. A railway has recently been opened between the town and Renfrew Ferry, on which locomotive wagons regularly ply. This railway has a rise of 16 ft. in the whole distance (34 m.). A railway from Glasgow, recently opened, passes through the town, where it divides itself into two branches, one going to Ayr, with a subsidiary branch to Kilmaronock; the other leading to Greenock. The Glasgow, Paisley, and Johnston canal, opened in 1811, commences at Port Eglinton, near Glasgow, passes Paisley, and terminates at Johnston, a distance of 11 m. There were conveyed along this canal, in 1840, 306,948 passengers, and 76,393 tons of goods. But it

PALATINE.

will, no doubt, be injured by the opening of the railway. The first light iron passage-boats were established on this canal in 1831. In addition to the Paisley Commercial Banking Company, there are three branch banks; and a savings' bank, or provident bank, instituted in 1815. The neighbourhood of the town produces coal, ironstone, fire-clay, and potters' clay; and there are manufactures of sulphate of iron, or coppers, alum, muriate of potash, and sulphate of ammonia. (*New Stat. Acc.*, p. 157-159.)

Previously to the passing of the Reform Act in 1832, Paisley, notwithstanding its great wealth and importance, had no parliamentary representative; but the act in question conferred on it the important privilege of sending one member to the House of Commons. Registered voters in 1840-41, 1837. Municipal revenue, £3997 13s. 4d. Number of councillors, 16. The sheriff's courts of the county were transferred from Renfrew, the capital of the shire, to Paisley, so early as 1703.

Paisley is very ancient, and is supposed to occupy the site of the Roman station *Fendurcia*. In 1164, Walter, son of Allan, lord high steward of Scotland, founded a monastery here, of which nothing remains but the nave and its collateral appendages, now used as the parish church. This abbey, the precincts of which were enclosed with a wall about one mile in circuit, was the burial-place of this noble family till they became kings of Scotland. At the Reformation, this property passed into the hands of a branch of the noble house of Hamilton, now represented by the Marquis of Abercorn, in whose possession (with a slight interruption) it has ever since remained. Paisley, in 1483, was regularly constituted under the jurisdiction of the abbot. The "Black Book of Paisley" has lately been ascertained to be simply a MS. copy of Fordun's "Scotchchronicon." The "Chartulary of Paisley" was printed in 1832 by the Maitland Club of Glasgow. Sir William Wallace is said to have been born at Elderslie, 2 m. S.W. of the town. (In addition to the works already quoted, see *Chalmers's Caledonia*, vol. iii.; *Crawford's Hist. of Renfrewshire*, 3d ed., 1818; *Bound. Reports*, and *Priv. Inform.*)

PALATINE, p. L, Montgomery co., N. Y., 56 m. W.N.W. Albany, 300 W. Bounded S. by Mohawk river. Watered by Gargra creek. It contains a Presbyterian and a Lutheran church, two stores, one grist-mill, two saw-mills; three schools, 115 scholars. Pop. 3923.

PALAWAN, an island of the E. archipelago, 4th div., about midway between Borneo and the N. Philippines. It is long and narrow, extending between lat 8° and 11° N., and long. 117° and 120° E.; having N.W. the China sea, and S.E. that of Bocoob. Length, N. to S., 275 m.; average breadth about 33 m. It is little known to Europeans; but its W. appears to be loftier than its E. side, and inhabited by a savage people, who seldom approach the coast. Palawan produces corries, wax, tortoise-shell, ebony, and lake wood: the sea-slug abounds around its shores.

PALEMBANG. See SUMATRA.

PALENCIA, a city of Spain, k. of Leon, cap. prov. of its own name, on the Carrion (crossed here by two bridges), 87 m. S.E. Leon, and 118 m. N.N.W. Madrid. Pop., according to Mifano, 10,813. It is agreeably situated in an extensive valley near the canal of Castile, and comprises several straight and pretty wide streets, with a spacious square, having colonnades on two of its sides. In the environs, also, are several well-planted walks, or *alamedas*. Its principal public buildings are the cathedral (one of the largest Gothic structures in Spain), five parish churches, a well-endowed hospital, a poor-house, (formerly a palace, built by the Old), founding asylum, and bishop's palace. Palencia had a university prior to the establishment of that at Salamanca; and it still possesses a superior seminary, with about 60 students, of grammar and philosophy. It has manufactures of woollen goods, blankets, coverlets, and serge, which meet with a ready sale throughout Spain; and of hats and earthenware, with tanneries, &c. A fair is held annually in September.

PALERMO (an. *Penormus*, from *nav*, all, and *Spes*, a station for ships, from the number of vessels that frequented its port), the cap. city, and principal seaport of Sicily, on its N. coast towards its W. extremity; lat. (observatory) 39° 6' 44" N., long. 13° 20' 15" E. Pop., in 1831, 173,478; but in consequence of the prevalence of cholera, it is now (1840) said to be under 140,000. It is built along the S.W. side of an extensive bay, in a plain which, from its luxuriance, and from being surrounded by mountains on three sides, has been termed the "golden shell" (*conca d'oro*). In front of the city, the numerous steeples, cupolas, and towers of which give it a noble appearance from the sea, is the Marina, a raised platform or terrace, extending above 1 m. along the bay, and about 80 paces in breadth. At the E. extremity of this walk is the Flora, a public garden, laid out in walks, interspersed with statues, fountains, and summer-houses. People of all ranks are admitted, and in fine evenings it appears the rendezvous of the whole city.

PALERMO.

Adjoining the Flora is the botanical garden, at the corner of which is a building similar to an ancient temple, in which botanical lectures are delivered. The garden is well laid out, and contains an extensive collection of valuable plants. On the W., Palermo extends to the foot of the rocky and abrupt mountain Pellegrino, but on the E. a reach of well cultivated grounds ascends gradually to cape Zaffarano, which bounds the bay on that side. The city is surrounded by an old wall, of little or no strength, some of the bastions being occupied by gardens, while others have been cut away to increase the breadth of the Marina. It is, however, defended by a citadel and several other forts, which are tolerably strong towards the sea; though from being much scattered they would require a large garrison, and could not hold out against a force investing the city by land.

Palermo is regularly built, and, if better finished, might be esteemed an elegant city. Two large streets, the Casaro and Strada Nuova, each upward of a mile in length, intersect each other at right angles, dividing the city into four equal parts, and each leading to one of the four principal gates. These streets are well paved with large flat blocks of lava, and are faced throughout their whole length with handsome buildings. The central space where they meet is an octagon (*Piazza Ottangonales*); each of its sides consists of an edifice three stories in height, combining the Doric, Ionic, and Corinthian orders; and it is besides enriched with statues and fountains. A coup-d'œil of similar magnificence to that enjoyed from this piazza is, perhaps, not to be met with in any other city of Europe. (*Russell's Sicily*, 43.)

There are several other public places or squares adorned with obelisks, jets-d'eau, and sculpture, of which the principal are the column of St. Dominic, and the superb fountain opposite the pretorian palace. But all the streets, except those above named, are irregularly laid out, narrow, and ill built. The houses are almost all high, and a number of them have balconies with iron railings. These projections lessen the symmetry of the architecture, but this is more than counterbalanced by the convenience they afford of enjoying the cool evening breeze in so warm a climate. Almost every house has a common stair; and each story of apartments forms, as in the old houses of Paris and Edinburgh, the separate residence of a family. Several of the mansions of the nobility are admired for their architecture, but their interior is usually deformed by a multiplicity of false ornaments. Many have marble columns, either in front, or in the large court, which they generally inclose; but their effect is frequently destroyed by the meanness of the adjoining buildings. Altogether Palermo presents an incongruous mixture of pomp and poverty, exemplified in noble ranges of palaces disgraced at their bases by shops and stalls, and in showy equipages parading the same streets with sturdy mendicants voraciously demanding food, or sluggishly taking their siesta on the pavement. Swarms of priests, nobles, officers, and other loungers, yawn on chairs before the coffee-house; and artisans of every kind at their respective employments outside their shop doors, usurp the sides of the streets, obliging foot passengers to walk in the centre among the numerous carriages. The constant calling out this occasions on the part of the coachmen, added to the hurry of business, and the groups round the ice-water stalls, form an animated and singular if not a pleasing scene.

The supply of water is peculiarly abundant, and most of the houses have fountains, even in their second and third stories; hence the city is in general clean, except after heavy rains, when, from the lowness of its site, it becomes extremely muddy, and recourse is sometimes had to movable iron bridges for crossing the streets. There is an excellent supply of provisions of every description; and during the absence of the moon, the principal streets are tolerably well lighted. The city, excepting on the site of the ancient port, where malaria is generated in autumn, is healthy. The temperature of winter seldom falls below 50° Fah. In summer, however, the thermometer keeps for months between 80° and 90°; and then the inhabitants generally shut up their houses and shops a little before noon, keeping them shut for three or four hours, an interval during which all is silence and stagnation. The *Scioccia* is very oppressive, but fortunately not of frequent occurrence.

Palermo has a great number of public edifices and institutions. Convents and churches are particularly numerous; of the former there are even said to be nearly 70! Most of the churches are sumptuous: but they discover no taste, and offend the eye by a profusion of ornament. A striking monotony reigns in their construction, being generally built with an elevated façade, a large nave, and two side aisles, bounded by lateral chapels, dedicated to various saints, and decorated with pillars, paintings, statues, flowers, and candelabra. Some, however, as that formerly belonging to the Jesuits, must be exempted from this censure. The cathedral, erected about 1180, by Archbishop Walker, at

PALERMO.

Englishman, is externally of Gothic architecture; and, though not in the best taste, is a tolerable specimen of the style of the 13th century. It has, however, been spoiled by the modern addition of a cupola; and its interior has been somewhat recently altered to the Greek style. Within are many fine red porphyry sarcophagi, of considerable antiquity, in which have been deposited the remains of different sovereigns of the island, including Roger the founder of the Norman kingdom of Sicily, the emperor Frederick II., &c. The church of St. Giuseppe, also on the Casaro, is profusely and richly ornamented, and has some fine columns of grey Sicilian marble, nearly 80 feet in height. The royal palace, the residence of the viceroy, is a spacious building of mixed Arabic and Norman architecture. It has many spacious apartments, a gallery with some good paintings, and a neat armoury: on its summit is the observatory erected in 1748, whence Piazzi discovered the planet Ceres. Attached to the palace is the beautiful little church of St. Peter, which, with its crypt and superb mosaics, forms one of the most complete specimens of Saracenic magnificence extant. The square in front has a statue of Philip IV. of Sicily, surrounded by four other statues. The tribunal of justice and the custom-house occupy a large edifice on the Marina, formerly the palace of the Inquisition, abolished in 1792. The public prison, in one of the main streets, built round a large courtyard, though well supplied with water, is dirty, and in many respects badly provided. The Jesuit's college, a magnificent edifice in the Casaro, with various schools, and a fine library, in which the Sicilian parliament formerly held their sittings; the university, the archbishop's palace, and the principal government pawn-bank, a spacious building, with a neat portico, are among the remaining most remarkable edifices. There are several theatres, but they are generally ill constructed, and not to be compared to those of Naples, Paris, or London.

At the N.W. extremity of the city is the arsenal, from which a fine mole, fully 1-1/4 m. in length, having a light-house and battery at its extremity, projects S. into 9 or 10 fathoms water, forming a convenient port, capable of accommodating a great number of vessels. This important work cost about £1,000,000 sterling; but the lighthouse, though a splendid structure, is said to be very ill lighted. Ships that do not mean to go within the mole may anchor about half a mile from it, in from 16 to 23 fathoms. There is an inner port, reserved for the use of the arsenal, with large naval magazines, prisons for galley-slaves, &c. There is also a small cove in front of the town, called the *Cala Felice*, the representative of the two ancient harbours, and capable of accommodating vessels of from 150 to 300 tons. On its E. side is the pratique office; the lazaretto, a dirty and inefficient establishment, is in a rocky bay at the back of the mole.

Few indications exist of the ancient splendour of the city, except the remains of a naumachia, and some vestiges of an amphitheatre. In the senatorial hall are preserved fragments of various marbles, &c.; and in the royal palace are two ancient bronze rams, brought thither from Syracuse, and said to have been made by Archimedes: (*Smyth's Sicily*, p. 73.)

In the neighbourhood are many fine specimens of Moorish architecture; the principal being the Saracenic fortress of Kuba, now used as cavalry barracks; and the Ziza, a palace erected in the 9th or 10th century, still in good repair, and occasionally used as a royal residence. Near the latter is a Capuchin convent, with a *cadaveri*, or receptacle for the reception of dead bodies. A royal residence, in the Chiese style, stands outside the walls, near M. Pellegrino; and about 10 m. E. Palermo, near the bay, is La Bagaria, the favourite residence of many Sicilian nobles. Several of the villas of the nobility are richly adorned, both by nature and art: that of Prince Palagonia, however, is chiefly noted for its statues of all sorts of monsters.

Palermo is the see of an archbishop, who is primate of Sicily; the seat of an intendant and council of Intendency; a departmental council; a supreme court of justice, with 14 judges; a civil and criminal court for the Intendency, and a tribunal of commerce. It has a university, the second in the Neapolitan dominion, attended by about 600 students, comprising several eminent names among its professors. It has a library of upwards of 30,000 vols., a printing press, several museums; but only a few lectures are given, and the education is worthless in the extreme. Palermo has also a high female seminary, second to that of Naples; a college of nobles, an episcopal seminary, and many inferior schools; numerous charities, including two large hospitals, a lunatic and a foundling asylum, houses of industry for mendicants, &c.; public baths, and several public libraries and scientific associations. Silk manufactures were established here in the 11th century, and they still form the chief branch of manufacturing industry, though much less flourishing than formerly. Cotton fabrics are also produced,

PALHANPOOR.

with oil-cloth, leather, &c.; and there is here a glass-work, the only one in Sicily. The tunny fishery employs from 900 to 1000 boats, and 3500 fishermen. But the principal resources of the inhabitants depend on Palermo being the residence of the viceroy and the seat of government, and on her trade. The latter, indeed, is but trifling, compared to what it would be were Sicily under an enlightened government, capable of calling forth its vast resources. But even at present it is far from inconsiderable. The great articles of export are shumac, fruits of various sorts, including oranges and lemons, wine, manna, brimstone, &c. Subjoined is a

STATEMENT of the Quantities and Values of the principal Articles exported from Palermo in 1839.

Articles.	Quantities.	Value in Pounds Sterling.
Argols and cream of tartar	cwt.	£. 4,790
Barilla	—	8,365
Brimstone	—	29,205
Cantharides	—	62
Corn, grain, pulse, and rice	qtrs.	242
Essence	lbs.	9,736
Fish, salted	cwt.	1,475
Fruits:—		
Dry and pickled	—	89,845
Oranges and lemons	boxes	164,189
Linned	qtrs.	5,727
Other seeds	cwt.	2,478
Liquorice paste	—	4,233
Manna	—	3,737
Oils:—		
Linned	galls.	12,945
Olive	—	77,984
Rags	cwt.	18,843
Shumac	—	317,989
Silks	lbs.	3,618
Skins	No.	68,000
Wine and spirits	galls.	694,440
Other articles	—	14,922
Total value	—	624,364

Of the above, goods to the amount of £390,122 went to the U. States of America; £128,563 to Great Britain and her colonies; £59,446 to France; £25,674 to the Baltic; £12,737 to Belgium and Germany; £37,418 to the Italian states; and £1,005 to other countries.

The imports consist principally of sugar and other colonial products; cotton, linen, silk and woollen fabrics; earthenware hardware, and other manufactured goods; dye stuffs, spices, &c.

The city funds, derived principally from landed property, the land-tax, and taxes on consumption, are said to amount to about £100,000 a year; but for many years past the expenditure has exceeded this sum, and the city is now deeply in debt.

Sicilian writers have made many absurd and ridiculous statements concerning the foundation of Palermo; but the most rational and generally received opinion, confirmed by the authority of Thucydides and Polybius, is, that it was founded by a colony of Phœnicians; the beauty of the situation, and the convenience of the port, whence, as already seen, it derived its name, being powerful inducements to a trading people, to make it a settlement. (*Thucyd.* lib. vi.; *Polybius*, lib. i. cap. 38.) It subsequently fell into the hands of the Carthaginians, who made it the capital of their Sicilian dominions. Soon after the beginning of the first Punic war, it passed into the hands of the Romans, who established a colony in it (*Strabo*, lib. vi.), conferred on it various privileges, and allowed it to be governed by its own laws. In a subsequent age, the Saracens made it the capital of their Sicilian territories; and since their time, with the exception of some short intervals, it has been the capital of Sicily. It was the residence of the court of Naples during their exclusion from that city from 1806 to 1815. (*Smyth's Sicily*, 70-80, and *Append.*; *Swinhurne*; *Brydson*; *Russell*; *Simonds*; *Pen Rosser's Italy*, li.; *Port. Reports*, &c.)

PALERMO, p. L. Waldo co. Me. 19 E.N.E. Augusta, 614 W. Incorporated in 1804. Watered by head branches of Sheepscot river, one of which issues from a pond. It has two stores, one grist-mill, two saw-mills; 13 schools, 537 scholars. Pop. 1594.

PALERMO, p. L. Oswego co. N. Y., 15 S.E. Oswego, 157 W.N.W. Albany, 380 W. Drained by Catfish creek. It has three stores, 11 saw-mills; 15 schools, 696 scholars. Pop. 1928.

PALESTINE, See SYRIA and PALESTINE.

PALESTINE, p. V. capital of Crawford co. Ill. 153 S.E. Springfield, 689 W. Situated 3 ms. from Wabash river, and contains a courthouse, jail, a U. States land-office, two churches, eight stores, various mechanic shops, and about 500 inhabitants.

PALHANPOOR, a fortified town of Hindostan, prov. Gujrat, cap. of a Mohammedan principality, 68 m. N.N.W. Ahmedabad. Lat. 24° 11'; long. 72° 29' E. Pop. 30,000 (?) 2 L*

PALMA.

It is about $1\frac{1}{2}$ m. in circ., and is surrounded by a brick wall, flanked with towers, the gates being defended by out-works, mounted with small cannon. It is of considerable political importance, being a frontier town on the desert separating Gijrat from Sinde and Cutch, and on the main route from Rajpootana southward. The state, of which it is the cap., extends from 30 to 40 m. round, including two towns, and about 130 villages, and producing a yearly revenue of about 2½ lacs rup. (*Hamilton, E. I. Gaz.*)

PALMA. See MAJORCA.

PALMAS, the principal town of the Canary Islands, which see.

PALME, or **PALMI**, a town of the Neapolitan dom., prov. Calabria Ultra I., cap. distr., on the gulf of Gioja, 2½ m. N.E. Reggio. Pop. about 7000. It was partially destroyed by the earthquake of 1783, but has since been restored. It is well built; its streets being regular, and its houses mostly of stone, and in good taste. In its centre is an elegantly sculptured and well supplied fountain. It has some manufactures of silk and woollen fabrics, and trades in oil, liqueurs, &c. (*Crawford's Trav.* 392.)

PALMYRA, p. t. Hampden co., Mass. 81 W. Boston, 391 W. Bounded W. by Swift river, S. by Chicapee river. Watered by Ware river. It contains a Congregational and a Baptist church, 8 stores, 3 grist-mills, 3 saw-mills; 14 schools, 350 scholars. Pop. 2130.

PALMYRA, (the Tadmor of the Scriptures, by which name it has always been designated by the Arabs,) a celebrated city of antiquity, and the cap. of the region of Palmyrene in Syria, in an oasis in the midst of deserts in the modern pach. of Damascus, 147 m. S.E. Aleppo, and 187 m. S.S.W. Damascus, lat. 34° 39' N. long. 38° 48' E.

This once famous city is now all but deserted, not having more than 100 inhabitants, and it derives its whole importance from its classical associations and the number and magnificence of its ruins. These, which stand near the E declivity of a mountain range running from N. to S., may occupy a space of about 3 sq. ms., though it is probable that the ancient city extended over a larger area, exclusive of the tombs on the tops and sides of the adjacent hills. The oasis, in which the city is situated, is traversed by two streams, which, though hot and sulphureous, are said to be wholesome, and not disagreeable. But the water used in the ancient city was of the best quality, being brought from a considerable distance by a large subterranean aqueduct, of which there are still some remains. The first view of the city is described by all travellers as extremely magnificent. "On opening upon the ruins," says Captain Mangier, "as seen from the Valley of the Tombs, we were much struck with the picturesque effect of the whole, presenting altogether a most imposing sight. It was rendered doubly interesting by our having travelled through a wilderness destitute of a single building, from which we suddenly opened on the innumerable columns and other ruins, the snow-white appearance of which, contrasted with the yellow sand, produced a very striking effect." (*Irbis and Mangier's Travels*, p. 362.) The ruins are not, however, to be compared, as respects the size of the gates, columns, and temples, with those of Baalbec and Thebes; but they are more remarkable than either for their vast extent, and they are less encumbered with modern fabrics than most other ancient remains.

The ruins now extant comprise the fragments of two or three temples, several gateways, (one of which is more perfect than the rest), colonnades, sepulchres, &c. With respect to the antiquity of these ruins, it is difficult to form a conjecture: the tombs are evidently the oldest, but even these do not date as far back as the Christian era. The other buildings are considerably more recent, and most of the fine and expensive edifices appear to have been constructed during the three centuries ending with the reign of Diocletian.

On approaching the city, a ruined mosque, built by the Saracens, introduces the stranger to a fine gateway, having a lofty central arch, flanked by two others of smaller size, which lead directly to a grand avenue, which, from the remains, must have been nearly one mile in length, and bordered on either side by rows of Corinthian columns, of which, however, only 114 now remain. This avenue leads to a gateway, beyond which are ranges of pillars supporting a frieze and entablature, supposed by Mr. Addison to be the ruins of two noble gateways, that may have led from the central avenue to other colonnades now entirely destroyed. A circular colonnade, of which eighteen columns only are now standing, has in its centre a small but richly ornamented building, with niches for statues; and immediately beyond it are the prostrate remains of a magnificent building, constructed of a species of marble superior to that found in other parts of the ruins. It appears to have comprised two very large rooms; but whether it were a temple or palace, is difficult to determine. By far the most extensive ruin, however, is the Temple of the Sun, the grand en-

PALMYRA.

trance to which was supported by four fluted Ionic pillars, and adorned with rich carvings of vine-leaves and clusters of grapes in bold and spirited relief, beautifully chiseled. The outer precinct, which encloses a quadrangular space of 800 sq. yards, is formed by a lofty wall, adorned with pilasters both within and without. Inside this court are the remains of two rows of noble marble pillars, each 37 ft. in height, and another row of columns 50 ft. in height, appears to have encircled the temple, which, however, was only 100 ft. in length by 45 ft. in breadth: it has since been converted into a mosque, and its interior is disfigured by passages from the Koran written round the walls.

The sepulchres, which are, perhaps, the most interesting of all the ruins, occupy the tops and sides of the surrounding eminence, some presenting mere heaps of rubbish; others half fallen, exposing their shattered chambers; while one or two still exist almost entire. They are built in the shape of square towers, from three to four stories in height, each forming a sepulchral chamber, with recesses divided into compartments for the reception of the bodies. Some of the chambers are ornamented with Corinthian pilasters and sculptures, in almost perfect preservation, executed in high relief; the walls are of white stucco, and the ceilings are divided into diamond-shaped compartments, delicately ornamented with white stars on a blue ground: over the doorways are tablets with inscriptions both in Greek and Palmyrene. A few of the streets may be traced with some difficulty, and the foundations of houses are distinguishable in some places; but not a vestige remains of the old walls destroyed by Aurelian, though a wall still exists that has been made of materials from the sepulchres, and was probably erected soon after the demolition of the older fortifications. The inscriptions are both in Greek and in the unknown Palmyrene language; all of those on the columns are honorary generally to the effect, that the senate and people inscribed them in honour of an individual whose pedigree is given through several generations. The inscriptions on the tombs are in Greek, and tolerably perfect. Fac-simile copies of them are given in the great work of Messrs. Wood and Dawkins, which also contains drawings of all the principal buildings of Palmyra.

History.—The earliest accounts of the existence of Palmyra are derived from the sacred writings, which state that "Solomon built Tadmor in the wilderness, and all the stone cities which he built in Hamath" (2 Chron. viii. 3, 4); and his motive for thus founding it was, according to Josephus, "because in that place were fountains and wells of water. He gave it the name of Tadmor, which is still prevalent among the Syrians; but the Greeks name it Palmyra." (*Ant. Jud. I. viii. ch. 6.*)

Pliny has noticed the city, and the peculiarities in its situation to which it owed its rise and importance: *Palmyra urbs nobilis situ, divitiis soli atque amnis; vasto equis embitus arsis includit agros; ac velut terris eximia rerum natura, privata certe inter dux imperia summa, Romanorum Parthorumque; at prima in discordia semper utrimque cura.* (*Hist. Nat., lib. v. cap. 25.*) The fertility of the oasis round Palmyra made it a suitable situation for a small town; but its position in other respects was still more advantageous, from its being the resting-place of the caravans between the Persian gulf and the great cities on the Euphrates and Tigris, and Aleppo, Damascus, and the ports on the Mediterranean. Palmyra thus became a principal emporium of the commerce between the eastern and western worlds; and to this, no doubt, is to be ascribed the wealth and importance to which she early attained. Being situated between the empires of Rome and Parthia, it was an object of great importance with the Palmyrenians to preserve a strict neutrality, and to keep on good terms with them both. But after the victories of Trajan had established the unquestionable preponderance of the Roman arms, Palmyra became a dependency of Rome, and attained to the rank of a colony. "It was during that peaceful period, if we may judge from a few remaining inscriptions, that the Palmyrenians constructed those temples, palaces, and porticos* of Grecian architecture, whose ruins, scattered over an extent of several miles, have deserved the curiosity of our travellers." (*Gibbes, cap. 9.*)

The most splendid period of the history of Palmyra was that which immediately preceded her fall. Valerian, emperor of Rome, having been made prisoner by Sapor, king of Persia, Odenathus, a citizen of Palmyra, who had attained to the principal direction of her affairs, joined the Roman forces, and had a large share in avenging the insult offered to the majesty of Rome. He attacked the Persians, drove them beyond the Euphrates, penetrated as far as their capital city Ctesiphon, and captured the treasures and women of the great king. For these services, the sen-

* According to Stephanus Byzantius, these were mostly erected by the emperor Adrian; but there is no evidence that such was really the fact, though he may have done so to some extent.

PAMELIA.

etc, with the approbation and applause of the Roman world, conferred on Odenathus the title of Augustus, and associated him in the empire with Gallienus. These honours, however, he enjoyed only for a brief period, being soon after (A.D. 263) assassinated by his nephew. The vacant throne was seized by his young, warlike, and beautiful widow, the famous Zenobia, who broke the alliance with the imbecile Gallienus, and assumed the title of Augusta, queen of the east. The accounts that have come down to us of this extraordinary woman are so very flattering that we may not unreasonably suspect them of being exaggerated, in the view, perhaps, of enhancing the merit of her conqueror Aurelian. But that she was highly accomplished there can be no doubt. "Her manly understanding was strengthened and adorned by study. She was not ignorant of the Latin tongue, but possessed, in equal perfection, the Greek, the Syriac, and the Egyptian languages. She had drawn up, for her own use, an epitome of oriental history, and familiarly compared the beauties of Homer and Plato, under the tuition of the sublime Longinus. The success of Odenathus was, in a great measure, ascribed to her incomparable prudence and fortitude." (Gibbon.)

Zenobia, who boasted of being the descendant of Cleopatra and the Ptolemies, sent, after the death of her husband, on pretence of this relationship, an army into Egypt, which she annexed to her dominions. But her troops were unequal to a contest with the disciplined legions of Aurelian. After being defeated in two great battles, Zenobia shut herself up in Palmyra. But, seeing that it must fall into the hands of Aurelian, she attempted to make her escape; and being intercepted in her flight, the city soon after surrendered. The victor sullied the glory of his conquest by ordering the execution of Longinus, author of the famous treatise on the sublime, and other advisers of the unfortunate queen; but, in other respects, the city was treated with great lenity. Unhappily, however, as soon as it was understood in Palmyra that the emperor, with his captive princess, had having massacred the Roman governor and garrison, proclaiming their independence. The instant Aurelian heard of this revolt, he at once, without a moment's hesitation, began to retrace his steps, and hastened to the ill-fated city with an irresistible force, and an insatiable thirst for vengeance. The sequel may be learned from his own words:—*Maternus non peperimus, infantes occidimus, senes jugulavimus, rusticos interminimus: cui torrens, cui urbem diripimus reliquimus? Percidimus autem eis qui remanserunt.* (Flavius Vopiscus in *Hist. August.* p. 318.) At the same time the walls of the city were raised to the ground, and, in the words of Gibbon, "the seat of commerce, of arts, and of Zenobia, gradually sunk into an obscure town, a trifling fortress, and at length, a miserable village. Zenobia herself was taken to Rome to grace the triumph of Aurelian, who, however, behaved towards her with a generous clemency seldom exercised by the ancient conquerors, and presented her with an elegant villa at Tibur, where the Syrian queen insensibly sunk into a Roman matron, her daughters married into noble families, and her race was not yet extinct in the fifth century." (*Decline and Fall*, ii., 44-48.) Palmyra afterwards fell with the surrounding country under the power of the Mohammedans; but history is entirely silent respecting the causes and period of its total desolation. (*Wood and Dawkins on the Ruins of Palmyra; Addison's Damascus and Palmyra*, ii., 394-393; *Irby and Mangles's Travels*, p. 262-267; *Mod. Trav.*)

PALMYRA, p. t. Somerset co., N. Y., 49 m. N.N.E. Augusta, 644 W. Drained by Sebastocock river which affords water-power. It has two stores, one saw-mill; 11 schools, 629 scholars. Pop. 1500.

PALMYRA, p. t. Wayne co., N. Y., 195 m. W. by N. Albany, 359 W. Watered by Mud creek. The Erie canal passes through it. It contains four churches, a Presbyterian, Episcopal, Methodist and Baptist, 90 stores, one fulling-mill, three grist-mills, five saw-mills, two tanneries, one printing-office, one weekly newspaper; two academies, 77 students; 15 schools, 662 scholars. Pop. 3549.

PALMYRA, p. v. capital of Marion co., Mo., 111 m. N.N.W. Jefferson city, 935 W. Situated 8 m. from Missouri river. It contains a courthouse, three handsome brick churches, a Presbyterian, Methodist and Baptist, a U. States' land office, two printing-offices, two weekly newspapers, and several stores. Marion college is 12 m. W., and Lower college 6 m. S. Both are manual labour institutions.

PAMELIA, L. Jefferson co., N. Y., 4 m. N. Watertown, 166 m. N.W. Albany. Bounded S. by Black river. Watered by Perch river. It contains six stores, two fulling-mills, one cotton factory with 9494 spindles, two grist-mills, eight saw-mills, two tanneries; 16 schools, 780 scholars. Pop. 2104.

PAMIEERS, a town of France, dep. Ariège, cap. arrond.,

PANAMA.

on the Ariège, 11 m. Foix. Pop., in 1836, 5972. It is well situated, and is generally well built and laid out. The cathedral, several other churches, the bishop's palace, a Carmelite convent, the courthouse, and a large civil hospital, are its principal buildings. No remains exist of its castle, built during the crusades, and called *Japanea*, from the Syrian town of that name, whence, by corruption, the present name of this town. (*Hugo, &c.*)

PANALICO, river and sound, N. C. The river is the broad estuary of Tar river, below Washington, Beaufort co.; it is 40 m. long, from 1 m. to 8 m. broad, and has a depth of water sufficient for any vessels which navigate the sound. Pamlico sound is a shallow body of water, 80 m. long, and from 8 m. to 30 m. broad, separated from the Atlantic by low sandy islands, scarcely a mile wide, covered with bushes. The outer point of one of these islands constitutes cape Hatteras. The principal entrance to the sound is Ocracoke inlet, which admits vessels requiring 14 feet of water. In its N. part it connects with Albemarle sound. The land around it is low, and in some places marshy. Pamlico sound receives Neuse and Tar rivers.

PANPELUNA, or PAMPOLONA, a fortified city of Spain, cap. kingd. of Navarre, on a hill near the left bank of the Arga, 46 m. S. Bayonne, and 195 m. N.E. Madrid; lat. 43° 49' 57" N., long. 10° 39' 45" W. Pop., according to Miñano, 15,000. It is surrounded by a strong wall, with bastions, but derives its principal defence from two castles, one within and the other outside the walls, the latter, the citadel, being situated on a rock (of which the only accessible part is covered by a morass), and encircled by a deep ditch. The interior comprises several wide and straight streets, lined on both sides with trottoirs; three public squares, in the largest of which bull-fights are held; six public fountains, supplied with water from a fine aqueduct 3 m. in length; and the *Trocadero*, a public walk. Outside the walls are three other planted walks, and six bridges across the river, connecting the town with the suburbs. The houses are irregularly built; and the public edifices, which comprise a cathedral, four parish churches, two palaces, a prison, poor asylum, and small theatre, are more remarkable for antiquity than beauty. Within the citadel are extensive barracks and magazines, and a curious corn-mill, turning five sets of stones, and capable of grinding 360 quintals of wheat a day. Pampeluna is a place of little industry, confined chiefly to the manufacture of coarse linen cloths, parchment, and white wax. Its trade also has long been in a languishing condition; and the town exhibits few signs of activity, except at its fair in July, which is much frequented both by the French and Spaniards. The surrounding country abounds with many varieties of grain and fruit; but agriculture is much neglected, and is only slowly recovering from the ravages inflicted during the late civil war.

Pampeluna, supposed to have been built by Pompey, after the defeat of Sertorius, and called by him Pompelopolis, was taken in the fifth century by the Goths, from whom it passed to the Moors. After the foundation of the kingdom of Navarre, it was made its capital city, and sustained several sieges. The most memorable event connected with the town, however, is the contest that took place for its possession between the English and French at the close of the peninsular war. In June, 1813, on the sudden retreat of the French army from Vittoria, the road to Pampeluna was alone open, and this fortress was hastily garrisoned and provisioned. It was forthwith invested by the British; but the approach of Marshal Soult, with an army, toward the close of July, promised it an early deliverance. It was in the vicinity of Pampeluna that the obstinate conflicts of the 37th and 39th of July took place; and the French being compelled to repass the Pyrenees with great loss, Pampeluna was cut off from all supplies, and surrendered on the 31st of October.

PANAMA, or DARIEN (ISTHMUS OF), the narrow neck of land which connects the continents of N. and S. America, forming a province of the Colombian republic of New Granada, between the 8th and 10th degrees of N. lat., and the 77th and 81st of W. long., having E. the Colombian province Chocó, W. that of Veraguá, N. the Atlantic, and S. the Pacific ocean. Its shape is that of an arc, the convex side facing the N.; length, W. to E., about 300 m.; general breadth about 49 m., but where narrowest, not more than 28 m. from sea to sea. Population of province in 1835, 73,665. The Cordillera, or chain of the Andes, is here interrupted by several remarkable breaks of low and level land, through which it has been proposed to carry a canal or railway; but near the city of Panama its summits rise to 1000 or 1100 feet of elevation, and farther E. they are considerably more lofty, and are generally covered with dense forests. The isthmus is extremely well watered; and, though without any river of considerable length, several of its streams are partially navigable. The dry season lasts from December to April, and the wet during the rest of the year. The quantity of rain is prodigious; but a very

PANAMA.

remarkable phenomenon occurs throughout the Isthmus, in the height of the rainy season, of which no satisfactory explanation has yet been offered. On the 20th of June the rain ceases for five or six days, and the sun shines out during the whole day with the utmost splendour; nor is any instance known of irregularity in the recurrence of this singular break in the ordinary course of the season. (*Geog. Journ.*, 1, 78.) The temperature and salubrity vary greatly. Porto Bello is one of the hottest and most unhealthy places in the world. On the opposite coast, at Panama, the thermometer in the rainy season does not rise higher in the day time than 87°, and though at other times it is very sultry, it can hardly be called unhealthy. Rice, maize, coffee, cocon, and some sugar, are cultivated; but most part of the sugar used is imported in skins from central America, or Cauca. Storax, caoutchouc, various dyeing drugs, and the finest timber trees, abound in the forests.

Near Panama is a considerable extent of cultivated land; but round Porto Bello, and on the E. coast, most part of the surface is uncultivated. Elsewhere the landlords keep their estates chiefly in grass, to save trouble; few of the inhabitants are industrious; and many, indeed, depend almost wholly on the chase. Drones of wild hogs, deer, and a variety of other wild animals, are met with; monkeys are frequently used as food, as are sharks, guanas, &c. Horses are small, but hardy; mules are, however, the favourite beasts of burden, and fetch sometimes 120 dollars each.

The Isthmus was formerly famous for its gold mines; but these are now all but exhausted and abandoned. The pearl fishery in the bay of Panama is still carried on, and with some success. The trade of the Isthmus, notwithstanding its favourable position, is at a very low ebb. On the Pacific some little traffic is carried on with various ports both N. and S.; but, on the Atlantic, almost the only communication is with Jamaica and Cartagena. The inhabitants are said to be less advanced in civilization even than their neighbours; and their education and morals seem to be alike bad. The Isthmus is divided into seven cantons; chief towns, Panama, the capital, Chagres, Porto Bello, Nata, and Carreto. (*Geog. Journ.*, 1, 69-101.)

The Isthmus of Panama, from its narrowness, appears, on the map at least, to be the most advantageous point for establishing a direct communication between the Atlantic and Pacific oceans. At first it was supposed that this might be effected by a canal, but the difficulties in the way of such an undertaking would not be easily surmounted; and the general opinion seems to be, that the preferable plan would be to construct a railway from Chagres, on the Caribbean sea, across to Panama. It is believed, however, that the project for connecting the two oceans by means of the river San Juan and the lake Nicaragua, presents, on the whole, greater facilities. See NICARAGUA (LAKE OF).

Colony of Darien.—The place marked New-Edinburgh in Arrowsmith's map, on the W. coast of the gulf of Darien, derived its name from its being the site where, in 1698, the Scotch attempted to form a settlement. This colony was projected by a Scotch gentleman of the name of Paterson, the founder of the Bank of England, and was zealously patronised by all classes of his countrymen, who formed a joint stock company, and subscribed large sums to carry the project into effect. It was, however, extremely ill suited for a country in the then situation of Scotland; and provoked the well-founded hostility of the Spaniards, and the bitter, though unreasonable and unfounded, jealousy of the English West India merchants and ship-owners, who either were, or pretended to be, much alarmed lest this new settlement, in an unoccupied and unhealthy country, should seriously injure their commerce and navigation. The selfish opposition of these interested parties to the project having been abetted by the English parliament, the king disavowed the company, and even issued orders to the governors of the West India and American colonies, charging them not to permit any intercourse with the Scotch at Darien! In consequence of these vindictive measures, and of the threatened hostilities of the French and Spaniards, the settlement was abandoned. This event was most acutely felt by the Scotch, whose pride was mortified by the failure of a scheme, of the success of which they had formed the most exaggerated expectations; and many of whom were ruined by the loss of the sums they had embarked in the project. It farther inflamed the existing prejudices against the English, and against the projected union of the two kingdoms, which happily however, was not long after effected. (*Laing's History of Scotland*, iv., 261-277; *Burnett's History of his Own Times*, iii., 299, &c., ed. 1753.)

PANAMA, a city and seaport of Colombia, repub. New-Granada, cap. of the above prov., on the Pacific, 43 m. S.E. Chagres, and 480 m. N.W. Bogota. Lat. 8° 57' N., long. 79° 30' W. Pop. about 11,000. It stands on a rocky peninsula, projecting into the bay of Panama, and has a very imposing aspect from the sea. Its plan is not strictly regu-

PAPAL STATES.

lar, but the streets are tolerably well ventilated, and it is said to be cleaner than most Spanish American cities. It is encircled by irregular and not very strong fortifications, constructed at different periods. The houses are partly of wood, straw, and other fragile materials; but many are substantially built of stone, the larger having court-yards, or *pataes*, in the old Spanish style. The public edifices are a cathedral, four convents, a nunnery, and a college; but most of them are falling into ruin, and a large and fine Jesuits' college is in a state of total dilapidation. Its roadside is exposed to northerly gales; but Mr. Lloyd says there are a number of islands a short distance from the main land, which afford secure anchorage, and from which supplies of provisions, including excellent water, may usually be obtained.

Panama is still the centre of some trade, not only with the ports on the Pacific, but also with the W. India islands, &c. Previously to 1740, when the trade with the Pacific first began to be carried on round cape Horn, it was the principal entrepôt of trade between Europe and W. America. From that period, however, it has fallen off; and its decay has been peculiarly rapid since the independence of S. America, and the opening of the other ports of the Pacific. Its situation is, however, highly favourable; and should a canal or railway be carried across the Isthmus, it will probably attain to greater commercial distinction than ever.

Old Panama, founded by the Spaniards in 1518, stood about 3 m. to the E. of the present town. It was destroyed by the bucanier Morgan, in 1670; shortly after which the existing city was commenced. (*Lloyd in Geog. Journ.*, 1, 85, 86; *Hall's S. America*, &c.)

PANIANY, a commercial town and seaport of British India, presid. Madras, prov. Malabar, on the Paniany river, 38 m. S. Calicut. It has numerous mosques, being principally inhabited by Moplas, or fishermen of Arabian descent. Before Tippoo Saib captured this town, its trade was very considerable, its merchants trading direct with Surat, Mocha, Madras, and Bengal. It still exports teak, cocon-nuts, iron, and rice; and imports wheat, pulse, sugar, salt, catchu, and spices; but the mouth of its river is closed by a bar which only admits boats of small burden.

PANOLA, county, Miss. Situated in the N.W. part of the state, and contains 760 sq. m. Watered by Tallahatchee river. It contained in 1840, 7353 neat cattle, 1189 sheep, 15,092 swine; and produced 3041 bushels of wheat, 231,250 of Indian corn, 6125 of oats, 3600 of potatoes, 4000 pounds of tobacco, 463,372 of cotton. It had 13 stores, five grist-mills, two saw-mills, one tannery; four schools, 92 scholars. Pop.: whites, 2237; slaves, 9415; free coloured, 5; total, 4657. Capital, Panola.

PANOLA, p. v., capital of Panola co., Miss., 161 m. N. Jackson, 939 W. Situated on the S. side of Tallahatchee river, and contains a courthouse and about 100 inhabitants.

PAOLI, p. v., capital of Orange co., Ia., 94 m. S. by W. Indianapolis, 625 W. Situated on Lick creek, a beautiful mill-stream. It contains a courthouse, jail, a brick seminary, six stores, one fulling-mill, two flouring-mills, a cotton factory, two oil-mills, two carding machines, various mechanic shops, and about 450 inhabitants. It is surrounded by a fertile and highly cultivated country.

PAPA, a considerable market town of Hungary, beyond the Danube, co. Wesprim, 82 m. S.E. Vienna. Population in 1837, 13,232. It was formerly fortified, and has a large castle belonging to the Esterhazy family. It has also numerous churches, one of which is a very handsome edifice, built with immense blocks of stone; Roman Catholic, Lutheran, and Calvinist colleges; manufactures of earthenware, glass, and paper, and an active trade in agricultural produce. (*Borghaus; Oester. Nat. Encyc.*)

PAPAL STATES (THE), STATES OF THE CHURCH, or PŌPEDOM, an independent country of Europe, occupying the greater part of central, with a portion of N. Italy, being principally comprised between lat. 41° and 45° N., and long. 11° and 14° E.; having N. Austrian Italy, from which it is separated by the Po; W. Modena, Tuscany, and the Mediterranean; S. and S.E. the Neapolitan dominion; and N.E. the Adriatic. It is very irregularly shaped; the length of a line drawn from its N. to its S. extremity may be about 270 m. Its breadth is very various. For the area, population (exclusive of about 10,000 Jews), subdivisions, &c., see the annexed table.

The Apennines, which intersect the papal territories nearly in their centre, have here an average height of about 4000 feet; but Monte della Sibilla rises to 7210 feet (*Brownière*); and several other peaks are not greatly inferior in elevation. The provinces of Perugia, Spoleto, Camerino, and the others constituting what was formerly called the March of Ancona, are those principally covered with the ramifications of the Apennines, which, in this part of Italy, approach more nearly to the Adriatic than the Mediterranean, leaving, however, an extensive plain on either side:

PAPAL STATES.

Legations, Delegations, &c.	Area in sq. m.	Pop. in 1858.	Chief Cities.
Comarca di Roma	648	225,456	Roma.
Legation of Bologna	1,125	242,523	Bologna.
Ferrara	1,065	210,265	Ferrara.

Total	17,218	2,732,035	

that on the N., between the Po and the Adriatic, comprises the legation of Ferrara, and the greater part of the legations of Bologna, Ravenna, &c. It includes the *Falci di Comacina*, a very extensive marsh, but, with this exception, is highly fertile and productive. The plain to the S. of the Apennines is of still more ample dimensions, embracing all the vast undulating tract known by the names of the Campagna and Maremma, extending between the declivity of the mountains and the sea from the frontiers of Tuscany on the one hand, to those of Naples on the other. The S. portion of this great plain, or that next Naples, consists of the district called the Pontine Marshes (an. *Fompina Paludes*), which, notwithstanding the vast sum expended upon it, is still very imperfectly drained. We have elsewhere fully described the present state of this vast and naturally fruitful plain, famous in antiquity for its fertility, but now, unhappily, the seat of pestilence and death. (See *anti*, p. 31.)

The Po, which forms their N. boundary, is the largest river of the Papal states; but by far the most celebrated is the Tiber. The latter rises at St. Albino in Tuscany, and runs generally S. or S.E., but with a very tortuous course, so within about 25 m. N.N.E. Rome, whence it flows mostly S.S.W. to its mouth in the Mediterranean, 15 m. below Rome, after an entire course of about 200 m. Before entering the sea the Tiber divides into two arms, enclosing the small island of *Isola sacra*. At Rome the greatest breadth of the Tiber is only about 400 feet, or scarcely one third part of the breadth of the Thames at Blackfriars bridge, and nearly approaching that of the Seine at Paris. It is justly entitled to its ancient epithet *Javus*, being almost constantly loaded with yellow mud, from the crumbling and disintegration of its banks. Its principal affluents are the Tizmo, Nar, and Tevere on the left or E., and the Chiana on the right bank. It is navigable for boats to near Perugia. Except the Tiber, no river of any consequence falls into the Mediterranean in this part of Italy. The country to the E. of the Apennines has, however, a great number of rivers, though none of them be of any very considerable magnitude, falling partly into the Po and partly into the Adriatic. Several of the most celebrated Italian lakes are in the Papal states, as those of Perugia (an. *Lacus Trasimeneus*), Bolsena, and Bracciano (which see). The lakes of Vico, Albano, Nemi, Gabii, &c., though insignificant in point of size, are interesting from the classical associations with which they are connected. They are situated in a mountain region, and evidently occupy the craters of extinct volcanoes.

Geology.—The primary rocks in the Apennine region consist mostly of serpentine, mica, clay-slate, and quartz. Gneiss is met with in various places along the coast. Mountain limestone is frequent, and indeed a large portion of the country consists of calcareous formations; but the region round the capital is of volcanic origin, and abounds with volcanic products, as sulphur, alum, &c. Rome is principally built of volcanic tuff, which composes the general soil of the Campagna. Some sulphur springs also exist at Foretta, N. of the Apennines, and various kinds of mineral springs are common elsewhere.

Climate.—In the legation N. of the Apennines the thermometer often sinks in winter to 10° Reaumur, and oranges, lemons, &c., do not flourish in the open air. But the greater portion of the Papal states is situated within the second Italian region. Vegetation is here scarcely interrupted at any period of the year. The air in the mountain districts is pure and salubrious; but the plains of Ferrara and Bologna, the Campagna di Roma, and the Pontine Marshes, are at that season very unhealthy; the latter especially are subject to malaria. The origin of malaria, has been a subject of much dispute, and we have already noticed some of the circumstances that have been conspired to reduce the Cam-

pagna to its present all but desert state. (See *anti*, p. 51.) In antiquity it was bordered along the shore by dense forests; and it is believed by many that the destruction of the woods has been a principal cause of the increase of malaria. "The ancients," says M. Simond, "planted, or preserved, these woods, under an idea, probably erroneous, that they screened them from certain winds carrying noxious vapours; but, though mistaken as to their real mode of agency, they were quite right in supposing them useful. To the destruction of the woods the increase of malarial fevers has been clearly traced; the one having uniformly followed the other. During the decline, also, and after the fall of the Roman empire, those stupendous aqueducts, which in earlier times brought whole rivers to Rome, having been broken and overturned, in some places poured their waters over the land, which became a marsh; and the population, diminished by wars, was farther and still more reduced by pestilence. The country became more unhealthy as it was less inhabited; in the course of a few centuries the millions of ancient Rome dwindled down to 30,000; and it was not before the 16th century, under Leo X., that the scanty population grew more numerous. Another cause of the increase of malaria is, that sandy ridge gradually thrown up on both sides the mouth of the Tiber for many leagues; various outlets, natural and artificial, are thus choked up; and hence the Pontine Marshes, formerly confined to a narrow space near the promontory of M. Circeo, now extend under other names all along the coast." (*Trav in Italy*, p. 350-359.)

Agriculture.—It has been estimated that of 530,000 *rubbé* of productive land (about 2,655,000 acres, or less than 2 part of the entire surface), 242,000 are arable, 162,000 in pasture, 14,000 in vineyards, 1400 in gardens, &c., and 170,000 in woods. In the March of Ancona, and other mountainous districts, and round the towns and villages, both the properties and farms are small; but it is otherwise in the Campagna and the plain of Bologna. The whole of the Campagna is divided into about 600 estates, varying from 500 to 1000 hectares and upwards each. The largest of these vast estates, which are mostly held in mortmain, belongs to the chapter of St. Peter. The value of land is very various; the rent in the Campagna varies from 4 to 4 scudi per hectare. Beyond the maremma, as the population increases in density, the rental rises to perhaps 30 scudi per hectare, for lands on which there are olive, vine, or mulberry plantations; or where there are adjacent markets for corn. In the neighbourhood of Rome, where the land is rented at a fixed price, it readily sells for 40 years' purchase; while land farmed on the metayer principle do not generally sell, owing to the greater difficulty of collecting the rent, for more than 33 or 35 years' purchase. Lands in the maremma are frequently rented by middlemen, who underlet them in smaller portions to the actual cultivators. But speaking generally, land is everywhere held under the *metayer* system, the occupier paying a certain proportion, generally a half of the produce, to the owner. The soil is mostly fertile, but owing to the badness of the government, which oppresses the cultivators with injudicious taxes; the want of capital, skill, industry, and markets; the ignorance of the cultivators, the number of holidays, and the prevalence of the *metayer* system, agriculture is in the most wretched state. The implements of husbandry made in the country are as rude as those described by Virgil; and heavy custom-house duties prevent the introduction of improved implements from abroad. The cultivated part of the maremma produces wheat, maize, beans, and vines; but the lands often lie fallow from three to seven years; and M. MacLaren states that, from what fell upon his observation, not one acre in eight is under the plough or hoe. (*Notes on Italy*, 68.) In the more populous and best cultivated parts there is usually an annual change from spring grains to corn produce; but by far the greater part of this region is a state of nature. Formerly all the farms were let with a considerable stock of horses, cattle, &c.; but the proprietors, when in want of money, parted with them. In whatever direction the traveller may enter the Campagna from Rome, he would pass over at least from 90 to 30, and frequently from 50 to 60 m., without meeting with a single field cultivated by resident inhabitants. In fact, though it embraces an area of about 4000 sq. m., or 2,560,000 acres, it is not supposed to have a resident population of more than 16,000 or 18,000 inhabitants, mostly wandering shepherds. There is on each estate a *casale*, or large building, where the implements of husbandry are kept; but neither bakehouses nor kitchen gardens exist throughout the whole tract, the labourers being wholly supplied at a few scattered depôts with provisions, sent thither from Rome. The shepherds are in about as depressed a condition as possible; they have a sickly, cadaverous appearance; their clothing consists principally of sheep-skins, worn with the wool outside; and they sleep either on the ground in the open air, or in some of the ruins with which the country is strewn. They are

PAPAL STATES.

paid, not in money, but in cattle pastured with those of the farmer. The harvests in the Campagna are reaped by peasants from distant mountainous districts, who come to it in companies of from 20 to 100 individuals. Even in favourable seasons, $\frac{1}{2}$ or $\frac{3}{4}$ part of their number are attacked by fever; and in unhealthy seasons, the proportion is much larger. Many die in the hospitals of Rome, or in the Campagna; others perish on the road home; and others again return condemned to pass the remainder of their days a prey to intermittent fever, or other diseases brought on by the climate; and yet such is the poverty of the population in the mountainous districts, that the chance of realising a few scudi continually tempts new adventurers to undergo the same risks.

In 1800, on the estate of Prince Rospigliosi at Zagarolo, land was let out at a low fixed rate in lots of a rubbio each (about $\frac{1}{2}$ acre) to the peasantry to cultivate as they pleased; and this plan, it is alleged, had the best results. Cultivation extended for a considerable distance round Zagarolo into the plain beneath; and the climate of the neighbourhood was improved. Were such a plan followed round the other centres of civilization, a considerable portion of the Campagna would, probably, soon lose a portion of its desolate and pestilential character, but neither the proprietors nor farmers show, in general, much disposition for change or improvement; and till the government and public economy of the state be completely changed, it were idle to expect that they should evince any such disposition. In order to arrest the depopulation of the Campagna, Pope Pius VII., in 1802, laid an impost of five *pauli* per rubbio on the uncultivated land immediately round the towns, and deducted five *pauli* per rubbio from the tax on cultivated lands. But this miserable attempt to extend industry by fiscal regulations (though it appears to be approved by M. Sismondi) necessarily failed. The regulation, which never was acted upon, speedily became obsolete; and the peasantry of the Campagna generally remain in the same condition as before the French invasion. (*Sismondi, Etudes sur l'Economie Politique*, li. 12-138.)

In the mountainous parts of the Papal states, where the country is divided into small farms, and rather thickly inhabited, pease, beans, and kitchen vegetables, which form a large proportion of the food of the peasantry, occupy most part of the land; the remainder being appropriated to wheat, maize, &c. Little skill is evinced in agriculture; the crops being generally raised only for the supply of the cultivators, no one thinks of raising those products for which his land may be the best fitted, till after he has provided an adequate supply of grain or other produce for the use of his family. In the mountains near Rome, white crops are taken from the grounds for two or three years successively, without any manure being applied to the land; three crops of wheat may be succeeded by maize or kidney beans for two years, and once in five or six years, a crop of hemp or flax is perhaps raised. The grain is trodden out by horses, and winnowed by hand, immediately after harvest. The wages of a man in harvest time, amount at Poli, to about two pauls a day, with bread and *pignette*, or weak wine; but they are generally higher the nearer the district to the capital. The herdsmen in the Apennines take charge of the cattle belonging to many different persons, and tend them on the mountains, night and day, receiving at the end of the season payment from each proprietor, at the rate of two scudi per month for every score of cattle. Besides bread and *pignette*, the food of the peasantry in the mountains principally consists of cheese from goats' or ewes' milk, onions, garlick, and other vegetables, and *polenta*, a kind of hasty pudding, made with maize, pulse, &c. Goats' flesh and pork are sometimes eaten by the labourers, but very little other animal food. (*Grakam's Three Months in the Mountains*, 7-36; &c.)

The provinces of Ferrara, Bologna, Romagna, and those forming the March of Ancona, produce rye, wheat, barley, and maize in abundance. Rice is grown in the legations of Ferrara and Bologna, but there only. Hemp and flax are cultivated along the Adriatic; and saffron, coriander, aniseed, wood, and great quantities of kitchen vegetables in the same districts and the N. provinces. The export of hemp is supposed to average 30,000,000 lbs. a year. Tobacco is grown in several places, especially at Chiaravalle, near Ancona; but being a government monopoly, its culture is confined within narrow limits; Serristori states that for 300,000 lbs. of tobacco exported, 1,000,000 lbs. are imported. The sugar-cane, indigo, and cotton, are cultivated near Terracina, though neither are grown to any great extent. Olive plantations were long among the most productive investments; but they are now less so than those of the white mulberry. The olive is abundant in the S. provinces; and though the Roman oil be badly made, and mostly consumed at home, a million lbs. have occasionally been exported in favourable years. Vineyards are said not to yield returns proportioned to the outlay. The vine is

tolerably well cultivated in the vicinity of Velletri; the plants in regular lines being tied to trellises of large reeds; but the most esteemed growths are the light, white, muscadel wines of Orvieto and Montefiascone, near Viterbo; they do not, however, bear transport well, and are seldom met with out of the country. The timber of the dense forests in the deleg. of Viterbo is not turned to much account from the distance of markets, and is cut principally for smelting iron ore, making charcoal, &c. Cork trees abound in the country about Cisterna, Velletri, &c.

The rearing of live stock is, as has been said, the principal branch of rural industry. The number of sheep in the Papal states is estimated at 2,000,000. There are two varieties; the *agretti*, a small, short-legged variety, in every respect resembling the breed of Dauphny, except that their wool, though good, is chocolate-coloured; and the *perdelle*, a variety with a wool of a whiteness almost equalling that of the breed of Aragon. Still, however, it would seem from the statements of Serristori that the total quantity of all sorts of wool exported from the Papal states does not exceed 800,000 lbs. a year, sent to Tuscany, Piedmont, France, and England. The ewes are mostly kept for their milk, and the greater part of the lambs are killed, the mutton not being good. About 1,000,000 lbs. cheese and 400,000 lamb-skins are annually exported, principally to the other states of Italy. Cattle breeding is extensively carried on in the marshes of the Po, in the provinces Bologna, Perugia, &c.; and about 40,000 oxen are exported. Many buffaloes and hogs are kept in the marshes; and about 100,000 ox or buffalo skins are annually exported. The horses are mostly of good breeds, and are exported to Tuscany and Lombardy. Goats are extensively reared, their flesh and lamb being the principal animal food. In Perugia and other delegs. great numbers of poultry, and in Forlì, Macerata, &c., many bees are kept. (*Childevicuz, Italy and its Agric.; Bowring's Report on the Roman States; Grakam; Sismondi; Sismondi; Etudes sur l'Economie Politique; Serristori, Statist. d'Italia*, part. vi.)

The fisheries on the coast are almost wholly conducted by Neapolitan fishermen. Mining industry is also at a very low ebb. The government works the mines of alum at Tolfa, but the rest are left to private speculators. Iron ore is pretty abundant in some places, but only a few traces of other metals have been discovered. About 4,000,000 lbs. of sulphur are raised in Romagna at Pesaro, &c.; and 100,000 lbs. of vitriol at Viterbo, half of which is exported. Lime, building stone, potters' clay, variegated and statuary marbles, fuller's earth, bitumen, asphalt, and coal are met with; but the last, though under the French it was raised in considerable quantities, is no longer made use of. From 70 to 80 million pounds of salt are annually made at Cervia, Commachio, Corneto, and Ostia, rather more than the half of which is sent to the adjacent states.

Manufactures, though in the most depressed and backward state, serve almost entirely for home consumption. Woollen fabrics are the principal, and include cloths, cassimeres, serges, woollen caps, blankets, and carpets. Rome, Spoleto, Matellan, Perugia, Norcia, &c., are the chief places in which these are made; but since their manufacture has ceased to be bolstered up by government premiums, their production has greatly diminished, and their total yearly value does not exceed 300,000 scudi. Hats, of the value of 200,000 scudi, are made principally at Rome; good felt cloth at Fabriano; silk goods at Rome, Bologna, Camerino, Perugia, Pessaro, &c.; leather and gloves at Rome; and paper, about 3,600,000 lbs. a year, are the other most prominent manufactures. Bologna was formerly famous for its crapes, but the value of the exports of these does not now exceed 30,000 sc. a year. The iron furnaces are estimated to yield 18,000,000 lbs. pig, and about 2,000,000 lbs. a year bar iron; rasps, files, nails, needles, pins, screws, &c., are made in various towns; glassware, to the value of 90,000 scudi, copper goods to 80,000 do.; earthenware to about 150,000 do., &c. Roman musical strings enjoy a high and deserved celebrity, and are exported to most countries of Europe. The most flourishing branch of manufacture is the refining of sulphur, a product which, under a free system, might be supplied in unlimited quantities. (*Serristori, Statistica; Bowring, &c.*) Such is the meagre catalogue of Papal manufactures. "Many a town of Great Britain, of only 30,000 inhabitants, produces a greater quantity of manufactured goods than the 3,000,000 inhabitants of the Pontifical states! Notwithstanding the enormous sacrifices made by the Papal government, the protections, the prohibitions, the premiums given for the encouragement of what is called native industry, scarcely a valuable discovery has been introduced: the woollen spinning, in some cases by hand, in others by machinery, is far behind its state in England, Belgium, Prussia, or France. The looms, such as were generally employed during the 14th century, are little better than those used by the Indians of the Deccan; the rowing and carding are wholly done by solitary workmen

PAPAL STATES.

and with the ancient tansels and hand cards; and the shearing with the antique hand shears, such as have been employed from immemorial time; and in some places the fulling is performed by men employed to trample on the cloth, a process probably not now to be found in any other part of the civilized world." (*Bearing's Rep.*, p. 84.)

Commerce.—From the circumstance of the Apennines dividing the country into two portions, between which there is little communication, some provinces are exporting while others are importing the same kinds of produce. The N. provinces have generally a superabundance of corn, while in the S. provinces the crops are insufficient for home consumption. On the other hand, oil is exported from the S., while in the N. legations, the Marche, &c., 3,000,000 lbs. are annually imported from S. Italy and Tuscany. Besides the articles of export previously specified, about 3,000,000 lbs. are sent every year from the N. legations, partly to Genoa as manure for orange trees; planks are sent to Spain, France, and America; organized silk, about 300,000 lbs., chiefly to France and England; about 450,000 lbs. linseed; 3,000,000 lbs. charcoal; 1,000,000 lbs. potash, with vinegar, cork bark, tartar, wood, tallow, bones, honey, works of art and antiquities are the other principal exports. The imports, in addition to those already noticed, are raw sugar, about 16,000,000 lbs. a year, and other colonial products from England and France, coarse wool for mattresses, cheese and butter from Lombardy, salt fish, pilchards, &c., from England, to the amount of 8,700,000 lbs. a year; about 2,000,000 lbs. of iron ore from Elba, and the same quantity of lead annually from England, and metals and manufactured goods of most kinds from N. and W. Europe. (*Servicieri, Statistica d'Italia*.) *Servicieri* estimates the total annual value of the imports at nearly 7,000,000 and that of the exports at above 5,000,000 scudi. The importation of salt, tobacco, alum, and some other kinds of native produce, including wheat when the price is under 14 scudi the rubbio on the Mediterranean, or 12 scudi on the Adriatic, is prohibited; as is the export of hampseed and wheat, when the price is above 16 scudi in the Mediterranean, and 14 scudi in the Adriatic ports, and other grains in proportion. The importation of such books as would communicate any useful information, as to politics, political economy, or philosophy, is of course absolutely forbidden. Notwithstanding the low state of manufacturing industry, high duties are levied on manufactured goods when imported. Woolen cloth, woollen and cotton fabrics, and cambrics, pay 100 scudi; dye or stamped cottons, 50 scudi; and porcelain, 20 scudi per 100 lbs. The principal seats of the foreign trade are Ancona and Civita Vecchia. In 1838, 1592 ships, of the aggregate burden of 66,938 tons, with cargoes of the value of 1,109,300 scudi, cleared from the former port; and in 1837, 1593 ships, burden 133,402 tons, cleared out of the latter. (*Port. Reports*, 1838; *Bearing's Reports*, &c.)

Accounts are kept in *scudi* (crowns) = 4s. 3d. each, and divided into 10 *paoli* and 100 *bajocchi*. The Roman *libbra* or pound of 12 ounce and 398 *danari* = nearly 12 oz. avoirdupois. The *barile* of wine, of 33 *boccali*, and 138 *figliette* = about 13 gallons; the *barile* of oil contains only 28 *boccali*. The Roman foot = 11.7 English inches; the palm of architects = about 8½ inches; the Roman mile = 1628 English yards. Generally the measures of Rome have less capacity than those of the N. legations.

The Government is wholly ecclesiastical, no one being eligible to fill any civil office who has not attained the rank of abbot. The pope enacts all laws, and nominates to all clerical appointments. He is assisted, however, by the high college of cardinals, comprising about 70 members; and the different branches of the government are conducted each by *Congregazioni*, with a cardinal at its head. Each legat. and deleg. is governed by a cardinal, assisted by two assessors, and a council of four individuals nominated by the pope, half of whom are changed every five years. The jurisdiction of the temporal nobles is provisionally retained in some provinces, but all the judicial officers of the nobility must be confirmed by the pope, and are subject to the general laws. In each cap. of a deleg. there is a tribunal of primary jurisdiction, which also decides in appeal on certain matters that first come before the district officers. The proceedings in these courts are public, but there is no jury. There are four courts of appeal, one at Bologna, one at Macerata, and two in Rome; and a supreme tribunal of final resort, that of *l'Uditore Santissima*, with a single judge; nine tribunals of commerce also exist. Every town has its own jurisdiction and magistracy, and a municipal court of from 18 to 48 members, according to the population. The laws in force are: originally those of the Justinian code; but the pope has power to alter or annul any previous law, and, which is incomparably worse, the provincial judges have extensive discretionary power. Criminal proceedings in the Papal states are very dilatory; and in all cases the accused is thrown into prison, whence there is no liberation on bail. In 1832, 2708 criminals were confined in the vari-

ous prisons, of whom 580 had been convicted of homicide; 384 of other offences against the person, 395 of burglary; and 1072 of other offences against property, and 76 of state offences. Brigandage is less frequent than formerly; and the government has stationed five military posts along the road from Velletri to Terracina, for the protection of travellers. Still, however, the police and the law are equally defective; and assassinations and other crimes of violence are daily taking place without the perpetrators being ever brought to justice. The whole frame of government is, in fact, a tissue of abuses.

On the fall of Napoleon, the alienation of church domains was confirmed; but the compensation since made to their former owners, and the restoration of suppressed churches and convents, have cost the government prodigious sums, and are the principal causes of the wretched state of the finances. (*Von Rasmer's Italy*.) Within the limits of the Papal states there are no fewer than eight archbishops' and 50 bishops' sees; and it is estimated that in Rome there is a clergyman for every ten families. It is needless to add that this superabundance of priests, instead of promoting religion and morality, is, in fact, a principal cause of their low state in the city. The outward deportment of the papal courts is, however, at present highly decorous. "Those times so disastrous and disgraceful, when the popes had so many nephews, and those nephews built so many splendid palaces and villas, called by the Romans, in derision, 'miracles of St. Peter,' are now almost as much forgotten in Rome, as the times when horses were made consuls, and eunuchs emperors." (*Lyman's Polit. State of Italy*.)

Public Instruction.—There are two chief universities—in Rome and in Bologna—each having at least 38 professorships; and six universities of secondary rank—at Ferrara, Perugia, Cambrino, Macerata, Fermo, and Urbino—each at least with 17 professors. The university of Rome was, in 1830, attended by 943 students (*Servicieri*); that of Bologna, which ranks, in Italy, second only to Pavia, is usually attended by from 500 to 600 students; that of Perugia by about 300; and those of Cambrino, Macerata, and Urbino, by about 300 each. Altogether, upwards of 9000 students annually attend the universities. (*Journal of Education*, viii., 306.) There are various other high colleges in Rome, &c., the principal of which is the Gregorian (see Rome). Secondary schools exist in most towns; but there is no general system of elementary instruction, and it has been estimated that only 1 in 60 of the population attend public schools. The truth is, that education in the Papal states is in the most degraded state imaginable. It is wholly in the hands of the clergy; and is conducted on the principle, if we may so call it, of imbuing the pupils with the grossest prejudices, and of proscribing every study or pursuit that might tend to expand or enlighten their minds, or make them acquainted with their rights and duties. The university education, excepting, perhaps, in so far as respects medicine, is altogether contemptible. Even theology is not efficiently taught; and philosophy, politics, and political economy are as little relished in Rome as in Morocco.

The censorship of the press is severe in the extreme; and the gazettes published in the different towns insert nothing not approved by the censors. The journals, of which there are several, devoted to *belles lettres*, antiquities, the fine arts, &c., being under a less severe surveillance, occasionally display originality and learning; but the literature of the Roman states is like their government, emasculated and imbecile. "The Eternal city prohibits all the best works on mental philosophy. She has not one eminent man of science; and if she had a Cuvier or a Buckland, she would not permit him to lecture or to publish his discoveries to the world till he had been subjected to the pruning knife of some ignorant censor. The apathy and timidity, the dread of independent thinking and free inquiry manifested by the Papal government, seems, however, to admit of easy explanation. Its dogmas, its rites, its principles of action were framed in accordance with the opinions of the 13th century. It does make some changes silently, by dropping a few untenable pretensions; but it can make no great and marked change without abandoning its professed character of being the depository of immutable truth. The rulers of Rome, therefore, finding themselves unable to raise up their old institutions to the level of modern knowledge, endeavour to keep down this knowledge to the level of their institutions. They see the props and stays of their system dropping off, and one source of influence falling after another, and their prudence counsels them to shut out, as far as they can, the light which is sapping their authority, and to look upon innovations, even of the most harmless kind, with suspicion. They are religious *Conservatives* in the strictest sense of the term." (*MacLaren's Notes on Italy*, p. 97.)

Charitable Institutions.—The Papal states are literally overrun with all kinds of charitable institutions. In Rome, especially, the sums expended on charitable foundations

PAPAL STATES.

are, in proportion to its extent, twice as large as in Paris; so that, as Berristori exclaims, "*Dovrebbe credersi che negli Stati Pontifici, e molto più in Roma non esistesse mendicizia.*" (Statist. p. 39.) But nowhere are the pernicious consequences of indiscriminate charity better exemplified than in the Roman states, where mendicity, wretchedness, and want prevail to a frightful extent. The universality of beggary removes all sense of shame; and a large proportion of the population are degraded enough to prefer subsisting on alms to making any attempts to provide for themselves. There is a *monte-di-pieta*, or government pawn-broking establishment, with a capital of 250,000 scudi, in Rome; and others in most of the principal cities; where also savings banks have been established with considerable success. (Hawking's Rep., p. 88-90.)

The army, if so it may be called, is under the direction of a cardinal-president, and a board of three general officers; and consisted, in 1840, of a permanent force of 14,660 men. (9300 infantry, 900 cavalry, &c.); and a body of reserve and national guard, together amounting to 9000 men.

The principal fortresses garrisoned by the pope are those of Rome, Civita Vecchia, Urbino, castle Franco, Terracina, and Ancona; by the treaty of Vienna, the emperor of Austria has the right to garrison Ferrara and Comacchio. The naval force consists of a solitary ship of war, manned by 33 men. (Almanach de Gotha, 1840; Oudinot, *Italie et ses Provinces*, &c.)

The taxes are very heavy, and are imposed in the worst possible manner. The principal consists of a land tax; heavy duties are also laid on most articles consumed in towns and villages; and all sorts of grain, except rye, maize, barley, and oats, pay a heavy tax when ground at the mill. Salt, tobacco, alum, and vitriol, are monopolies in the hands of government. The customs' duties are probably, however, on the whole, the most oppressive and injurious. The lottery, also, notwithstanding its demoralizing influence, is a fertile source of revenue; and contributes, in fact, about one tenth part of the entire public revenue!

The public revenue and expenditure was as follows in 1835:

Revenue.		Expenditure.	
	Scudi.		Scudi.
Direct taxes	2,633,368	Treasury charges	235,277
Customs, &c.	4,251,080	Customs, &c. do	530,529
Stamps and registry	577,810	Postoffice	128,469
Postoffice	228,085	Lotteries	588,011
Lotteries	898,288	Papal household	485,030
Various sources	42,284	Interest on debt	2,547,585
	8,312,941	Government and justice	1,344,264
		Public instruction	105,261
		Public works and charities	806,491
		Army and police	1,823,146
		Public health	264,079
		Various	326,944
			5,236,750
			8,312,941
		Deficit in the Revenue	615,836

But according to the *Ann. de Gotha*, 1841, the accounts for the preceding year were more satisfactory.

History.—The rise of the Papedom as a temporal power dates from 755, when Pepin, king of the Franks, invested the pope with the exarchate of Ravenna; to which Charlemagne added the provinces of Perugia and Spoleto. Benevento was given to the pope by the emperor Henry III. in 1053; and in 1102 the marchioness Matilda of Tuscany bequeathed to the holy see the provinces forming the "Patrimony of St. Peter." In 1297, Forlì and the rest of Romagna, and, in 1364, Bologna, became portions of the Papal dominion; and at the end of the 14th century the pope acquired full jurisdiction over Rome and Sabina. Ferrara was acquired in 1598, Urbino in 1626, and Orvieto, in 1649.

The French invaded the states of the church in 1797, after which the N. legations were annexed to the Cisalpine republic. In 1798, Rome was taken by the French, and in 1810 the whole of the Papal states were included in the kingdom of Italy. Since 1815, most part of the pope's former dominions have been restored; but his authority, especially in the N. legations, is far from being well established, and his power as a temporal prince, depends wholly on the support given him by Austria. (Percival, *Hist. of Italy*; Simondini; MacLaren, *Notes on Italy*; Von Raumer's *Italy and the Italians*, &c.)

PAPUA, or NEW GUINEA, a very large island, or perhaps a dense cluster of islands, in the E. archipelago, third division; between the equator and the 9th deg. of S. lat., and the 130th and 150th degs. of E. long.; having N. and E. the Pacific ocean, W. and S.W. the sea in which Gilolo, Ceram, the Aroo Isles &c., are situated, and S. Torres

strait, separating it from Australia. It is indented by several deep bays; but even its coast line is in many parts unknown, and its interior has been but little explored, and is, in fact, a *terra incognita*. The coast, viewed from the sea, rises gradually into hills of considerable elevation; but as mountains of any remarkable height have yet been discovered. The whole island being covered with palm trees and timber of a large size, little can be said respecting its soil, which, however, is presumed to be fertile. The coco-nut, the two species of the bread-fruit tree, pine-apples, and plantains are found here; nutmeg-trees also grow wild; but it is not known whether they produce good spice. It is said that there are no quadrupeds in Papua, except dogs, wild cats, and hogs; and that to the E. of Gilolo no horned animals of any description are found. The woods abound with wild hogs, which the natives kill with spears and arrows, in the use of which they are very expert. There is reason to believe that gold is found in the interior of the island. The natives of Papua appear to consist of two distinct races; those in the W. being identical with the negroes of the E. archipelago, while the inhabitants of the E. part of the island belong rather to the sallow complexioned long-haired natives of the South sea islands (see POLYNESIA). The Papuan negroes, of whom a brief notice is given in the art. **ARCHIPELAGO**, **EASTERN** (I., 142), continue, for the most part, in their original state of savagery and barbarism, devoid of homes or clothing, and subsisting principally on the precarious produce of the chase, or on the spontaneous products of the forests. On the N.W. coast, which has been the most frequently visited by Europeans, the dwellings of the natives are raised on posts, as in other parts of the archipelago, and among the ultra-Groegic nations of the Asiatic continent. These men are accommodated in many families, who live in cabins on either side of a wide common hall that occupies the centre of the building. The cabins are miserably furnished; a mat or two, a fire-place, earthen pot, with perhaps a china plate, a basin, and some sago flour. As they cook in each cabin, and have no chimney, the smoke issues at every part of the roof; and at a distance the whole building seems to be on fire. Their clothes are very scanty, but they contrive to bewilder themselves so as to attract the attention of European observers. Their hair is not so short, close, and woolly as that of the African negro, and they wear it bunched around their heads to the circumference of 24 and 3 ft.; and, to make it more extensive, comb it out horizontally, occasionally adorning it with feathers.

The men in general wear a portion of the inner bark of the coco-nut tree, resembling a coarse kind of cloth, fastened round the middle; and the women use blue *Burra* barks in a similar manner. Boys and girls go entirely naked till puberty. All are fond of wine and colored china beads, and wear them about their wrists, &c. The women, as generally happens among savages, lead a laborious life; and Forrest says that he has often seen them labouring hard in fixing posts in the ground for stages, in making mats, or in forming pieces of clay into earthen pots, while the men were stunting about.

In the interior the inhabitants are supposed to practise gardening and some sort of agriculture, as they supply the inhabitants on the coast with food, in exchange for arms, knives, and other coarse cutlery. The natives on the coast purchase these from the Malays and the Chinese, particularly the latter, from whom they also buy blue and red cloths. In exchange, the Chinese carry back missey bark, slaves, ambergris, sea slug (*bêche de mer*), tortoise-shell, small pearls, birds of paradise, and many other species of dead birds, which the Papuas have a particular method of dressing.

The Dutch may have some trade with Papua; but Mr. Earl says that no intercourse whatever takes place between it and the British settlements in Australia, Singapore, or elsewhere in the east.

The inhabitants of the more westerly islands of the E. archipelago buy the Papuans for slaves; and the natives of the W. coast of Papua make slaves of those of the E. and sell them to strangers. With a similar view, probably, they were formerly, and perhaps still are, accustomed to assemble in great numbers, and make war on the inhabitants of Gilolo, Ceram, Ambio, and other islands still farther W.

The Arabians, in their early voyages, appear to have come into contact with the Papuans, whom they constantly describe as cannibals. Papua was discovered by Europeans in 1511, and frequently resorted to by the Portuguese during the 16th century. Toward the end of the 18th century Forrest, McCluer, and other British navigators visited it; since which it has been but little noticed.

PARA, formerly called *Belem*, a city and seaport of Brazil, cap. prov. of same name at the confluence of a considerable river, with the great estuary of the Tocantins or Rio Para, on its S. side, opposite the island of Joazeiro

PARAGUAY.

Almost half the entire territory is national property. It consists of pasturage lands and forests, which have never been granted to individuals, the estates of the Jesuit missions, and other religious corporations; and a great number of country houses and farming establishments confiscated by the dictator. The latter has paid great attention since the commencement of his reign to the improvement of agriculture, and to rendering the government property productive; and has, by so doing, created a branch of revenue which, aided by time and a wise government, may be found sufficient of itself for all the wants of the state. He has let a part of these lands at a very moderate rent, and for an unlimited period, under the single but indefinite condition, that they shall be cultivated, or turned into pasturage. On the other hand, the large estates belong to large farmers, where thousands of cattle and horses are bred. These supply his cavalry with horses, and his troops with provisions; besides which, they also furnish great numbers of oxen for the consumption of the capital. For these the dictator requires a high price, and will allow no one to undervell him. The farming establishments are objects of peculiar

Francia, next to personal aggrandizement, appears to be actuated by the vulgar, short-sighted, barbarous policy of wishing to render Paraguay dependent solely on her own internal resources, and wholly unconnected in any way with any other South American state. Except in special cases, he permits no ingress or egress of individuals or mer-

PARAMARIBO.

chandise to and from Paraguay,* and this system of exclusion will probably be kept up as long as he lives. While Paraguay remained a Spanish province, the yearly value of its exported produce fell little short of 1,500,000 dollars. Of Paraguay tea, 8,000,000 lbs. were annually sent to Santa Fé and Buenos Ayres, besides 1,000,000 lbs. tobacco, large quantities of timber, cotton, sugar, molasses, spirits, &c. But the only trade, if so it may be called, which has been carried on of late years, has been upon account of the dictator. "When he wants an assortment of foreign goods, a permit is sent over to the adjoining province of Corrientes for a vessel to proceed to the opposite port of Neembuck. On her arrival there, the invoice of the cargo is immediately forwarded to him at Assumption, from which place, after selecting such articles as he requires, he orders a quantity of yerba-maté to be sent on board in payment. There is no appeal from his own valuation: no one is allowed to go on shore, and the ship is sent back as soon as the yerba is delivered. This article is in such demand, from his having stopped the trade in it, that the people of Corrientes are glad to get it upon his own terms. In the same manner, for a short period, he allowed a peddling traffic to be carried on between the Brazilian missions beyond the river Uruguay and the port of Ytapua, but that trade he altogether stopped about 10 years ago." (*Parish's Buenos Ayres, &c.*, 524, 525.)

The government of Paraguay is an anomaly in the present times. It approaches as near to an absolute despotism as can well be conceived, the dictatorship of Sulla in ancient Rome being the only model with which it may be compared. The state is nominally republican, having a so-called congress of several hundred members; but the entire power centres in the dictator, who is not only commander-in-chief, but head of the church, the law, and every other branch of the administration. The country is divided into 90 sections, or *comandancias*, exclusive of a territory in the S.E., called the Misiones, occupying 600 sq. leagues, and governed by a special officer. Besides Assumption, the cap., there are but four towns in Paraguay; the other collections of houses being mere villages. There is no law save what is dictated by the caprice of the dictator; and his punishments are as barbarous as his policy is tyrannical and oppressive. The military force comprises about 3000 men, principally cavalry; besides which, there is a militia, comprising every free male citizen, 17 years of age, and capable of bearing arms. The naval force consists of only a few brigantines and gunboats. The amount of the public revenue is uncertain: it is derived from state property, the greater part of which has been confiscated by the dictator; tithes in kind upon all articles of produce, the right to levy which is sold each year to the best bidder; taxes upon shops and storehouses in the capital; the *droit d'aubaine*, or right to the property of all foreigners dying in Paraguay; fines, postage, sale, stamp and commercial dues, &c. The principal state expenditure is for war-stores, and the support of the army. There is no public debt. Public education is not much encouraged by the dictator; but there are many primary schools for male children, and, according to Reugger and Longchamps, "it is a rare occurrence in this country, where no printing-press exists, to find a free man who cannot read and write." Morals are at a very low ebb.

Paraguay was discovered in 1536 by Sebastian Cabot. The Jesuits afterward established many missions in the S. part of the country; and were supposed to have effected astonishing improvements in the condition and habits of the natives; but no sooner had they been expelled in 1768, than the fabric they had been so long in raising fell straightway to pieces, and the Indians relapsed into their former barbarism. In 1776 Paraguay became a province of the viceroyalty of Buenos Ayres. In 1810, the Buenos Ayres revolutionary troops were defeated by the Paraguayans; but the latter soon afterward deposed their governor, and, in 1813, proclaimed Paraguay a republic under two consuls. In 1814 the second consul, Dr. Francia, found means to get himself made sole dictator for three years, and at the expiration of that term, for life. In 1826 Francia declared Paraguay independent, and its independence was formally recognised by the emperor of Brazil in 1837. (*Robertson's Letters on Paraguay; Reugger and Longchamps; the Reign of Dr. Francia; Parish's Buenos Ayres, &c.*)

PARAMARIBO. See GULANA (Dutch).

PARGA, a fortified town and seaport of European Turkey, in Albania, sanjakk Delvino, on the Ionian sea, near the mouth of the Panar (an. *Acheron*), 48 m. S.W. Yanina, and 13 m. E. Paxo; lat. 39° 15' 45" N., long. 20° 24' S.E. Pop. 4000. It is built amphitheatrically on the side of a steep rock, surrounded on three sides by the sea, the summit of which is crowned by an almost impregnable fortress, commanding a magnificent view of the surrounding coast

PARIS.

and country. It is surrounded by strong walls, and has a double harbour. The streets are narrow, steep, and dirty; it has no public buildings of importance, and many of the houses are in ruins. The inhabitants export oil, tobacco, different kinds of fruit, and some tolerably good wine, all being the produce of the fertile and well-watered tracts surrounding the town. Sir J. C. Hobhouse states that the Parisians were among the worst of the Albanians, and that their connexion with the Christian states had taught them only the vices of civilization without diminishing their ferocity. (*Albania and Turkey*, p. 169.) The opinions of General Campbell and Colonel Leake are much more favourable; and Colonel de Brosset, who had excellent opportunities of estimating their character, pronounced them to be spirited and independent, though at the same time temperate, docile, and, if well treated, easy of command. The Albanians, however, mostly withdrew from the town on its being ceded to Ali Pacha, and the present inhabitants are principally Turks.

Parga is hardly mentioned in history until 1401, when it entered into an alliance with Venice, which continued nearly four centuries, until the subversion of the latter in 1797. Parga, being independent of Ali Pacha, tyrant of Albania, afforded an asylum to refugees from his violence, and was the seat of frequent cabals against his government; so that it became an object of importance for him to annex it to his dominions. In 1814 it was besieged by Ali, but being assisted by the British in Corfu, Ali was obliged to give up the siege, and the Parisians had reason to believe that they would be incorporated with the republic of the Ionian islands. The British government did not, however, agree to this arrangement: they felt the importance of Parga to Corfu; but the dread of continued dissensions with the Albanians led to a negotiation for its surrender, on Ali paying a pecuniary indemnity to such of the inhabitants as should refuse to remain after a change of government. In consequence of this agreement, which was severely, and perhaps justly, censured, most of the Parisians withdrew to the Ionian islands; and Ali had to pay, in all, about £300,000 by way of compensation. The cession took place in the year 1819.

PARIS (an. *Lutetia* or *Lutetia*), a celebrated city of W. Europe, the metropolis of France, being the next European city to London in magnitude and importance, in the dep. of the Seine, of which, with its suburbs, it occupies the largest portion, on the Seine, about 110 m. (direct dist.) from its mouth, 210 m. S.E. London, and 159 m. S.S.W. Brussels; lat. (observatory) 48° 50' 14" N., long. 2° 20' 15" E. Pop. in 1826 (exclusive of troops and temporary residents), 690,431, and in 1836, 909,198. The city stands in a plain surrounded on several sides, but especially N. and N.E., by considerable eminences; and the geological constitution of the district is so peculiar that the French geologists have called it the Paris basin, in the same way that the English have called the tertiary formations near the English metropolis the London basin. Here are found alternate strata, abounding with marine and freshwater shells, and containing also many fossil remains of extinct animals. Gypsum (known in England as *plaster of Paris*) is found in large quantities; and S. of the Seine is quarried good building-stone, of which, indeed, some of the principal edifices of Paris are formed: the older quarters, all of which were subterraneous, have been converted into catacombs, or repositories for the bones of the dead, removed from the public graves that once abounded, greatly to the injury of the health of the city.

Paris, like London, is situated on both sides a considerable river, which runs through it from S.E. to N.W., and divides it into two parts, of which the largest is on the N. side; the most ancient part of the city being, however, confined to the small islands within the channel of the river. In the course of centuries it has so extended itself, that it now occupies an area of about 14 sq. m., including the Champs Elysées, and other open spaces at its W. extremity. Many of the best streets are parallel to the river, and the open spaces, or quays along its banks, present an agreeable feature of which London is almost wholly destitute. A few of the streets more recently built are wide, and lined on each side with *rolletoirs*; but, generally speaking, the streets are narrower, and less regular, than those of the British metropolis. The style of building, however, in the best streets, is probably superior to that of London. The houses are very high, and many of them comprise seven stories, including the ground-floor; for there are no *sunk stories*. All the tenements have rich heavy cornices one story below the roof, and the fronts are invariably coated with plaster, and repainted from time to time. The town has, therefore, in its better parts, a gay and handsomer appearance than London; but internally, the houses (which are of great extent, inhabited by many families, and in some cases, formed round internal courtyards, accessible by *porte-cochères*), want the many comforts and conveniences

* Francia retained Bessland, the companion of Humboldt, without any just cause, in confinement in Paraguay for nine years!

PARIS.

which are found in English houses." (*Maclaren's Notes*, p. 12.) As in London, the fashionable part of Paris is at its W. end, while the districts of an opposite character are mostly in the E. and S. The *boulevards*, a succession of open, circular roads, similar to the "Circular Road" which surrounds Dublin, encircle the more densely-peopled portion of the city. They occupy the site of the old fortifications built in the reign of Louis XIII., are from 60 to 70 yards in width, and, being planted with trees, form agreeable places of resort for all classes of the inhabitants.

The city was originally divided into four quarters (*quartiers*), but as it increased, new allotments became necessary, though the old name was retained; and hence we find that there are at present 48 *quartiers*. For electoral and municipal purposes, however, Paris is divided into 12 arrondissements, each comprising four *quartiers*, and each sending one member to the chamber of deputies.

The following table exhibits the population belonging, in 1896 and 1895, to the different arrondissements, with the names of the *quartiers* comprised in each, the order of succession being from W. to E. on each side the Seine.

Arrondissements.	Quartiers.	1896.	1895.
1. N. of the Seine.			
I.	Quartiers du Roule, des Champs Elysees, des Vieux-Francois, des Tuilleries.	72,101	62,768
II.	Quartiers de la Chaussee d'Antin, du Faubourg du Palais Royal, du Faubourg Montmartre.	70,620	60,528
III.	Quartiers Poissonnerie, de Montmartre, de St. Etienne, du Mail.	54,167	57,026
IV.	Quartiers de St. Pierre, des Marais, de Louvre, de la Banque de France.	51,720	50,120
V.	Quartiers des Bonnes-nouvelles, du Faubourg St. Denis, du Faub. St. Martin, de Montmartre.	70,500	65,524
VI.	Quartiers du Temple, des Lombards, de la Porte St. Denis, de St. Martin des Champs.	66,451	64,106
VII.	Quartiers des Arènes, de St. Avoise, du Mont-de-Picote, du Marche St. Jean.	70,908	68,407
VIII.	Quartiers des Quinze-Vingts, du Faub. St. Antoine, de Marais.	70,575	68,094
IX.	Quartiers de la Cité, de l'Armenial, de l'île St. Louis, de l'Hôtel-de-Ville.	57,795	71,780
2. S. of the Seine.			
X.	Quartiers des Invalides, de la Monnaie, de St. Thomas d'Aquin, du Faub. St. Germain.	66,683	66,173
XI.	Quartiers de Luxembourg, du Palais de Justice, de l'Ecole de Justice, de la Sorbonne.	65,743	65,767
XII.	Quartiers de l'Observatoire, de St. Jacques, de St. Martin des Champs, de St. Marcel.	67,362	66,861
		590,431	590,190

"Paris, however," observes Mr. H. Lytton Bulwer, "is divided into quarters as well by its manners as its laws, and these different districts differ as widely one from the other in the ideas, habits, and appearance of their inhabitants, as in the height and size of their buildings, or the width and cleanliness of their streets. The Chaussee d'Antin breathes the atmosphere of the Bourse, and the Palais Royal is the district of bankers, stock-brokers, generals of the empire, and rich trades-people; and it is the quarter fullest of life, most animated, most rife with the spirit of progress, change, luxury, and elegance. Here are all the new buildings, arcades, and shops, and here are given the richest and most splendid balls. How different is the *quartier* St. Germain, the district of the long and silent street, of the meagre repeat, and the large, well-trimmed garden, of the great courtyard, of the broad and dark staircase, inhabited by the administrators and the old nobility, manifesting no signs of change, no widening of streets, no piercing of arcades or passages: it hardly possesses a restaurant of note, and has but one unfrequented theatre. Farther E., on the same side of the Seine, is the *quartier* of the students, at once poor and popular, inhabited by those eloquent and illustrious professors who give to France its literary glory. Then there is the Marais, the retreat of old-fashioned judges and merchants, where the manners have been changed almost as little as the houses by the philosophy of the 18th century: here are no carriages, no equipages: all is still and silent; you are carried back to the customs of the grand hotels in the time of Louis XIII. Then there is the Faubourg St. Antoine, the residence of those immense masses that

reigned under Robespierre, and which Bonaparte, after Waterloo, refused to summon to his assistance. And behold the ancient city of Paris surrounded by the Seine, and filled by a vast and wretched population; there, proud amid the sordid roofs around them, rise the splendid towers of Notre Dame, that temple of the 12th century which, in spite of the Madeleine, has not been surpassed in the 19th; there is the Hôtel-Dieu, the antique hospital as old as the time of Philip Augustus, and there is the Palais de Justice, where sat the parliament of Brocard, remarkable in the chronicle of De Retz!" (*France, Social, Lit., and Pol.*, i., 44-47.)

Barrières, Boulevards, &c.—Paris, as defined by the walls erected in the reign of Louis XVI., is of an irregular oval shape, its greatest length from N.W. to S.E. being 4½ m., and its greatest breadth from the Barrière de la Villette northward to the Barrière d'Enfer southward about 3½ m. In these walls are 58 gates, at each of which is a toll-house for the collection of the *octroi*, or local dues on goods entering the city; and on the outer side of the walls are well-planted walks, called "the outer boulevards," abounding with *gringettes*, wine-shops, &c., the favourite resort of the lower orders, the wine drunk here not being subject to the town dues. Between the outer and the inner or great boulevards, already noticed, are the suburbs or *faubourgs*, forming some of the best built quarters of Paris.

General Condition of Streets, Houses, &c.—The streets in the interior of Paris, except those of more modern construction in the fashionable quarters N.W. the Tuilleries, have been formed more or less on the model of the narrow lanes and alleys constructed before the general introduction of carriages, at a time when the absence of police and the frequency of popular tumults rendered it necessary to defend the streets at night with cross barriers or chains. Much attention, however, and large sums of money have lately been devoted to the improvements of the great thoroughfares; *trotoirs* of basaltic stone from Auvergne have been laid down in many of the streets; and more recently the asphalt-pavement has been successfully introduced in the Rue Rivoli and on the Boulevards. Gas has been provided by two or three chartered companies; and the quarters of the Tuilleries, Chaussee d'Antin, and Palais Royal, as well as the arcades and principal shops N. of the Seine, are now brilliantly lighted with gas. But in the streets of other quarters, and even in the best streets S. of the river, may still be seen the melancholy oil-lamps, or *réverbères*, suspended by a cord across the street, emitting only sufficient light to make darkness visible, till midnight, when all the lights are extinguished, and the town is plunged in obscurity, rendered more annoying and dangerous from the inefficiency of the night police. (*Maclaren's Notes*, p. 22.) With respect to cleanliness, Paris, though greatly improved, is still very far from what it should be. The sewers, which were begun at the commencement of the 15th century, were at first wholly open, running through the middle of the streets, either directly into the Seine, or into its tributaries, the brook Mémil-montant northward, and the Bièvre southward. In some of the closer and less wealthy districts this nuisance still remains; but by far the larger part of Paris is now supplied with subterranean drains, arched with stone, some of them being of great size. Drainage, however, for separate houses is still far from being common; there is a general want of water-closets; and domestic filth is in many cases allowed to accumulate, greatly to the injury of the public health, and in spite of police regulations not strictly enforced. The houses, also, which are always five, and often seven, stories in height, though without cellars, consist, as in Edinburgh, of separate stories; and sometimes a single story, or floor, is divided into different sets of apartments, occupied by different individuals or families, the access to the different stories being from a common staircase, usually very dirty, and often, indeed, filthy to a degree revolting to an Englishman; and as water is seldom introduced into the houses by pipes, but is brought by porters from the public fountains in the streets, we need not be surprised at the deficiency of cleanliness. The more modern houses, however, are provided with better means for insuring this advantage; and in the new quarters we do not observe that *malange* of inmates, from the prince *ex premier* to the poor seamstress *au sixième*, that distinguishes the houses of Paris from those of most other capitals of Europe. The broader streets have externally a pleasing appearance, owing to the regularity of the houses, the great number of windows (for which there is scarcely any tax), and the general use of balconies and "external shutters called *persiennes*, formed by thin bars of wood, turning on hinges, and folding back on the walls when not in use." (*Maclaren*, p. 28.) The streets S. of the Seine are gloomy and monotonous: in the chief hotels of the nobility few windows face the street, and large *porte-cochères* lead to an inner court yard, round which the building is arranged.

Principal Streets, Places and Parks.—The leading street

PARIS.

of Paris, corresponding with the Strand or Oxford-street of London, is the *Rue St. Honoré*, running westward from the *Marché des Innocens*, and forming, with its continuation, the *Rue Faubourg St. Honoré*, a line of streets very nearly 2 m. in length. The houses in this faubourg are large and handsome, belonging chiefly to the higher classes; but those in the part nearer the centre of the city consist principally of shops and residences of persons in trade. The *Rue St. Honoré* is connected eastward with the *Rue St. Antoine*, terminating in the *Place de la Bastille*, in which is the model of the projected *Fontaine de l'Éléphant*. These streets entirely intersect the capital from W.N.W. to E.S.E., and the continuous line measured from the *Barrière du Roule* westward to the *Barrière du Trône* eastward, is exactly 5 m. in length. From N. to S. runs another and almost equally important avenue, formed N. of the Seine by the *Fauxbourg* and *Rue St. Martin*, crossing the river and Isle of Paris by two bridges (the *Pont Notre Dame* and *Petit Pont*), the part S. of the river consisting of the *Rue* and *Faubourg St. Jacques*, terminating in the *Barrière d'Arceuil*, from which to the N. end of the line at the *Barrière de la Vilette* is a distance of $\frac{3}{4}$ m. The *Rue St. Denis* runs parallel to the *Rue St. Martin*, connecting the *Pont-au-Change* with the N. Boulevards at the *Porte St. Denis*; and more westward, running in the same direction, are the *Rue de Richelieu*, *Rue de Castiglione*, and *Rue de la Paix* connected with the *Place Vendôme*, the *Rue de Luxembourg*, and the *Rue Royale* and *Tronchet*, which run into the square containing the church of *La Madeleine*. These again are crossed by other streets running from W. to E., the principal being the *Rue St. Augustin*, which connects the Bourse with the Boulevard des Capuchins; and opposite to the gardens of the Tuilleries is the *Rue de Rivoli*, a noble well-paved street, lined on its N. side by government buildings and fine hotels; it is about $\frac{1}{2}$ m. in length; and lined throughout its whole extent with colonnades. The chief streets S. of the Seine and parallel to its banks are in the *Faubourg St. Germain*, comprising the *Rue de Grenelle*, a handsome avenue lined with several large and handsome government-buildings, the *Rue St. Dominique*, *Rue de l'Université*, and *Rue de Bourbon*, the last running close to and in a line with the *Quai d'Orsay*. Most of the streets at the E. end of Paris are narrow and irregularly built: the *Quartier Latin*, S. of the Seine, comprises several collegiate edifices; but the streets are confined and crooked, in fact, little better than mere lanes and alleys. Indeed, the only handsome streets of Paris, except the Boulevards, are to the W. of the Palais Royal on both sides the river. The quarters of the Tuilleries, the *Place Vendôme*, and the *Chaussée d'Antin*, are the most fashionable districts N. of the Seine; but the houses, or *hôtels*, of the noblesse are chiefly in the *Faubourg St. Germain*. Besides the streets just mentioned, Paris has about seventy squares, or *places*, the principal of which are—1. the *Place de la Concorde*, an open space W. of the garden of the Tuilleries, in the centre of which is the obelisk lately brought from Luxor, in Egypt; 2. the *Place Vendôme*, an octagon surrounded on three sides by handsome buildings, with Corinthian fronts, and having in its centre a noble column, formed on the model of that of Trajan at Rome, covered with bronze castings, representing the achievements of the grand army in 1805, and surmounted by a statue of Napoleon; 3. the *Place des Victoires*, originally formed in 1685, and having in its centre an equestrian statue of Louis XIV. on a marble pedestal, with bas-reliefs; 4. the *Place de Grève*, where public executions were formerly carried into effect, and having on one side the *Hôtel de Ville*; 5. the *Parvis Notre Dame*, in front of the cathedral of that name, and having on its S. side the *Hôtel-Dieu*; and 6. the *Place de la Bastille*, in the *Faubourg St. Antoine*, occupying the site of the Bastille destroyed 14th July, 1789: in its centre is the *Colonne de Juillet*, a large Doric column, erected in commemoration of the revolution of 1830, 130 ft. in height, surmounted by a colossal figure of the Genius of France. Paris has also 65 fountains, communicating by pipes with the Seine and the canal de l'Ourcq; some of them, as the fountains of St. Sulpice, St. Eustache, Grenelle, the *Château d'Eau* in the Boulevard de Bondi, and that in the *Marché des Innocens*, are worthy of notice from their architectural beauty; though the supply of water from them be not only insufficient, but of bad quality. In consequence of the great depth to which the *calcaire grossier* of the Paris basin penetrates, there are no springs in the city itself, though aqueducts bring pure water from a distance: but pipes, leading as in London to each house, are of very modern date, and only partially introduced.

Exclusive of several handsome gates and barriers, Paris has four splendid triumphal arches: those of St. Denis and St. Martin in the N. Boulevards, erected in honour of Louis XIV.; the *Arc de Carrousel*, forming the principal entrance to the palace of the Tuilleries, built in 1806 on the plan of that of Septimius Severus at Rome, being 60 ft. in width,

by 45 ft. in height; and, the *Arc de l'Étoile*, at the W. end of the *Avenue de Neuilly*, commenced by Napoleon in 1808, and only recently completed. The latter is a most magnificent monument, and is, indeed, by far the most stupendous structure of the kind ever erected, either in ancient or modern times. It consists of a single arch 94½ ft. in height, 48 ft. in width, and 73 ft. in depth, and of two smaller transverse arches; the whole structure being 147 ft. in length by 73 ft. in depth, and 162½ ft. in height. It stands quite separate from any other building, so that it is seen to the best advantage. It has numerous colossal groups of sculpture, depicting most of the great battles gained by the French during the revolutionary war. The effect of this prodigious structure is grand in the extreme, and is worthy the genius and magnificence of its founder.

Contiguous to the *Arc de l'Étoile* is the garden of the Tuilleries, an enclosed space of sixty-seven acres, laid out by the celebrated Le Nôtre in broad walks and angular beds, and profusely ornamented with vases, statues, &c. It is a favourite resort of the Parisians, and is separated by the *Place de la Concorde* from the *Champs Élysées*, an open space about 1000 yds. in length by 400 yds. in breadth, planted by Colbert in 1670, with pavilions along the sides provided with seats and entertainments. These parts, for so they may be called, constitute with the *Avenue de Neuilly* the Hyde-park of Paris, and, like it, are thronged on Sundays and festival days. S. of the Seine is the *Champ de Mars*, an oblong space bordered by a double avenue of trees, and used for reviewing troops, horse-racing, &c. It was the scene of the celebrated *Fête de la Fédération*, 14th July, 1790, as well as of the *Champ de Mai* during the 100 days. Races are held in it in May and September; but English sportsmen describe them as very inferior. Several minor gardens are dispersed in the different faubourgs; besides which, near the E. and W. suburbs respectively are the *Parc des Vincennes*, about $\frac{1}{4}$ m. in length by 2 m. in breadth, and the *Bois de Boulogne*, a favourite resort of carriage company, as well as of duellists and suicides. Duels, however, have become much less frequent since the enactment of the law, allowing damages to the family of the deceased party.

Palaces and Government Buildings.—Paris contains four royal palaces; but only one of these, that of the Tuilleries, is inhabited by the royal family; the Louvre has not been the residence of a French monarch since the minority of Louis XV., and is now formed into a national museum and picture gallery; the Palais Royal, built by Cardinal Richelieu, and the favourite abode of Louis XIII. and Anne of Austria, consists principally of shops, cafés, restaurateurs, and *estaminets*, crowded at all times, day and night, by almost every class of the Parisians; and the Palais du Luxembourg built for Marie de Medici, widow of Henry IV., is now devoted to the use of the chamber of peers. Palace of the Tuilleries, erected in the 16th century, on the site of a manufactory of tiles (*tuiles*, whence its name), was greatly enlarged by Henry IV., Louis XIII. and XIV.; and additions have since been made to it by Napoleon and Louis Philippe. Its architecture is of a somewhat mixed character; but the earlier parts may be seen as a good specimen of the revived Italian style. Wings extended from the main building on the side towards the *Place du Carrousel*, one of which, on the S. side, connects it with the museum of the Louvre; and on the garden side are arcades extending through the central portion of the building, at the sides of which are handsome partitions formed into state apartments, remarkable for their lofty windows, flanked by Corinthian pilasters. The general effect is extremely grand, especially on the garden side; but its grandeur results more from its great length and the variety of outline it presents, than from any excellence or congruity in the details. The state-rooms are on the first floor, running the whole length of the garden front, the principal being the *Salle du Conseil*, the state dining-room, known as the *Galerie de Diane*, from which other rooms lead to a vast saloon and state ball-room in the centre of the building, called the *Salle des Maréchaux*, adorned with portraits of the great marshals of France, and unquestionably one of the finest rooms of the kind in Europe. The court of the Tuilleries, on the E. side of the palace, was formed chiefly by Napoleon, and forms a wide space, separated by an iron railing from the *Place du Carrousel*, and now used for the inspection and review of the troops on duty in different parts of Paris. S. of the *Place du Carrousel* is the long gallery of the Louvre, connecting it with the Tuilleries. The pictures are deposited in a splendid range of rooms on the first floor, facing the river, about $\frac{1}{2}$ m. in length; but nearly the whole interior of the palace, which forms a hollow square, is appropriated to the reception of museums, &c., which will be subsequently noticed. A portion of the basement story, however, in the S. wing, is divided into apartments for the residence of officers, attendants, &c. As respects its external architecture, the

PARIS.

Louvre, is undoubtedly one of the finest regal structures in Europe. Its E. front, facing the *Place du Louvre*, consists of a magnificent colonnade formed by 24 coupled Corinthian columns, rising above the basement story, and surmounted by a beautiful cornice and line of balustrades. The S., or river front, though much less ornamented, is still extremely handsome, being faced with 40 Corinthian pilasters, above which rise a balustrade and central pediment; the N. and W. fronts are quite plain, and form a striking contrast to those just described. The internal courtyard of the Louvre is a perfect square, each side being 400 ft. in length. The buildings surrounding it are of the Corinthian and Composite orders, highly adorned with sculpture. The *Palais Royal*, which stands to the N. of the mass of buildings just noticed, has towards the Rue St. Honoré a front with two wings, united by a screen which encloses a courtyard somewhat resembling the horse guards or admiralty of London, not inelegant, though of a very impure style. Round the oblong space, at the back of the palace, the father of the present king of France erected large houses and handsome colonnades, occupied by jewellers, tailors, *merchands-de-mode*, shoemakers, printers, *restaurateurs* (the principal of which are Vêry, Vefour, and the frères Provençaux), keepers of *cafés*, *astinets*, or smoking-rooms, &c. The gardens are tastefully laid out, the whole being "brilliantly illuminated with gas;" and hence the Palais Royal is the perpetual rendezvous of the idle and curious, as well as of the little *rentiers* of the capital. The *Palais du Luxembourg*, where, during the republic, the directory held its sittings, and which, since the re-establishment of the monarchy, has been used by the chamber of peers, is a stately edifice, facing the *Rue de Vaugirard*, with two wings, connected by a screen and gateway; being remarkable for strength and solidity, as well as for the beauty of its proportions. The interior comprises several handsome apartments, the most interesting being the *Salle des Séances*, a semi-circular chamber of no great size, round which are arranged chairs for the peers, while the flat side is occupied by the president's seat, and tables for clerks, &c.; this room, however, is much too small for its present purpose, and a larger and more commodious building is now being erected. The gallery of the Luxembourg, which once boasted of a fine collection of old pictures, since removed to the Louvre, is now appropriated to the reception of works by living French artists; the gem of the modern gallery being "the bathing nymph," by Julien. The gardens behind the palace, laid out in the old French style, have a sheet of water in the centre. Among the buildings devoted to the use of the government and legislature, the first place is due to the Palais Bourbon, erected chiefly by the Prince de Condé, between 1729 and 1789: it was occupied during the revolution by the *Council of Five Hundred*; but at the restoration of the Bourbons was restored to the Condé family, with a proviso for the accommodation of the deputies in that portion of the building previously occupied by the council. The chamber of deputies was purchased from the family in 1829; and a treaty has lately been completed for ceding the entire property of the Palais Bourbon for the use of the legislature. The Corinthian portico fronting the *Port Louis XVI.*, the pediment of which has lately been completed and exposed to public view, is of fine proportions; but, when compared with the building to which it is the entrance, it is much too large, and leads to no apartments of any great size, except the chamber itself, a semicircular room ornamented with 30 Ionic columns of white marble, having gilt capitals. The president's chair and the tribune form the centre of the axis of the semicircle, round which rise successively the seats and desks of the 459 deputies, to the height of the basement supporting the columns. The walls are adorned with pictures and statues; and a spacious double gallery, capable of accommodating 700 persons, runs round the semicircular part of the chamber, fitted up with tribunes for the royal family, corps diplomatique, &c., and seats for the public. The place of each deputy is marked at the beginning, and retained to the end of each session; but when a member addresses the assembly, he does not, as in the British House of Commons, speak from his place, but ascends the tribune near the president's chair. The sittings are held chiefly by daylight. The library of the deputies, a long and handsome gallery, contains about 44,000 vols., chiefly reports and law-books, both French and English, including also a few rare MSS.

Some of the government offices are extremely handsome edifices, especially the *Hôtel des Finances*, an inviolate structure of vast size in the Rue Rivoli; and the *Hôtel du Quai d'Orsay*, a noble stone building, on the plan of the Farnese palace at Rome, and unquestionably one of the most magnificent in Paris, comprising about 800 rooms, allotted into offices for the council of state, the Cour des Comptes, and for the departments of the Interior and Public Instruction. The *Hôtel des Affaires Etrangères*, in the Rue

des Capucines, is a building of considerable extent, but with few pretensions to architectural elegance. The *Hôtel des Monnaies*, or Mint, S. of the Seine, a little W. the Pont Neuf, built in 1771, has two fronts, the principal of which facing the river, has a length of 300, with a height of 78 ft. All the operations of coining are carried on within this building; and it is the place of assay for all gold and silver articles made in Paris. In one of the apartments is a superb collection of medals and casts belonging to all eras of French history. Among other buildings nearly or more remotely connected with the government of Paris are the following: 1. The *Hôtel de Ville*, in the *Place* of the same name, commenced in 1549, but not completed till 1605, having a singularly uncouth front, with two side pavilions, higher than the rest of the edifice, and two gates leading to a quadrangle, in which is a bronze statue of Louis XIV. It comprises some fine apartments, particularly the *Grand Salle*, at one of the windows of which Lafayette, in 1830, introduced Louis Philippe to the populace as the best of Republicans! Its exterior is now undergoing extensive repairs. 2. The *Palais de Justice*, in the Isle du Palais, an edifice in a mixed style, erected between the 14th and 18th centuries, on the site of a still more ancient structure; in the interior a central staircase leads to a grand saloon, called the *Halle des Pas Perdue*, which comprises apartments for the court of cassation, the Cour Royale, and Cour d'Assize. 3. The *Hôtel de la Légion d'Honneur*, on the Quai d'Orsay. Paris has eight prisons, among which those of St. Pélagie and St. Lazare are the most extensive and best managed. The prison for juvenile offenders in the Rue de la Roquette, is built on the panopticon principle. The *Conciergerie* and *Abbaye* are small, and very inefficiently regulated the latter being now exclusively employed for the detention of military offenders.

Religious Edifices.—The sacred buildings of Paris, like those devoted to secular purposes, exhibit a great variety of styles; but from the close of the 16th century downwards, the Grecian has prevailed. The first place, however, both as respects antiquity and grandeur, must be ceded to the *Cathédrale de Notre Dame*, erected between 1010 and 1407: it is a cruciform structure, with an octagonal E. end, and double aisles surrounding the choir and nave; a third aisle also being occupied by a series of seven external chapels. At the W. end are two lofty towers, evidently intended to have been the bases for steeples; but the tower usually seen at the intersection of the nave and transepts was destroyed during the revolution. The length of the church externally is 442 ft., the breadth 162 ft., and the length of transepts 353 ft.: the towers are 235 ft. high. The exterior, though not without beauty, is heavy, owing to the absence of steeples, pinnacles, &c., which give a light appearance to the majority of Gothic buildings. The W. front, however, with its three large gates and circular window, and the noble gateway on the W. side of the church, are highly worthy of admiration. The inside of the church has a very splendid and imposing appearance, owing to its numerous aisles and chapels; but the uniformity of effect has been entirely destroyed by the embellishments of the choir, which, though in themselves beautiful, are wholly unsuited to the rest of the building. The church of *St. Germain des Prés*, built about 50 years after Notre Dame, is cruciform, with a circular E. end. A considerable portion of the old building has gone to decay; and, out of three towers, only one remains; but the interior contains some good modern decorations, valuable pictures, old monuments, &c. There are six other churches, either wholly or in part of Gothic architecture; the most interesting is the church of *St. Germain l'Auxerrois*, not only from its structure, but its associations with the less peaceful periods of the history of Paris, especially those of the massacre of St. Barthélemy. Among the more modern churches in the Grecian style, the largest and most splendid is that of St. Geneviève, now called the *Panthéon*, in the quarter of the university. It was commenced in 1764 by Louis XV. The portico is composed of 22 fluted Corinthian columns, 60 ft. in height, supporting a triangular pediment 190 ft. broad by 24 ft. in height, in which is a sculptured composition, by David, representing the genius of France (a colossal figure 14 ft. high), surrounded by the great men of the nation: on the frieze beneath is inscribed in gold letters—

"AUX GRANDS HOMMES, LA PATRIE RECONNOISSANTE."

The plan of the church is a Greek or equilateral cross, the exterior having no windows, and being ornamented only by a frieze and cornice. In the interior a gallery and colonnade line the nave and transepts on both sides, forming so many smaller naves and aisles. Semicircular windows rise above the colonnades, throwing a strong light into all parts of the building; and from the centre of the cross rises a dome 282 ft. in height, the lower part of which is encircled by a Corinthian peristyle of 33 columns, each 36 ft. high. The inside is now perfectly empty, without any embellishments, except its architectural decorations; but it is intend-

PARIS.

ed that it shall be enriched with statues of Voltaire, Rousseau, Lagrange, and other illustrious individuals, whose remains have been deposited in the spacious vaults beneath the pavement. The total length of the Pantheon, including the portico, is 333 ft.; interior length from E. to W. 295 ft.; length of transept 303 ft.; uniform breadth 104 ft. On the whole, this church is a work of great merit: the general proportions are good, and there is much grace and elegance in the outline, as well as grandeur and simplicity in the design; but it is by no means entitled, either from size or composition, to be compared with St. Paul's. Among the other churches, the most deservedly celebrated is the Madeleine, at the N. end of the Rue Royale, on the model of the Parthenon of Athens, but larger, being 338 ft. in length, and 138 in breadth, while its archtype is only 238 by 100 ft. It is altogether a very noble structure, and is remarkable for purity and elegance of design. Paris has, in all, twelve parish churches, corresponding with the arrondissements, and 30 district churches, besides six others unattached, and several belonging to hospitals, convents, &c.; but none of these, except that attached to the *Hôpital des Invalides* (for which see *Hospitals*), requires any particular description. There are also several places of worship for dissenters from the Roman Catholic religion; two of which belong to the French Lutherans, two to Calvinists, and five to Independents; besides which, there are three English churches and five chapels, two American chapels, two Jews' synagogues, and a Greek church; but none of them have any claims to architectural beauty except the church of the Visitation, in the Rue St. Antoine, and the Gothic church belonging to the British embassy, in the Rue d'Aguesseau. The Roman Catholic clergy of Paris comprise an archbishop, 12 vicars-general, 3 metropolitan and 4 diocesan officials, 16 canons of Notre Dame, 34 honorary canons, with cures and vicars to the different churches.* The Protestant clergy comprise 3 Lutheran and 5 Calvinist pastors, 4 French independent ministers, an English bishop, 5 English Episcopal clergymen, and several ministers of other denominations. Paris still comprises several convents for females; but those of the present day bear but a very slight resemblance to the old nunneries; and are now little more than religious boarding schools for young ladies, or lodging houses for the numerous *sœurs de charité* who devote themselves to the nursing of the sick in the hospitals, &c. There are, also, 14 societies, some of which are liberally supported, for the promotion of religion at home and abroad, as well as of religious education.

Judging from the statements of the most intelligent travellers, it would seem, whatever may be the other wants of the French capital, that an increase of church accommodation is not one of them. "Had I not looked into the almanack, I should never have found out which day was Sunday. The churches are open every day, and of course afford no criterion. The shops are open too; cars and carriages are plying on the streets, and placards invite you to vaudevilles at the theatres and ballets at the opera. Your first impression is that Sunday has been blotted out of the French calendar. On closer inspection, you discover that there is a difference between this and the other days in the week, though I am sorry to say it is a small one. In making a circuit about 12 o'clock through the Palais Royal, the Rue Vivienne, Boulevard des Italiens, Rue de la Paix, and Rue Rivoli, I found about one shop in 30 shut or half shut. At 4 o'clock, on a shorter tour, I found about half of them shut, and at 6 o'clock, three fourths. The thoroughfare of carriages is perhaps also rather less, and that of loaded carts decidedly so. Some of the working classes, I understand, rest on Sunday, going to church perhaps in the morning, and in the evening to a theatre with their wives, or to a cheap café, and playing at dominos."

On Sunday-week I went to the once celebrated Café de Mille Colonnes, (now sunk to the character of an *estaminet*, or smoking-house,) to get a cup of coffee. It was about seven; I found two or three parties playing at billiards, and a score of little groups, of two, or three, or six individuals, busy with dominos. Two of the parties near me consisted each of a man, with his wife and daughter. The greater proportion, however, of the working classes, ply their labours on Sunday till dinner-time, then rest in the afternoon; and that they may not want their holiday, go beyond the barriers, where wine is cheap, and spend the Monday in drinking and dancing. The over-ridrig observance of the Sunday in Scotland, which sometimes disgusts young minds with religion altogether, is a light evil, when compared with this." (*MacLaren's Notes*, p. 17.)

Cemeteries.—The Parisians formerly interred their dead like the ancient Romans, along the sides of the roads leading out of the city; but, as the population increased, and its

boundaries were extended, these grave-yards became included within its precincts, and were at length almost in the centre of the town. They were, however, both few and small; so that the inhabitants were compelled to have recourse to other modes of interment; and accordingly, large trenches (similar to those opened during the prevalence of the plague in London) were dug for the reception of corpses thrown in till the holes were filled, when they were covered over, and others opened close to them. This disgusting method of burying necessarily rendered the neighbourhood of these cemeteries extremely unhealthy; and at length the government issued a prohibition against all funerals within the town, and ordered the formation of spacious cemeteries at a mile distance from the city-walls, at the same time ordering that the bones in the old grave-yards should be deposited in the subterraneous quarries or catacombs under the Quarter St. Germain. Paris has now five large and well-laid out cemeteries, similar in many respects to those which have since been formed on the same model near London, Liverpool, Leeds, and other large towns of England. The Père-la-Chaise, outside the E. barrier, is the finest of the Parisian cemeteries; and its advantageous situation on the slope of a hill, the number, as well as beauty of its monuments, and the celebrity of many of those whose remains have been brought thither, make it one of the most interesting sights in the French metropolis. The catacombs are very extensive, running under about one third part of Paris E. of the Seine: they are arranged into galleries lined with piles of bones, and the entrance is near the Barrière de l'Enfer; but, being deemed unsafe, they are no longer shown to visitors. (*Dulaure*, ix. 211-240.)

Hospitals and benevolent institutions.—Hospitals for the relief of the sick, and *aspeices* for the aged, infirm, or foundlings, existed in Paris from a very early period; but being exclusively under the direction of ecclesiastics, the objects of the founders were grossly perverted, and the reverses of these establishments applied to improper uses. No improvement took place till the revolution; when, by a decree of convention in 1793, the two old and only remaining hospitals were ordered to surrender a portion of the inmates of their crowded and unhealthy wards to the convents and other houses that had become national property. An administration, consisting of a general council and administrative committee, was formed in 1801, for the purpose of improving the condition of the public charities of Paris: taxes on places of amusement and graves in the cemeteries were applied to defray the necessary expenses; and from that time to the present these institutions have progressively increased both in number and utility; so that at present there are 13 hospitals and 21 *aspeices*, having altogether about 20,000 beds, and supported in 1837 by a revenue of 18,606,330 fr., or £747,653 sterling, chiefly arising from portions of the *octroi* dues, contributions from the theatres, dues from the *Mont-de-Piété*, interest of funded property, &c. The *Hôtel-Dieu* is entitled to the first notice, on account of its antiquity; for it is known to have existed in the middle of the 12th century, and even at that early period to have had some valuable endowments. It was enlarged between the reigns of Henry IV. and Louis XVI.; and since the revolution the buildings have been so much improved, that at present the Hôtel Dieu, with its subordinate establishment in the *Rue de Fleury* St. Antoine, furnishes accommodation for upwards of 1000 in-patients. In 1837, 26,412 patients were admitted into this establishment, the average mortality being one in 6.4. It is in every respect extremely well appointed, and has among its medical officers the most celebrated physicians and surgeons of Paris: indeed, the Hôtel-Dieu may be considered as the great normal hospital of France. The hospitals next in importance are those of *La Pitié*, *La Charité*, *St. Antoine*, *Beaujon*, *des Enfants Malades* and *des Filles-Du-Calvaire*; the whole number of these establishments under the civil administration amounting to 16, exclusive of three military hospitals, regulated by the minister of war. These hospitals, however, are, with two or three exceptions, situated in close neighbourhoods, and, from the antiquity of the buildings, ill-planned; but the interior management is extremely good, and may bear a comparison with that of the first London hospitals. Among the *aspeices*, the principal are the *Bicêtre*, for infirm old men, the *Salpêtrière*, for aged women, two *aspeices* *des incurables*, and one for orphans and foundlings. There are also numerous *maisons de santé* in and about Paris, which receive patients at certain fixed scales of payment, and may therefore be called hospitals for the middle classes. A great number of minor institutions for the relief of the sick and poor are supported by private subscription.

Of all the establishments, however, in the French capital devoted to the support of the aged and infirm, by far the most important, both on account of the grandeur of its buildings and the benefits which it confers on its inmates, is the *Hôtel des Invalides*, intended for the support of dis-

* The cures in France are the incumbents of livings, the *vicaires* being the merely salaried servants of the cures; in the same way as the stipendiary curates of England are the dependants of the rectors and vicars, though protected by the bishop.

PARIS.

abled officers and soldiers, or those who have been in active service upwards of 30 years. The edifice, situated in the S. end of an avenue leading over the Pont des Invalides from the Champs Elysees, and begun in 1875, is a conspicuous object from a distance on account of its gilded dome, lantern, and spire rising to a height of 333 ft. above the floor. It is composed of 5 courts of equal form and size, surrounded by buildings 5 stories in height, and covers a space of nearly 7 acres; and is, on the whole, a very heavy building, without any exterior beauty. The church of the establishment is indebted for its noble appearance principally to its magnificent dome supported by 90 pairs of Composite pillars. Besides about 170 pensioned officers, there are about 3000 sub-officers and privates, who are boarded, lodged, and clothed, and receive a monthly stipend varying according to rank. The dormitories contain each from 50 to 60 beds; besides which there are large infirmaries for the sick. All, except field-officers, mess at public tables, and all wear the same uniform. Their only duty is to mount guard within the precincts of the hotel; and, when the king comes within its walls, they have the exclusive privilege of guarding his person. On the whole, the Hôtel des Invalides, though by no means so beautiful a building as Greenwich Hospital, near London, is entitled to rank with it as one of the grandest national institutions of Europe. And it is now more than ever deserving of notice from its containing the remains of the emperor Napoleon, perhaps the greatest general, and perhaps, also, the greatest man of modern times.

Commercial Establishments.—Paris, till 1836, though abounding with fine public edifices, had no structure specially devoted to the transacting of commercial business. The merchants previously met in the Hôtel Mazarin, and afterwards in the Palais Royal; but the inconvenience to which they were subject, led, in 1808, to the formation of a plan for constructing an exchange sufficiently large for the multitudinous business of so great a capital. The form of the *Bourse*, which stands in a spacious square at the E. end of the Rue St. Augustin, is a parallelogram 212 ft. in length by 126 ft. in width, surrounded by a peristyle of 66 Corinthian columns. The *Salle de la Bourse*, or great hall, on the ground-floor of the building, 116 ft. in length by 76 ft. in breadth, is surrounded by arcades of Doric architecture. A grand staircase leads to a spacious gallery supported by Doric columns, and to the hall of the Tribunal de Commerce. Corridors run round both the upper and lower hall, communicating with various rooms devoted to commercial purposes: and on the whole the arrangements are of the most complete description. The hours for transacting business are from one to five; but the galleries and corridors are open from nine till five. The *Banque de France*, erected by Manard in 1790, possesses little architectural beauty. The present establishment was founded in 1803, and received the exclusive privilege for 40 years of issuing notes payable to bearer. Its capital consists of 90,000,000 francs, in shares of 1000 francs each. The notes issued are for 1000 and 500 francs. The customary rate of discount varies according to circumstances, but averages 4 per cent: the bank, however, discounts no bills that have more than three months to run. It opens, also, *comptes courants* with all requiring them, and charges no commission, its only remuneration for such transactions arising out of the use of money placed in its hands. The government of the bank is vested in a council of 90 elected by the 900 largest proprietors; the governor and deputy-governor are appointed by the king. The institution is flourishing, and enjoys unlimited credit. The public establishments connected with wholesale trade are called *halles*, the principal of which is the *Halle aux Blés*, or corn-market, a circular building, completed in 1767. The *Halle aux Vins*, on the Quai St. Bernard, S. of the Seine, near the Jardin du Roi, is an immense inclosure, having an area of 31,100 sq. yards, walled on three sides and fenced towards the quay by an iron railing about 850 yards in length. This great market is divided into streets called after the principal French wines; there are seven in piles of buildings, four in front and three behind, one of which is fire-proof, and used solely as a store-house for spirits. The warehouses and vaults will contain 400,000 casks. Wines entering this *dépot* are not charged with the octroi till taken out for consumption; but they pay one franc per cask for warehouse room, &c. The hall is open from six to six in summer, and from seven to five in winter; and the counting-houses of some of the principal wine merchants are within the premises. The quantity of wine taken out of the hall in 1836 amounted to 932,402 hectolitres, and of spirits to 36,910 hect. The other wholesale markets are the *Halle aux Draps*, and the *Halle au Cuir*, the *Halle aux Peaux*, near the Quai de la Tournelle, being now exclusively used by the chiffonniers for the sale and exchange of rags, &c. The *Mont-de-Piété* of Paris is a government establishment, enjoying the exclusive privilege of lending money on moveable effects at the rate of 9 per

cent. a year, or $\frac{3}{4}$ per cent. a month. The money which it lends is borrowed from government at the rate of 3 per cent.; and the whole is under the management of a board of commissioners.

Markets, &c.—Paris has 36 markets, the principal of which is that of St. Germain, opening on the Rue de Seine, and constructed from the designs of Blondel, which has served as a model for all the others since built. It is a parallelogram, 500 feet in length, by 480 feet in breadth. One of the most celebrated markets is the *Marché des Innocens*, in the centre of which, as already observed, is one of the noblest fountains in the capital: this, in fact, is the Covent Garden market of Paris, and has at least an equally fine and abundant show of fruit and vegetables; but connected with it, and in its immediate neighbourhood, are several other markets for fish, cheese, eggs, &c.; and indeed it may be termed a "quarter of markets." The *Marché des Vieux Linge* (old clothes market), built in 1809, partly on the site of the old *Temple* (the prison of Louis XVI. immediately prior to his execution), comprises four galleries containing 1888 stalls or shops, in which are exhibited for sale all kinds of old clothes, shoes, iron, tools, &c.; and is, on the whole, not unlike the Rag Fair or Monmouth-street of London. The other markets are, generally speaking, commodious, but they require no particular description. Paris has, also, five *abattoirs* (built in consequence of a decree of Napoleon, 9th Feb., 1810), where the animals necessary for the consumption of its inhabitants are killed. The abattoir of Montmartre is about 1074 feet long, and 364 feet broad, and that of Ménil-montant is nearly as large; the other three (two of which are S. of the Seine) are inferior both in size and arrangement.

Internal Consumption.—All estimates respecting the consumption of provisions in a populous city must, of course, be extremely vague; but, perhaps, with regard to Paris, there is less uncertainty, owing to the octrois or duties levied on most articles coming across the barrier. It is very difficult to form any estimate of the consumption of bread, on account of the permitted exportation of wheat into the neighbouring districts, whenever the price outside the barriers exceeds that of the *Halle aux Blés*, but the daily consumption of flour is supposed to amount to about 1700 sacks. Cattle, sheep, &c., chiefly come from Normandy, the Isle of France, and Limousin. It appears, however, that, though, in 1826, the average consumption of each inhabitant was estimated at 53·4 kilogram, the allowance to each in 1836 amounted to only 59·4 kilogr., a result ascribable wholly, or almost wholly, to the increased price of butcher's meat, occasioned by the oppressive duties laid on foreign cattle when imported, and the inadequacy of the home supply. (See art. FRANCE.)

The following table, though not complete, gives a tolerable idea of the consumption of Paris in 1836.

Wines . . .	992,363 hect.	Sauzages,	
Spirits . . .	36,441 —	hams, &c.	3,301,518 kilog.
Older and		Cheese, dry	1,944,587 —
perry . . .	18,133 —	Grapes . . .	618,936 —
Vinegar . . .	17,541 —	Sea-fish . . .	4,771,263 fr. val.
Beer . . .	111,811 —	Oysters . . .	1,219,659 —
Oxen . . .	73,330 head.	Fresh-water	
Cows . . .	17,448 —	fish . . .	541,745 —
Calves . . .	77,563 —	Poultry and	
Sheep . . .	378,476 —	game . . .	8,367,376 —
Pigs . . .	91,939 —	Butter . . .	11,532,080 —
Pies and pre-		Eggs . . .	4,935,864 —
pared meats	210,773 kilog.	Hay . . .	7,842,323 bottles.
Meat, coarse	819,981 —	Straw . . .	11,959,813 —
Offal . . .	1,233,779 kilog.	Oats . . .	1,003,945 hect.

Among other articles of consumption, the tobacco sold in Paris during the same year amounted to 708,793 kilog. Fuel, which is here one of the most costly articles of domestic expenditure, consists principally of wood; but large quantities of coal and charcoal are also made use of.

Industry, Commerce, and Trade.—Paris, besides being the political cap. of France, is one of the chief seats of the national industry and commerce. Many branches of industry are conducted on an extensive scale; the advantages resulting from the greater subdivision of employment, the greater command of scientific assistance, and of skilled workmen, being more than sufficient to counterbalance the higher wages and heavier expenses in other respects attending their prosecution in so great a city. Still, however, it is ludicrous to suppose that a city like Paris, without coal, and without the command of water-power, should ever be able to come into successful competition with such places as Manchester, Glasgow, or Birmingham. The articles produced in Paris are, in fact, chiefly those of virtue, jewellery, the fine arts, or those immediately ministering to the luxurious wants of a great capital. In these, however, a great increase has taken place during the last 10 years; and in 1838 the prefect of the department estimated the

PARIS.

value of its manufactures exported to foreign countries at 80,000,000 francs, and of those sent into other parts of France at an equal sum. Two large manufacturing establishments belong to the government, and, like all similar establishments, are carried on at a heavy loss. One of these, the *Manufacture Royale des Gobelines*, so called from the place where it is carried on having originally belonged to a family of the name of Gobella, who amassed great wealth as dyers; but the property having changed hands, it was converted into an establishment for weaving tapestry; and, becoming celebrated for the beauty of its products, was purchased by Colbert for Louis XIV., in 1663, since which it has been a government monopoly. The pieces of tapestry are most exquisitely executed, and the effect of some of them is scarcely inferior to that of the best oil paintings. The manufacture of a single piece frequently occupies three or four years, costing from 15,000 to 18,000 francs. Some splendid carpets are likewise manufactured in this establishment. Its products are chiefly destined for the royal palaces and public buildings, or for presents by the king to other monarchs: a few of the inferior pieces of tapestry are allowed to be sold, but the sale of carpets is forbidden. A drawing school is attached to the manufacture, and lectures are annually delivered by the most celebrated chemists on the chemical principles of dyeing. The royal manufacture of tobacco is conducted on a very extensive scale, in a handsome modern house on the Quai des Invalides. The quantity of tobacco purchased by the government, in 1838, amounted to 5,885,000 kilograms, besides 135,000,000 cigars; and about one fifth part of the entire produce of tobacco in France is manufactured in this establishment. The royal manufacture of Sévres porcelain, though about 6 m. from Paris, and not in the department of the Seine, may be noticed in this place: it has been the property of the crown since 1759. Some of the articles furnished by this manufactory bring very high prices, and are esteemed alike for elegance of form, and the beauty and brilliancy of the paintings. An exhibition takes place in September, when there is an extensive show of foreign china and earthenware, as well as of specimens in different stages of progress. The *salo-dépôt*, in Paris, is in the Rue Rivoli. Among the other manufactures of the capital, jewellery, works in gold, silver, bronze, and steel, watch-making, the manufacture of chemical products, hats, carpets, artificial flowers, and the compounding of all kinds of bonbons and sweetmeats, furnish employment to a vast number of persons; besides which, Paris has 28 woollen factories, employing upward of 1200 hands, and producing broad-cloth, cashmere shawls, *schalies*, flannels, &c., one establishment for weaving silk shawls, and 24 factories for cotton or mixed goods of cotton and worsted. The manufacture of both silk and cotton stockings is likewise conducted on a most extensive scale. With respect to the wages of workmen in Paris, there has been a considerable fall since the revolution of 1830: stone-cutters, carpenters, masons, &c., receive from 3 to 4 francs a day, and a few of those engaged in the more delicate branches of handicraft may earn from 5 to 6 francs per the day of 19 hours. Those engaged in the cotton and woollen factories receive only about 1½ francs per diem, and work for 14 or 15 hours; and the wages of females, in whatever branch they are employed, scarcely exceeds that rate. Young women in shops receive their food, washing, and lodging, with wages varying from 160 to 400 francs a year. The expenses of living to these classes range between 17 and 28 sous a day, and lodging may cost about 100 francs a year. The Parisian workmen scarcely ever work on Sunday, and they are quite as fond as those of London of keeping holiday on Monday, devoting both these days to amusements in the guinguettes, theatres, &c. A great number of workmen belong to benefit societies, of which there are about 170; and the moral condition of the labouring classes has been greatly improved by the establishment of fire and life insurance companies, savings' banks, infant and primary schools, as well as by the abolition of lotteries and gambling-houses. In 1838, 30,697,988 francs were paid into the Paris Savings' bank, and 21,379,500 francs were taken out.

The export trade of Paris consists chiefly in the transmission to foreign countries of its different manufactures. The following is an official statement of the value of the exports from Paris from 1828 to 1837 inclusive:—

1828	66,979,467 fr.	1833	95,274,381 fr.
1829	64,737,731	1834	96,315,090
1830	64,321,108	1835	119,441,522
1831	68,758,574	1836	134,495,449
1832	66,911,055	1837	137,000,000

The retail trade of Paris is on a very extensive scale, and it is estimated that there are 6500 retailers of food and drink, that 3000 are employed in making and selling articles of dress or ornament, 3000 in building and furnishing houses, 850 in printing, publishing, and selling books, &c., 1570 in

trades connected with the fine arts, 350 in trades connected with mechanics, optics, &c., and about 650 in keeping hotels, restaurants, cafes, &c.; but these statements are all very vague, and not to be relied on. The tradesmen's licences, issued in Paris, during 1838, amounted to 73,891, including hawkers; and the returns to government from this source were estimated at 8,321,354 francs.

Paris has also 42 banking firms, 128 stock and insurance brokers, 1000 physicians and surgeons, 280 apothecaries, and about 400 persons keeping seminaries and pensions for children of both sexes.

Seine, Bridges, Quays, and Navigation.—Paris has not like London, a deep broad river, navigable to the city by sea-borne vessels of large burden; but the Seine is, notwithstanding, a striking feature in Paris on account of its bridges and quays, as well as advantageous from its extensive boat-navigation. It enters Paris from the E.S.E. about 3½ m. below its junction with the Marne, at Charenton, and in its course forms a slight curve northward, its whole length from the *Barrière de la Rapée* at the E. end, to the *Barrière de la Grenelle* at its W. extremity, being 8000 metres, or nearly 5 m., in which space it forms three islets, the smallest but highest up the stream being the *Isle Louviers*, used as a dépôt for wood-fuel, the isle of St. Louis, about 700 yards in length, and the isle du Palais, the site of the ancient *Lutetia*, about 5 furlongs in length, by 2 do. in breadth. The river is crossed by 94 bridges, of which five are on the suspension plan, three of iron and stone, one of wood, and the rest of stone. These structures, though usually on a level with the quays, and on the whole convenient, will not bear to be compared with the bridges of St. Trinité at Florence, or St. Angelo at Rome, much less with the noble bridges crossing the Thames. "The Parisians," says Mr. Woods, "boast of their bridges, but without great reason: the *Pont d'Austerlitz*, sometimes called *Pont du Jardin du Roi*, is fine for an iron bridge; the *Pont Neuf*, which crosses two branches of the Seine, and has 12 arches, has little pretension to beauty; the *Pont des Arts* is a light, not to say slight construction of iron, for foot passengers; the *Pont Royal* is a well constructed stone bridge of five arches, but hardly a handsome one; the *Pont de la Concorde* is a stone structure of five very ugly looking flat arches, and the *Pont de Jena* is a caricature of flattened elliptical arches, and apparent lightness, its entire merit being confined to some ingenuity in the construction in order to obtain this effect, which, nevertheless, is certainly a blemish." (*Letters of an Architect*, l. 22.) The islets in the river are connected with the N. and S. bank by 10 bridges, some of stone and others of wood, of inferior size and little beauty. The banks of the Seine are not blocked up, like those of the Thames, with coal-wharves, warehouses, and irregularly built houses, running close down to the water's edge, but have fine open quays, affording uninterrupted walks, extending on both sides the river from one end of the city to the other, Paris being in this respect greatly superior to London. Wharves and landing-places are formed in different parts, particularly towards the E. end of the city. *Dépôts*, for fire-wood are to be found along the river, and on all the outskirts of the town, and the boats along the wharves on both sides the isle du Palais furnish supplies of wood and charcoal. The navigation of the river is effected by large boats called *coches d'eau*, by barks, and within the last few years by steamers, the number of which is progressively increasing. From the higher parts of the river about 11,000 boats arrive every year with fruit, corn, and flour, hay, wine, paving-stones, bricks, &c., besides about 4000 barks laden with timber, charcoal, and fire-wood. Barges of from 40 to 60 tons burden come from Rouen with colonial produce, cotton goods, cider, salt, foreign corn, &c., and two steamboats ply daily between Rouen and Paris, and two others during summer between Paris and Montreuil. The river dries in light, and does not average more than 700,000 francs a year, exclusive of the octrois.

Canals and Railways.—The canal N. of the Seine consists of two or three branches, connected with an undertaking for uniting the waters of the Seine and Ourcq, with the view not only of making an inland navigation, but also of supplying the capital with water of better quality than that of the Seine. The canal de l'Ourcq receives the waters of the Ourcq about 28 m. N.E. Paris, and after collecting several minor streams, falls into a basin in the N.E. suburb of the city, from which branch several canals almost encircling the N. side of Paris. These canals, however, are less used for navigation than for supplying the city with water. Several railroads are in course of construction from Paris; those to St. Germain and Versailles are already open, are much frequented, and will, apparently, be profitable undertakings. The principal projected railways are intended to connect Paris with Orleans, and with Rouen and Havre. Other railways will, in all probability, be formed within a few years; and there is reason to hope that the country

PARIS.

may, at no distant period, possess some considerable portion of the facility and speed of communication which distinguish England and Belgium from the other countries of Europe.

Establishments for Education.—The university of Paris, which appears to have been established early in the 13th century, though some writers have traced its antiquity up to the time of Charlemagne, comprised, before the revolution of 1789, 10 great and 26 minor colleges, which had each faculties of divinity, law, physic, and arts. The professors appear to have been attached to colleges rather than to the university as an abstract body, and the number of students living in the colleges was very considerable. The income of the university arose out of a 28th part of the rent paid by the farmer-general of the royal posts and messageries, which, with the students' fees, made a large income; and the extensive buildings, still remaining, testify the importance once attached to these institutions, at the same time that the literary annals of France prove that, speaking generally, the various functionaries performed their duties pretty efficiently. At the revolution, however, the colleges were abolished, their estates confiscated, and the whole establishment was remodelled. Farther alterations were made by Napoleon: but the present system dates from the restoration of the Bourbons. The university of Paris, as now constituted, is in fact the central establishment for education in France, and has under its direction all the faculties, colleges, and schools of the country: Indeed, it may be considered as a mere government establishment, since the minister of public instruction, is *ex-officio* rector of the university, which has jurisdiction over the five royal and two private colleges of Paris, the royal college of Versailles, and all the *institutions* and *pensions* within certain limits. There are four faculties for higher degrees granted by the academic council; but no students can be admitted to them without having previously taken the degree of bachelor of letters. Professors are attached to each faculty, and deliver gratuitous courses of lectures, a certain attendance on which, as well as other exercises, is necessary for obtaining degrees. Candidates for the degree of bachelor of letters must produce certificates of having studied at least one year in one of the colleges of the university, in some authorised *institution*, or under the charge of a regular tutor. Examinations are publicly held four times a year under four professors appointed by the academic council: they include numerous oral questions on philosophy, literature, history, and the elements of mathematics, with papers for written composition and the translation of Greek and Latin authors. The examination of each candidate must last 14 hours, but may be protracted at the pleasure of the professors. All the higher degrees are granted only after severe trials, and numerous candidates are annually rejected. The number of regularly-entered students in law is about 3300, and in medicine 2300. There are seven colleges in Paris, all of which have a certain number of attached bursaries, and receive boarders as well as day-pupils. The following table exhibits the numbers and classes of the students in the different colleges in 1840-41.

Colleges.	Bursars.	Free-boarders.	Out-door Pupils.	Total.
Collège Louis le Grand	92	451	563	1,076
— de Henri IV.	95	408	326	820
— de St. Louis	91	214	576	431
— de Charlemagne	none	—	738	738
— de Bourbon	none	—	882	882
— Stanislas	20	111	44	275
— Rollin	47	342	—	389
Total	315	1,526	3,267	5,215

At the end of each academical year, in August, a grand distribution of prizes takes place in the public hall of the Sorbonne to the most deserving pupils of these colleges, and the degree of emulation thus excited among more than 5000 students is immense. The minister of public instruction presides at this ceremony, the professors deliver Latin orations, and the company comprises the most distinguished functionaries and literati of France.

Paris, besides its colleges, has 28 *institutions* and 93 *pensions* for boys, with 32 institutions and 48 pensions for girls. These are similar in all respects, except in size; the institutions being on a larger scale, and the course of study more general and more advanced in them than in the pensions. The conductors of these establishments must be at least graduates of letters, and are bound by law not only to follow a course of study prescribed by the university, but to send their pupils daily to one of the royal colleges in order to attend the professors' lectures. It is their duty, also, to assist them in their studies, and prepare them for the lessons to be gone through in the public class-rooms of the college. All the permanent students of the colleges wear a military-looking uniform, and are summoned to their duties by beat of drum. There are no colleges for

girls, and their education varies according to the system followed in each particular establishment; the mistresses, however, of the different schools are obliged to pass an examination before persons authorised by the university. (See a valuable paper on the *Present State of superior Education in Paris*, in the *Statistical Journal of London*, iv., 50-66.)

Among the other establishments for education, the highest is the college of France, founded by Francis I. in 1530, and augmented at different periods. It consists of professors only, called *lecteurs du Roi*, among which are Biot, Thénard, Elie de Beaumont, Michelet, Lacroix, Jaubert, St. Hilaire, Chevallier, and other distinguished scholars and men of science. All their lectures are gratuitous, and open to every body. The museum of natural history, in the *Jardin des Plantes*, has likewise an attached corps of 13 professors, who deliver courses of lectures on different departments of natural history, chemistry, agriculture, &c. These lectures are, also, perfectly open and gratuitous, as are those delivered on Oriental literature at the *Bibliothèque du Roi*; on painting, sculpture, &c., at the royal school of fine arts; and on various branches of practical science at the *Conservatoire des Arts des Météores*. One of the best of the educational institutions to which the revolution gave rise is the *Ecole Polytechnique*, established in 1794-95, for the promotion of mathematical and physical science and the graphic arts, and the preparation of pupils for the artillery, engineering, and mining departments. The school is under the control of the minister of war; but the details of management and instruction are left to a general council. The most distinguished masters in every branch of science are hired by government; and no students are admitted without having previously undergone an examination, to prove their competency in the classics and elementary mathematics. The pupils, of whom there are about 300, study two, sometimes three years; and no one can enter the higher departments of the military service without a certificate of attendance at this establishment. The present king has founded 24 scholarships, twelve of which are in the gift of the minister of war, eight of the minister of the interior, and four of the minister of marine. The establishment is supported by government; but the pupils pay an annual sum for board and lodging. The mathematical education at this institution is excellent, much superior indeed to what it is in most other institutions of the same kind. Another seminary of great importance, and closely connected with Paris, though not within the capital, is the *Maison Royale* of St. Denis, established by Napoleon, and furnishing an excellent education to between 600 and 700 young ladies, the daughters, sisters, and nieces of members of the legion of honour; of whom 400 receive their instruction gratuitously. This institution is in every respect admirably conducted, and might serve as a model for a large college of females; it has, also, two succursal houses, in which 400 pupils are gratuitously instructed. There are also several normal schools, with lectures, &c., for the purpose of forming teachers in the primary schools. The adult primary schools in the department of the Seine are attended by about 8500 pupils; and the primary schools for children were attended, in 1838, by 12,650 boys, and 11,250 girls; the expense of these establishments being estimated at more than half a million francs a year. There are at present, also, between twenty and thirty infant schools in Paris, supported by subscription, and attended by about 5000 children.

Literary Institutions.—Among the many chartered and private literary societies of Paris, the highest place is due to the Institute, unquestionably the first establishment of the kind in Europe. A decree of the convention, in 1793, annihilated the old *académies*, including among others, the *Académie des Inscriptions et des Belles Lettres*, the most celebrated academical institution that ever existed. In 1795, however, the *Institute* was formed, in the view of combining the literary and scientific academies into one body. In 1803, Napoleon divided the Institute into four classes; and in 1832, a fifth was formed of moral and political science. The titular members, of whom there are 217, receive pensions from government, ranging between 1800 and 1500 francs a year, besides whom there are 45 free academicians, 31 associates, and 219 corresponding members. The magnificent building in which this learned body meets is on the Quai Conti, near the Pont Neuf: it was built at the close of the 17th century, after the designs of Leveau, at an expense of 2,000,000 francs, left by Cardinal Mazarin, who intended it should be a college for natives of four provinces then recently annexed to the crown of France. The principal room of the palace (formerly used as a church) is now appropriated to the sittings of the different classes, and fitted up with benches forming a semicircle facing the president's chair. The Mazarine library comprises 160,000 printed vols., with 4500 MSS.; and the more recently formed library of the Institute has upwards of 100,000 vols., chiefly scientific works. At one end of this library is Pigalle's celebrated marble

PARIS.

statue of Voltaire. The interior is adorned with busts, bas-reliefs, &c.; and this palace is, on the whole, one of the finest public edifices in Paris. The *Bureau des Longitudes* is another important public body, formed in 1795, for the discovery of the best methods of ascertaining the longitude, and for the general improvement of navigation: its meetings are held at the Observatory (near the *Barrière d'Arceuil*), a building well suited for astronomical observations, and furnished with every description of philosophical instruments, and a good library of scientific works. The bureau produces annually the celestial almanack, called the *Connaissance des Temps*, for the use of navigators; and another work of a more general character, the *Annaire du Bureau des Longitudes*. The Royal Academy of Medicine, formed in 1776, and restored in 1820, is charged with making reports to government on all matters of public health: this establishment, as definitively organized in 1835, consists of 175 resident, and 25 country members, with 23 foreign associates. The following are among the principal learned societies of Paris supported by private subscription:—

Libraries, Museums, and Picture Galleries.—By far the most celebrated library of Paris, and probably the largest and most valuable that any where exists, is the *Bibliothèque du Roi*, or royal library. This vast collection of books is deposited in the old Hôtel de Nevers, a long, inelegant-looking edifice in the Rue Richelieu. It was begun in the middle of the 16th century; and at the death of Louis XIV. it had 70,000 vols.: it was afterwards greatly increased by the addition of MSS. and printed books from the suppressed convents; and it is said to comprise at present about 700,000 books and pamphlets, 80,000 MSS., 100,000 medals, 1,600,000 engravings, and 300,000 maps or plans; though there is reason to think that these numbers are in some measure, considerably overrated. It is open from ten to three daily (except Sundays, and during a recess of six weeks in September and October), and every facility is given for literary research, except that the books may not be removed from the building. Among the libraries attached to public establishments, the following are the largest:—That of St. Geneviève, comprising 200,000 printed vols. and 30,000 MSS.; the two libraries of the Institute, consisting together of 900,000 vols. and 4500 MSS.; that of the Arsenal 190,000 vols. and 6300 MSS.; that of the chamber of deputies (50,000 vols.); and that of the Bibliothèque de la Ville (30,000), all open to the public. Paris has also several valuable museums, belonging either to the government or the university. The museum of natural history, in the *Jardin des Plantes*, may be said to stand at the head of every institution of the kind, not only in France, but elsewhere; it is conducted at an annual expense of 300,000 francs, and gives employment to 160 persons. The botanic garden, exclusive of a large collection of exotic plants from all climates, comprises buildings fitted up as dens for carnivorous animals, with menageries for foreign birds and beasts, which are all provided with habitations suitable to their modes of life. This collection of living animals, perhaps the largest in Europe, has enriched the museum with many new species, and enabled zoologists to improve the study of comparative physiology. Large additions to the *menagerie* have recently been made, and the collection is constantly on the increase. The amphitheatre of anatomy and museum of natural history occupy a large space at the end of the garden: on the first floor of the latter is a superb collection of reptiles and birds; the second floor is devoted to the reception of mammalia, birds, insects, mollusca, &c., arranged according to the system of Cuvier (who here pursued those studies that have gained him an imperishable fame); and on the third story is arranged a general herbal, comprising upwards of 50,000 species, besides special collections amassed by Tournefort, Jussieu, Humboldt, Decandolle, &c., the entire number of specimens amounting to nearly 400,000. Along the E. side of the garden runs a long gallery, in which is deposited a noble museum of geology and mineralogy, only recently formed, and even now second to none in Europe. The museum of comparative anatomy is kept in a detached building W. of the garden; and the number of preparations, which fill 15 rooms, considerably exceeds 15,000. The menagerie is open every day; and the museums may be seen by tickets twice, or three times a week. Paris has many

minor collections of anatomy, mineralogy, &c., attached to the school of medicine, and to its numerous literary societies; but none of them are sufficiently extensive to require description. The *Conservatoire des Arts et des Métiers*, in the Rue St. Martin, deserves notice, both on account of its great extent and the astonishing variety of instruments and machines, specimens of manufacture, models of patents, &c., deposited therein; in fact, this gallery of practical science is one of the most interesting exhibitions in Paris; and having been re-arranged and newly catalogued, may now be seen to great advantage. It is open during two days in the week; but the library is accessible seven or eight hours a day.

The great glory of Paris, however, as respects the fine arts, is the gallery of the Louvre, comprising a most extensive and valuable collection of pictures and statues. During the latter years of the reign of Napoleon, this gallery was the richest and most magnificent by far of any that has ever existed, having then to boast of the *chef-d'œuvre* of Rome, Florence, and, in fact, of the greater part of continental Europe, carried off by the conquering legions of France. But victory having deserted the eagles of Napoleon, these treasures were again restored to their former possessors, and the Louvre has no longer to glory in the Apollo Belvidere, the Venus de Medici, and other matchless productions. Still, however, the collection is a very noble one. Eighteen large halls, on the ground-floor, are filled with pieces of sculpture, including the choicest treasures of the Villa-Borghese, and many works that once embellished ancient Rome. Many of them are of great value, especially the *Diane à la Biche*, standing on a pedestal adorned with most exquisite bas-reliefs; a statue of Mars, supposed to have been modelled from a picture by Zeuxis, once in the temple of Concord, at Rome; the celebrated Fighting Gladiator, by Agias of Ephesus; the Hermaprodite of the Villa-Borghese, a statue of Jason, erroneously called Cincinnatus; and the magnificent group of Silenus and the Infant Bacchus discovered in the garden of Sallust at Pompeii. Five other rooms in the basement story are devoted to the reception of works by modern sculptors; a large apartment was filled in 1830 with a collection of Egyptian antiquities, and a large gallery has since been opened, called the *Musée de la Marine*, comprising models and sections of vessels, plans of ports, and other naval curiosities. The great picture gallery, which is on the first floor, is approached by a grand staircase painted by native artists, and comprises a suit of nine apartments, the walls of which are lined by upwards of 1900 pictures by artists belonging to the French, Flemish and Dutch, Italian and Spanish schools. Among the pictures of the French school are 15 admirable landscapes by Claude, the best of which is the well known "Disembarkation of Cleopatra;" 16 compositions, chiefly scriptural, by N. Poussin, among which may be distinguished an "Assumption" and "Holy Family," and 17 beautifully coloured marine paintings by Verneet. Among the Flemish and Dutch pictures, which, like those of the French school, occupy three apartments, the most distinguished specimens are "Gerard Dow's Dropsical Woman;" several pictures by the Vandycks, particularly a sketch of the "Dead Saviour in the Virgin's arms;" 14 fine studies by Rembrandt, including his "Venus and Cupid;" and 38 pictures by Rubens, the principal of which are the "Flight into Egypt;" and a composition known to connoisseurs as the *Virgo aux Anges*. The schools of Italy and Spain occupy the three remaining apartments, which, indeed, contain the gems of the gallery. The following have been specified as those more particularly entitled to notice.—Raphael's "*Belle Jardinière*," and "Holy Family," painted for Francis I., who paid for it upwards of 45,000 francs; Leonardo da Vinci's portrait of "Monalisa;" Correggio's group of "Jupiter and Antiope;" Domenichino's "*St. Cecilia*;" Guido's "Infant Saviour on the Virgin's knee;" Guercino's "Repentance of St. Peter;" a magnificent battle-piece, and the "Witch of Endor," by Salvator Rosa; Murillo's "Infant Jesus;" and Epesagoletto's "Adoration of the Shepherds."

The Louvre is open every day except Mondays, and on Sundays the concourse of visitors is particularly great. Owing to the want of room, the pictures of the ancient masters are removed from the grand gallery, or are covered over, from the 1st of February to June, to make way for the annual exhibition of the works of the modern artists! This arrangement has been much objected to, and is, perhaps the most defective of any connected with the fine arts in Paris. It is to be hoped that it may speedily be obviated, by providing some other place for the modern exhibition. The French metropolis comprises several valuable private collections, especially that of Marshal Soult, which has some fine specimens of the Spanish school: the gallery of the Palais Royal consists chiefly of works by modern artists.

Literature and Periodical Press.—Paris is the great centre from which emanate all the most important publications

* Those marked with an asterisk publish memoirs and bulletins of their proceedings.

PARIS.

of France, and in which is congregated all the most distinguished French writers. The increase of publications appears to have been regularly progressive from 1817. And within the last 30 years a great number of highly important and valuable new works, especially in history, philosophy, and science, have issued from the French press, as well as several republications of old standard works. These large undertakings are mostly conducted at the expense and risk, not of one, but of several publishers, on a joint stock principle. The periodical press of Paris is well conducted, and has great influence. In 1838, 947 periodical works were published, exclusive of 66 political papers. The principal magazines are the *Revue de Paris* (which appears weekly), and the *Revue des Deux Mondes*, *Revue du Nord*, and *Revue Britannique*, published monthly.

The following table exhibits the circulation, in 1838, of the nine principal newspapers of Paris:—

La Siècle	11,667
La Presse	9,700
La Constitution	5,653
Le Moniteur Parisien	5,300
La Gazette de France	5,006
Le Quotidienne	3,333
Le National	3,333
Le Journal des Débats	3,166
Le Journal du Commerce	3,100

The sale, however, of the "Presse" and "Constitutionnel," has considerably diminished since this return. The "Moniteur Universel" is the official morning journal of the government. "Galignani's Messenger," a well conducted daily paper, in English, is extensively circulated in the principal cities and towns of continental Europe. The royal printing-office of Paris employs about 400 workmen. The censorship of the press, which was early introduced, and was exercised, though with considerable indulgence, down to the revolution of 1789, was finally abolished after the revolution of 1830.

Theatres and other Amusements.—Paris may be regarded as the dramatic capital of Europe. Every Parisian, even of the lowest class, esteems himself, more or less, a critic of the drama; and the fondness for this species of entertainments makes the 14 theatres be almost nightly crowded to excess: indeed, the receipts of the theatres have for some years been steadily on the increase, and amount at present to nearly 9,000,000 francs a year, of which a tenth goes to the support of public hospitals and charities. The most fashionable spectacles of Paris are the Italian and French operas. The former of these (which has been held in the Opéra since the destruction by fire of the old Salle Favart, but will soon be removed to the Théâtre de la Renaissance) is strictly confined to the representation of Italian operas, and its administration for many years has secured an almost unprecedented amount of vocal and instrumental talent. The French opera house, belonging to the *Académie Royale de Musique*, is partly supported by the government; the operas are represented by the pupils of the academy, the dancers in the ballet are the first in Europe, and the stage mechanism is brought to matchless perfection. These theatres are supported chiefly by the higher classes, and as fashionable resorts may be considered analogous to the Italian opera in London. The other theatres, five or six of which are nightly crowded almost to suffocation, are supported by the middle classes, the small *rentiers*, and wealthy tradespeople. Vaudevilles and musical farces are the most popular entertainments; but among the lower classes frequenting the Porte St. Martin and Ambigu Comique, there is a marked predilection for the horrible, as depicted by Victor Hugo, Dumas, &c. The following is a list of the theatres now open in Paris, with the amount of accommodation in each:—

Académie Royale de Musique	1,940	Théâtre du Palais Royal	930
Opéra (Ital. Opera)	1,600	Théâtre de la Porte St. Martin	1,800
Théâtre Français	1,590	Théâtre Gaîté	1,800
— de l'Opéra Comique	1,900	— des Folies Dramatiques	1,400
Théâtre des Variétés	1,940	Théâtre de la Porte St. Antoine	1,920
— de la Renaissance	1,800	Gymnase Dramatique	1,300
Théâtre de l'Ambigu Comique	1,900	Cirque Olympique, (for horsemanship)	1,800

The theatres, however, are by no means the only amusement of the Parisians; for they seem to be equally attached to their concerts, balls, and guinguettes, which abound in every part of the French metropolis. The concerts Musard are in high estimation, and those of Strauss in the *Jardin Turc*, near the Porte St. Martin, are almost equally celebrated. The *Bal masqué* of the opera deserves notice also, as being the nearest approach made by the French to the almost insane revelries of an Italian carnival.

Hotels, Clubs, &c.—Paris abounds with excellent hotels, cafés, and restaurants; about a dozen of which may vie in respectability and amount of accommodation with similar establishments in the W. end of London. They are uniformly clean, and in many cases elegantly furnished. "Indeed," says Mr. MacLaren, "in the interior of these establishments, two peculiarities immediately strike the eye of a stranger—the profuse use of mirrors and marble. Many apartments are furnished with three or four mirrors of very large size; and you will see a restaurant panelled all round with mirrors, each 3 or 4 ft. broad. The tables in these places are almost invariably slabs of marble, and the tops of cabinets and even basin-stands are of the same substance. In the cafés here, also, there are no fires visible, as in the London coffee-houses; but the stoves are so managed as always to maintain an agreeable warmth throughout the apartments. (Notes, p. 14 and 30.) The restaurants, or dining-rooms, are frequented by all classes of the inhabitants, female as well as male. In fact, however, it may be accounted for, whether it have originated in its greater advantageousness in an economical point of view, in the taste of the people for society, or whatever else, home, in the English sense of the word, has but few charms for the bulk of the Parisians, who may be said to live in public, dining in restaurants, spending their evenings on the Boulevards, or in the theatres or cafés, and, appropriately it must be allowed, ending their days in the public hospitals! At the principal restaurants (such as Verry's, Véfour's, the Frères Provençaux, and the Rocher de Cancale) the bills of fare include hundreds of dishes, and the charges are necessarily high; but at many houses of great respectability diners may be had for two or three francs, including half a bottle of *vin ordinaire*. Beausé and Pomard, however, are the wines commonly drunk by persons in good circumstances. The houses of the *traiteurs* are frequented almost exclusively by the tradespeople and lower classes; but they also supply diners to people at their own houses at a fixed price for each dish. Clubs, similar to those of London, have been established within the last few years; the largest and most respectable is the Club Anglais, the habitual resort of the leading men in the fashionable and diplomatic circles. The Jockey Club is frequented by sporting men, and a still more heterogeneous assemblage may be found at the Cercle. It may be remarked, also, that these clubs have been much more numerously attended since the suppression of the salons and other licensed gambling-houses, which till very recently infested the metropolis of France.

Local Government.—Paris, with its environs, forms the small department of the Seine, of which the form is nearly circular, and the diameter about 15 m. At the head of it is a prefect, under whom are twelve mayors, one for each of the twelve divisions of the town, and two sub-prefects for the country quarter. As to the administration of justice, the courts of Paris are less comprehensive than those of London, their jurisdiction comprising only the capital and seven adjoining depts.: but in all other respects Paris is as much the common centre of public business for France, as London is for England. The court of cassation is the supreme court of appeal from all the tribunals of France, and the *Cour des Comptes* has authority to examine all the public accounts of the kingdom. The *Cour Royale* confines itself to the trial of criminals in the dep. of the Seine; besides which there is tribunal de *premiers instances*. Paris is likewise the permanent residence of the sovereign and royal family; the place of meeting for the legislature; the seat of all the ministerial bureaux, and of the public offices generally. It is the seat of an archbishop, and the headquarters both of the royal guards and of the first of the twenty-two great military divisions of France. It has also a numerous corps of national guards, or volunteers, composed of twelve legions, comprising about 30,000 men. For mercantile purposes it has a chamber and several courts of commerce. Finally, it is the centre of almost all associations for public purposes, such as those for the promotion of national industry, for the management of prisons, for the diffusion of vaccine inoculation, &c. As already stated, Paris sends 19 deputies to the chamber of deputies, one for each arrondissement. Total number of electors, in 1838–39, 16,871.

Population, Health, &c.—In 1838, when the population amounted, excl. troops and foreigners, to 909,196, there were 23,949 births and 24,057 deaths, showing an increase during the year of 1-180th part of the gross population. Of the births, 14,645 were males and 12,043 females: the illegitimate being, in the same year, to the legitimate births as one to three, while the average throughout France is as one to 13. This gives but an indifferent view of the morality of the French capital; but it is favourable compared with the fact, that of the whole number of children born, 4792 were abandoned by their parents, and sent to the Foundling Hospital! We are glad, however, to have to state, that the admissions to this hospital have been of late years progressive—

PARIS.

ly diminishing; and that, in this respect, there has been a material improvement. Of the children produced in 1836, no fewer than 4773 were born in hospitals, and these, of course, were mostly abandoned. Of the deaths in 1836, 9060, or between $\frac{1}{2}$ and $\frac{3}{4}$ of the whole, took place in the public hospitals, 64 in prisons, and 389 were found dead, and deposited in the Morgue, or public dead-house, in the late de la Cité. The suicides in Paris, during the last 15 years, have averaged about 240 a year, or about one in 93 of the deaths during that period, a proportion about double that of London. The most densely peopled arrondissements are the 2d, 8th, and 13th; those most thinly peopled being the 4th and 9th. Of the entire population of the city it is supposed that nearly a half are working people, the rest being composed of tradesmen, professional men, and persons of independent property. There are about 80,000 servants, and nearly the same number of paupers; but the latter have been gradually on the decrease for some years.

Nearly 15,000 patients are constantly in the hospitals, and about 60,000 pass through them annually, of whom about 4-5ths are discharged cured. The foundlings may average about 30,000; and about the same number of aged and infirm persons are supported by public charity. The population of the prisons is very fluctuating, but may be taken at about 4000 at an average. The climate of Paris is not so variable as that of London, but the winters are sometimes very severe; snow does not lie long, fogs are not frequent, and on the whole the climate is favourable. There has been a great improvement in the health of the inhabitants since the revolution, though it be far short of the improvement that has taken place in London during the same period. As was to be expected, the least densely peopled arrondissements, and those occupied by the wealthier classes, are far the healthiest.

Fortifications.—During the course of the present year (1841), it has been, after much opposition, determined to fortify Paris, by surrounding it on all sides with a continuous chain of fortifications. The sum of 140 millions francs (£5,600,000) has been voted for the execution of the works, which have been already commenced. We believe, however, that most military men are of opinion that the fortifications in question will not oppose any effectual resistance to an invading army; and that it is, in fact, impossible successfully to defend so great a city. It is true, the fortifications may be serviceable as a means of overawing the Parisians; and it has been suspected that this has been with many the real motive that made them approve of their construction.

History.—When Gaul was invaded by Cæsar, Paris, then called *Lutetia*, was the chief town of the Parisii, a Belgic tribe, and was afterwards included by Augustus in the province of *Legionensis quarta* or *Senonia*. It attained no importance, however, till the middle of the 4th century, when it took the name of *Parisii*, and became the see of an archbishop.

It was the favourite residence of the Emperor Julian, who, in his *Misopogon*, terms it his *αἰὲλ Ἀκρόπολις*; being taken by the Franks, under Clovis, in 486, it became the capital of his new kingdom. As late as the close of the 9th century, the walled part of Paris was still limited to the island of la Cité, though considerable suburbs were extending themselves along both banks of the Seine. It was greatly enlarged by Louis VI. and VII.; still more so by Philip Augustus; and after the battle of Poitiers, in 1356, new walls were raised on the N. side of the Seine. The treaty of Troyes, in 1430, gave Paris into the hands of the English, who held it till 1436, when it was recaptured by the French, and the English garrison put to the sword. The population of Paris, in the 15th century, is estimated by Dulaure at 150,000, and great architectural improvements had been gradually taking place; but the police was so bad, that both life and property were insecure, and morals were almost at their lowest possible ebb. The city was farther improved by Francis I., and the circuit of the walls was greatly enlarged by Charles IX. and Henry IV., under whose reigns the entire suburb of St. Germain was rebuilt. In the religious wars of the 16th century, Paris was the scene of a revolt against the troops of Henry III., known as "the day of the barricades." It was held by the Leaguers, from 1585 to 1594, when it surrendered to Henry IV. The palace of the Luxembourg and the Palais Royal were built in the reign of Louis XIII., and the walls were so extended as to include nearly the whole space within the present boulevards; but the police was still wretchedly inefficient, and disorders were of almost daily occurrence, particularly in the turbulent quarter of the university. In the 17th century, Paris was the principal scene of the tumults of the *Frondeurs*, supported by the inhabitants, against the French and Swiss guards; but notwithstanding these disturbances, the city still increased, churches, convents, and hospitals were built, the palace of the Tuileries was finished, the quays and boulevards were laid out, sewers formed, and other improvements effected at a great expense. The most

PARMA (DUCHY OF).

memorable scenes connected with the history of the French revolution, from the destruction of the Bastille, in 1793, to the assumption of imperial power by Napoleon, were enacted in the metropolis, which has long had a preponderating, though not always a beneficial influence, over the affairs of the kingdom. Under the government of Napoleon, Paris was greatly improved, and many of those scientific and other establishments were either formed or remodelled, which have contributed to increase its literary and scientific renown. The work of improvement proceeded slowly during the reign of Louis XVIII. and Charles X.; but since the revolution of 1830, which placed the Duke of Orleans on the throne, great activity has been evinced by the legislature in raising solid as well as splendid monuments, some of which, as the Madeleine, the Arc de l'Étoile, and the ministerial hotel on the Quai d'Orsay, may vie in magnificence with the finest European structures. At the same time, new pavements, bridges, sewers, markets, the metropolises, and prisons, attest that no department of the metropolis is neglected by the government; and whenever gas is generally introduced, and water more generally diffused in private houses, Paris will be one of the most comfortable as well as handsome and most luxurious capitals of Europe. (*Dulaure, Histoire de Paris; Paris and its Historical Scenery*, l.; *Metropolitan Magazine*, 1837; *Galignani's New Paris Guide; Pianta's Picture of Paris; Dictionnaire de la Conversation et de la Lecture*, art. *Paris*, and *Private Information*.)

PARIS, p. l., capital of Oxford co., Me., 39 m. W. by S. Augusta, 593 W. Watered by Little Androscoggin river, which affords water-power. It has a courthouse, jail, 10 stores, one woolen factory, three grist-mills, three saw-mills, one paper-mill, four tanneries, one printing-office, one weekly newspaper; 170 schools, 1060 scholars. Pop. 9454.

PARIS, p. l., Oneida co., N. Y., 8 m. S. Utica, 96 m. W. N. W. Albany, 378 W. Drained by Sadusaga river. It contains five churches, two Presbyterian, an Episcopal, Methodist, and Baptist, seven stores, two fulling-mills, 19 saw-mills, two paper-mills, two tanneries, two distilleries; one academy, 47 students; 15 schools, 864 scholars. Pop. 3644.

PARIS, p. v., capital of Barry co., Tenn., 98 m. W. Nashville, 784 W. Situated on Holly fork of Little Sandy river, and contains a courthouse, jail, two churches, an academy, 10 stores, various mechanic shops, and about 900 inhabitants.

PARIS, p. v., capital of Bourbon co., Ky., 36 m. E. Frankfort, 507 W. Situated on the S. fork of Licking river, and contains a courthouse, jail, two churches, 10 stores; three academies, 110 students, two schools; 28 scholars. Pop. 1197.

PARIS, t., Stark t. and co., O. Drained by Sandy creek. Pop. 9474.

PARIS, p. v., capital of Edgar co., Ill., 114 m. E. Springfield, 685 W. It contains a brick courthouse, nine stores, 60 dwellings, and about 350 inhabitants.

PARIS, p. l., Oswego co., N. Y., 22 m. E. Oswego, 147 m. W. N. W. Albany, 376 W. Drained by Salmon creek. It contains a church, two stores, one fulling-mill, one grist-mill, four saw-mills; 16 schools, 404 scholars. Pop. 1543.

PARISHVILLE, p. l., St. Lawrence co., N. Y., 15 m. E. Canton, 931 m. N. W. by N., Albany, 595 W. Watered by St. Regis, Racket, and Oswegatchie rivers. It contains two churches, a Congregational and Baptist, five stores, one furnace, one forge, one grist-mill, six saw-mills, one tannery, one distillery; 15 schools, 800 scholars. Pop. 2250.

PARKERSBURG, p. v., capital of Wood co., Va., 335 m. N. W. by W. Richmond, 303 W. Situated on the N. side of Little Kanawha river, at its junction with Ohio river. It contains a courthouse and 10 stores.

PARKE, county, Ia. Situated in the W. part of the state, and contains 450 sq. m. Drained by Big and Little Racoon, and Sugar creeks, tributaries of Wabash river. It contained in 1840, 14,355 neat cattle, 18,356 sheep, 43,136 swine; and produced 107,188 bushels of wheat, 4025 of rye, 942,850 of Indian corn, 137,140 of oats, 93,067 of potatoes, 15,150 pounds of tobacco, 125,576 of sugar. It had 59 stores, one furnace, two fulling-mills, nine flouring-mills, 36 grist-mills, 44 saw-mills, four oil-mills, 11 tanneries, 21 distilleries, one pottery, one printing-office, one weekly newspaper; two academies, 150 students; 54 schools, 1841 scholars. Pop. 13,449. Capital, Rockville.

PARKMAN, p. t., Piscataquis co., Me., 71 m. N. by E. Augusta, 666 W. Incorporated in 1832. It has three stores, one grist-mill, three saw-mills; 13 schools, 546 scholars. Pop. 1905.

PAREMAN, p. t., Geauga co., O., 169 N. E. Columbus, 321 W. Drained by head waters of Grand river. It has four saw-mills; one academy, 18 students, three schools, 132 scholars. Pop. 1181.

PARMA (DUCHY OF), and indep. state of N. Italy, between lat. 44° 30' and 45° 8' N., and long. 9° 30' and 10° 30'

PARMA.

THE (exc. the detached distr. Guastalla), having N. Austrian Italy, from which it is separated by the Po, W. the Saraceni dom. S. the latter and Tuscan Lunigiana, and E. Modena. Area estimated at 9083 sq. m. Pop. in 1833, 465,673. This duchy, lying between the Po on the N., and the Apennines on the S., is partly and principally included in the great plain of Lombardy; but a large portion of its surface is covered with the ramifications and slope of the Apennines, the crest of the ridge, here about 4000 feet in height, forming its S. boundary. It slopes to the N., and all its rivers fall into the Po. The soil, which is very fertile in the plain, where it is watered by numerous canals, is stony and arid in the mountainous districts. It is principally held by metayers; but while in the surrounding states such agreements are entered into between the metayer and his landlord as they may approve, in this duchy the law interposes to protect the tenant, who might be inclined to subscribe to peculiarly onerous conditions. Thus, a landlord may stipulate for more than half, but not for more than 2-3ds of the produce. If the landlord furnish the cattle, the farmer has a right to, at least, 1-3d of the profit thence arising; and if the tenant furnish the cattle, no lease is binding that does leave him 2-3ds the produce. (*Von Rasmer, Italy*, i., 307, 308.) Along the Po, the farther we advance to the E., the soil becomes deeper, richer, better watered, and more fertile. The dairy is here the great object of attention, and the famous cheese which derives its name from this duchy, is still made to a great extent in the neighbourhood of Pavia, Lodi, &c. Farms are very small, and the husbandry inferior to that of Modena. (*See ITALY (AUSTRIAN)* and 59.)

The acorns of the numerous oaks, along the banks of the Po, feed an immense number of hogs, which are generally preferred to those of any other part of Italy; in consequence many are sent to Tuscany and the Papal states, whither, also, and to Genoa, great numbers of fat oxen are sent. The sheep of the duchy are indifferent: the superior flocks pastured in the Parmese Apennines in summer, belong to Lombardy, Tuscany, and other adjacent states. Both poultry and bees are abundant. Maize, wheat, beans, tobacco, fruit, and wine, are the principal products of the plain country. The only raw materials manufactured are silk and hemp; but according to Serriotti, the produce of the former only amounts to 100,000 lbs. a year. Rice is grown in the district of Guastalla, and near Parma. In the mountains but little corn is grown; and the climate is too cold for the vine. Chestnuts and skimmed milk, with cheese made from the milk of goats and ewes, form the principal food of the population. Potatoes were not introduced into the mountain districts when the duchy was visited by Châteauneux. The inhabitants of these districts make a good deal of charcoal; but their principal revenue is derived from their migrations: for all the active inhabitants quit their homes at the favourable season, to work in Lombardy and Tuscany. The money they gain and save from this source forms almost all the capital circulating among them. (*Châteauneux's Italy and its Agricul. Trans.*, p. 55.)

Iron, copper, vitriol, and petroleum, are found in the mountains; but the principal mineral product is salt, of which about 12,300 quintals are made annually. Manufactures, excepting such as are domestic, are of trifling importance; silk fabrics are the principal, and are made in all the larger towns. There are several iron forges; and hats, glass, earthenware, paper, and gunpowder are made in Parma, Piacenza, and San Donnino. The value of the imports, which consist mostly of woollen and linen cloths, colonial goods, and articles of luxury, is estimated at 748,000 *lire*; while the value of the exports, including 8000 head of cattle, and 27,000 hogs, is estimated at only 168,500 *lire* a year. (*Serriotti, Statist.*) But it is hardly necessary to say that there can, in fact, be no such discrepancy between them; and either the one statement or the other, or perhaps both, must be completely erroneous. Except the Po, there is no navigable river, nor is there any canal, except for irrigation, within this duchy.

The government is an unlimited monarchy, hereditary in the male line, but at present vested in a female, this duchy having been assigned, by the treaty of Vienna, to the Archduchess Maria Louisa, ex-empress of France. At her death, however, it will fall, under the existing arrangements, to the Duke of Lucre, or his heirs. The administration is conducted by a cabinet of six ministers. The duchy is divided into five districts: chief towns, Parma, the capital, Piacenza, Borgo San Donnino, Borgo Taro, and Guastalla. There are 38 inferior courts of arbitration, consisting of a single judge, and courts of primary jurisdiction and appeal in Parma and Piacenza. Criminal trials take place in public, but without the intervention of a jury; the judges composing the court decide by a majority of votes. The code of Parma, promulgated since 1800, is bottomed upon the Code Napoleon, but has much that is peculiar to itself. Secret societies are prohibited, and associations for definite objects, if consisting of

more than 30 members, require to be authorized by government. All games of chance are prohibited, under penalty of fine and imprisonment. Public provision is made for the poor; and beggars are either punished with imprisonment, or sent to a workhouse. If death ensue from a duel, the challenger is liable to imprisonment for from 10 to 20 years, and the challenged from 3 to 10. (*Von Rasmer*, i., 314-316.) The Roman Catholic is the state religion; but others are tolerated. Public instruction is furnished by about 380 elementary schools, attended by nearly 10,000 pupils; there are also secondary schools in most of the towns; and superior academies in Parma and Piacenza. The military force consists of about 1300 men, chiefly infantry. The public revenue, derived from state property, territorial and personal taxes, patents, communal and river dues, custom duties, *eccelesie*, in Parma and Piacenza, amounted, in 1834, to 6,885,840 *lire*. The public debt, in 1833, amounted to 10,700,000 *do*. (*Serriotti, Statist. d'Italia*.)

This territory anciently formed part of Cisalpine Gaul. Charlemagne gave it to the Holy See; but during the quarrels between the popes and the emperors, Parma and Piacenza became independent republics. They afterwards fell successively under the dukes of Milan, the popes, the Farnese family, and the Spaniards. By far the most celebrated of its native sovereigns was the famous Alexander Farnese. Though he served one of the most odious tyrants, Philip II., Farnese was alike generous and brave, and was certainly the most skillful and accomplished general of his age. In 1801, Parma was ceded to the French; and in 1805, it was principally included in the dep. Taro, belonging to the kingdom of Italy. (*Serriotti, Statistica d'Italia; Rampoldi; Châteauneux; Rasmer, &c.*)

PARMA, a city of N. Italy, the cap. of the above duchy, on the little river of its own name, a tributary of the Po, here crossed by three bridges, 35 m. S.E. Piacenza, and 33 m. S.W. Mantua: lat. 44° 48' 1" N., long. 10° 28' 45" E. Pop. circa 36,000. Its walls are between 3 m. and 4 m. in circumference; it is surrounded by a glacis which forms a favourite public promenade. It is well built and laid out, especially its principal thoroughfare, which forms a part of the Flaminian way (via Flaminia). It has many good public and private edifices; they are mostly, however, of brick, and none is remarkable for beauty: many of them are, also, in a decaying condition, and its streets are "dull and dreary." The Farnese palace, though an immense pile, is little more than half the original design; it is raised on open arcades; and, though partly in a ruinous state, it serves for the residence of the archduchess, and accommodates the academy of arts. In the new picture gallery belonging to the latter are several masterpieces by Correggio, Parmegino, Raphael, the Carracci, &c. The academy has also a museum, in which are many interesting antiquities from the buried city of Velleia (18 m. S. Piacenza), and an extensive and well arranged library. Attached to the palace is the large Farnese theatre, designed by Vignola on the model of the ancient theatres, 300 feet in length, and capable of accommodating some thousand persons. It is built entirely of wood, and is well constructed for hearing; but it has been long disused, and is said to be in a very dilapidated and ruinous state. Another, but smaller theatre, exists on the same floor; and a third, built by the present archduchess, was finished in 1830.

The cathedral, an edifice of the 11th century, though in a mixed and semi-barbarous style, is, on the whole, a magnificent building: its fine dome, is ornamented with one of the last and most celebrated productions of Correggio. The city has a great number of other churches, several of which possess some fine works of art. It is a bishop's see, and a seat of the high court of revision for the duchy, besides several inferior courts; and was, till 1802, the seat of a university; it has now a superior school of divinity, medicine, and philosophy, attended by about 430 students; a college of nobles, founded in 1600; an episcopal seminary, some inferior schools, and several hospitals and other charities. The principal and most extensive establishment in the city is the famous printing-office of the Bodoni, established in 1765: it has produced some of the best specimens of typography, especially some of the most splendid editions of the classics of which modern Europe has to boast. The city is supplied with water by a conduit, said to be 50 m. (?) in length. The *Palazzo Giardino*, and a large public cemetery, are situated without the walls. Parma has some silk and other fabrics; but its manufactures and commerce are comparatively insignificant.

Parma became a Roman colony A.U.C. 569. It suffered greatly in the civil war between Antony and Augustus; and was colonized anew by the latter, from whom it received the name of *Julia Augusta Colonia*. It was anciently much celebrated for its wool.

Velleries prima Apulia, Parma secunda Martialis, xiv. Ep. 68.

(*Corder's Italy*, ii., 36-39; *Rampoldi; Dict. (Glog., &c.)*

PARNASSUS.

PARMA, p. t., Monroe co., N. Y., 10 m. N.W. Rochester, 231 m. W. by N. Albany, 380 W. Bounded N. by lake Ontario. Drained by Salmon and Little Salmon creeks. It contains two churches, three stores, two fulling-mills, two grist-mills, five saw-mills, two tanneries; 17 schools, 914 scholars. Pop. 2652.

PARNASSUS, a mountain-chain of Independent Greece, prov. E. Hellas, and nom. Phocia, famous in Grecian poetry and mythology, the favourite resort of Apollo and the muses, and especially sacred to Bacchus. It runs from W.N.W. to E.S.E., forming the connecting link between mount Pindus and mount Helicon; but the only part of it that requires any particular mention is its culminating point N. of Delphi, now called *Liakura*, lat. $39^{\circ} 31' 57''$ N.; long. $22^{\circ} 38' 36''$ E. According to M. Peytier, it rises 8068 ft. above the sea, and being covered with snow during the greater part of the year, would have been rather an uncomfortable residence for the muses, who inhabited its lower regions, especially the laurel groves in the vicinity of the Castalian fountain. Dr. Clarke, who ascended this celebrated mountain, describes its summit as somewhat resembling that of Cader Idres in N. Wales; and adds that "after having been for years engaged in visiting the tops of mountains, he must still confess that he never saw any thing to compare with the view from the summit of Parnassus. The gulf of Corinth had long looked like an ordinary lake, and it was now reduced to a pond. Northwards, beyond all the plains of Thessaly, appeared Olympus, with its many tops, clad in shining snow, and expanding its vast breadth distinctly to view. The other mountains of Greece, like the surface of the ocean in a rolling calm, rose in vast heaps according to their different altitudes; but the eye ranged over every one of them. Helicon was one of these; and it is certainly inferior in height to Parnassus. One of the principal mountains in the Mores, now called Tricala, not far from Patras, made a great figure in that mountainous territory; it was covered with snow, even the lower ridges not being destitute of it. We looked down on Achaia, Argolia, Elis, and Arcadia, as upon a model. The higher region of the mountain is of limestone, bleak and destitute of all herbage, except a few alpine plants." (*Travels*, vii., 261.) From the sacred town and temple of Delphi the mountain appears to have two summits, one of which was sacred to Phœbus and one to Bacchus—

"—Parnasse gemino pecti altera colla,
Mors Phœbo Bromœque sacra." *Lycos*, v. 72.

Running down the cleft between these two summits is the famous *Fons Castalis*, the genuine source of poetical inspiration. It is thus alluded to by Virgil, in connection with the neighbouring mountain—

"Sed me Parnassi deserta per ardua celsa
Raptat amor. Juvat iugis, quæ nulla priorem
Castalian molli devenerit orbita clivo." *Georg.* iii., 292.

Even at present it is by no means unworthy its ancient renown. Mr. Dodwell says, "It is clear, and forms an excellent beverage. The fountain is ornamented with pendent ivy, and overshadowed by a large fig-tree." Higher up the mountain is the Corycian cave, which, during the Persian war, afforded a safe retreat to the less adventurous Greeks after the battle of Thermopylae. (*Hærod.* viii., 36.) It is described by Mr. Baileys, the first modern traveller who has visited it, as a chamber 330 ft. in length, and nearly 900 ft. in breadth, with a roof studded with stalactites. Above this cave, and at a distance of about 80 stadia from Delphi, stood the town of Tithorea, taken and burnt by the army of Xerxes at the close of the Persian war. The ruins were found by Dr. Clarke, near the modern village of *Velitza*. For further particulars see *DALPHI*.

PAROS, a famous island of the Grecian archipelago, group of the central Cyclades, to the W. of Naxos, from which it is separated by a strait, 5 m. across; mount St. Elias, the most elevated point in the island, being in lat. $47^{\circ} 2' 46''$ N.; long. $25^{\circ} 11' 25''$ E. Pop. 8000† It is oval-shaped, being about 12 m. in length by 8 in breadth. Though rugged and uneven, it is, speaking generally, extremely fertile; and, if well cultivated, would support four or five times its present population. It produces considerable quantities of cotton, with corn, wine, oil, &c. Tournouret says that the butchers' meat is good, that there are a great number of hogs, and that pigeons and partridges are extremely abundant. (i., 303, 4to. ed.) Port Naussa, on the N.E. coast of the island, is one of the best harbours in the archipelago, and was used, in 1770, as the rendezvous of the Russian fleet. Parechia, on the site of the ancient city of Paros, on the W. coast of the island, is the capital. Its harbour is open to the W., and there are some sunken rocks in its vicinity, on one of which the *Superbe*, a French line-of-battle ship, was lost, in 1833. The present town consists of mean houses, which, however, are interesting, from their chiefly consisting of fragments of the old city, including portions of the shafts and

PARSONSTOWN.

capitals of columns, &c.: the cathedral church is said to be the best in the archipelago.

Paros was famous in antiquity for its beautiful snow-white marble, whence Virgil has called the island *marivosa Paros*. (*Æneid.* iii., v. 126.) The finest of the ancient statues, including the *Venus de Medici*, the *Apollo Belvidere*, and the *Antinous*, were formed out of this material. Indeed, the best sculptures used no other, *omnes autem tantum candido marmore vixi aut Paro insula*. (*Plin. Hist. Nat.*, lib. xxxvi., cap. 5.) The quarries were situated about 4 m. from the city of Paros, and remain exactly in the state in which they were left by the ancients. Dr. Clarke says they had been wrought with infinite skill; and that the blocks had been cut out with such precision that there was not the smallest waste. (vi., 138, 8vo. ed.)

According to Thucydides (lib. i.), Paros was originally settled by Phœnicians. It early attained to great wealth and consideration, and established colonies in Thasos and other islands. During the first Persian war, it sided with the Persians; and, after the defeat of the latter at Marathon, the city of Paros was unsuccessfully besieged by Miltiades. Themistocles, however, rendered it tributary to Athens. It produced several distinguished individuals, among whom may be specified Arachlochus, the inventor of Iambics.*

In modern times, the only event of importance connected with the history of Paros is the discovery of the "Parian, or Arundelian Chronicle." This is a chronological account, cut in marble, of the principal events in the history of Greece during the period of 1318 years, beginning with Cæcrops, and ending with the archbishop of Diognetus, anno 264 B.C. The chronicle for the last 90 years is, however, obliterated; and the inscription is in many parts a good deal defaced.

The marble slab on which this chronicle is cut was purchased on the spot, in 1694, for the earl of Arundel, whence it is now frequently called the Arundelian chronicle; and being brought to England in 1697 the inscription was soon after copied, translated, and published by Selden and other eminent scholars. Unfortunately the marble afterwards met with the most barbarous treatment, having been broken, and a part of it employed, as is alleged, to repair a chimney in Arundel house. The portion that escaped this worse than Gothic usage was presented in 1697 to the university of Oxford, of which it is one of the most precious relics. (*Robertson on the Parian Chronicle*, p. 43-48.)

For a lengthened period the Parian chronicle was regarded as of unquestionable authority, and was referred to as such by all inquirers into ancient history. In 1728, however, its authenticity was assailed, in a singularly clear, able, and ingenious dissertation, by the Rev. John Robertson, who contended that it was altogether spurious, and had been fabricated in modern times. As was to be expected, this dissertation elicited various answers, by Mr. Hewlett; Porson, the celebrated Greek scholar; Gough, the antiquary, &c.; and at present it seems to be generally concluded by the ablest critics and scholars, that the objections of Robertson have been satisfactorily disposed of, and that there is no good or sufficient reason for doubting that the Parian Chronicle was really compiled about 264 years B.C.

PARSONSFIELD, p. t., York co., Me., 86 m. W.S.W. Augusta, 538 W. Bounded N. by Great Ossipee river. It has seven stores, one fulling-mill, four grist-mills, four saw-mills, one oil-mill, four tanneries; one academy, 225 students; 90 schools, 473 scholars. Pop. 2442.

PARSONSTOWN, or BIER, an inland town of Ireland, King's co., on the confines of Tipperary, on the Birr, a branch of the Lesser Bann, 7½ m. above its confluence with the Shannon, and 63 m. W.S.W. Dublin. Pop., in 1831, 5406; in 1851, 6925. It has a large square, in which is a pillar surmounted by a statue of the duke of Cumberland, erected in commemoration of the victory of Culloden, in 1746, and some good Roman. Its public buildings are the parish church, a fine Roman Catholic chapel, the cathedral of the see of Kildare, three meeting-houses for Independents, one for Quakers, and two for Methodists, a fever hospital, a dispensary, a courthouse, and a bridewell. Near it are large barracks. It has various schools, and is the seat of a manor court, general sessions and petty sessions: it is also a constabulary station, and has two distilleries, a brewery, and an extensive retail trade. The river is navigable for 2 m. from the Shannon, for barges. Markets on Saturdays; fairs, Feb. 11, May 5, Aug. 23, and Dec. 10. Poor-rate revenue in 1830, 2267; in 1836, £1967. Branches of the provincial and agricultural banks were opened in 1833 and 1836.

* The *Dictionnaire Geographique* says that the famous sculptors Phidias and Praxiteles were natives of Paros. In point of fact, however, the former was born at Athens, and the birthplace of the latter is unknown.

PASCAGOULA.

Close to the town is Blir castle, the seat of the earl of Rosse, the head of the noble family of Parsons, whence the town has its name, and to whom it is greatly indebted. The castle, which is of considerable antiquity, has been completely modernised, and greatly improved by its present proprietor.

PASCAGOULA, river, Miss., is formed by the union of Leaf and Chickasawhay rivers, and enters Pascagoula sound of the gulf of Mexico. It is navigable 50 m. for vessels drawing 8 ft. of water, and 150 m. for boats. It is 200 m. long.

PASCAGOULA, sound, Miss. and Ala. Situated off the mouth of Pascagoula river, separated from the gulf of Mexico by low islands, and communicates on the E. with Mobile bay. It is 55 m. long, with an average breadth of 8 m.

PASCO, or **CERRO DI PASCO**, the principal mining town of Peru, dep. Junin, prov. Huanaco, in an irregular hollow on the table land of Bombon, nearly 14,000 ft. above the level of the sea, and 60 m. S. by W. Huanaco. Population varying at different seasons from 4000 to perhaps 12,000. It is a mean, wretched place, which, previously to the establishment of the Peruvian Mining Company, in 1835, had not a house with a chimney, fire-place, or glazed window; and even now its dwellings are principally covered with thatch, a frequent cause of destructive fires. The town—of which the very *edifices*, or unburned bricks, partly used in some of the houses, contain silver—is so burrowed under, that a person is in no small danger of inadvertently falling into old mines, or rather pits, sometimes superficial, sometimes deep and fathomless, and half filled with water. There are several hundred well-known mines, from which silver has been and still could be extracted in large quantities, provided a perfect drainage were effected. But during the revolution a great many of the mines were allowed to fill up with water, and only about 30 are now wrought for eight months a year. From 1825 to 1836 inclusive, 2,190,535 marcos of silver were reduced to bars in the foundry at Cerro Pasco; the produce in the latter year having been 337,840 marcos. These mines have the advantage of being near a coal mine, which has of late years been opened; but turf, dung, timber, &c., are the kinds of fuel most commonly used. The miners choose whether they will be paid in money or a proportion of the ore. In the former case they get four reals, or 2s. a day; but they prefer of course payment in ore, if the mine be productive; and sometimes realize, in this way, very high wages. But the gambling nature of the pursuit has the worst effect on all parties engaged in it. The miners are almost universally profligate, and involved in debt; and but few of the undertakers have made fortunes. (*Smith's Peru as it is*, II., 1-20.)

PAS-DE-CALAIS, a dep. of France, reg. N., formerly comprised in the provs. of Artois and Picardy, between the 50th and 51st degs. N. lat., and 1° 35' and 3° 10' E. long.; having N.E. and E. the dep. Du Nord, S. Somme, W. the English channel, and N. the strait of Dover, or *Pas-de-Calais*, whence its name. Area, 655,645 hectares. Pop., in 1836, 655,315. There are several chains of hills, but none of any considerable height. The Scarpe, Lys, and Aa, rise in this department; besides which the principal rivers are the Liane, Canche, and Authie, having mostly a N.W. course. Except about Boulogne, the coasts are generally low, and in some places bordered with sandy downs, which are, however, prevented from increasing to an inconvenient extent by being carefully planted. The soil is, for the most part, good; and agriculture is, on the whole, well conducted. Of the surface, in 1834, 492,374 hectares were supposed to be arable; 46,310 in pasture; 21,852 in orchards, gardens, &c.; 43,107 in woods, and 18,845 in heaths and wastes. Near Boulogne, farms vary in size from 85 to 250 acres; but, in general, they do not exceed 140 acres. Few are cultivated by the proprietors, being usually let to farmers who pay a money rent, and are also charged with the payment of the land tax. All kinds of corn, but principally wheat and maslin, and large quantities of beans, peas, and oleaginous seeds, are raised. About 1,522,000 hectolitres of potatoes were grown in 1835; and a good deal of land is devoted to the growth of beet-root. The annual produce of beer is estimated at 360,000 hectolitres; of cider, at 36,000 hectolitres; and of malt spirits, at 11,000 hectolitres. In 1830, there were estimated to be nearly 200,000 oxen and cows, and 300,000 sheep in the department; the produce of wool averages about 662,000 kilogr. a year. The farmers, though not prosperous, are contented with their condition; and there are few paupers requiring permanent relief. In 1835, of 232,002 estates subject to the *contribution foncière*, 101,918 were assessed at less than 5 fr., and 30,408 at from 5 to 10 fr. Some coal is met with; but the greater part of that made use of in the department is brought from Belgium; and wood and turf are the principal species of fuel. About

PASSAU.

8,984,000 kilogr. of beet-root sugar were made in this department in 1836, a greater quantity than in any other French department, that of the north excepted. Arras is famous for lace and gingerbread. A portion of the population of Boulogne and Calais is occupied in the manufacture of tulles; in the arrondissement of Bethune many hundreds are employed in making linen stuffs and yarn; and manufactures of cotton stuffs and yarn are pretty general. Spirits, leather, gunpowder, soap, glass and earthenware, tobacco pipes, &c., are also produced. Artesian wells (so named from the province Artois) originated in this department. The *Pas-de-Calais* is divided into six arrondissements; chief towns, Arras, the capital; Bethune, Boulogne, Montreux, St. Omer, and St. Pol. Calais and Boulogne are the principal sea-ports, and have a considerable coasting trade, and share in the cod, herring, and mackerel fisheries. The department sends eight members to the chamber of deputies; number of electors in 1836-30, 4512. Total public revenue (1831), 18,133,373 fr. (*Huge, art. Pas-de-Calais; Dict. Geogr.; French Official Tables; and Part. Report on Agriculture, 1834.*)

PASQUOTANK, river, N. C., rises in the S. part of the Dismal Swamp, and enters Albemarle sound by a broad estuary, including which it is 40 m. long. It admits ordinary coasting vessels to Elizabeth city. It derives its chief importance from the Dismal Swamp canal, which extends from Deep creek, a tributary of Chesapeake bay, 23 m. to Joice's creek, a branch of Pasquotank river. This canal is 46 ft. wide, and at intervals of a quarter of a mile, 66 ft. wide for turnout stations, 64 ft. deep, with six locks 100 by 30 ft. It has a navigable feeder of 5 m. from Lake Drummond, in the Dismal Swamp; and it forms an important channel of communication from Norfolk to the south.

PASQUOTANK, county, N. C. Situated in the N.E. part of the state, and contains 300 sq. m. Bounded N.E. by Pasquotank river, S.W. by Little river. It contained 1840, 5719 neat cattle, 2415 swine, 15,905 swine; and produced 19,130 bushels of wheat, 473,970 of Indian corn, 45,101 of oats, 21,065 of potatoes. It had 26 stores, 10 grist-mills, two saw-mills, one tannery, one printing-office, one weekly newspaper; two academies, 78 students; five schools, 106 scholars. Pop.: whites, 4650; slaves, 2769; free coloured, 1076; total, 8514. Capital, Elizabeth city.

PASSAIC river, N. J., rises in Mendham, Morris co., and flows through a mountainous country, with a quiet and sluggish course, excepting at two falls. At the Little falls it descends by two leaps and a rocky rapid 51 ft. in the distance of a half a mile. Five and a half miles below are the Great falls at Paterson. Here the river pours itself in one unbroken cataract of 60 ft. wide, 50 ft. descent, and a total fall of 70 ft., affording an immense water-power. It finally enters Newark bay, and is navigable 13 m. to Acquackanonk. It flows through marshes near its mouth, and is about 70 m. long, and is the longest river which runs wholly in the state.

PASSAIC, county, N. J. Situated in the N.E. part of the state, and contains 180 sq. m. Watered by Passaic river and its tributaries. It contained in 1840, 5532 neat cattle, 5075 sheep, 4565 swine; and produced 5190 bushels of wheat, 36,731 of rye, 70,674 of Indian corn, 94,012 of buckwheat, 45,945 of oats, 78,686 of potatoes. It had 126 stores, four lumber-yards, one furnace, 18 forges, four fulling-mills, one woollen factory, 90 cotton factories with 40,056 spindles, two dyeing and printing-works, 13 grist-mills, 21 saw-mills, four paper-mills, seven tanneries, two distilleries, one brewery, two printing-offices, two weekly newspapers; three academies, 126 students; 41 schools, 1967 scholars. Pop. 16,734. Capital, Paterson.

PASSAMAQUODDY, bay, lies partly in the state of Maine, and partly in the British province of New-Branswick, and is 6 m. wide, and 12 m. long. It has a sufficient depth of water for the largest vessels, and is never closed by ice. It abounds with cod, mackerel, herring, and other fish. The boundary of the United States passes through it on its W. side, into St. Croix river, which enters its N.W. part.

PASSAU (an. *Castra Batava*), a fortified frontier city, principally belonging to Bavaria, circ. Lower Bavaria, of which it is the cap., on the Danube, where it is joined by the Inn, and also by the small river Ilz, 68 m. E.S.E. Ratisbon: lat. 48° 34' 29" N., long. 12° 28' 5" E. Pop., circa 9000. It consists of the city proper, built in the angle between the Danube and Inn, and of three smaller portions beyond the Danube, the Inn, and the Ilz; the latter being within the Austrian dominions. These different parts are connected by bridges, and surrounded with fortifications; and are further defended by two citadels, and some inferior forts; this being, in fact, one of the most important fortresses in the line of the Danube. The defile, in which the town is situated, is highly picturesque; and it has a striking appearance from the river, though not generally well built. The cathedral, however, is a magnificent

modern edifice, in the Italian style, and several of the other churches are handsome; the old Jesuit's college, now a lyceum, the bishop's palace, several hospitals, an orphan asylum, and the postoffice are the other principal public buildings. On a hill adjacent to the Innstadt, is the shrine of *Maria-hilf*, a celebrated place of Roman Catholic pilgrimage. Passau is the seat of circle, police and taxation boards, and has an Episcopal seminary, a school of industry, manufactures of leather, tobacco, and pottery-ware, docks for ship building, and an active trade both up and down the Danube. It was long the capital of an ecclesiastical principality, secularized in 1805. Here, in 1552, a treaty was concluded between Maurice, elector of Saxony, on the one hand, and Ferdinand, king of the Romans, on the part of the emperor Charles V., on the other, by which the latter agreed to set the landgrave of Hesse at liberty, and to allow the Protestants full freedom of conscience. (*Berghaus; Sketches of Ger.*, ii., 101, 102, &c.)

PASSYUNK, t., Philadelphia co., Pa. It includes the W. part of the tongue of land included between the Delaware and Schuylkill rivers, below the city of Philadelphia. It contains League island in the Delaware, and is covered with meadows and gardens. Pop. 1594.

PATAGONIA, an extensive country of S. America, comprising nearly the whole of that continent S. of lat. 30° S., and having N. the territories of La Plata and Chili, S. the strait of Magellan, separating it from Terra del Fuego, E. the Atlantic, and W. the Pacific. Little is known respecting this region beyond its coast outline. The Andes in Patagonia appear to consist of but one cordillera, the mean height of which may be estimated at 3000 ft.; but opposite Chiloe there are some mountains probably from 5000 to 6000 ft. in height. (*Geog. Journ.*, i., 157.) The W. coast is abrupt, very much broken, and skirted with a great number of irregularly shaped rocky islands. The E. coast has been most explored. The surface of the country appears to rise from the Atlantic to the Andes, in a succession of terraces, all of which are alike arid and sterile, the upper soil consisting chiefly of marine gravelly deposits, covered with coarse wiry grass. No wood is seen larger than a small thorny shrub, fit only for the purpose of fuel, except on the banks of a few of the rivers subject to inundation, where herbage and some trees are occasionally found. This sterility prevails throughout the whole plain country of Patagonia, the complete similarity of which, in almost every part, is one of its most striking characteristics. It is stated, however, by the Indians on the Rio Negro, which forms the N. boundary of Patagonia, that near the Andes, wheat, maize, beans, lentils, peas, &c., are raised. This latter region is not, however, placed under the same circumstances as the country more to the eastward, nor is it subject to the causes which mainly occasion its sterility.

A great deal of rain falls in the Andes, and the country immediately E. of the mountains is thickly wooded, and is injured by too much rain. This results from the moisture which the W. winds, that prevail throughout most of the year, bring with them from the Pacific, being condensed and precipitated in the mountains and immediately adjacent territory; so that after passing these regions the winds are quite dry; and E. winds, which are very rare in Patagonia, are those only which convey any moisture to the desert E. of the Andes. Porphyry, basalt, sandstone, containing numerous organic remains, and a friable rock, greatly resembling, but not identical with, chalk, are among the mineral formations hitherto remarked as the most prevalent in E. Patagonia. The zoology of the country is as limited as its flora. Guanacoes are met with sometimes in herds of several hundreds; and their enemy the puma, and a small kind of fox, are almost the only other wild quadrupeds at all abundant, except mice. The latter are of many species, and so numerous that, according to Mr. Darwin, Patagonia, poor as she is in some respects, can, perhaps, boast of a greater stock of small rodents than any other country in the world. (*Voyages of the Adventure and Beagle*, iii., 215.) The condor and the cassowary are included among the few species of birds. The reptile and insect tribes present nothing remarkable.

The Patagonian Indians are tall and bulky, and, though not absolutely gigantic, they may be said, after rejecting the exaggerations of the early and the contradictory statements of later travellers, to be the tallest people of whom we have any accounts, the average height of the men being probably not under six feet. Their heads and features are large, but their hands and feet small; and their limbs are neither so muscular nor so large-boned as their height and apparent stoutness would induce one to suppose. Colour a dark copper brown; hair black, lank, and coarse, and tied above the temples by a fillet of plaited or twisted snows. A large mantle of guanaco skins loosely gathered about them and hanging from the shoulders to the ankles, is, with a kind of drawers and loose buskins, almost their only article of dress, and

adds much to the bulkiness of their appearance. They neither pierce the nose nor lips, but disfigure themselves greatly with paint. They lead a nomadic life, living in tents formed of poles and skins, and subsisting on the flesh of the wild animals they catch. Both men and women ride on horseback, and are often furnished with saddles, bridles, stirrups, spurs, and Spanish goods of various kinds, which they obtain from Valdivia and other places in S. Chili. Their arms consist generally of a long tapering lance, a knife or scimitar if one can be procured, and the *bolas*, a missile weapon of a singular kind, carried in the girdle, and consisting of two round stones, covered with leather, each weighing about a pound. These, which are fastened to the two ends of a string, about 8 ft. in length, used as a sling, one stone being kept in the hand, and the other whirled round the head till it is supposed to have acquired sufficient force, when they are together discharged at the object. The Patagonians are so expert at the management of this double-headed shot, that they will hit a mark not bigger than a shilling with both the stones at a distance of 15 yards. It is not customary with them, however, to strike either the guanaco or the ostrich with them; but to discharge them so that the cord comes against the legs of the ostrich, or the fore legs of the guanaco, and is twisted round them by the force and swing of the balls; so that the animal being unable to run, becomes an easy prey to the hunters. These people live under various petty chiefs, who, however, seem to possess but little authority.

Patagonia was discovered by Magellan in 1519. The badness of its harbours, which are mostly difficult and dangerous of access, and afford little or no security for vessels above the size of a brig, has hindered the formation of any European settlement, except at Port St. Julian, about lat. 49° 10' S., and long. 67° 40' W., where the Spaniards settled about 1779, but speedily abandoned the establishment. A few expeditions have been undertaken to the interior in the last century, and lately by the officers of the *Adventure*, principally up the larger rivers; but the coasts are rarely frequented by any other than whaling vessels, and the nature of the country is not such as to hold out any hope of its ever emerging from its present state of savage barbarism. (*Parish's Buenos Ayres*, &c., 58-59; *Voyages of the Adventure and Beagle*; *Geog. Journ.*, i. vi.)

PATERSON, city, capital of Passaic co., N. J., is situated on Passaic river, near the great falls, 4 m. from tide water, 13 m. N. Newark, 17 m. N.W. New-York city, 75 m. N.E. by N. Trenton, 214 W. A society for the establishment of manufactures, projected by Alexander Hamilton, was formed by the subscription of \$300,000, about half only of which was fully paid in, in 1791. The contributors were incorporated by the Legislature in November 22d, 1791, and authorised to increase their capital to \$1,000,000. After several other places had been proposed, the company located near Passaic Falls at Paterson. At this period there were not more than 10 houses in the place. This was one of the first attempts to establish cotton manufactures in the United States, and had to contend with the obstacles to which such establishments were then incident; the objects of the company in a great measure failed, and were abandoned. But more propitious times have enabled their successors to raise up here a large manufacturing city. The city of Paterson was incorporated November 22d, 1791, and lies partly in Bergen county and partly in Passaic county, is on both sides of the river, and includes 36 sq. m. By a dam in the river, 4½ feet high, and a canal around the falls, a vast water-power is created, sufficient for the supply of numerous manufactures. It contains a courthouse, jail, a bank, and many spacious edifices for manufactures, built chiefly of stone. There are nine churches, a Presbyterian, two Dutch Reformed, a Methodist, Reformed Presbyterians, Episcopal, Baptist, True Reformed Dutch, and a Roman Catholic. There is a philosophical society of young men, who have a respectable library, and a Mechanics' society for the advancement of science and the mechanic arts, with a library and philosophical apparatus. The Morris canal passes near the city, a little to the S. of it, and the railroad to Jersey City gives an easy access to the city of New-York. Passaic Falls are celebrated for their picturesque beauty, and are often visited as a curiosity.

There were in the city in 1840, 104 stores, with a capital of \$152,950, machinery was manufactured to the amount of \$907,000, four fulling-mills, one woollen factory, with a capital of \$20,000, 19 cotton factories, with 45,056 spindles, two dyeing and printing works, with a capital of \$555,000, one grist-mill, one saw-mill, two paper-mills, with a capital of \$32,000, one tannery, two printing-offices, two binderies, two weekly newspapers. Total capital in manufactures, \$1,792,500. It has one academy, 80 student; 16 schools, 1006 scholars. Pop. in 1825, 5084; in 1830, 7331; in 1840 7598.

The city is governed by a mayor, recorder, common council, &c. There are many manufactures not enumerated
